“This country, Great Britain, is vulnerable in so many ways, that the picture is horrid. By letter I will say nothing upon that subject. One instance I will however state, because it is information you cannot, as yet, receive from any other quarter; though in two or three months from the date of this letter the fact will be fully established, and you may then hear it from others. The thing I allude to is of peculiar importance. The fact is this. I know (and in a few weeks shall prove), that ships of any size, and for certain reasons the larger the better, may be navigated in any narrow or other sea, without sails (though occasionally with), but so as to go without wind,

and even directly against both wind and waves. The consequences I draw are as follows:—First, that all the principal reasons against the French having the ports of Ostend, &c. cease; inasmuch as a French fleet, composed of ships of the above-mentioned description, would come out at all times from Cherbourg, Dunkirk, &c. as well as from Ostend, &c. and appear in the same seas. The water, even at Dunkirk, will be amply deep enough for the purpose of having them there. The French having Ostend ought not therefore . . . under this new revolution in naval affairs, for it will be complete revolution . . . to be a bar to peace. Under the old nautical system, naval men might have reasoned differently upon that subject. But the most important consequence which I draw from the stupendous fact mentioned at the top of this page is this, namely, that it will shortly, and very shortly, render all the existing navies of the world (I mean military navies) no better than lumber. For what can ships do that are dependent upon wind and weather, against fleets wholly independent of either? Therefore, the boasted superiority of the English navy is no more! We must have a new one. The French and other nations will, for the same reason, have their new ones. Now, do you seriously mean, or can you as an honest man (which you are), reconcile it to your conscience to place the very existence of your native land on this miserable foundation; namely, on the circumstance of which of the European nations can build new ships fastest? Recollect, I pray you, that the French, according to Dr. Price's calculations, independent of their new acquisitions, were upwards of thirty millions, and that England and Wales together do not contain five. Recollect also, that they can bring, not only all shipwrights, but all house-carpenters, smiths, &c. into requisition; and this, from their unparalleled enthusiasm in the cause in which they feel themselves engaged, will be cheerfully submitted to. This never has been done in England, and I am sure, in the present state of men's minds in that useful class, it cannot now be done. Having now received the above information, what answer, nay what excuse, can you make to your constituents, and to your country, should you not oppose the war; and, above all, what excuse can you make to that Being, infinitely high, who is the Creator of us all?"

Mr. Wilberforce's view of the Town and Country, and the relative position and value of influential residents in towns and country gentlemen, is no less worthy of attention now than at the end of last century. He writes to the Earl of Galloway:—

"House of Commons, December 3, 1800.

"My dear Lord,— I assure you from my heart that no man respects more than myself the character of a nobleman or gentleman who lives on his own property in the country, improving his land, executing the duties of the magistracy, exercising hospitality, and diffusing comfort, and order, and decorum, and moral improvement, and, though last not least (where it has any place), religion, too, throughout the circle, greater or smaller, which he fills. Greatly I regret that due attention, as I think, has not been paid to this class of persons. Every inducement and facility should have been held out to them for fixing in the country, rather than in towns. Timber, bricks, and tiles, &c., used in improvements, should have been exempted from taxation. The house-tax and window-tax should have been increased on town houses, and lessened on

those of gentlemen residing on their own property. For in fact your country gentlemen are the nerves and ligatures of your political body, and they enable you to enforce laws which could not be executed by the mere power of government, and often preserve the public peace better than a regiment of soldiers. London is the gangrene of our body politic, and the bad humours it generates corrupt the whole mass. Through the medium of the great clubs, &c., one set of opinions, manners, modes of living, &c., are diffused through a vast mass of the higher orders. Domestic restraints, and family economy, and order, are voted bores; while, from the nature of our constitution, aided by the increasing wealth and the prevailing sentiments of the age, whatever ways of thinking, speaking, and acting, become popular in the higher classes, soon spread through every other. Hence respect for our nobility, and even for the king himself, instead of being regarded as a Christian duty, is deemed an antiquated prejudice. Alas! alas! my dear lord, when I consider the singular blessings we have received at the hands of God, and how ungrateful and insensible we in general are, I am filled with grief and apprehension. 'Shall not I visit for these things?' occurs but too naturally. Happy they who can secure a better subsistence than this world can supply, and who are urged by considering the precariousness of all earthly happiness, to pursue, with greater earnestness, that which is alike excellent and unequalled in degree, as it is sure and unfading. I remain, my dear lord, your lordship's obliged and faithful,

"W. WILBERFORCE."

In another letter we have an interesting opinion and criticism upon Paley:—

"Near Bath, September 28, 1803.

"Have you read Paley's 'Natural Theology?' To a mind already pious, it will, I hope, be serviceable, by multiplying his recollections of his Supreme Benefactor, by accustoming him to see God in every part of his curious frame, and in all nature around him. But the view of the divine character which is there exhibited is very erroneous and very mischievous. His wisdom, power, and goodness, are indeed enforced by many new proofs; but another grand attribute of the Supreme Being, as he is represented to us in the Scriptures, I mean his justness or his holiness, is entirely overlooked or neglected. The practical consequences of this error are most pernicious: it tends to flatter men into a false estimate of their own character, of the claims of God on them, and therefore of the necessity and value of the Redeemer and Mediator between God and man. How have I been drawn on? I think you will see the train of my ideas."

A reminiscence of the early life and promise of one now so distinguished as Lord Brougham will be perused with interest. Here is Mr. Wilberforce's recommendation of that eminent person to Mr. Pitt:—

"W. Wilberforce, Esq. to the Right Hon.

William Pitt.

"[Private.] Broomfield, Oct. 25, 1805.

"My dear Pitt,—I was taking up my pen to say to you something which I thought of just after we parted on Wednesday, when another idea occurred to me, which I will mention first, lest you should think me like some others I have heard you mention, who pop out at last, or in a postscript, the real object of the visit or letter. It is, that if in the course of any of your calls for proper men to be employed in any diplomatic business you should be at a loss

for one, you perhaps could not in the whole kingdom find any one in all respects so well qualified as the Mr. Brougham whom I formerly mentioned to you. He speaks French as well as English, and several other languages. But the great thing is, that he is a man of uncommon talents and address, and for his age, twenty-six, knowledge also, and I told you of his being so long the advocate for your government in Edinburgh. My mentioning him to you is entirely of my own head; of course he knows nothing of it, indeed, he is in Edinburgh, and I only do it (most solemnly I assure you) on public grounds, and because I know you must often want men for foreign services. He has, besides the qualities I mentioned, great resolution, strength of constitution, &c. The idea of mentioning him to you arose in my mind when I was going to inform you, that in the course of his tour on the Continent last year, particularly at Vienna, Naples, &c. he found that all the foreign ministers, to whom, especially at Vienna, he had good introductions, spoke of Lord Harrowby in the highest terms; in short, it was when I was speaking of Harrowby in the terms you know I should use, he declared, that it was surprising how little justice appeared to be done to him at home, or even by some of our own diplomatic and other English people abroad, compared with the estimation in which he was held among all foreigners of rank and consequence. He said much more of the same kind. I thought you would like to hear this; it made me the more rejoice at his undertaking the mission on which he is now embarking—I am ever, my dear Pitt, yours most truly,

"W. WILBERFORCE.

"P.S. I need not say this requires no answer."

An account of the death of the great statesman to whom the preceding letter was written is very affecting:—

"Broomfield, February 11, 1806.

"Oh, what a lesson does Pitt's latter end read to us, of the importance of attending to religion in the days of health and vigour, and even of the benefits which may follow from being acquainted with the language of Scripture, and with the principles of Christianity! Poor fellow! for some time, perhaps a fortnight or more before his death, he sat chiefly (till the last few days, when he was almost entirely in bed) in his chair, neither reading, nor talking, nor hearing conversation. Conversation in a few moments fatigued him, and he saw but few people from the time of his coming from Bath, about eighteen days or twelve (on the sudden, I forget which) before his decease, and none at all but the bishop, the physicians, and his servants, and one or two of the young Stanhopes, for the last week. It was not till the morning before his death that the Bishop of Lincoln could get leave to speak to him as to a dying man, and I have no reason to believe he thought himself in any immediate danger before. The bishop proposed to pray with him, and in the strictest confidence, I will tell you what I am bound by promise not to mention generally. Pitt at first, poor fellow! objected—that he was not worthy to offer up any prayer (I think it was added) in his present state; referring, I suppose, to his bodily and mental weakness. The bishop very properly told him that he, Pitt, knew the bishop would not deceive him, and assured him that was the very state of mind in which prayer was best and most properly offered. The bishop then prayed with him, and afterwards Pitt desired to settle his temporal concerns,

showing very much his character, such as I conceived it, by one or two traits which I will mention some other time. I am extremely pressed to-day. I am not aware, but have reason to fear the contrary, no further religious intercourse took place before or after, and I own I thought what was inserted in the papers impossible to be true. Pitt was a man who always said less than he thought on such topics. The bishop, I ought to mention, told me he had often wished to speak to him before on these subjects, but the physicians said, 'No, it might be fatal to him,' &c. O, my dear friend, what a scene does the dying chamber of this great man exhibit! Just before, we received the account of the death of Mrs. Buchanan, who was perfectly aware of her situation, and appeared to have almost a foretaste of the joy of heaven, and a countenance expressive of her heavenly hope, Christian love, and confidence. But what has struck me most is, that perhaps poor Pitt may be truly said to have died of a broken heart,—he who was prime minister of England, &c. Lord C. died, I fear, without the smallest thought of God, &c. How awful! yet to the very last he indicated that astonishing zeal in his country's service which his whole life had displayed."

Hear also what Mr. Wilberforce says of another individual, who occupied much of the public attention in his day:—

"*William Wilberforce, Esq. to W. Hey, Esq.*  
Brighton, August 15th, 1807.

"My dear Sir,—From the time of Mr. Sheridan's first announcing his bill\* I was on my guard, and I only kept back in the earliest stages of the business, because, for various reasons, too long to be now communicated, I judged that to be the course of conduct most likely to insure my ultimate success. I much doubt whether he was serious in meaning to carry the measure through; not but that he is likely to be more in earnest, more consistent, and more persevering (alas!) in such a case as this, than in any other. He seems to live on that, to me, melancholy distich, 'Life is a jest,' &c. When he was chatting with some of the government about his speech on Irish affairs, he justified himself by saying, with his usual laugh, 'Consider, I have not made one rebellious speech this whole session! I must make one!' Though he has had an almost Herculean measure of strength of constitution, yet, as his faculties now betray some symptoms of decay, I suspect it will not be long before he breaks entirely. Yet, with all his vices and extravagancies, there is a certain degree of political principle—but I have dwelt longer than I meant on this motley character."

We conclude with a letter which draws a picture of the late King George IV.; which seems to us to set his majesty in a genuine and true light:—

"*Wm. Wilberforce, Esq. to Mrs. H. More.*  
Kensington Gore, February 1st, 1816.

"My dear Friend,—Many and cordial thanks for your long letter. It is just what I wanted to receive—an account of the absent friend, and her goings on; and on the spot I take up my pen to begin an answer, which shall be completed piecemeal, as opportunities shall offer. You mention my reception at the Pavilion: nothing could be more gracious; I should rather say, more unaffectedly gentlemanlike. He personally invited me to dine with him, desiring me to fix my day; and when, of course, I

expressed myself willing on any day,—'Well, then, to-morrow. I assure you,' he added, 'you will hear at my table nothing you will disapprove: I hope, indeed, at no time; but if ever there did any thing of that sort pass, there should be nothing of it when you should be with me.' He invited, as I afterwards heard accidentally, Lord Ellenborough to meet me, and was really quite the English gentleman at the head of his table. Poor fellow! I longed to have a private half hour with him; for it is sad work. Dinner comes on table at six; at nine the dinner party goes into the other rooms, in one of which is music, in another cards, in others, and a long gallery 160 feet long, walking about, till about a quarter or half-past twelve, and then, on the prince's retiring, all of us depart. But really it is a large part of existence, from six to half-past twelve daily, or rather nightly. The Princess Charlotte is a fine fair German-looking personage, with a sensible countenance and a commanding air. I believe, but nothing certain was known, that there is foundation for the report of her being likely to become the wife of Prince Cobourg; a very handsome foreigner, of high blood, and, which is better, no dominions. By the way, I forgot the civilest part of all the prince's conduct towards me. Finding invitations to the evening parties come pretty thick upon me, I mentioned one evening to Bloomfield, that evening engagements broke in upon my family plans; that I was at Brighton for a quiet life, my boys at home, &c.; and that, though highly honoured and gratified (really true) by his royal highness's kindnesses, I wished to decline frequent invitations. The prince himself was told of it, and, in the handsomest way possible, begged me to suit my own convenience: he should always be happy to see me, &c. I am forced to break off; indeed I have kept this by me for two or three days in the hopes of a vacant evening; but I had better send it than keep it any longer. Oh, how I sympathise with good old Baxter in feeling peculiar pity for the great and high of the earth! May God's best blessings attend you. Kindest remembrances.—Ever yours,

W. WILBERFORCE."

*Shetland and the Shetlanders; or, the Northern Circuit. With a Map of the Route.* By Catherine Sinclair, author of "Modern Society," "Hill and Valley," &c. &c. 12mo. pp. 428. 1840. Edinburgh, Whyte and Co.; London, Longman and Co.

MISS SINCLAIR'S previous volume, or, as she calls it, "first shot," having, we are glad to hear her state in sporting phrase, fulfilled our favourable augury of its success, "in bringing down a large covey of readers," we are well pleased at this discharge of her second barrel. Yet we do not think it is quite so killing; or, perhaps, she has got so far north that the game is not so fine nor so plentiful. Nevertheless, *Shetland and the Shetlanders* have offered a sufficient field to beat up, and our fair author has gone over it with her usual acuteness and vivacity. In Caithness, where her father, the late worthy Sir John Sinclair, held so large a property, she speaks of "Langwell, now the residence of Mr. Donald Horne," and goes on to tell, "When the late proprietor, after taking possession of his recently purchased estate, first appeared at church, the parish clergyman, being gratefully attached to my father, looked full in the face of his new auditor, and gave out for his text the fifth verse of the seventy-fifth psalm, 'Lift not up your Horn on high.'"

"The next place we passed was Nottingham

House, a large bleak, lonely mansion, belonging to the male representative of the Sutherland family, who would have inherited that ancient earldom, for which his predecessors had a lawsuit, endeavouring to prove that the Earls of Sutherland, for three centuries, had all been usurpers; but, like most old Scotch titles, this was impartially settled in the female line. Nottingham House used formerly to be in sad disrepair, and the late proprietor was overheard once, when a visitor unexpectedly arrived, calling loudly to his servant, 'Bring me a fork to open the drawing-room door!' Many of the windows were at that time built up; and a clergyman who slept there one night previous to preaching in the parish church, got up next morning and opened his shutters, but seeing no light, he retired to bed, wondering much what had disturbed him so early. Unable to sleep, he watched impatiently for the first glimpse of dawn, thinking that certainly a sleepless night was a very tedious affair, when at length the clerk rushed into his room, saying that the whole congregation were assembled in their pews, and had waited impatiently for some time!

"In the plantations at Stirkoke, we started a fine covey of young pheasants, probably the most northern colony of these birds in the world. A noble-looking red deer also was tethered in the park, looking so quiet and domestic, that it seemed curious to think what days of toil and sleepless nights a sportsman would gladly have endured, to see the mere tips of his horns: but there he stood safe from every gun, though ready to be shot at the shortest notice."

But we must get on towards Shetland and the farther north. After deploring the starvation and destitution with which the natives were visited last season, Miss Sinclair says:—

"Another destitution, of yet greater importance, is deeply deplored in Scotland, and became a subject of serious discussion among the clergy as we approached Fair Isle, a bright green spot, like an emerald on the wide ocean. This place is quite a little world in itself, covered with grass of a most vivid and luxuriant verdure, but distant twenty-four miles from the nearest shore, being exactly half way between Orkney and Shetland,—and there four hundred of our countrymen live and die without the instructions or consolations of any clergyman. The parish to which they belong lies in a far-distant island, whence Mr. Thomson, the incumbent, used to visit them once in a season, to perform all the marriages and christenings; but now, being eighty years of age, he is unable to encounter the fatigue of such a voyage; and it was mentioned, that the last time a clergyman arrived there, several of the children requiring to be christened were quite old and uninstructed, while one boy, when the service was performed on himself, swore most violently. The anxiety of these neglected people for ministerial teaching is so extreme, that they will laboriously row their boat any distance to bring a preacher, and only ask their expenses for taking him away, as it is considered ample remuneration for a voyage of fifty miles to hear a single sermon; and Mr. Watson, of North Yell, told us, that once, when detained accidentally beyond Sunday, the whole population crowded round him to hear the gospel, and listened with fervent attention. Many rich people disapprove loudly of foreign missions, confidently saying, 'Let charity begin at home;' and for them here is a noble opportunity. Neighbours and brethren of our own, who have little to enjoy here, and

\* Mr. Sheridan's bill was to take the jurisdiction of ale-houses from the Middlesex magistrates. Mr. Hey had expressed his fear lest it should lead to the destruction of the authority of magistrates in general."

no one to tell them of happiness hereafter, suffer the most urgent want, while a small subscription might supply the moderate wishes of some resident clergyman, who would be welcomed with eager and grateful delight, bringing them the knowledge which they seem all to be thirsting for. The deputations sent by charitable societies travel sometimes now at a most preposterous expense. A lady assured me that once a barouche and four arrived at her house in the Highlands, containing four gentlemen, who requested leave to see her pictures, and mentioned that they were a committee of clergymen from England, collecting funds for some religious object. Next day her old poultry-woman found several tracts scattered along the approach, and this expedition cost several hundred pounds, besides taking more than one clergyman away from his own charge. This is a wide world, in which there certainly is a great deal of good to be done, but as none of us are like the tortoise, who could carry the whole world on his own shoulders, men who would really be useful must measure the utmost extent of their own individual ability, and do the very most which is possible, without attempting more."

Talking of clergymen, here is a humorous anecdote of one :—

"Did you ever hear of the Irish clergyman who preached for the Blind Asylum formerly, and began by gravely remarking, 'If all the world were blind, what a melancholy sight it would be?'"

Now for a bit of superstition :—

"After passing through Nain, we crossed 'the witches' moor!' where Macbeth had his interview with the withered old hags. Their dancing days are over now, and besides, we were rather too early for their cantrips, or for being favoured with any predictions of coming greatness to ourselves. No grass ever grows where a witch's foot has trod, and this 'blasted heath' seems bare enough to prove for certain, that on the very identical spot we saw they appeared, and on no other. We carefully kept our gravity here, as you are probably aware, that if any one smiles on a witch in the Highlands, his mouth remains awry for ever afterwards."

Another anecdote :—

"A *propos* of very juvenile precociousness, I was greatly diverted lately to read an advertisement of a new astringent application for the gums, beginning, 'Children cutting their teeth are respectfully informed!'"

At Banff we are told :—

"Several very primitive customs are still observed in this part of the country. When farmers come to market, they pay nothing at the inn for being lodged or entertained, but some time afterwards, 'mine host' performs a tour of visits among all those who favoured him with their company, and then he graciously accepts presents, according to the wealth or the gratitude of his *ci-devant* guests, who load him with hay, cheese, butter, eggs, or poultry, till, like the lady in Roman history, he is almost buried beneath the weight of gifts and offerings heaped upon him. A very convenient custom is also observed by poor people, when about to marry upon nothing, who have what is appropriately called 'a penny wedding.' The happy couple call on each of their neighbours to announce the propitious event, and to inquire at the same time what the friends are willing to subscribe towards increasing and prolonging the comfort of their wedded life. At these marriages two hundred

people sometimes assemble, while no guests are expected to appear without an offering in some shape or other,—a loaf, a cheese, a bottle of whisky, or even, in cases of extreme poverty, half-a-dozen eggs. The entertainment which ensues is kept up occasionally for several days, and instead of bottle-sliders, on which to pass the bottles, they are frequently placed on blue bonnets. Every mortal is weary of listening to accounts of the melancholy festivities which take place at Highland funerals, but I could not help being amused to hear, that when three Strathspey lairds set out to attend the burial of the late Rochemurchus, one of them gravely remarked, 'How drunk we shall all be this time to-morrow!' At a great chieftain's house where guests used formerly to be over the mast-head in claret and champagne, but where modern sobriety and decorum have been introduced by the present proprietor, an old Highland laird was heard indignantly muttering to himself as he left the table, 'Och! if this isn't the first time she ever dined at Castle Grant, and was able to go up the stairs by herself.' I was shocked to hear that an old clergyman, well known for his convivial propensities, who died last year, wishing his funeral to become peculiarly jovial, bequeathed a large stock of claret for his friends to finish on the occasion, and his old boon-companions, standing in a circle round the grave, filled their glasses to his memory, and afterwards poured a share of the contents on the earth beneath which he was interred. The neat and cheerful town of Banff is proverbially alluded to by the Scotch as Coventry is in England. If one of the common people be angry at another, he exclaims in a tone of bitterness, 'Go to Banff!' I felt perfectly well satisfied, however, to visit this very respectable town, though often extremely indignant formerly at being told by our old nursery-maid to go there."

It is odd enough that in England "Go to Bath" is a similar impertinent advice. Is there any thing in the similarity of name, Banff and Bath, to induce this oburgation? In the latter case the addition, "and get your head shaved," is evidently an improvement in consequence of an accompaniment which frequently attended a visit to the salutary springs of Bladud.

We shall not encroach further on these agreeable and amusing pages, and not only recommend their reading, but recommend to such readers as can accomplish it in the season to put themselves on board a *Damp-skiff*, as the Danes call a steamboat, and visit the scenes they so well describe.

#### THE STAGE; BY ALFRED BUNN.

[Second notice.]

MR. BUNN had, no doubt, long, many, and the best of opportunities, for knowing much about the stage *behind*, and not a little about it *before*, the curtain. His quarrels and his toadyings are also notorious; and it will rest with the public to determine what weight is to be attached to his statements. That Macready, and every friend or supposed friend of his should be objects of assault (in return for the drubbing bestowed by the former), was naturally to be expected, and accordingly we not only find that accomplished gentleman and admirable tragedian attacked in various ways, but also Sir Edward Bulwer, and others, who are suspected of entertaining a high regard for him, both in his public and private life. Mr. Bunn is of opinion that Macready cannot act Shakspeare characters: his attraction in them affords a strong support to a counter-opinion,

and the success of his last season at Covent Garden Theatre, a triumphant answer, both as respects his own powers in performing, and the estimation in which "Shakspeare's Plays" are still held in England, whenever they are represented with talent like his which can fairly sustain them.

On another point Mr. Bunn is perhaps so far right, when he attributes the difficulties of the theatres to the starring system, and the extraordinary nightly sums paid to the upper class of actors. But this does not do half the mischief he attributes to it; and many causes conspired to the decline of the drama—among which *we* reckon, though *he* applauds them, the management, schemes, and conduct of the writer himself, when he was in authority with either of, or both the patent theatres. During that period we felt it to be our duty almost invariably to condemn his course; and now that we see his boastful apology for it, we see no reason whatever to change our sentiments.

But we will wait till we have had an opportunity of considering his whole work before we discuss its merits or demerits; and have only said as much as we have done, lest, noticing it as a thing of public curiosity, we should be held as countenancing any of its personalities, whether against Macready, Bulwer, G. Robins, Farren, Power, Liston, C. Kemble, Miss E. Tree, the Marquess of Conyngham, Mr. Mash, or others. That we do not enter upon the question of the individuals whom Mr. Bunn panegyrises, is probably a matter for which some of them will thank us;—all we shall observe is, that the ex-manager and lessee speaks very familiarly of his noble and other distinguished friends.

So curtailed in our references we shall, for the nonce, merely select a few amusing or characteristic passages, in continuation of our review, and begin with a statement relating to Kean :—

"In the year 1814, Mr. Kean, who was putting into the Drury Lane treasury a nightly average of 484*l.*, as set down in the first chapter, was content after his success was established, to sign an engagement for three years, at 8*l.*, 9*l.*, and 10*l.*, per week. He considered the committee acted with singular liberality in cancelling that article, and substituting one for 20*l.* per week, as some compensation for his great attraction. On the termination of this agreement, Mr. Kean stipulated for, and received, to the close of his career, the sum of 50*l.* per night! A case of more inconsistent absurdity than this cannot possibly be cited; inasmuch as at the time he was literally causing the theatre to overflow nightly by his exertions, he was content with 20*l.* per week; but when his attraction subsided, and Drury Lane frequently presented to his performance 'a beggarly account of empty boxes,' nothing less than ten times that sum (supposing him to play but four times a-week) would be accepted. I have before me the treaty he concluded with Mr. Price, dated the 31st December, 1826, on his return from a second engagement in the United States, wherein he stipulated for half a clear benefit, in addition to 50*l.* per night, for twelve nights' performance. If, however, such a deviation from the long-established regulations of the London theatres could be justified, it would be in this instance; for, except under singular circumstances, there was always some attraction in Mr. Kean; he was a child of genius, a great, an original actor, 'Hyperion to a Satyr' when compared to the pretenders who imagine they have succeeded him."

It is added that he was driven to the American engagement "by the result of the trial of Cox versus Kean, which vitally stabbed his reputation, unnerved his energies, and led to that last *liaison* his friends so much regretted. While at his seat, in the Isle of Bute, with the degraded object of it, his secretary, Mr. Phillips (the respected father of the respected singer, Mr. H. Phillips), observing that he was likely to be fleeced not only of his money, but of the valuable mementos of his reputation which so many admirers had contributed, remonstrated with the woman; who so grossly insulted him, that, perceiving the influence she had over Kean, he resolved on leaving his house. Going to a neighbouring inn to take the first coach, he thence despatched a letter detailing his grievance to the tragedian, from whom he received the following answer—so beautiful, so melancholy, so peculiar, that it is a curiosity worth preserving:—

"Dr Phillips,—I am shocked, but not surprised. In error I was born, in error I have lived, in error I shall die. That a gentleman should be insulted under my roof creates a blush I shall carry with me to my grave; and that you are so, in every sense of the word, is unquestionable—from education, habits, and manners. It is too true that I have fostered a worm until it has become a viper. But my guilt is on my head. Farewell!—Yours,

"ED. KEAN."

A story and letter of Mathews may pair with this. Mr. Bunn says:—

"This eminent performer and capital fellow was a rare exception to most others of his craft. Nothing could ever induce him to make an engagement that he did not think would be mutually advantageous. On this subject, the following delicious letter, in reply to an offer I made him to go to Dublin, is entitled to especial commemoration:—

"Kentish Town, March 5, 1828.

"Dear Bunn,—If you have not heard of what I have said on the subject of acting in Dublin, there is nothing surprising in your offering an engagement; if you have, you must have a contempt for me, and my consistency. Perhaps you have heard of my oath relative to that subject—perhaps you have heard of Liston's ('twas a joint oath)—and exclaim 'Dicers' oaths,' and should we break our oaths again exclaim, 'at actors' perjuries Bunn laughs.' I shall not attempt to influence Liston, nor remind him, *à la* Lady Macbeth, 'had I so sworn'—but not the persuasive pen of A. Bunn, nor reward, nor the greatest terms ever offered to mortal actor, shall ever induce me to present myself again to a Dublin audience. This I have invariably said, whenever I have been solicited to visit the country; and therefore the offer being treated with contempt cannot apply personally to you. I shall not trouble you with my various reasons for this determination; but I never liked Ireland—Ireland never liked or understood me. I do not hate them for this, but I thoroughly hate them for their want of appreciation of Liston. We acted there together often—not the last engagement. They would not smile at him—they broke his heart; and he is a mean hound if he allows them to annoy him again. Never more shall they insult me. Remember Tonson—'Off, off—Talbot, Talbot'—the cut-throat malignant, doubly-distilled essence of all vulgarity in the shape of slang still wrings in my ears. They hooted me from their stage; and but for Abbott's sake I had left with the gratification of expressing my contempt for an audience who could calmly 'gape on,' and see a

hired party of college and other ruffians drive a London actor from the Dublin stage unheard, untried, for the crime of having selected for his opening part a character that had been acted by one of their own favourites. Pray observe, I was hooted before I had delivered one line of the author. If ever I forget or forgive it, may—but I have sworn. Now in a commercial point of view. A few people who would not pay—'theatrical varlets,' have lied to you, as they did to poor Abbott, whom they ruined, that I should bring you money. They lie! they lie! I never brought money in Dublin. I can prove it to you. They have a habit of exaggerating—they cannot help it. One of the fools who would have told me that his father's present house was only a wing of the one he intended to build, actually had the audacity to say to me, 'Sure you done iligantly the last time you were in Dublin?' 'Very,' said I. I received six shillings for my share of the house the first night, and not a farthing for the second and third. I played several nights for nothing, and in nine nights, including the benefit, received 130*l*.—went across the water to a civilised country, and in one night at Liverpool I cleared 200*l*!!! Fact, 'alone I did it.' Can it be endured with patience then, that I should meet Pat after Pat, to swear to me I am always successful? You believe them: they deceive you—they deceive themselves. I never brought money in Dublin—Braham did—Kean has—Vestris—not me—Stephens, not I—I never (by G—d) played to one full house in Dublin, but once, in Crow Street; and then they knocked down the door-keepers and got in for nothing. 289*l*. was returned for the greatest number of people ever collected in the building, so Jones said. Therefore do not lament me, or Liston, who would have got less than me, had he not secured 10*l*. per night certain. Console yourself, Bunny, and believe me when I say that in paying us you would have been a loser; and believe me also when I say I never will act in Dublin again as long as I live.—Thine, my dear Bunny, very truly,

C. MATHEWS."

"This does not exactly tally with his account at page 145 of the second volume of Mrs. Mathews' biography; but no matter."

The announcement of Mrs. Mardyn to play Myrrha in Byron's "Sardanapalus," is explained at length, and seems to have been a complete hoax on the manager by some wags at Paris. It led, however, to a real correspondence between Bunn and T. Moore, which exhibits the former in a genuine light, and does no discredit to the modesty and independence of the poet. We copy the two letters:—

"Having (says Mr. B.) confirmed Mrs. Mardyn's proposal by a rejoinder, the result of the negotiation was immediately made known to the public through the medium of the play-bills; while, in the hopes of sustaining the curiosity it excited, and at the same time of rendering as much justice as possible to the production of 'Sardanapalus,' the subjoined letters passed between the celebrated 'poet of all circles and idol of his own,' Mr. Moore, and the manager:—

"Theatre Royal, Drury Lane, April 5th, 1824.

"Dear Sir,—An unexpected correspondence has sprung up between Mrs. Mardyn and myself, which has led to the postponement of Lord Byron's 'Sardanapalus' till Thursday, and she plays Ionian Myrrha, having informed me that the noble poet actually taught her the character! The conflicting opinions such assertion leads to, it is not now necessary to discuss. She appears in the part, at this theatre,

next Thursday. I petitioned our mutual friend, Mr. Murray, to petition you some time since to write a prologue, ushering into the world this sublime poem of your immortal friend, thereby adding or attaching your own immortality to his. Mr. Murray told me you feared it would do no good, and you were of opinion such things seldom succeeded. They are no part or parcel of success beyond the bespeak of as much as possible for what follows; and in this case would do us vital service. I will honestly tell you what I want, and put it to you as a man of business. I want a prologue of some thirty lines, which you would compose as fast as you could write, and if that prologue could make any gentle reference to the lady enacting Myrrha, so as to bespeak a good feeling towards her, it would (being to be spoken by one of the sisterhood) go a great way with thick-headed Johnny (I mean Bull, not Murray). If you would condescend to do this, and accept fifty guineas for the half hour it would take you to do it, the charm will be complete. Pray excuse my great frankness, and my thus treating the Temple of Genius so much like Covent Garden Market; but as a man of the world you may be induced to pardon me. If I received it by post on Wednesday morning, it would be time enough. If I do not herein appear to pay homage enough to the shrine of 'the spark divine,' it is not that I feel it less, for amongst your millions of idolaters is not to be found one greater than your obliged and faithful servant,

A. BUNN.

"To Thomas Moore, Esq. &c. &c."

"Sloperston, April 6th, 1824.

"My dear Sir,—Both from the pleasure I should feel in connecting my name, however humbly, with that of Byron, and the importance which you do me the honour to attach to my assistance on this occasion, I should have been most happy to undertake the task you propose, had I the slightest confidence in my being able to succeed in it. But I feel quite sure that my effort would be a failure, and (as I said to our friend Murray on the subject) the less of failures a man perpetrates the better. It gives me real pain, I assure you, to reject a proposal so tempting in itself, and so liberally offered; but I know that both you and myself would regret my having acceded to it. Did your people tell you the efforts I made one night to find you at your house near the theatre? I should have tried again, but for my short stay in town. Forgive this hurried note, but I am in fear of being too late for the post. Yours most truly,

THOMAS MOORE.

"To A. Bunn, Esq.

"Theatre Royal, Covent Garden, London."

We conclude with one of Mr. Bunn's anecdotes:—

"As you are intimate with Mathews," said Braham to me one day at dinner, 'tell him that a Jew came to Bristol the other day while I was staying there, and advertised for personation the whole of his (Mathews's) last entertainment. He attracted a large audience in one of the public rooms, and, shortly after he commenced, his performance gave such dissatisfaction, that there was a universal cry of 'Off, off!'—'Swindle, swindle!' The Jew, quite undaunted, and with a rare expression of candour that silenced the opposition, and convulsed its creators with laughter, advanced with all possible humility, and said, 'Ladish and Gentlemen, I shall not dishpoor dish business vid ye—*fish* a swindle!' Those who have not heard Mr. Braham's rich delivery of the Jewish dialect can have no idea of his humorous recital of this anecdote."

*The Ecclesiastical and Political History of the Popes of Rome during the Sixteenth and Seventeenth Centuries.* By Leopold Ranke, Professor in the University of Berlin. Translated from the German by Sarah Austin. 3 vols. 8vo. London, 1840. Murray.

AMONG the few standard works which, in these days, issue from the British press, the present is fairly entitled to take a front rank. The original has long been known, both on the Continent and in this country, as a production of laborious research, mature consideration, and calm and impartial execution. Truth appears to have been the sole object of the author, and, as far as we are competent to judge, he has stated all the facts he has been able to ascertain, according to the best examination of authorities and sources of intelligence, swerving neither to the right hand nor to the left, nor endeavouring to twist or turn them to suit any preconceived historical theory, or unfairly sustain any religious opinion. To some Roman Catholic repositories we observe he has been refused access; but the place of the muniments therein preserved has been well supplied from other quarters. We also observe that the French translation of his history (1838) has been rendered worthless by suppression, mutilation, and perversion. Under pretence of rendering the text of the German Protestant, the French writer has misrepresented the original, and sought to serve the cause of the Church of Rome by this piece of literary bad faith,—a fraud so easy of detection. Justly does Mrs. Austin remark,—

"It is impossible not to be struck with surprise and mortification that, in this age of the world, any man should be found so blinded by antipathy, as not to perceive how much both Catholics and Protestants have suffered by misrepresentation; how much both have to gain by truth; how much, therefore, both are interested in preserving the integrity of a history to which both may appeal from prejudice and calumny."

And this brings us to say of our countrywoman's own translation, that it is a model for such performances. True to the German in every respect, it is an excellent example of clear and forcible English. The following extract, however, will more fully explain this matter. Mrs. A. states:—

"Professor Ranke, not without reason, regards his reputation for impartiality, and (what to such a writer is far more important) the effect of his book on the public mind, as seriously endangered by the appearance of the French version. Accordingly, when I announced to him my intention of translating his work, and my wish to attend to any suggestions he might have to make, I received an answer containing the following words:—'My book needs to be set right in the eyes of all but German readers, after the unconscious treatment it has received at the hands of a catholicising French translator. I look to England to redress the wrong done to me in France.' I have endeavoured to render the original with scrupulous fidelity, at the risk of occasionally sacrificing facility of expression to this paramount object, and to my desire of counteracting (as far as it rested with me to do so) the effect of this great offence against the author and against truth. The English reader will perhaps accept such a guarantee as Professor Ranke's opinion may afford, that I have not wholly failed in my purpose."

Indeed she has not; but having had access to Ranke's second edition, has thus had it in her power much to improve the work, the chief

interest of which, she justly observes, "lies in the solution it affords of the greatest problem of modern history. It is impossible to contemplate the rapid and apparently resistless progress of the Reformation in its infancy, without wondering what was the power which arrested and forced back the torrent, and reconquered to the ancient faith countries in which Protestantism seemed firmly established. The ebb and flow of this mighty wave are traced with singular vividness as well as accuracy in the following pages. In them will also be seen how many of the elements of Protestantism lived and moved in the bosom of the catholic church;—and, on the other hand, how many of the institutions, and how much of the spirit, of the ancient church have adhered to some forms of Protestantism. Nor is the connexion between the aspirations of man after the beautiful, and those after the good and the eternal, forgotten. In the sixteenth century, as in the fourteenth, the church appears as the inspirer and the patron of art. We are likewise struck by several examples of those great oscillations of the human mind, of which each succeeding generation is the unconscious witness, though each appears to regard its own mental condition with an exclusiveness and intolerance little befitting a creature so changeable, and so dependent on circumstances for his opinions, as man. A period of laxity in religion and morals is as invariably succeeded by one of rigour and asceticism, as that again is sure to engender an impatience of restraint, an inordinate craving for indulgence, and a coldness, not to say aversion, to the exercises of devotion."

Were we to write a long essay we could not more correctly or more truly explain the nature of this publication; and to enter into any of its details with a space necessarily so limited as ours, would be to do great wrong to so important a subject. The opening view of the situation of the papal power at the beginning of the sixteenth century, and of the events which led to that position, is a retrospect of great value, and carried through with the same impartiality and ability which mark the rest of Professor Ranke's labours. We are so much gratified with it that we feel a regret it is not an elaborated history. Under such hands what would the lives of the popes be in the dark and middle ages, when their biographies were the annals of civilisation? But we must be content with what has been done, and so end by saying that this is a publication with which no library of the slightest pretension can dispense. It is full of interest and information: it develops the springs, and traces the course, of the most important matters which can engage the human mind; and offers abundant subjects for consideration essential to the welfare of mankind in this world, and no less essential to their prospects in the world to come.

*Supplement to the Introduction to the Atomic Theory: comprehending a Sketch of certain Opinions and Discoveries, bearing upon the General Principles of Chemical Philosophy, which have been brought into Notice since the Publication of that Work. Prefaced by some Remarks on the Projected Reforms in Academic Education.* By Charles Daubeny, M.D. F.R.S. &c. &c. London, 1840. Murray.

DR. DAUBENY'S former work was published about nine years ago, at a time when it was conceived that Chemistry was about to take its place amongst the exact sciences. The beautiful

atomic theory or law of definite proportions, propounded by Dalton, had, with few exceptions, so completely won the regards of scientific men, that they readily yielded to its influence, and admitted its truth. Theory was acknowledged law, without the requisite extensive observations, upon which all laws ultimately rest. Induction sanctioned the generality. It was, however, induction which, adapted not to the maturity, but to the infancy of a science, chiefly relies on individual penetration, requiring a comprehensive union of knowledge in one person, whereby the individuals of a class may be directly referred to their principle of classification, and not resting on an extensive and well-digested arrangement of facts. Such a person was Dalton, and so far as he was concerned, the theory was complete and perfect, and so simple, that it at once took elevated rank in the scale of physical truths. The law of definite proportions was established, although, to this day, its subordinate laws remain to be discovered. A few simple propositions seemed to embrace all chemical phenomena, but they contained the elements of their own subversion: they comprised unknown principles, to which all anomalies were referred; and assumed data which subsequent experiments have disproved. Organic Chemistry affords chiefly the unstable premises to which we allude. Chemists, however, have been emboldened to consider the principles, hitherto referred to the operation of a vital fluid, as attributable to the same laws as those which operate on unorganised matter, and thus to lay open a wide field of investigation. We rejoice in this, and the more especially, because we fully agree with Dr. Daubeny in considering that no head is made against materialism, as many fancy, by assigning to the direct agency of a vital fluid the process of the animal economy; and "that those who would assign to that immortal principle of our nature which manifests itself in the operations of thought and intellect, any concern in the functions of the perishable body more direct and immediate than that which it may exert through the medium of the nervous system, so far from establishing on a surer foundation the doctrine of the soul's immortality, are, in fact, degrading that *divina particula rursus* to a level with electricity, chemical affinity, and other influences, which affect equally inanimate as well as animate matter." And "that when we suppose that any real explanation is afforded of the phenomena of physiology by ascribing them to the operation of the vital principle, or to any vital affinities, which is merely a less simple mode of expressing the fact, we are indulging in one of those delusive attempts to substitute words for ideas, which have so much tended to retard the progress of physiological science."

Of the tendency of the inquiries of modern chemists, and especially of the progress made in that most important and interesting division of the science, Organic Chemistry, Dr. Daubeny's *Supplement* gives an able and concise account, divested of all unnecessary technicalities. It, moreover, clearly demonstrates the bearing of recent discoveries and experiments on the law of definite proportions, or rather on the propositions engrafted thereon. They are highly attractive; but, however seemingly deviating in their results from the fundamental principle of the atomic theory, they tend only to a further development, and to the establishment, of its universality. Besides being a short but satisfactory account of those views with respect to the constitution of matter, which have been more nearly matured since the

publication of Dr. Daubeny's former work, the *Supplement* is a sketch of the leading doctrines of Chemistry, offered as a text-book, more particularly to the Oxford public. Discussions that may be expected to arise with regard to the extent to which an acquaintance with chemical principles ought to be held as an essential ingredient of a liberal education, have encouraged this offering. The professor in the University of Oxford says, "He must indeed be blind to the signs of the times, as well as to the current of academical feeling, who does not anticipate that the period is approaching at which the system pursued at this University will undergo some considerable modification." And Dr. Daubeny advocates the requirement of a certain elementary knowledge of the fundamental laws of mechanics and of chemistry, which constitute the grammar to every other kind of natural knowledge, if not from every graduate, at least from every student who leaves the university with the sanction of its highest honours. "Ignorance of the nature of gravitation and of the constitution of the very atmosphere we breathe" may, under the present system, attach to persons who leave the University with their highest credentials. This is not compatible with the maintenance by the clergy of that control over the education of the country, which has hitherto been conceded to them. Dr. Daubeny's *Supplement* is, in every respect, worthy of attentive perusal and consideration.

#### WRANGELL'S SIBERIA AND THE POLAR SEA.

[Third notice, conclusion.]

IN one excursion the travellers got among the Tschuktschi, of whom we select a few notices:—

"Etel (a chief of a tribe who agreed to escort them) made his appearance early next morning (13th April), fully equipped for the journey. He appeared to have put on his best clothes, and carried on his back a kind of havresack, with tobacco, and some few other European trifles, intended for barter at Koliutschin. His cap was much ornamented with beads and ear-rings, and surmounted by a large raven's head, which he told us would ensure us a fortunate journey and a good reception. We set off, and were accompanied for some distance by the greater part of the inhabitants of the village, who were evidently under some anxiety respecting their chief; at length they took their leave, with many ceremonies, and repeated entreaties that Etel might come back very soon. Late in the evening we arrived at two single Tschuktschi huts, where Etel advised us to pass the night. The inhabitants were roused from their sleep by the barking of the dogs, and being frightened at the sight of so many strangers, caught up a large Shaman drum, and made a hideous din, till their friend Etel came forward with his raven's head; and by this significant emblem, and his assurances of our peaceful intentions, induced them to be quiet. There were only four men and five women, they seemed very poor, and could only spare us one seal.

The greater part of the drift-wood found between the Schelagskoi and Tschukotekoi Nos is, however, probably of American origin, for it consists chiefly of stems of pines and fir, which do not grow along any of the rivers which enter the sea between the mouth of the Indigirka and Tschau Bay. Trunks of those trees are brought down in abundance by the Lena, but they are not often drifted as far as the Indigirka, and are rarely seen among the

quantity of larch, aspen, and poplars, which are floated down by the other rivers of northern Siberia. My opinion, that the drift-wood on this part of the coast comes from America is confirmed by the assertion of the Tschuktschi, that among the trunks of fir they not unfrequently find some which have been felled or hewn with stone axes.

"The Tschuktschi inhabit the north-eastern part of Asia, extending from Tschau Bay to Behring Straits in one direction, and in the other from the Anadyr, and the upper country of the Aniuj, to the Polar Sea. Their neighbours to the south are the Koraki, and to the west the Tschuwanski and Jukahiri of the Aniuj. They formerly occupied a more extensive territory, before the Cossacks from the Lena subdued the country through which the Kolyma flows.

Though still in great measure a nomade race, have less of the characteristics which usually accompany such a mode of life, than the wandering Tungusi; they are less cheerful, and more careful; they lay up stores for the future, and in general do not remove their dwellings without an object, but only when it becomes necessary to seek fresh pasture for their reindeer. They are more covetous and more saving than belongs to the character of genuine nomade races. Their dress differs greatly from that of the Tungusi, which is tight and close-fitting, and well adapted to an active wandering life, whereas the clothing of the Tschuktschi is large, loose, and cumbersome. They wear long wide trousers made of fur, and an ample kutchanka. The coast of the Bay of Anadyr is inhabited by a people very distinct from Tschuktschi in figure, countenance, clothing, and language, called Onkilon (sea-people). Captain Billings, in the description of his journey through the Tschuktschi land, shews that the language of this coast-people has a close affinity to that of the Aleutians of Kodiak, who are of the same stock as the Greenlanders (Esquimaux). There are traditions which relate that two centuries ago the Onkilon occupied the whole of the coast from Cape Schelagskoi to Behring Straits; and it is true that there are every where along this tract the remains of huts constructed of earth and whalebones, and quite different from the present dwellings of the Tschuktschi. A disagreement between Krächoi, the principal chief of the Asiatic Esquimaux, and an Errim, or head of a tribe of reindeer Tschuktschi, broke out into decided hostilities; Krächoi was defeated and forced to flee, his people migrated, and the coast was deserted. The inhabitants of Ir-Kaipij relate, that Krächoi, having killed a Tschuktschi Errim, was closely pursued by the son, and after some time retreated to the rock of Cape North, where he intrenched himself behind a kind of natural rampart which still exists. The young Errim followed him thither, and succeeded in killing Krächoi's son; by which, according to the ideas of these people, the debt of blood was paid. Krächoi let himself down from the cliff during the night by means of thongs, and got into a boat which was waiting for him at the foot of the rock. He at first steered towards the east to mislead his pursuers, but the following night he turned westward, and reached Schelaurow Island, where he built the earthen huts of which we had seen the remains. He was gradually joined by his kinsmen and others of his own tribe; and they all finally fled together in fifteen baidars to the country, of which the mountains are said to be sometimes visible from Cape Jakan. In the course of the winter, a Tschuk-

tschi who was allied to Krächoi, disappeared with his family and his reindeer; and it was supposed that he too had gone to the northern island. Formerly all the Tschuktschi lived on the produce of their reindeer; but those among them who lost their herds by sickness or other causes settled by degrees along the coast, where they kill whales, seals, and walrus. These animals, the whales especially, are particularly abundant about Koliutschin; they become more rare in going westward, and are not met with at all west of Cape Schelagskoi. This is, no doubt, the reason why we found the population along the sea-coast increase as we approached Behring Straits. The people of the country are now divided into two classes, the settled Tschuktschi who live on the coast, and the reindeer or nomade Tschuktschi who inhabit the mountainous parts of the country. The latter, who form the chief bulk of the population, call themselves Tennygik. The two classes live on good terms with each other, and interchange their different commodities. The inhabitants of the coast furnish to the nomades whales' flesh and bones, walrus-skin, and train-oil, which is a favourite article of food; and receive in return reindeer skins, both raw and made up into clothing.

At Ir-Kaipij, the principal occupations are taking seals and walrus. Seals are sometimes caught by a sort of net formed of thongs, which is placed under the ice, and in which the animal becomes entangled. Sometimes the following method is used: the hunter dresses himself in white, that he may not be noticed on the snow, and lies down near one of the openings by which the seals come out of the water to sun themselves; he is armed with a lance, and carries an instrument made of five bears' claws fastened to a stick. With this he keeps gently scratching the snow, or the surface of the ice the whole time; the people say that this sets the seals to sleep, but its more probable use is to cover the noise made by the hunter as he gradually creeps nearer, till he is able to reach the animal with his lance. This method rarely fails of success. Wolves are killed by a very ingenious device. The two ends of a strong piece of whalebone are bent together, and fastened by a thread; water is then poured over the ring till it is covered with a crust of ice sufficiently strong to make it retain its form; the thread is then cut away, and the whole is smeared over with fat. The wolf on finding it swallows it greedily, when the ice melts and the elastic whalebone springs asunder and chokes him. Walrus are taken by cutting off their retreat to the water, when they are despatched with ease. The walrus is almost as useful to the settled, as the reindeer is to the nomade Tschuktschi. The flesh and the blubber are both used for food, the latter for the lamps; the skin is made into durable thongs for harness and other purposes, and into strong soles for boots; the intestines furnish a material for light waterproof upper garments for summer use; a very durable thread is prepared from the sinews; and lastly, the tusks, which are of the finest ivory, are sometimes formed into long narrow drinking-vessels which it takes a long time to hollow out, but are more frequently sold to the reindeer Tschuktschi, who convey them to the Russians. The most dangerous chase is that of the white bears, which the hunters pursue to their dens among the hummocks, and which are killed with spears, frequently after a severe combat. For fishing they use baskets of thin willow-rods, which they sometimes sink in the water; and sometimes use like nets. For fowl-

ing they employ an instrument consisting of a number of long slender thongs, to the ends of which stone pebbles or bits of walrus' teeth are fastened. This they throw up into the air with great dexterity among a flight of geese or other wild-fowl, and the birds, becoming entangled in the loose thongs which fly in every direction, are brought to the ground. Though the Tschuktschi, as already mentioned, pursue the white bear, the flesh of which is a favourite article of food, they are not in general fond of the chase, although their country abounds in wild reindeer and sheep, foxes, wolves, bears, and other large fur animals. They have bows and arrows, but they are not particularly expert in their use. Their principal weapons are different kinds of spears, and particularly the batass already described. Iron being scarce, they sometimes employ walrus' tusks instead. The settled Tschuktschi use dogs for draft, but instead of harnessing them two and two, as is done on the Kolyma, they drive four abreast. Their sledges are also of a different construction, and rather resemble the reindeer sledges, only they are not so large. The dogs are smaller than those employed for draft in other parts of Siberia, and inferior both in strength and swiftness. It is remarkable that in 1821 the Tschuktschi lost great numbers of their dogs by the same malady as that which made such ravages among those of the Kolyma, the Indigirka, the Jana, and the Lena. From much observation and repeated inquiries, it appears that a kind of bondage exists both among the settled and the nomade Tschuktschi. We found among the wealthier people whole families who had always been in a state of servitude; they have no property, they cannot leave their masters, on whose arbitrary will they are entirely dependent, and are employed by them in all sorts of hard labour and attendance, in return for which they are fed and clothed. Neither our interpreter nor the Tschuktschi from whom we inquired could give us any information respecting the origin of this state of things. They said, 'It always had been so, and must continue to be so.' Possibly the slaves are descended from captives. The Tschuktschi use only animal food; boiled reindeers' flesh with seals' blubber is a frequent dish: they are particularly fond of the flesh of white bears, and of the skin of the whale with a layer of meat adhering to it eaten raw, which bears some resemblance to sturgeon. Meat-broth is taken quite cold, and is often mixed with snow and drank out of large wooden vessels as a beverage to quench thirst. Every individual carries about with him a little tube of reindeer bone, through which he sucks up the liquid from the large vessel. Fish are not much esteemed, and only eaten when other food is wanting. Salt is never used. It is strange, that in a country of such intense cold, where one would suppose that every means of getting warmth would be most acceptable, every article of food is taken cold. They usually conclude their meals with a lump of snow, and I have often seen them, with a temperature of 36°, and even colder, take up from time to time handfuls of fresh snow and eat it with great apparent relish.

The endurance of the native is incredible:—  
“A Jakut, when travelling, wears only his usual in-doors clothing, and at night, spreads a horse-cloth on the snow, which, with a saddle for his pillow, forms the whole of his bedding; his only covering is the fur jacket which he has worn during the day, and which he pulls off, and puts over his back and shoulders, while the front of his body has scarcely any

covering, and is turned to the blazing fire. When he has lain for some time in this way, and feels so warm that he is near perspiring, he stops up his nose and ears with little bits of fur, and covers his face so as to leave only an exceedingly small aperture for breathing, and this is all that he requires in the most intense cold, not to be frozen during sleep. Even in Siberia the Jakuti are called iron men; and I suppose that there are not any other people in the world who endure cold and hunger as they do. I have seen them frequently in the severe cold of this country, and when the fire had long been extinguished, and the light jacket had slipped off their shoulders, sleeping quietly, completely exposed to the heavens, with scarcely any clothing on, and their bodies covered with a thick coat of rime. They are also remarkable for the acuteness of their sight. A middle-aged Jakut assured M. von Anjou, that he had several times seen that blue star, pointing to Jupiter, swallow up another very small star, and soon afterwards send it forth again: thus he had observed with the naked eye the immersion and emersion of one of Jupiter's satellites. Their memory and local sagacity are also very surprising, and are of the greatest use in their journeys through these extensive and unvaried wastes. A pool, a stone, a bush, a rise of ground so slight as to be hardly perceptible,—objects which a European scarcely notices,—are deeply impressed in their memory, and serve years afterwards to guide them over the trackless and desert steppe.”

We have now only to copy two notices of celestial phenomena:—

“At noon we saw a beautiful phenomenon, which my companions said indicated approaching bad weather of long continuance. The sun was surrounded by four mock suns, at equal distances from each other, connected by a circle of beautiful prismatic colours, of which the radius was 22°. The true sun, and two of the mock suns, were intersected besides by a horizontal prismatic arc, extending 80°, having two smaller bows at the two ends. These, which were perpendicular to the horizon, had peculiarly bright and sharply defined colours, but in reverse order to the rainbow. The phenomenon lasted two hours, and then gradually disappeared. The wind fell soon afterwards, and the bad weather, which had been foretold, began by falling snow.”

Of the aurora borealis we are told:—

“Even during the most brilliant auroras we could never perceive any considerable noise, but in such cases we did hear a slight hissing sound, as when the wind blows on a flame.”

“The finest auroras always appear at the beginning of strong gales in November and January; when the cold is most intense, they are more rare. A remarkable phenomenon which I often witnessed deserves to be recorded, i.e. when shooting stars fell near the lower portion of an auroral arch, fresh kindled streamers instantly appeared, and shot up from the spot where the star fell. From some of the above remarks it may be inferred that the freezing of the sea may be connected with the appearance of auroras. Perhaps a great quantity of electricity may be produced by the suddenly rising vapours, or by the friction of large masses of ice against each other. The aurora does not always occupy the higher regions of the atmosphere; it is usually nearer the surface of the earth; and this is shewn by the visible influence of the lower current of the atmosphere on the beams of the aurora: we have frequently seen the effect of the wind on the streamers as obvious as it is on clouds; and

it is almost always the wind which is blowing at the surface of the earth.”

In conclusion, we have most heartily to join Major Sabine in his expression of admiration for the zeal, intrepidity, and constancy with which M. von Wrangell and his brave associates endured all the difficulties and hardships which their undertaking demanded. Those qualities which have been the theme of our panegyric when exemplified by the Parrys, Franklins, James Rosses, Burneses, Landers', Parkeses, Fishers, Backs, and others of our gallant countrymen, shone no less brightly in these Russian adventurers, and the tribute of our warmest applause is due to their glorious self-denial and noble exertions.

#### MISCELLANEOUS.

*Illustrations of the Breeds of the Domestic Animals of the British Islands, &c. &c.* By D. Low, Esq. F.R.S.E. London, 1840. Longman and Co.

PART III. of this work has just issued from the press, and whether we look at it for the beauty or the accuracy of its illustrations, it is equally entitled to our highest encomium. Some folks may stare when we speak of the “beauty” of a part whose plates consist of *hogs*; but, please the pigs, if they look at these engravings they will confess that nothing can be more beautiful than such animal configurations. First we have the Wild Boar and Sow, fierce and dangerous creatures, which the sportsman finds it wonderfully exciting to track in their jungly lairs, and spear to the death in not inglorious conflict. Savage, strong, and swifter than their form would indicate, the grisly boar whets his destructive tusks; and few beasts of chase offer more of resistance or peril to the hunter. Next we have specimens of the Siamese breed—a sow and pretty litter. The mamma is really so handsome as to refute the old saying, “Like the pigs, the older you grow you grow the uglier;” and as for the young ones, they seem as well worthy of being made pets of as any lady's lapdog. The third is the old English breed, with swagging long ears, and rough and curly bristles; and the fourth is the Berkshire breed, shorter limbed, a reddish-brown colour, and one of the earliest, though the principal improvements have been made in Leicestershire and Staffordshire. The black colour shews the introduction of the Siamese cross, and the white mixture in other cases the Chinese, which latter has created many of the varieties. Among Mr. Low's observations, he remarks that the lessening the size of the animal ought to be so far guarded against, that we should not, for the sake of fancy or delicacy, reduce the product of an article so useful for general consumption. In this, as in all his other remarks and statements, the reader of this work for practical purposes will find it as valuable as it is really admirable as a work of art. Altogether, it is certainly a performance of its kind quite unequalled among the publications of this or any other country.

*The Anatomy of Suicide.* By Forbes Winslow, R.C.S., author of “Physic and Physicians.” 1840. 8vo. pp. 339. London, Renshaw; Edinburgh, Cairnes and Son; Dublin, Fannin and Co.

The subject is one of paramount interest, and Mr. Winslow has collected such an extraordinary number of facts and cases, that, even without considering their bearing on great legal and medical questions, his work is one which cannot be looked into without a strong feeling of its extreme curiosity and importance. Here, indeed, truth far exceeds all that fiction

ever conceived; and the wonderful contradictions, vagaries, and revolutions of the human mind, exhibited under a thousand different impressions, made by a thousand different causes, fill us at once with astonishment and dismay. We are fearfully made; and a few of these pages must admonish us fervently to pray to our Maker, that we may be preserved from such absurd hallucinations and fatal propensities.

*The Banker Lord. A Novel.* 3 vols. 12mo. London, 1840. Colburn.

THERE is one word in our language for which, like the "gloaming" of our Scotch neighbours, we vainly search for a synonyme,—that comprehensive word is Twaddle. Some people like twiddle, and can generally find it in a fashionable novel, though perhaps seldom so wholesale as in this production.

*The Penny Cyclopædia, Vol. XVII.* London, 1840. Knight and Co.

THIS volume carries on the work from the word Organ to the word Pertussis; the first being an instrument with the most splendid of all sounds, and the last the name of a disease with sounds of all others nearly the most painful and distressing (Hooping Cough). Between are many interesting articles, and many engravings, particularly of subjects in natural history.

*The Buried Bride, &c.* Post 8vo. pp. 173. 1840. London: Simpkin, Marshall, and Co. Southampton: Sharland.

THIS poem possesses some merit. How often have we written such a sentence! how often seen it quoted, and advertised! and now, what is its true meaning? This work is "middling," we can just manage to read it, and no more,—we cannot praise it. Two classes of books which come under our hands need but to be placed under the heads of two words, which might be stereotyped, and which would be "middling" and "bad;" the good ones (when they do come, angel visitants) deserve all the space we can give them. This, then, is one of those books which, if a publisher were asked for at the end of a month, he would just remember that so much paper had been put in boards, and printed with just such a title: it would just escape the number he never had heard of at all; the *Bride* might live a month without being eternally *Buried*. We cannot praise it, neither is it good enough to call forth our earnest censure: it is one of those books that make us yawn, and read, and growl, and yawn, and read again, and when we have done,—why we have done,—and we say there is merit in the work, and we mean what we say; and yet we could not make a connected extract of twenty lines to prove what we had said, for ten out of that twenty would possess no merit. And, were we to fill a *Literary Gazette*, we could say no more.

*The Present State of East India Slavery, &c.*, by James Peggs, late Missionary in Orissa, &c. Pp. 110.—The third edition of a pamphlet in which the writer, from parliamentary reports, &c. &c., calls the attention of the humane to the condition of slaves in the East. *The Law and Custom of Slavery in British India*, by W. Adam (12mo. pp. 279. Smith, Elder, and Co.), is another work which throws considerable light upon the same subject.

*A Discourse on the Pastoral Care, &c.*, with a Prefatory Address by the Rev. T. Dale, M.A. Pp. 185. (London, Washbourne).—A new and good edition of Bishop Burnet's well-known work, with notes and references to the fathers, by a member of Cambridge University; as well as an appropriate introduction from the able pen of the Vicar of St. Bride's.

*Plain Sermons on Subjects Practical and Prophetic*, by the Rev. A. McCaul, D.D. of Trin. Coll., Dublin. Pp. 376. (London, Wertheim; Cheltenham, Wight and Dewe).—Dr. McCaul is always earnest, and generally persuasive to excellent, moral, and religious conduct. He holds some peculiar opinions on various topics, which it is not within our province to examine; and we can only say, therefore, that these sermons may be perused with Christian benefit.

*The English Mother, &c.*, by a Lady. Pp. 84. (Bath, Pocock; London, Simpkin and Co.; Burns).—Early lessons on the Church of England, calculated to familiarise with its doctrines.

*Lectures on Locke; or, the Principles of Logic: designed for the Use of Students in the University.* 8vo. pp. 240. (London, Cadell).—A lucid and practical book of instruction, which we cordially recommend to those who desire to pursue the study of logic effectively.

## ARTS AND SCIENCES.

### ROYAL INSTITUTION.

FRIDAY, 12th.—Mr. Carpmael 'On the Manufacture of Cards (for Cotton and other Works).' The card is, of itself, a simple instrument, in appearance somewhat like a hair-brush, and consisting of a sheath or surface of leather, into which fine wire teeth have been set, but a most important one when viewed as an indispensable apparatus in the working of cotton, wool, and flax, and also, in part, of silk. Mr. Carpmael called attention to the general construction and use of the card, and related and illustrated the history and progress of improvement in the many processes formerly employed, but now blended into one by Mr. Walton, for its manufacture. The machine perfected by him is the most striking instance of ingenuity and great skill in the combination of instruments to produce an instrument we ever beheld. The working of its mechanical fingers, the accuracy of its movements, and the completeness of its operations, together with the beauty of its construction, were much to be wondered at, and greatly to be praised. Its various offices are to supply itself with wire from a drum-head wheel, to cut the wire into a proper length, to bend it into the form of a staple, to puncture two holes in the sheath, to pass the staple-form wire through these holes, to force them firmly against it, and then to give the shanks of the wire the required crooked figure. These it performs in rapid succession, and more, because for the setting of each wire it is evident that the sheath must be presented to the prickers in a new position; all the wheels, springs, &c. necessary to accomplish this are in action simultaneously, or rather in strict harmony with the other operations. It was worked by hand on Friday evening, but it is adapted for, and intended to be set in motion by steam; and a provision is made that, should the least thing be out of order,—should there be even the slightest bend in the wire, or the wire out of rule or line, it will immediately throw itself out of gear, and stop. Is not this machine a wonderful combination of instruments, and almost worthy to be called a mechanical being? Previously to 1810, these several offices were performed by separate machines, and the hand and foot setter, the most expert workman, could only set thirty wires per minute. Since then, Mr. Dyer's machine has been generally used; this combines several of the processes, and can set from 100 to 140 per minute. Mr. Walton's can set from 400 to 500 per minute. The importance of a manufacture may be calculated from the quantity of materials employed. In this country, for these cards, 48,000lbs of wire, and about 4000 hides, are cut up weekly. No hand labour could supply the enormous demand of the present day. But whether the substitution of machinery for hand labour be a benefit in all its consequences, we leave for the consideration of the political economist. One improvement in the card, unconnected with the machine, is the giving the sheath a surface of India rubber. The rigidity of the leather caused the bending of the wire teeth by any knotty substance in the cotton to be a permanent injury, whereas the elasticity of the caoutchouc enables the

bent wire to regain its former correct figure, and thus is the instrument preserved. All the advantages afforded by the natural card, the teasel, are therefore acquired for the wire card; and, one more, the latter is not injured by being wetted. When Mr. Carpmael had ended, Mr. Faraday, in the name of the committee, bade farewell, this being the last in the present season of the evening meetings, which have been continued now for fourteen or fifteen years with great gratification and instruction to their numerous attendants.

### STATISTICAL SOCIETY.

MR. HEYWOOD in the chair.—A very important paper by Colonel Sykes was read, viz. 'Statistics of the Metropolitan Commission in Lunacy.' Colonel Sykes is one of the commissioners. The Commission embraces a period of seven years to 1839, and a range taking in London, Westminster, Southwark, Middlesex, and seven miles adjacent. The establishment of a board so important to the interests of the public, the cause of humanity, and the security and proper treatment of lunatics, is owing, if not in its original design, yet certainly in its consolidation and working, to the philanthropic zeal and perseverance—nay, personal pecuniary sacrifices, of Mr. R. Gordon, M.P. for Windsor, and one of the joint secretaries of the Board of Control. Passing over the constitution of this salutary and most necessary Commission, we come to more generally interesting details. The owners of asylums never know on what day they will be visited, so that they are always taken unprepared; and as the commissioners never grant a license to any house without being in possession of ground-plan and sections of the building, there cannot be any places of concealment in which an afflicted member of society might be immured for guilty objects. If the commissioners think any patient sufficiently recovered to admit of his discharge, and the relatives of the party, or the parish-officers, in the case of a pauper, refuse to take the patient out, he or she is visited three several times at certain intervals, and then set free by order of the Commission. The commissioners can also visit the asylums by night upon information upon oath of mal-practices. With respect to persons keeping houses for the reception of insane persons, the following commissions or omissions render them subject to the penalty of a misdemeanour:—Omitting to give a full and complete plan of the whole house, or additions or alterations; keeping a house for the reception of two or more insane persons without a license; receiving patients without an order and certificate knowingly and wilfully; not making an entry of the name, &c. of the person bringing a patient; signing a certificate with the intention to deceive; signing a certificate, being father, son, brother, partner, or part proprietor, or the regular professional attendant of the house, with others of a similar nature, and sufficiently stringent and minute to secure justice to the patient, order and system in a house, and punishment for neglect. The precautions taken with respect to the admission of patients are equally characterised by humane considerations for the state of the afflicted and the liberty of the subject. The feelings of families are as much respected as possible, and the conditional oath of secrecy taken by the commissioners ensures this object; nevertheless, any party desirous of ascertaining whether any particular person be confined in any of the asylums can obtain the required information by going through a form ap-

pointed. Forty-two asylums have been under the supervision of the Commission. Some slight changes have taken place in the abandonment of two or three establishments, and the addition of others, but the total number of patients on the books of the several asylums under the Commission since its establishment, exclusive of last year, is 17,031; comprising 3685 male paupers, 4739 female paupers; 4658 male patients, and 3941 female private patients. The gradually increasing confidence of the public being manifested by the increase of the patients in the asylums from more than 1400 in 1833, to more than 1700 in 1839. Of the above number of 17,031 lunatics, 4021 have been discharged or removed. The most marked and most melancholy feature in the statistics of the Commission is the percentage of deaths: this amounts, in the whole number of afflicted, to 10.13; the deaths of paupers are 12.76 per cent, of private patients only 7.56; the male paupers' deaths average is 15.52, the female, 10.6; the private male, 8.73, female, 6.2. Colonel Sykes, in his valuable paper, refers to ample tables; to which we, of course, can only allude.—M. de Hamel, of St. Petersburg, laid on the table of the Society an elaborate typographical map of the city of Moscow, which excited considerable interest. M. Hamel is at present engaged in instituting a statistical inquiry into the manufactures and commerce of that city, by command of the government.—This was the last meeting of the present session.

#### LINNEAN SOCIETY.

THE Lord Bishop of Norwich, President, in the chair.—Mr. Thomas Nightingale, who has recently returned from a botanical expedition to New Guinea, Java, and Ceylon, exhibited drawings of several interesting plants and specimens of fruits from those countries; also specimens, in a high state of preservation, of several species of birds of paradise.—Mr. Pamplin exhibited specimens of a rare English species of *Orchis*, from the hills near Streety, Berks.—Mr. Westwood exhibited fourteen species of the singular tribe of insects named *Pausside*.—The paper read was 'A Description of a New Species of *Cerapterus*, a Genus belonging to the above-mentioned Family,' by Mr. Westwood. The species is remarkable as being the only one of the genus from America; it was collected in Brazil by Mr. Miers. The President nominated Mr. Brown, Mr. Forster, Dr. Horsfield, and Mr. Lambert, Vice-Presidents for the present year.—A portrait of Dr. Booth, late secretary of the Society, was presented by a number of the fellows.—This was the last meeting of the present session. The meetings recommence in November.

#### WILTSHIRE TOPOGRAPHICAL SOCIETY.

ON Saturday last a party of gentlemen met at the Freemasons' Tavern, to establish a Society under the above title; the object of which is to collect materials for, and publish, historical and archaeological accounts of the northern part of the county in particular, and of all places within the shire, which are without their local topographer. Mr. Britton, with whom the Society originated, explained that, having long lamented the want of a good history of his native county, and despairing of seeing it carried into effect by any individual, he had solicited some of his friends to join him in the formation of a Society, which, by mutual co-operation, industry, and zeal, might easily effect that which could not be accomplished by any one, two, or even three persons. Nearly ninety

noblemen and gentlemen of the county had responded to his appeal, and the present meeting was called to organise, and give a substantial form and character to, the Society. George Poulett Scrope, Esq. M.P., presided. A series of resolutions were passed, and a code of laws adopted. The Marquess of Lansdowne was elected as Patron and the first President, and the following as Vice-Presidents:—The Bishop of Salisbury; the Right Honourable Sir John Cam Hobhouse, Bart.; Robert Gordon, Esq. M.P.; and Joseph Neeld, Esq. M.P. Eighteen gentlemen were named as the Council, with instructions to arrange and digest the laws and regulations, and to print and circulate the same, with topographical queries, and such other matters as they may deem advisable. It will give us pleasure to learn that this novel institution is conducted with harmony and energy, and that it will speedily give evidence of its capability by producing such topographical publications as may redound to its own honour, and awaken a laudable emulation in gentlemen of other counties whose histories have been neglected.

#### PARIS LETTER.

Academy of Sciences, June 16, 1840.

SITTING OF JUNE 8.—The sitting opened with the reading of some observations by M. Liouville, in reply to strictures by M. de Pontécoulant, on a report drawn up by him on a memoir of M. Leverrier's, relating to various problems of physical astronomy. This was another episode of the main quarrel between M. de Pontécoulant and M. Arago, which has been taken up by all the Academy against the former. As we have before hinted, M. Arago's political opinions are known to have a good deal to do with it; and the Parisian press, according as its political colours are, have ranged themselves on one side or the other. What are called the *Journaux du Château* are all on the side of M. de Pontécoulant. The dispute is totally unworthy of the Academy, and altogether uninteresting to any body but a mere Parisian.—M. Freycinet presented to the Academy the last number of the narrative of his voyage of circumnavigation in the *Uranie*, and briefly recapitulated its contents.—M. de Blainville also presented a new number of his work on the osteology of vertebrated animals.—M. Becquerel presented the second part of the fifth, and the whole of the sixth volume of his "Experimental Treatise on Electricity and Magnetism." He mentioned that he had detailed Faraday's experiments with great care, and had also given an analysis of Arago's treatise on Lightning.—M. Séguier presented to the Academy a model and description of the electro-motive machine invented by Patterson of New York.

A letter was read from M. Gasparini, stating that in certain parts of the kingdom of Naples the country people had remarked that when a certain spot produced mushrooms in great abundance, there were always to be found near the surface of the soil black, irregular, solid substances, which they called mushroom-stones, and which they believed promoted the growth of the fungous plant. M. Gasparini, suspecting the true nature of this substance, examined several localities, and ascertained that they were a species of truffle, sometimes of enormous dimensions, and in one instance attaining the size of a child's head six or eight years old. This specimen was now produced before the Academy.—M. Stanislas Julien sent another extract from a Chinese or Japonese work relative to the rising of a volcanic island: it was

as follows:—"In the fourth year of the reign of King-Te, of the dynasty of Song (A.D. 1007), there was a mountain that rose from the sea, south of Corea. When it began to rise, clouds and vapours caused a profound darkness; and the earth trembled with a noise like that of thunder. After seven days and nights the darkness began to be dissipated. The mountain was then about 100 *schang* (1000 feet) high, and 40 *lis* (4 leagues) round. No trees or plants appeared on it. A thick smoke covered its summit; and at a distance it looked like an immense mass of sulphur."

M. Degoussé addressed a note to the Academy on the successful application of borings to draw off water in order to prevent a landslip at Meudon, near Paris. As the embankments for the Versailles and Meudon railroad were making, a considerable portion of soil, with some houses on it, slipped, and more was threatening to follow, when, by their rapidly drawing off the water from a substratum of clay and sand, which caused the slip, the whole hillside was left dry, and the danger obviated. The borings were carried through the clay stratum into the porous strata beneath, and the water ran off immediately.

An invitation to the Academy was read from the Committee for organising the fête at Strasburg in inauguration of the statue of Guttenberg, the printer. All members not too much occupied were begged to honour the fête with their presence on the 24th inst.—The last number of Mr. Daly's "Revue de l'Architecture et Travaux Publics" was laid on the table.

*Academy of Medicine.*—At the last sitting M. Velpeau produced a female patient, from whom he had cut away two-thirds of the lower jaw-bone, but on whose face there was not only no scar of incision, but not even any deformity.—Some curious experiments were detailed to the Academy upon live pigeons, portions of the brains of which had been artificially removed without death immediately ensuing.

*New Books.*—M. Michel Chevalier, who has lately returned from an extensive tour (not his first) through the United States, has published an elaborate work on the means of communication possessed by those territories; in which he dwells at much length on railroads, canals, and other public works constructed there. This gentleman has the character of being an acute and accurate observer: and his opinion is considered of importance now that the French nation are just beginning to understand what railroads and steam-engines really mean.—We understand that in the recently published number of the "Encyclopédie des Gens du Monde" the article "Bourgogne" (its history) is from the able pen of M. de Sismondi. The publication itself flourishes.—Messrs. Didot have advertised a new and complete edition of Ducange's "Glossary," with all the additions of the Benedictines, Carpentier's Supplement, &c.; to come out in thirty-two quarterly numbers, forming eight vols. quarto.

The Society of Sciences at Haarlem has conferred on Professor Marcel de Serres, of Montpellier, a gold medal, for his memoir on the causes of migration in animals, especially birds and fishes.

Captain Dumont d'Urville has discovered a new land (in January last) in the latitude of the antarctic circle, and 180 degrees east longitude from Paris, to which he has given the name of Adèle. He also writes from Hobart Town, on February 14th, that he had deter-

mined the southern magnetic pole with great accuracy!!!

M. Bouhée, who is a well-known practical geologist of Paris, where he gives courses of lectures, although not attached to any of the colleges as professor, has been commissioned by government to inspect the principal quarries and veins of marble in the Pyrenees, and to report thereon; it being considered desirable to know how far the marble from that part of France can best be made available for purposes of public utility. We see that this gentleman has just advertised in the French papers for geological pupils, or companions, to make an extensive tour with him, first through France to the Pyrenees, and then through parts of Italy and Switzerland; the excursion to last from July to November.

The following is M. Gannal's mixture for injecting the carotid artery, whereby all the purposes of embalming are attained:—One kilogramme of dry sulphate of alumine, dissolved in half a litre of warm water, and marking thirty-two degrees of the areometer. About three or four litres of this will inject all the vessels of the body, and will preserve it in summer;—in the winter, from one to three litres are enough. But, to keep away insects, there ought to be added to the above chlorure of copper, at the rate of 100 grammes to a kilogramme of the sulphate of alumine, or else fifty grammes of arsenic acid. This applies to all kinds of animals, birds, fishes, &c., as well as to the human subject.

*Sciarada.*

Si dice per proverbio in questo mondo,  
"Chi tralascia il primo non fa il secondo."  
Non ha becco l'inter, né penna ed osso,  
E vola pur quanto un uccello grosso.

Answer to the last:—Pen-nello.

#### LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, June 6.—The following degrees were conferred:—

*Doctor in Divinity.*—P. Maurice, Chaplain of New College and All Souls.

*Masters of Arts.*—T. Hussey, C. T. Nesbitt, Brasenose College, Grand Compounders; Rev. E. H. Sawbridge, Rev. E. H. M. Sladen, Balliol College; Rev. J. Irving, Rev. W. Whitelegg, Queen's College; Rev. F. M. Knollis, Fellow, P. L. Drake, Demy of Magdalen College; Rev. T. G. F. Howes, Oriel College; Rev. H. J. C. Smith, Rev. A. R. Symonds, Wadham College; Rev. A. P. Stanley, Fellow of University College.

*Bachelors of Arts.*—W. F. Addison, Wadham, W. A. Campbell, Christ Church, Grand Compounders; G. Paterson, G. Arden, R. Gee, E. S. Venn, T. Fox, Wadham College; J. Isaacson, G. Pretyman, New Inn Hall; C. J. Sale, Scholar of Lincoln College; C. T. A. Lusby, Scholar, G. W. Dassen, Magdalen Hall; C. K. Dean, Queen's College; W. B. Garnett, E. F. Coker, A. Coote, G. M. K. Ellerton, J. O. Taylor, H. D. Schofield, R. Fletcher, Scholars of Brasenose College; J. B. G. Jones, T. Jones, Jesus College; R. H. Chichester, W. B. Hole, N. A. Howard, L. M. Peter, J. Walter, T. D. Salmon, C. Forbes, D. D. Stewart, W. Renaud, Exeter College; T. Mitchell, G. Wood, Oriel College; H. C. Adams, Demy of Magdalen College; R. Cholmeley, Exhibitioner of Corpus Christi College; J. T. B. Landon, Scholar, W. Milton, Worcester College; T. Garrard, Fellow, R. O. Walker, St. John's College; F. Tate, Scholar, H. T. St. John, University College.

June 10.—The following degrees were conferred:—*Masters of Arts.*—Rev. J. M. Capes, Balliol, C. H. Monseil, Worcester College, Grand Compounders; Rev. G. Richards, Rev. J. E. Cox, All Souls College; the Lord Viscount Esmyn, C. T. Newton, Student, Christ Church; Rev. D. Lewis, Fellow of Jesus College; W. D. Furneux, J. B. Paige, Rev. I. Nicholl, Rev. J. Graves, E. E. Estcourt, Exeter College; Rev. J. D. Dixon, Rev. H. Milne, Rev. R. H. Baxter, Brasenose College; E. J. Hensley, Fellow, W. R. Wardale, Scholar, Rev. H. F. Gray, Corpus Christi College; Rev. L. H. Rudd, Scholar, E. J. Bevir, H. Bubbs, Pembroke College; J. H. Moor, Demy of Magdalen College; Z. Mudge, C. H. Borrer, Rev. I. P. Prescott, Oriel College; F. Poynder, Wadham College; A. W. Hadden, Scholar of Trinity College.

*Bachelors of Arts.*—G. T. Spring, R. W. Greaves, St. Edmund Hall; J. H. Southcombe, All Souls' College; H. Thompson, P. Holmes, C. S. Grueber, Magdalen Hall; E. Shephard, Exeter College; R. K. Sconce, Brasenose College; the Marquess of Kildare, J. R. Buckland, Student, F. H. M. Blades, Student, G. A. Ward, Student, W. White, J. Shank, W. Partridge, C. F. S. Weidemann,

D. Royce, Christ Church; E. B. Burrow, Pembroke College; J. E. Welby, Demy, Magdalen College; G. Hext, Scholar, H. J. Marshall, Exhibitioner, Corpus Christi College; W. H. Orme, St. John's College; H. Skrine, A. Baker, Wadham College; H. Bennett, Scholar, C. Forster, Worcester College; W. Bushnell, R. T. Fawcett, M. D. Scott, University College; H. Rendall, Scholar, H. Neville, A. W. Wetherall, J. Humfrey, Trinity College.

CAMBRIDGE, June 11.—The following degrees were conferred:—

*Honorary Master of Arts.*—Lord A. R. C. Loftus, Trinity College, third son of the Marquess of Ely.  
*Doctor in the Civil Law.*—J. S. Roupell, Trinity Hall.  
*Bachelors in Divinity.*—Rev. R. Hayne, St. Peter's College; Rev. W. D. Rangeley, Fellow of Queen's College; Rev. J. Shaw, Fellow of Christ's College; Rev. C. Merivale, Fellow of St. John's College; Rev. E. Dodd, Fellow of Magdalen College; Rev. R. Buxton, Rev. F. Watkins, Fellows of Emmanuel College.

*Bachelor in Physic.*—H. F. Burman, Caius College.  
*Porson Prize.*—On Tuesday last, the Porson prize for the best translation of a passage from Shakspeare into Greek verse was adjudged to J. C. Conybeare, of St. Peter's College.

Subject—*Ivovius and Cresida*, act 1. scene 3. beginning  
"The ample proposition that hope makes,"  
and ending  
"Make a toast for Neptune."

*English Prize Poem.*—The Chancellor's gold medal for the best English poem was on the same day adjudged to R. Andrews, of Pembroke College.  
Subject—*Richard the First in Palestine.*

#### ROYAL SOCIETY OF LITERATURE.

JUNE 18th. Lord Bexley, V.P. in the chair.  
—The following papers were read:—1. Observations by Mr. Thomas Phillips, referring to a former paper by him on the pronunciation of some British and German words; in which the writer suggested that the strong pronunciation of the letter *x* by the Spaniards was brought by the Goths from Dacia, and that it is in reality the Æolic digamma.—3. Remarks by Mr. Millingen, following up the subject of a paper by the same writer, read at the last meeting, on a figure of Venus Urania; including many curious particulars respecting the worship of that deity, and suggesting the desirableness of a more systematic inquiry on the subject.—3. The Rev. R. Woolmer Cory, 'On the Site of the Ancient City of Shiloh,' determining it to be at the ruins of a place between Shechem and Bethel, bearing the name of Seelón.—4. 'On the Scope of the Hieroglyphic Tablets of Succession,' by Mr. Cullimore. The writer brought together in this communication several facts, tending, in his opinion, to confirm the correctness of his attempted restoration of the wanting portion of the Tablet of Abydos, published by the Society in 1834.—5. 'An Essay on the Reciprocal Influence of Mind and Body,' by Mr. W. Newnham, a long and elaborate production, a small part only of which had been read when the time arrived for terminating the meeting.

#### SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY, V.P. in the chair.—An Address of Congratulation to Her Majesty, on her providential escape from the late atrocious attempt at assassination, was laid before the Society by the President and Council, which was signed by all the fellows present.—Mr. Davis exhibited a small statue in bronze, with some other Roman relics found in digging the foundation of an addition to St. Thomas's Hospital.—Sir Edward Home exhibited a ground-plan of Odiham Castle, Hants, with an outline drawing of the keep.—Mr. L. A. B. Waller exhibited seven drawings of monumental brasses, as follows: 1. Brass of John Levensthorp, Esq. and Katharine his wife, in Sawbridgeworth Church, Herts, 1433. 2. Of Nicholas Manston, Esq. St. Lawrence Church, Isle of Thanet, 1444. 3. Of John Daundelyon, Esquire, Margate Church, 1446. 4. Of Walter Grene, Esq. Hayes Church, Middlesex,

1450. 5. Of a Knight of the Paris Family, temp. Hen. VI. 6. Of Richard Quatremayns and Sybil his wife, in Thame Church, Oxfordshire, 1468. And 7. Enamelled brass of Sir John Say and Wife, in Broxbourn Church, Herts, 1473. These brasses afford good illustrations of military costume during the reigns of Henry VI. and Edward IV., the period of the contest between the houses of York and Lancaster.—Mr. Whisbaw exhibited an impression from the Seal of Isbury's Almshouses at Lambourn, Berkshire.—The reading of Mr. J. G. Nichols's observations on the heraldic devices engraved on the figures of Richard II. and his Queen, on their monument in Westminster Abbey, and the table of brass on which the figures are laid, was concluded. The circumstance that so splendid a monument should have been erected to the memory of the unfortunate King Richard was explained from the contract for its erection, shewing that the king himself caused it to be made in his own lifetime, on the death of his beloved wife. This meeting closed the session; and the Society adjourned until Thursday the 19th of Nov. next.

#### ROYAL IRISH ACADEMY.

MAY 25.—The Rev. Dr. Todd announced to the Academy that the transcript of the Book of Lismore, borrowed some time ago by the Council from his Grace the Duke of Devonshire, was now completed; and he exhibited it, together with the original, to the meeting. After some remarks on the beauty of the transcript, which was made by Mr. Eugene Curry, and the means taken to secure its accuracy, Dr. Todd proceeded to give some account of the original MS.; the circumstances under which it was discovered in the castle of Lismore, in 1814; and its subsequent history. He shewed that it received the name of "the Book of Lismore" merely because it happened to be found in that castle, and that it had no connexion with the Church of Lismore, as the appellation of "Book of Lismore" would imply. It was written, probably, for some members of the MacCarthy family, and was a sort of Bibliotheca, or collection of tracts on all such subjects as appeared interesting in religion, legendary lore, and history, in the fourteenth century, at which period the book was most probably written. After describing the various mutilations which the volume appears to have sustained, Dr. Todd proceeded to describe its contents, and to make some remarks on the sources of the different tracts contained in it. These are, Lives of St. Patrick, St. Columkille, St. Bridget of Kildare, St. Senan of Scattery Island, St. Finnen of Clonard, and St. Finchnus of Brigown, all in Irish of great purity and antiquity; the conquests of Charlemagne, taken from the celebrated romance of the middle ages, falsely attributed to Tilpin, or Turpin, archbishop of Rheims; several legends, as the story of All-hallowtide, of Antichrist, of St. Canice of Aghaboe, of David and Solomon, of a Christian and a Jewish Child, of St. Comgal of Bangor; and the history of the Lombards, from the celebrated work of Paul Warnefrid. Of this latter tract, which is full of strange tales and legends, Dr. Todd read a short portion, in an English translation. The reading of the remainder of the paper was deferred to the next meeting of the Academy.

#### FINE ARTS.

##### NEW PUBLICATIONS.

*Series of Portraits of the Sovereigns of England. Painted in Enamel.*

H. P. BONZ, Esq., Enamel Painter to her

Majesty, her Majesty the Queen Dowager, and H.R.H. the Duchess of Kent, has opened (by card) to his friends and other lovers and admirers of the fine arts this most curious and valuable collection, to be viewed on Mondays and Thursdays during the months of June and July. It cannot be otherwise than gratifying to the well-wishers of the British school to contemplate, in these beautiful examples, the progress and perfection attained in that difficult department of art, enamel painting, the characteristic qualities of which are truth and durability. It lives in our memory when this department of art was confined to one or two professors, and was limited to works of very small dimensions. It was reserved for the late H. Bone, Esq. R.A. to enlarge the latter to the size they have now attained, and for his son, H. P. Bone, not only to advance the progress of the art, but to master its difficulties so far as to be able to enamel immediately from the life, by which means the spirit of an original composition is preserved. Those who may examine his performance in this way will find them invested with the purest tints and the richest hues of the best examples of portrait, either in oil or in water-colour painting. The rarity, as well as the beauty, of many of the individual portraits in the above-mentioned series renders it highly valuable, whether in a national, a historical, or an antiquarian point of view.

*A Series of Monumental Brasses, extending from the Reign of Edward I. to that of Elizabeth.* Drawn and Engraved by J. G. and L. A. B. Waller. Part I. London: Waller, Pickering, &c.

AN excellent companion to Stothart's "Monumental Effigies." The first part contains, 1. Ralph de Knevynton, in Alveley Church, Essex. 2. A Notary, in St. Mary Tower Church, Ipswich. 3. Archbishop Harsnett, in Chigwell Church, Essex. 4. A Knight of the Cheyne Family, in Drayton Beauchamp Church, Buckinghamshire. These plates, and also some drawings from other brasses, intended as future contents of the work, which we have seen (*vide* the report of the proceedings of the Society of Antiquaries in the present No.) augur well for the future progress of the work: they display much talent, and careful and elaborate attention to details; and we sincerely wish the young and spirited projectors the patronage they so richly merit.

*The Theory and Practice of Water-Colour Painting.* By George Barret. 8vo. pp. 123. London, 1840. Ackermann and Co.

MR. BARRET is not only a distinguished artist himself, he is the son of a distinguished artist. His father was one of the most able landscape-painters of his day; warmly promoted the establishment of the Royal Academy, of which he became a member; and was among the first of those who, departing from the wishy-washy style of landscape-drawing then in vogue, by the introduction of rich and powerful local colours, led the way to the perfection in that interesting branch of the fine arts which has since elevated it to the rank of painting. Mr. George Barret, the author of the treatise under our consideration, was, in 1805, one of the founders of the Society of Painters in Water-Colours. They were sixteen in number. Most of them are no more; and, of the survivors, the names of only four, Messrs. Barret, Cris-tall, Hills, and Varley, appear in the catalogue of the present year. To the annual exhibitions of the Society, Mr. Barret has been a regular and most valuable contributor. The glowing

and mellow sunsets and twilights in which his masterly pencil evidently delights, have, more especially, been among the chief attractions of those exhibitions. Thus, with his hereditary and personal knowledge, and with the means which he has enjoyed, during a long course of years, of closely observing the practice of all his highly-gifted contemporaries, it is difficult to conceive any one better qualified than Mr. Barret for his present undertaking.

We confess, therefore, that we are rather disappointed at the result. Not at the quality of it, for that is excellent; but at its brevity. On closing the volume, we felt somewhat like a hungry man, who has been compelled to dine on a single partridge, when he could devour a whole covey, and knows that they are in the larder. Mr. Barret must have vast stores in his mind, if he chose to dispense them. However, let us be thankful for the information which he does communicate. To the tyro it must be invaluable; and parts of it may not be unacceptable even to the more advanced in art. He begins by shewing his pupil how to obtain an intimate knowledge of drawing and outline. That indispensable foundation for excellence being laid, he proceeds to treat of light-and-shade, and colour; pointing out the pigments which ought to be preferred, and describing the best modes of combining and using them. In this part of the work much insight is given into those technical processes which, however subordinate, are still among the necessary acquirements of an accomplished artist. The dryness of these details is relieved by a variety of general observations, all, nevertheless, having a strict reference to the main subject. Among other things, we were much gratified by the opinion which Mr. Barret expresses of Gaspar Poussin, coinciding as it does with the estimate which we have long formed of that artist; namely, that, upon the whole, he was the greatest landscape-painter that ever lived.

Mr. Barret's style of writing is pleasing and unaffected; but we regret to add, that it is occasionally a little defective in perspicuity. We will quote a single instance. In pages 74 and 75 the following passage occurs:—

"I will now endeavour to explain the cause of transparency, which is the result of transmitted light and opacity, by the light being reflected from the surface of an object."

This is unintelligible. To say nothing of the incorrect punctuation (which, no doubt, is a typographical error), the imperfect construction of the last part of the sentence throws the meaning of the whole into obscurity. What Mr. Barret intended to state was probably as follows:—

"I will now endeavour to explain the cause of transparency, which is the result of transmitted light; and the cause of opacity, which is the result of the light being reflected from the surface of an object."

But this, and other trifling blemishes of a similar nature, may be easily removed, before the volume goes to that second (and, we trust, enlarged) edition to which its merits must, in our opinion, certainly conduct it.

#### THE DRAMA.

*Her Majesty's Theatre.*—The appearance of Mario, and a new ballet, *L'Ombre*, in which Taglioni is a delicious spectre, though the rest is spun out and the scenery refuses to move, either mechanically or supernaturally, have been the novelties here.

*Haymarket.*—A slight farce by Buckstone (writer and actor) has been brought out here with laughable success. It is a *Kiss in the*

*Dark*; and never did such an event, accompanied by smutted faces, produce more amusement.

*English Opera.*—In addition to the successful new production of *The Three Secrets*, and the second part of *Thomasse Thumb*, some of the best Olympic pieces have been transplanted hither. The popular *Ladies' Club*, with its third Chairwoman (Mrs. Orger), and Mr. C. Dance's *Sons and Systems*, with an almost new cast of characters, are as attractive as ever; and, in turn with other cleverly acted pieces, give an evening's amusement well deserving of public patronage. Indeed, we hardly know where so efficient and entertaining a combination of comic parts could have been or be seen together.

*Prince's Theatre.*—*The Templar and Jewess (Ivanhoe)* with very heavy music by Marshner, has been tiresome at this house. Spohr's *Jessonda*, with a *débutante*, Mad. Sloeckel Heinfetter, both as to music and musician, much better.

*Drury Lane.*—After a week's attention to the entertainment at this theatre, we most cordially recommend a visit to the *Concerts d'Été*. The music, we need scarcely say, is of the very first order; and the solos, of which there are two, at least, in the course of each evening, are such as cannot be surpassed. The whole thing is so excellently managed, that families can join in the shilling lounge with as much comfort and safety as if attending a half-guinea concert. Carpeted floors, quantities of fresh flowers, and wax-lights, also lend their aid to make an evening pass here quite delightfully. Mr. Eliason has certainly reached the perfection of concert-giving.

*Queen's Concert Room.*—The last Societa Armonica Concert was held in these rooms on Monday evening, when, in addition to Tamburini, Rubini, and Grisi, a Mademoiselle Constance Janssens made her first appearance. She is a great addition to our vocal corps, possessing a good, clear, full voice, and having the addition of flexibility and high cultivation. We do not think the favourite airs of opera prima donnas the best selection for a young *débutante*; comparisons will arise, and however gifted the latter may be, they can scarcely be in her favour. The instrumental music was excellent, more particularly the performance of Mr. Haumann on the violin.

#### ORIGINAL POETRY.

##### THE THREE HOROLOGES.

*From the Italian.*

SHADE, wheel, and sand, by line, by steel, by fall,  
Dark, hard, minute slow-moving waste the day.  
Oh! deadly shade that wrap'st me in thy pall!  
Oh! cruel wheel that drawest my life away!  
Oh! heavy sand to all that live in woe!  
With griefs, racks, burthens, do ye hold your sway.  
Ye threefold death, gloom, torture, restless flow,  
Snarcs, pains, and dangers, aye o'er life ye spread,  
Dull type of horror, shade to all below,  
Blind wheel that ever urges as I go!  
And thou, small dust, mute token from the dead!  
Three silent guides conduct us to the grave,  
Be patient, earth, the blood ye shed can save.—R.

#### VARIETIES.

*The Temple Church.*—We rejoice to learn that this ancient and singularly fine specimen of architecture is about to be cleared and restored. There can be no doubt the work will be performed with the taste and judgment it requires. If we remember rightly, the Temple is one of the only four round churches in England. The oldest is supposed to be that of St. Sepulchre at Cambridge (perhaps *temp.* Henry I.), and the other two are St. Sepulchre at North-

amptton, built by the Templars from 1180 to 1220; and the church at Little Maplestead, Essex, temp. Henry III. The London church is dated (see Britton's "Architectural Antiquities") in 1185, but the clustered columns and incumbent arches are somewhat more modern.

**Gerard Griffin.**—We regret to hear of the death of Mr. Gerard Griffin, the author of the "Tales of the Munster Festivals," "The Collegians," and other popular works. He was a native of Limerick, in his thirty-sixth year, and had latterly retired to a monastery in Cork, devoting himself to religious duties and devotions. His first literary efforts appeared in *The Literary Gazette*, when he was not twenty, under the signature of "Oscar."

**John Clare, the Poet.**—The newspapers mention that this amiable man and sweet rural poet died some months ago, in the Lunatic Asylum of York. Alas for poor genius!

**Paganini** is dead, and left a very large fortune, principally to his son, by (it is said) a Jewish woman of Milan.

**The South London Horticultural Society** had a splendid show of flowers at the Surrey Zoological Gardens on Tuesday. The weather was most propitious, and many medals, &c. were awarded.

**United Service Institution.**—On Thursday evening, the annual concluding *conversazione*, given by the members of and subscribers to the United Service Museum, was numerously attended. The arrangements were calculated, and appeared, to afford general satisfaction. Besides the many valuable and interesting relics, models, natural curiosities, &c. of the museum, the solidification of carbonic acid gas, Mr. Ingoldby's mechanical wonders, specimens of Alhambra mosaic in pottery and porcelain, casts, drawings, &c. &c.; and last, though not least, the liberal refreshments arranged, and in progress, in the several rooms, gave amusement to all and inconvenience from crowding to none. Much credit is due to Mr. Tonna, under whose direction and care the museum and the several entertainments are conducted.

**The Industrious Fleas.**—In a small work upon English history, called the "Faithful Analyst," is the following curious fact related:—"In this year (1576), one Mark Scalliot, a Blacksmith of London, for Trial of his Skill, made one Lock of Iron, Steel and Brass, of Eleven several pieces and a Pipe Key, all clean wrought, which weighed but one grain of gold of Forty Three links, to which a chain Key and Lock being fastened, and put about a Flea's neck, it drew the same with Ease; all which Lock, Key and Chain and Flea weighed but one grain and a half."—E. W.

**Wyld's Battles and Sieges, &c.**—We have only taken a cursory glance at Mr. Wyld's maps and plans of the military operations of the war from 1808 to 1814, and have to express our admiration in general terms at the triumph of art in this line which he has accomplished. New means of engraving have been invented and brought into use, and these representations of Salamanca, Torres Vedras, and all the other scenes of Wellington's glories, afford the most perfect and lively idea of the grounds occupied, and consequently of the skill and genius displayed in the strategies employed. Next week we shall probably enter upon some of the details; but, for the present, may conclude by stating, that nothing so illustrative of warfare was ever before executed on the surface of paper.

**Hall's Patent Hydraulic Belt or Water Elevator.**—Having occasion to be in the neighbour-

hood of Portman Market during the last week, we looked in where the above machine was being exhibited to a few gentlemen, foreign and English, admirers, as well as professors in mechanics; and we have no hesitation in saying that we were impressed with the great utility of the hydraulic belt in the various positions where it may be applied, whether in emptying ponds, draining or irrigating land, raising water to any level: in short, in any purpose where hydraulic aid may become necessary. The construction of the machine is so simple and economical, that the elaborate force-pump is likely to be entirely superseded; indeed, so simple is the mechanism that it may be turned by any animal, and, in many instances, be worked by manual labour. As a proof of its excellence, a hole a foot square was cut in a vessel, and although two men only applied the machine, yet the water never reached six inches in the hold.

**Tornado.**—A tornado of extraordinary violence has nearly levelled the town of Natchez, in America, and destroyed, it is calculated, property of the value of a million of dollars. It afterwards swept down the river eight miles towards the sea, doing infinite damage. We trust we shall receive such an account of it as may throw a light on Colonel Reid's theory of storms.

**Academy of Fine Arts.**—At a recent meeting, an election took place of an *Academicien libre* (honorary member), a vacancy having occurred by the death of M. Senones. The candidates were Count de Montalivet, Intendant-General of the Civil List (the official paymaster of all the orders of pictures, statues, &c. for Versailles, &c.); M. Brongniart, Director of the Ceramic Museum at Sevres; and Mr. Onslow, the great composer. The ballot gave for these gentlemen thirty-six votes, four votes, and two votes respectively.—*From our Paris Correspondent.*

**Academy of Medicine.** Sittings of 28th April and 5th May.—A report was read 'On a Demand for a Patent for the use of Lactate of Iron.' The report concluded against it, as being a substance already known and described.—M. Sedillot, sen., read a memoir recommending the practise of re-vaccination.—M. Nonat presented an essay 'On the Employment of Sulphate of Quinine, and the use of the Scarifying Process in the Treatment of Simple Intermittent Fevers.'—*Ibid.*

The extensive publication by Messrs. Didot, "l'Univers Pittoresque," is taking very well with the public. All the different countries are allotted to men who have made them their special study, and the consequence is, that the descriptions are very carefully executed. Thus, Egypt is given to M. Champollion-Figeac, Greece, to M. Pouqueville, &c. The volumes, which are only six francs a-piece, contain a vast quantity of matter, and the engravings that adorn them are well executed: there are about a hundred to each volume.—There is a curious book advertised for subscription in Switzerland, being an edition of a comic poem in the Jurassic patois, called "Les Paniers," composed in 1740 by Ferdinand Raspiller, Curate of Courroux, near Porentruy. The editor is to be M. Thurmman, of the Ecole Normale of that place.—We see that a work on the Political Economy of the Romans, by M. Dureau de la Malle, is just out: the author is a clever man, and is likely to have done his task well: we have not yet been able to peruse the two volumes of which it is composed.—M. Arago has published in some of the journals an immensely long letter to M. von

Humboldt, in which he replies to the attacks of M. de Pontécoulant, and of some of the Paris papers.—M. Cousin's speech over Poisson's tomb has been ordered to be printed.—*Ibid.*

**Discovery of Sepulchral Urns near Fail Monastery.**—About a quarter of a mile northwards from Fail, in the parish of Tarbolton, a large flat stone was found, five feet below the surface. Under the stone was a small pit, or grave, in which were two urns containing burnt bones. The urns fell to pieces soon after being exposed to the atmosphere. Two other flat stones have been met with, each covering a small pit. There was an urn in one of these pits. The other had no urn, but contained a considerable quantity of burnt bones. They are supposed to be of very ancient date.

## LITERARY NOVELTIES.

In the Press.

A new and illustrated translation of the genuine works of Flavius Josephus is announced, by Robert Trail, D.D., Rector and Vicar of Schull—the ancient Scholia, in the Diocese of Cork.

## LIST OF NEW BOOKS.

Tables of Six-Figure Logarithms, superintended by R. Farley of the Nautical Almanac Office, 12mo. 4s. 6d.—On the Employment of Children in Factories and other Works, by Leonard Horner, 8vo. 3s. 6d.—Amesbury on Deformities, &c. of the Chest, Spine, and Limbs, 4to, with plates, 1l. 11s. 6d.—Cochrane's Library of Scottish Divines: Rev. H. Binning's Works, Vol. III. 12mo. 5s.—The Banker Lord, a Novel, 3 vols. post 8vo. 1l. 11s. 6d.—The Dream, and other Poems, by the Hon. Mrs. Norton, 8vo. 12s.—Professor Whewell's Philosophy of the Inductive Sciences, 3 vols. 8vo. 30s.—Comicum Græcorum Fragmenta, by J. Bailey, Part I. 8vo. 9s. 6d.—Michael Kemp, 6th edition, fcap. 4s.—Dr. Macnish's Book of Aphorisms, 2d edition, 18mo. 2s. 6d.—Dr. Macnish's Anatomy of Drunkenness, 8th edition, 18mo. 2s. 6d.—Historie Antiquæ Epitome, by Rev. T. K. Arnold, 12mo. 4s.—Episcopacy Vindicated against Dr. Wiseman, by the Rev. W. Palmer, post 8vo. 6s.—Eclogæ Ovidianæ, with English Notes by the Rev. T. K. Arnold, 4th edition, 12mo. 2s. 6d.—Memoir of the late Mrs. S. Budgett, by J. Gaskin, 12mo. 4s.—Klatsowski's Guide to German Pronunciation, 3d edition, 12mo. 4s.—Guide to Jersey and Guernsey, fcap. 4s. 6d.—Allison's History of the French Revolution, Vol. VIII. 8vo. 15s.—Tysa's Legal Hand-Books: Landlord and Tenant, 18mo. 2s.—The Young Conchologist's Book of Species, by S. Hanley, 12mo. 4s.—On the Nobility of the British Gentry, by Sir J. Lawrence, 4th edition, 12mo. 5s.—The Chronicle of a Traveller, or a History of the Afghan Wars with Persia, translated by G. N. Mitford, 8vo. 8s.—W. Adam's Letters to T. F. Buxton on Slavery in British India, post 8vo. 5s. 6d.—Boileau on the Nature and Genius of the German Language, new edition, 12mo. 7s.—The Prelate, by the Rev. C. S. Smith, 2 vols. post 8vo. 21s.—Kermer's Numismatic Manual, 8vo. 21s.—Lectures on Locke; or, the Principles of Logic, 8vo. 10s. 6d.—The Suppression of the Reformation in France, by D. D. Scott, 12mo. 6s.—J. F. Royle's Natural History of the Himalayan Mountains, 2 vols. imperial 4to. 11l. 11s.—The Works of Charles Lamb, 1 vol. medium 8vo. 16s.—Miscellanies of Literature, by I. D'Israeli, 1 vol. medium 8vo. 18s.—Lectures on the Book of Daniel, by the Rev. C. P. Miles, 12mo. 3s.—Arnold's History of Rome, Vol. II. 8vo. 18s.

The Gallery, with a Selection of Pictures by Ancient Masters of the Italian, Spanish, Flemish, Dutch, and English Schools, including One Room of the Works of the English Masters, is open daily, from Ten until Six.

Admission, 1s. Catalogue, 1s.  
WILLIAM BARNARD, Keeper.

## SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

Accumulated fund, nearly 950,000.  
Annual revenue, nearly 170,000.

**PARTIES** intending to effect Life Assurances at this Office are reminded of the great benefits to be derived by those who take advantage of the current year, the regulations of the Society requiring that, before additions can become absolutely invested, the Policies entitled thereto must have been in endurance at least five full and complete years. This condition will of course be satisfied at the next periodical investigation, on the 31st December, 1845, in regard to all policies opened within the year, 1840.

Whilst in this year the advantages thus to be derived are even greater than in any other during the septennial period, it may be confidently asserted that in any year, owing to the careful and economical system of its management, to the judicious selection of lives assured, and to the great facilities afforded in the settlement of claims, there is no office in which greater benefits can with justice be held out to the Public.

By way of illustration of these and of the remarkable rapidity of the growth of this Society, it may be stated, —

That in the event of a party insured under a policy opened in the year 1830, per 3000*l.*, at that time the largest sum taken by the office on one life, dying after payment of the premium for the present year, his representatives would be entitled to receive the sum of 4197*l.* 0*s.* 6*d.* Thus,

Original sum assured	£3000 0 0
Vested additions at 31st Dec., 1831, being at the rate of 14 per cent. per annum on the 3,000 <i>l.</i>	£40 0 0
Do. do. at 31st Dec., 1838, being at the rate of 3 per cent per annum on both the 3000 <i>l.</i> and the 340 <i>l.</i>	495 12 0
	1085 12 0
	£4035 12 0

Contingent prospective additions applicable to the years 1839 and 1840, being at the rate of 3 per cent per annum on the accumulated sum of 4035*l.* 12*s.* 0*d.*

161 8 6

Had the policy been for 6000*l.*, which is now the largest sum assured, the amount to be received would have been 6904*l.* 0*s.* 10*d.* And that during the ten years the amount of sums insured has increased from 955,000*l.* to 2,797,000*l.* (the amount of insurances last year alone being no less than 630,000*l.*, and the accumulated fund from 189,000*l.* to 949,000*l.*).

Copies of the Report of the Proceedings of last year may be had, on application, at the head office, or at any of the Society's Agencies; and all communications and inquiries addressed to the Manager in Edinburgh, or to any of the Agents, will meet with immediate attention; and blank forms of proposals will be forwarded, with the necessary instructions as to filling them up, &c.

JOHN MACKENZIE, Manager.

5 St. Andrew Square, Edinburgh, May 29, 1840.

Agents:—London, Hugh McKean, Office, 7 Pall Mall West; Bradford, George Rogers, Horton Road; Addersfield, Messrs. Marsden and Sykes, of the Huddersfield Banking Company; Leeds, William Ward, Attorney; Liverpool, Arthur Oughterson and Co. Exchange Street, East; Manchester, Thomas Boothman, jun.; Newcastle, Charles Bertram, 12 Sandhill.

## COUNTY FIRE OFFICE, and PROVIDENT LIFE OFFICE, 30 Regent Street, Piccadilly, Established 1808.

Capital, a Million Sterling and Upwards.  
President.—The Right Hon. EARL GREY.  
Trustees and Directors.

His Grace the Duke of Rutland  
The Marquess of Northampton  
The Right Hon. Lord King  
The Right Hon. Lord Northwick  
Sir W. E. Welby, Bart.  
Sir John Osborn, Bart.

Barber Beaumont, Esq. F.R.S.

The County is the only Fire Office which has constantly made returns to its Members, and for a long series of years. These returns have varied from 10 to 95 per cent, and have amounted to upwards of 100,000*l.*

In the Life Office, nearly the whole of the profits are divided among the parties insured. Their effect may be judged of from a Policy taken out by his late Majesty on his own life for 3000*l.* which additions increased to 3003*l.*

Upwards of Thirty Insurance Offices having broken up within a few years, and about fifty new ones having been projected within the last two or three years, it may be necessary to state, that all the Substantial Advantages promised by such new Offices have been long realised under the Plans and Management of the Provident Life Office.

J. A. BEAUMONT, Secretary.

## ERECHTHEIUM CLUB, or AUXILIARY ATHENÆUM.—The Provisional Committee

of this Society, formed on the basis of the Athenæum Club, hereby give notice, that the books of the Association will remain open to receive Applications from Noblemen and Gentlemen, desirous of becoming Members, until Thursday, the 9th day of July, in order that the Committee may form some estimate of the extent of accommodation that may be required. Prospectuses may be had, and any further information obtained, by applying to H. E. Paine, Esq. Secretary, at the Temporary Offices of the Club, 6 Watteau Place, Pall Mall.

## LAW OF MARRIAGE.—At a

Meeting of parties aggrieved by the existing restrictions upon Marriage, held at the Office of Messrs. Crowder and Maynard, No. 3 Mansion-House Place, London, on Thursday, the 31st of May, a Committee, consisting of seven of the gentlemen present, was appointed (with power to add to their number), to take the necessary steps for obtaining a repeal of the objectionable restrictions upon Marriage, and more particularly that which prohibits marriage with a deceased Wife's Sister; and it was resolved, that the objects of the meeting should be forthwith published in such of the London and Provincial papers as the Committee might think proper, with a view to obtain the active co-operation of all parties interested.—Communications to be addressed to Messrs. Crowder and Maynard, as above.

## TO ADVERTISERS.—EDINBURGH

REVIEW, No. 144.—Advertisements for the forthcoming Number are requested to be sent to the Publishers on or before Saturday, June 27, and Bills on or before Tuesday, June 30.  
London: Longman, Orme, and Co.

## TO LITERARY CAPITALISTS.—

Any Gentleman whose attention has been devoted to General Literature, may possess himself of an important and interesting Literary Property, identified with the National Literature, and nominally ranking with the oldest Standard Periodicals of the day, yielding an income ample sufficient to reward the person whose attention may be directed to it.—Apply, prepaid, X. Y. care of Mr. Lewis, 125 Fleet Street.

**THE PSALTER, or PSALMS OF DAVID,**  
Printed for Chanting; to which are added, the Hymns of the Church.  
A liberal Allowance is made to Clergymen or others purchasing for the Use of Churches.  
Burns, 17 Portman Street.

NEW WORKS published by Messrs.  
SAUNDERS and OTLEY, Conduit Street.

**The Entire Works of Sir E. L. Bulwer, Bart.**  
M.P. M.A.  
Complete and uniform, beautifully illustrated, a Volume published on the 1st of every Month.

Volume for June,  
**The Pilgrims of the Rhine, and The Student.**  
Beautifully illustrated by Calvermo.  
"Well worth to hold its place beside other collections of our standard novelists of England, and there, no doubt, in every well-appointed library, will it be found. Its circulation cannot be too wide for the excellent thought and philosophy, the just views of conduct and character, that are lastingly embodied in it, or for the delightful and unending amusement of which it will remain the enduring source."—*Examiner*.

II.  
**The Social Influence of Democracy.**  
The Completion of Democracy in America.  
By M. A. De Tocqueville.  
Translated by H. Reete, Esq.  
"As a study of political science, this book stands unrivalled in our time; equally remarkable for lucidity of style, soundness and delicacy of reasoning, and for the moral and intellectual vigour with which it has been conceived and completed."—*Times*.

III.  
**Arundel;**  
A Tale of the French Revolution.  
By Sir Francis Vincent, Bart.  
"To those who like to read history under the attractive form of the novel, Sir Francis Vincent's book will afford amusement and instruction. It gives one of the most lively and correct accounts we have seen of society in France at the end of the last century. It is really as agreeable a book as a novel-reader may wish to study."—*Times*.

IV.  
**Hawkwood; a Romance of Italy.**  
"The feuds of the predominant Italian families and the crimes which render their chronicles; the feats of the gallant mercenaries who gained for England power and renown in a clime so different and so distant from their own; the luxury, blent with mystery, of Venetian life and manners; and the delicious scenery of that land where every step calls up a sensation of the bliss of existence, or a political remembrance of times past, are in turns in the work before us, portrayed with a vividness of colour, and a mastery of touch, very rarely to be found in the romances of these exhausted days."—*Athenaeum*.

V.  
**Camp and Quarters;**  
Or, Scenes of Military Life.  
By Major Patterson.  
Author of "Adventures in the 50th or Queen's Own Regiment."  
"Major Patterson hits the right temper in these lively volumes. His work will be a useful addition to anecdotal history, reflecting, with the fidelity of a mirror, the vicissitudes and contrivances of a soldier's experience."—*Atlas*.

VI.  
**Peter Paul Rubens; his Life and Genius.**  
Translated from the German of Dr. Waagen, by R. E. Noel, Esq.  
Edited by Mrs. Jameson.  
"We cannot too earnestly recommend this work to the study of the artist and connoisseur. It is, beyond all comparison, the most complete and perfect analysis of the mind and works of Rubens which has ever been given to the public."—*Britannia*.

VII.  
**The Real and the Ideal; or, the Illustrations of Travel.**  
"The author appears to have fused down whole volumes of notes and journals into these pages, in which he not only passes in review all that he has seen and heard among the scenes in which he has moved, but supplies from the stores of a graceful and accomplished mind every thing which could be expected to illustrate the subject of his criticism. He has given, in fact, a sort of philosophy of Travel."—*Naval and Military Gazette*.

VIII.  
**Records of Real Life.**  
By Harriott Pigott.  
Revised by the late John Galt.  
"Mr. Galt adopted Miss Pigott's MS. with intense interest; the preface and notes were the last efforts of his mental powers."  
—*Introduction*.  
"The author having moved in the best circles of society, and travelled a good deal on the Continent, has in these volumes presented us with many pleasant reminiscences of her sojourn and associates, forming a miscellany in the way of light and polite literature, which we can safely recommend to the upper classes for their entertainment."—*Literary Gazette*.

IX.  
**Social Life in Germany Illustrated**  
In the Dramas of Her Royal Highness the Princess Amalie  
Translated, with an Introduction, by Mrs. Jameson.  
"These volumes are full of interest, especially at a moment when every thing German is interesting to the English public, especially German princes and princesses, and the social life of Germany. With her usual good taste, Mrs. Jameson has chosen some of the most beautiful specimens of the in-door comedy of the German stage for translation into her native language. These pieces are all exceedingly natural and womanly, graceful, and true, and moral; and Mrs. Jameson has rendered good service to her readers—a large and extending circle—in bringing them acquainted with such compositions."—*Atlas*.

X.  
**Western India in 1838.**  
By Mrs. Postans.  
Author of "Ceylon."  
"We notice, with much pleasure, the opportune appearance of this book; there cannot be a doubt that the present is a critical period in the history of British possessions in India. And it is fortunate to receive at such a time, and in a form that is likely to

be popular and attractive, the result of sound reflection, as well as of lively and accurate observation, on a subject of incalculable importance to the national interests and honour."—*Examiner*.  
"We need not recommend the work to our readers, it is sure to be read; and it is impossible not to desire to extend the knowledge of a work, which all who wish well to England and to India should endeavour to circulate."—*Colonial Magazine*.  
Agents:—for Ireland, John Cumming, Dublin; for Scotland, Bell and Bradfute, Edinburgh.

**ENGLISHMAN'S LIBRARY.**  
F. cap 8vo. cloth, with Engravings, Vol. IX.  
**TABLES OF THE VILLAGE.**

### THE WELLINGTON MEMORIAL.

WE have enlarged our bounds to-day for the pleasure of giving place to the Subscription List (as far as it has yet been received) which records the public sentiment in honour of His Grace the Duke of Wellington, Duke of Ciudad Rodrigo, Duke of Vittoria, Marquess of Torres Vedras, Count of Vimiera, and Prince of Waterloo. It is a noble tribute; but yet how short of what is due to the incalculable services and immortal glories of its illustrious object! Posterity, history, nations, generations yet unborn, and regions yet uninhabited, will consummate the triumph to the end of time; but still it is delightful to contemplate contemporary gratitude and living appreciation. And this is but one instance of the general wish,—one portion of the universal feeling, to prove to this truly great man whilst we enjoy the happiness of having him with us, that every memorial of him is dear to a just and thankful people. Elsewhere, in a thousand quarters, painting and bust, and statue and column, speak the same language, and tell the world of the fame of Wellington, of what he has done for his country, and how his country, from cottage to palace, from niche to populous site and mountain-top, links herself with his achievements and rejoices in her hero.

On the memorable 18th of June, this splendid list appeared in the daily journals of the metropolis, and created no slight sensation as one of the most appropriate observances of the anniversary. From that point of time, that height of fortune, what a retrospect may be traced—from Assaye to Waterloo! Marshal after marshal inured to victory—the conquerors of Europe—the lofty and laurelled demigods of war—were in turn compelled to yield their wreaths to make one coronal for him; and, at the last, as if ordained by Providence to be the unparalleled crowning of an unparalleled career, the mightiest warrior that ever existed was forced to submit to the common destiny, and add all his brightness to the dazzling Sun of Wellington.

To Wellington, on the royal arch daily before his eyes, from contributions freely and voluntarily given, and munificently headed by his sovereign, it is undertaken to raise this monument—in our opinion, the fittest that could be designed—an equestrian group and likeness of the individual. That, as a work of art, it ought to be the grandest and most perfect of its kind of which we have any example admits of no question; and it is with much satisfaction we can already say, from what we have already seen, that if the artist be spared to finish what he has so auspiciously begun, we are assured that our best hopes in this respect will be amply fulfilled. In a former *Literary Gazette* (No. 1215) we described the colossal bust moulded by Mr. Wyatt for this statue; and we repeat that nothing is wanting to its effect, either as a resemblance to the original or as a specimen of the heroic in sculpture. It is simple, dignified, and expressive. Since then the head of the horse has been all but completed; and for anatomical accuracy, attitude, spirit, and nature, we can imagine no

higher effort. Our readers are probably unaware of the difficulties of execution in productions of such large proportions. The ears of the horse are two feet in length; the diameter of his eye-balls seven inches! And all must correspond: the scale, if of ten times the size of life, must be as correct as in the most graceful palfrey, or the labours of the sculptor are vain—his work a failure. The sublime must not lose sight of the beautiful as an indispensable twin companion; nor the vast forget that it is only a mass of deformity if not consistent with the true.

The mere mechanical contrivances for a performance like this are extraordinary. The beds of clay in which the casts are taken; the pits and furnaces in which the metal is melted; the massive fabric of beams and cross-beams, and iron clamps, and pulleys, and purchases, upon which the principal parts of the group are framed; the inventions for turning the whole as easily as a hand-organ, so as to present every spot to the plastic hand of the artist; and the very building required for carrying on these operations, a lofty, spacious, and well-lighted edifice, are all curious components of the task, with which few persons are in the least acquainted. We confess that we were so ignorant of their extent and magnitude as to be quite astonished at such bare initiatives of colossal art.

And these considerations lead us to look at the means for executing the task in the style which its character demands. The subscription is, as we have said, a noble one, and is continually increasing; but to have the design all that the feeling of the British nation desires, it must receive considerable additions. There is, perhaps, enough for a splendid equestrian statue; but not enough for such a group as the appointed situation requires, to be in keeping with its own fine proportions. Instead of sixteen or eighteen feet in height, it ought to be one-fourth more, to have its due effect on the spectator below; and every one knows how heavy is the accumulation of material and cost for every foot,—nay, every inch, added to a composition of this magnitude. We trust, therefore, that the stimulating appeal of the 18th will find a response in many a heart; and that the distinguished Committee will speedily have sufficient funds at their disposal to insure such a "Memorial" as England and the English capital may be proud to boast of for many an age to come. There may a Wellington be seen for ever, in substance as imperishable as his glory, in semblance as complete to the imagination as the idea of his deeds is overwhelming,—like the protector of the metropolis and the guardian angel of the throne.

Entertaining these thoughts, we have been much gratified to observe with how patriotic glow the press, including all political parties, has echoed a similar strain. "The Times" briefly but forcibly remarked:—

"To-day is the anniversary of the Duke of Wellington's crowning victory of Waterloo. The columns exhibit a noble proof of the estimation in which this great chieftain is held by his countrymen. Such a testimonial does honour as well to those who confer it as to him who receives it."

Truly it does, and truly do we believe that

many more will hasten to share in this mutual honour. "The Morning Herald" says:—

"As it has always been deemed, in some sort, a distinction to be contemporary with illustrious men, and with deeds of great historical import, so must it be deemed, on the same principle, emphatically a distinction to have the opportunity of enrolling one's name in 'the valued file' of those, who seek to discharge, to however slight an extent, some portion of the national obligation to a national benefactor. The subscribers to the Testimonial will honour themselves in honouring the Duke of Wellington. Not only, therefore, will it be desirable that the more opulent of the Duke of Wellington's countless admirers should, without the loss of a moment, enter their names in the list of subscribers; but it will, moreover, be of great importance in a business point of view, that those who have subscribed should immediately hand over their money to the Committee. Too many men permit their zeal to evaporate in the act of attaching their names to a subscription list. The payment of the money would seem to such stout backers to be a wholly superfluous affair. Future subscriptions—which may be paid to the treasurer, or to the several bankers named in the advertisement) will, of course, be published from time to time hereafter."

"The Globe" says:—

"The subscription list to the Wellington Memorial in our to-day's columns affords satisfactory testimony of the suspension of party spirit in the general desire to do honour to the great actions of the Duke of Wellington. We do not ascribe to the mere admiration of military talent and success so rare a union of men of all parties as regards this testimonial. There is something quite peculiar in the career of the Duke of Wellington; and the national sense of his great qualities has risen, instead of sinking, after a lapse of time, which robs martial renown of its first glitter and brilliancy. Neither are the English a people who are long to be dissatisfied with renown, or long disposed to idolise the merely successful soldier. We should be sorry if they were so: we should think it augured ill for the permanence of peace with our neighbours, or progress in the arts of peace, if the high station which the Duke of Wellington holds in the public esteem were due solely to the fortune, or the merits, of warfare. The character of the Duke of Wellington, as developed in his 'Despatches,' is precisely of that stamp which is adapted to fix the esteem of Englishmen, and even obtain that of all candid minds amongst our former enemies. A strong example of this was afforded in the recent review of Colonel Gurwood's publication in the *Revue des Deux Mondes*. It was remarked by the writer, that Wellington's example was calculated to be highly useful on the continent, where constitutional maxims of government have now the ascendancy; and where, if war is to be made hereafter, it must be made, so to speak, constitutionally. The constant sense of public duty and responsibility under which he acted; the rigid observance and enforcement of justice in the most minute details; the forbearance from, and prevention of, all that was lawless and arbitrary, which engaged his constant solicitude in the very heat and hurry of warfare; these are the qualities which pre-eminently distinguished the Duke of Wellington, and, as we have said, win admiration even from those who were once our enemies. The Duke of Wellington's life is indeed a great and useful example, that success even in war, which forms an apparent exception to the ordinary rules of public law and morality, may be most powerfully aided by those very virtues which the pestiferous race of military aggressors and conquerors most despise. It is for this, more than for the Peninsula and for Waterloo, that we thank him; and his glory will survive whatever record is raised to his name."

"The Morning Post" says:—

"The list of subscribers to the Wellington Testimonial, which occupies so appropriately several pages of our paper this day, affords a gratifying proof of the high estimation in which the British people hold the first of living warriors and statesmen—of the well-founded exultation, and the grateful and honest pride, with which they regard him as their own. We cannot refer to this national tribute without breathing a prayer, in which every British heart will fervently unite, 'May the Duke yet witness, in health and happiness, many annual commemorations of the day of Waterloo!'"

"The Courier" says:—

"This memorable day will be found nobly commemorated in the columns of the 'Courier,' by the advertisement of subscriptions received for a National Memorial in honour of the military achievements of the immortal Wellington. No memorial, however magnificent, can indeed add to the splendour of those achievements, or transmit their renown more imperishably to all posterity

than the history of the world, with which they are unchangeably, as irrevocably, blended now and for ever. But it will serve as an enduring and grateful token that the greatest of nations was not unworthy to possess the greatest of heroes. The publication of the list of subscribers to this national work could not more appropriately take place than on the anniversary of the glorious day of Waterloo."

#### "The Standard."—

"The Committee intrusted with the management of the Wellington Military Memorial think it their duty to apprise the subscribers and the public that the work is proceeding most satisfactorily, and that they entertain a well-founded hope that the statue itself—of larger dimensions than any similar work with which they are acquainted—may be ready for erection on the anniversary of the battle of Waterloo, the 18th of June, 1842. It is their intention to publish, on the anniversary in the present year (Thursday, the 18th instant), a general list of the subscribers; and they cannot but hope that the forthcoming list may exhibit an increase in the number and amount of subscriptions in some degree proportionable to the increasing interest which the public appears to take in the illustrious person whose transcendent achievements the memorial is designed to celebrate."

As a proof that this appeal is heard, we have much satisfaction in adding the following names to the list, which were received during the course of its publication. When sufficiently numerous, we see it is announced by the Honorary Secretary, Mr. Leake, they will be published from time to time in the usual channels of public information.

With this encouraging testimony we conclude our notice; but we cannot resist the temptation to close it by repeating a compliment paid to the genius of the artist by a nobleman of the purest taste in art and most refined judgment whom our age can boast. We were describing the design to him, and expressing our admiration of it, when in a few words he said more than we could say in a page—"Wyatt is the only sculptor living who understands the poetry of the Horse!"

#### REVIEWS OF NEW BOOKS.

*The Life of Thomas Burgess, D.D. F.R.S. F.A.S., &c. &c. &c., late Lord Bishop of Salisbury.* By J. S. Harford, Esq. D.C.L. F.R.S. 8vo. pp. 557. London, 1840. Longman and Co.

WERE we asked within the sphere of our own knowledge, in all the wide circle of society with which it has been our lot to be acquainted, to name the individual who was the truest model of a good man, a sincere Christian in principle and practice, an honour to the church and an ornament to the mitre, we should, without a moment's hesitation, name Thomas Burgess, the late Bishop of Salisbury. It was our happiness to enjoy his friendship for many years, to have much literary intercourse with him, to hear the ever frank and candid exposition of his sentiments on all subjects, to be instructed by his learning, and to witness his constant exercise of as much virtue, benevolence, and piety, as ever came within the practice of a human being. Our respect, esteem, and admiration, were largely attached to him; and it

was with no common satisfaction that we took up this volume dedicated to his memory.

Its author, Mr. Harford, has had all the opportunities needful to enable him to perform his labour of love in a sufficient manner. During his later years he was on intimate terms with the bishop, and from his mouth he gathered information to throw a light upon the earlier periods of his life. And yet in the career of the student, the scholar, and the churchman, there is nothing of stirring incident to record. At college he is distinguished by his assiduity and his youthful fruits; as he advances onward, his reward is reaped in being called to perform unostentatious clerical duties, and console himself in the quiet of domestic privacy. In the end his merits exalt him to dignified station, where, still, his inborn modesty, simplicity, and humility, though they cannot conceal his worth and talents, keep him in a sphere far removed from popular notice and popular noise. Such was the life of the Bishop of Salisbury, the points of which may be shortly summed up. He was born in 1756, the son of a respectable grocer at Odiham, Hants. He was educated at Winchester, and thence went to Oxford, where, on taking his bachelor's degree, he published Dawe's "Miscellanea Critica," which attracted much notice to so young a man; he obtained the Chancellor's prize, was appointed Tutor of Corpus Christi College, took orders, and formed many interesting university friendships, among others with Dr. Barrington, who, succeeding to the see of Durham, made Mr. Burgess a sharer in his eminent fortunes, by giving him a prebendal stall and other preferments. He married a most amiable and exemplary woman, one fit to be his companion in all good,—Miss Bright, the daughter of an ancient Yorkshire family,—and was soon after appointed Bishop of St. David's. He greatly improved his diocese, and founded St. David's College for the education of clergymen, so that they might discharge the functions of their sacred trust in a language and manner intelligible and beneficial to the people of Wales. He was commissioned by George IV., and with the aid of a few coadjutors whom he selected to assist him (of whom we had the honour to be one), established the Royal Society of Literature. He was translated to the bishopric of Salisbury in 1825, and after occupying that station for nearly twelve years, he died as he had lived, a pattern to the mortal world in which he had sojourned three-score and ten years.

Though most mild and unassuming, the Bishop of Salisbury was firm and uncompromising in every opinion which he considered to be essential to man's happiness here or hereafter. Thus he was a strenuous opposer of the Roman Catholic claims, and as zealous an opponent of Unitarianism. Among a hundred publications these subjects are conspicuous; and other volumes were bestowed on the disputed verse of St. John (1st epist. v. 7), and the authenticity of writings ascribed to Milton. The rest were theological, critical, educational, and learned; and the whole marked by an earnestness and sincerity which even rival disputants must acknowledge as proof of exalted moral and religious principles.

From this biography we shall select only a few illustrations, which describe passages of his calm but interesting course:—

"The four years which he spent at Oxford, previously to taking his degree, were steadily devoted to hard reading and to learned researches. He studied some of the finest works of the Greek philosophers and poets with criti-

cal attention, and being fond of the philosophy of language, applied its principles to the investigation of the origin and formation of that of Greece, with an acuteness which contributed much in its consequences to his future eminence. He delighted also in metaphysical reading and research; and when he relaxed from these severer occupations, it was to cultivate a more intimate acquaintance with the finest productions of elegant literature, both classical and English. From an admirer, he became a votary of the Muses, and in the year 1777 published, in the spirit of youthful ambition, an English poem, entitled 'Bagley Wood,' which was followed at a short interval by another, the title of which I have been unable to discover. Bagley Wood is situated between Abingdon and Oxford, and was one of his favourite rural retreats. His library has been searched in vain for copies of these youthful productions, which, however useful they might have proved to himself as exercises in composition, were probably of no great poetical merit. In the year 1778, before taking his degree, he tried his strength as an author in a way better adapted to the powers of his mind and to the course of his learned studies, by editing a new edition of Burton's 'Pentalogia.' This work, which comprises five of the finest of the Greek tragedies, illustrated by Annotations for the use of students, had formerly been deemed a Cambridge book, but had gradually fallen into disuse in that University. Mr. Burgess enriched this edition with an appendix of additional and learned notes, with an improved and copious Greek index, and with an elegant preface, in the course of which he deprecates, in the following terms, the severity of criticism:—"Such as it is, I trust the learned reader will accept, in a kind spirit, this attempt on the part of a youth, less skilled, I fear, in Greek criticism, than becomes one who ventures for the first time to incur the risk of commenting upon the ancient tragic authors. Many considerations there are which make me doubt of the propriety of this publication, and these doubts would have prevailed, had I not been encouraged by the authority of Quintilian, a man of the most profound judgment. 'A youthful author must not (he says) defer publishing till he grows old, for fear daily gathers strength; that which is long meditated appears more and more awful; and while we deliberate when to begin, the time itself for beginning passes away. Therefore the fruit must be gathered while it is yet green and tender, while there is the hope of pardon, and favour is at hand. To dare the attempt involves no dishonour, and age supplies what may be wanting to the work; and should any thing be advanced which savours of youth, it is treated accordingly.'" Such a publication by an under-graduate was so remarkable an occurrence, that it attracted much attention both at Oxford and elsewhere."

His marriage is related with characteristic aptitude:—

"My readers will not be surprised to hear, that his thoughts had hitherto been so exclusively bestowed upon his learned studies and his religious duties, that he had little attended to the cares of housekeeping. In allusion to his inexperience in all such matters, the Bishop of Durham smilingly said to the lady, a short time before their marriage, 'Miss Bright, you are about to be united to one of the very best of men, but a perfect child in the concerns of this world; so you must manage the house, and govern not only your maids, but the

men-servants also.' A piece of friendly advice for which Mrs. Burgess, however unwilling to outstep her proper province, soon found reason to perceive the necessity. On the day of their marriage, the bishop drove into Durham from Auckland Castle to unite their hands, and it was arranged that they should go to Winston Parsonage immediately after the ceremony. Conjecturing that his chaplain might probably have forgotten to furnish his larder suitably to the occasion, the kind and thoughtful prelate had sent over an ample supply of delicacies to await their arrival. Just as they were about to drive off, he amused himself by probing the fact. 'You have, no doubt, taken good care to provide every thing in the best manner for Mrs. Burgess's reception at Winston?' The chaplain started at the question, and was obliged to own that really it had never occurred to him. He was at once relieved from his embarrassment, and had reason, as on many former occasions, to recognise in his diocesan his good genius. But while he thus occasionally lost sight of what referred to personal comfort or gratification, Mrs. Burgess was most pleasingly impressed, on settling at Winston, by the minute attention which she found that her husband had been in the habit of paying to the comfort and relief of the poorer classes of his parishioners. In after-life they both delighted to recur to the happy days they spent in this peaceful parsonage. The situation was so retired, that, excepting in the summer months, they saw little company; but their evenings were rendered delightful by the constant fund of interesting reading which the library, seconded by its owner's intimate acquaintance with its stores of knowledge and entertainment, supplied. Their time was divided between Durham and Winston, though the habits of the two places were necessarily very different. Mr. Burgess retained all his love of studious and devout retirement; but his marriage naturally led him more than formerly into mixed society, where he was always a great favourite. He was never inclined to take the lead in conversation, or in any way to obtrude his opinions, but was always willing to be drawn out by others; when, from the strength of his memory, his excellent understanding, and his acquaintance with general literature, he poured forth a bright stream of instruction and amusing information. But he was most happy himself, and most of all attractive to others, when engaged in a *l'ête-à-l'ête* with some kindred spirit upon any subject of mutual interest. His person, as described to me, at this time, corresponded with my own impressions at a much later period. It was tall, erect, and dignified, and there was a cast of pleasing, not repulsive gravity, over the calm expression of his intellectual features. His smile was peculiarly winning. The Reverend Mr. Smelt, a very accomplished man, and sub-tutor to George IV., who often met him at Durham, used to say, 'Of all the sweet things I can think of, there is nothing quite equal to Burgess's smile.' He had always been a cherished guest at Auckland Castle, occasionally spending many weeks there. During one of these visits, after his marriage, Mrs. Burgess was walking in the park with the bishop and a lady, when they saw him approaching. 'There,' exclaimed the lady, 'comes an Israelite indeed, in whom is no guile.' 'Yes,' replied the bishop, 'or as Pope has elegantly expressed it,—

'In wit a man, simplicity a child.'"

There was no flattery in this—never was

any eulogy more strictly just; and his rise to the mitre is not less a true picture of the man—an honour to give and receiver!—

"After Mr. Burgess had taken his degree of B.D., Dr. Cooper, one of his brother-prebendaries, and his next-door neighbour at Durham, used frequently to urge him to proceed to take that of D.D. Most of the prebendaries at this time had done so. 'Burgess,' he would say, 'you ought to take your doctor's degree. It is a compliment you owe your college.' In the summer of 1803, business calling him to London, he stopped at Oxford in his way, and did take it. During his stay in town, the Bishop of Durham told him that Mr. Addington, then premier, had a few days before said to him, in the course of conversation, 'I wonder Burgess does not call on me; I was with him both at Winchester and Oxford.' The bishop added, that, after hearing this, he really ought to call. His shrinking, modest nature recoiled, however, on the present, as on many former occasions, from obtruding himself into notice, or in any way courting patronage, and he returned to Durham without profiting by this friendly hint. Even Mrs. Burgess heard nothing of it till several days after his return home, when he casually mentioned what had occurred, and she very naturally exclaimed, 'Then, of course, you called in Downing Street?' to which he replied in the negative. She tacitly acquiesced in his decision. About a fortnight afterwards, as they were sitting together, the post came in, and among various letters which it brought, Mrs. Burgess called his attention to one franked by Mr. Addington. 'Some friend,' he replied, 'must have asked him to frank a letter to me,' and he put it aside for the moment, not having the slightest suspicion of its contents. Mrs. Burgess, who soon after left the room, observed on her return, that he looked grave and thoughtful, and inquired the cause, when he showed her the following letter from Mr. Addington:—

"Downing Street, June 5th, 1803.

"Sir,—Though we have been separated almost thirty years, I have not, let me assure you, been a stranger to the excellence of your private character, nor to your exertions for the interests of learning and of religion; and I have been anxious that your services should be still further noticed and distinguished, and your sphere of being useful enlarged. These considerations, alone, have led me to mention you to his majesty as the successor of the late Lord George Murray, in the diocese of St. David's, and I am happy to say that his majesty has entirely approved of the recommendation. It will not be expected that you should relinquish your prebend in the cathedral church of Durham.—I have the honour to be, with true esteem, sir, your most obedient and faithful servant,

HENRY ADDINGTON."

"To the Rev. Dr. Burgess."

"The feelings of Dr. Burgess on the perusal of this letter were mingled and conflicting. The tribute of respect and esteem which it conveyed, from a distinguished and upright statesman, writing from an accurate knowledge of the nature and circumstances of his career, both public and private, could not but highly gratify him. His conscience, also, testified that he had in no way courted this flattering offer. It came to him unsought and unexpected. But his reflecting mind could not be dazzled into a forgetfulness of the great responsibility attendant upon the episcopal office, nor of the onerous public duties which its acceptance would impose upon him, whose cherished wish had been the quiet life of a country clergyman. His first

impression, therefore, was to decline the offer; and, in allusion to this fact, he said to a friend, a short time only before his death, 'I had not lost the feelings which prompted me, some years before, to request permission to retire from Durham into a less public station.' Further reflection, however, outweighed his scruples; he felt convinced that, should he return a negative reply, the friends whose judgment he most valued would unite in condemning his decision; and this conviction, together with the spontaneous nature of the minister's offer, and the anticipations which his letter threw out of his increased usefulness, finally induced him to return an affirmative, and, of course, a grateful answer. Some idea existed that Mr. Addington would have given the vacant bishopric to a learned divine in the north, long since dead, an old friend of Burgess, and a worthy man, but pompous and pushing. One who knew them both observed in allusion to this report, 'It was well he did not give it to Dr. —; he would have died of inflation. It is best bestowed on that humble, apostolical man.'"

In various parts, Mr. Harford speaks of the bishop's munificent charities;—it is impossible to speak of them too highly. We remember upon one occasion bringing under his notice a case of great suffering, in which the father of a family of nine or ten children was threatened to be cast into prison to perish. From three to five hundred pounds, well employed, it was thought, would avert this calamity; and the circumstances were communicated to his lordship, to the late amiable Lord Dover, and to some other gentlemen then engaged in forming the Royal Society of Literature. A subscription was made, to which the humane bishop contributed *fifty pounds*, lest there should not be enough; and he gave it, saying, 'This is more than I can afford at present from other claims and objects, the sum set apart for this year being already exhausted; and so, if half can be saved to apply to the relief of other distress, I shall be well pleased.' There was no return, but he had the consolation to learn, with the blessings of parents and children, that there had been sufficient to rescue them from ruin, and establish them in comfort in their respectable rank in society.\* Well does Mr. Harford observe:—

"His object was to be generous and charitable on Christian principles, to the exclusion of all display or ostentation. A sentence now and then fell from his lips, which proved how superior he was to every thing little and sordid. I well remember, on a particular occasion, that, on my strongly commending one of his many generous acts, his reply was, 'As to money, I regard it no more than as dirt, when an important object calls for support.' His private charities were dispensed in the spirit of this noble sentiment. His applications were numerous, and were seldom unheeded. Sometimes it turned out that his goodness had been abused. 'Well, and if I have been deceived,' he would say, when remonstrated with on such occasions, 'does not God make his sun to shine on the evil and on the good?' He often said that avarice was the vice of old age, and that he was anxious to guard against its first approaches."

Anecdotes of his friend the Bishop of Durham are deserving of similar notice. Mr. H. relates them:—

"It was his constant maxim of conduct, 'We have very many letters of the venerated and lamented bishop, which, if his biographer had desired to enter into more detail upon several of his most interesting pursuits, we should have been happy to communicate.—Ed. L. C."

and he often gave it in counsel to patrons, never to make promises, nor even to encourage expectations. He was one day accosted at court by Queen Charlotte, for whom he entertained an affectionate and dutiful respect, as follows:—“My Lord, I have a favour to ask of you. The living of —, in your disposal, is, I understand, vacant, and I shall be greatly obliged if you will bestow it upon Mr. —, for whom I feel much interested.” The bishop, in the most courteous manner, signified, in reply, his desire to meet any wish expressed by her majesty; but added, that he felt bound to apprise her of the rule which he had invariably laid down to himself with respect to all such applications. He had no sooner given utterance to it, than the queen stopped further explanation, by exclaiming, “My lord, I will not say a word more: and I beg that no wish of mine may lead you to violate so golden a rule.” But though he never made promises, he always had a list, known only to God and to himself, of the names of those who, he had reason to believe, were most deserving of advancement and patronage. The following incident illustrates at once his unbending principle and great kindness. A near relation of his, who had been gay and thoughtless, applied to him for advice about taking orders; adding, that he could venture to say, a great improvement had recently taken place in his principles and habits. The bishop received him kindly; but before he would enter upon the subject, stipulated for the most frank and explicit replies to any questions he should put to him. In this way an acknowledgment was obtained, that he was influenced by the hope that, as his relation, he would ordain and provide for him. And it further came out, that his wishes were fixed on a particular living then vacant, or on the point of becoming so, the value of which was about 500*l.* per annum. “And would this amount of income,” inquired the bishop, “entirely satisfy your wishes?” He eagerly replied in the affirmative. “You shall have it then,” replied his lordship, “but not in the way you propose. I cannot reconcile it to my sense of duty to ordain you, but I will immediately transfer as much stock into your name as will produce an annual sum equal to that which you have declared to be the acmé of your wishes, and may it prove to you all that you anticipate.”

Happy is the Church when it possesses such heads; but we turn to that sad event which deprived it of our lamented friend:—

“On the evening of the 13th of February the bishop was so unwell that he retired early to his room, never again to leave it. During the three ensuing days he lay in a state of great debility, but was not materially worse. In this state of prostration he gave a manifest proof how strong the ruling passion was even in death. He had sent to the press at the close of the preceding week a final letter to Dr. Scholtz, defending his own views respecting the controverted verse. He asked for the proof-sheet on the very day on which he thus took to his bed, but it was not ready. On the next day, the 14th, his servant procured and brought several copies of it to him. The bishop rallied for a moment on being told it was come, and desired that he might be supported in bed, while he franked two covers enclosing proof-sheets to his friends, Dr. Baubington and the late Rev. Francis Hayshe. With the aid of his man-servant and of Mrs. Burgess he at length accomplished his object, though with great difficulty. With this effort,

the bishop resigned every earthly anxiety, and his thoughts became wholly absorbed by religious meditation and prayer. On the evening of Thursday, Mr. Maule, his assiduous medical attendant, on taking leave of him, expressed the hope that he would be able to lie still, and obtain some rest; to which the bishop replied, “The only rest I desire, or have ever sought for, is pointed out in those comforting words,—‘Come unto me all ye that are weary and heavy laden, and I will give you rest;’ uttering the last words with all the emphasis in his power: ‘And as for peace, through faith we have peace with God; and if we have peace with God, we have peace with all the world. Is it not so?’ He then added a cordial ‘Good night.’ He continued to grow weaker until the ensuing evening, when so decisive a change took place, that his medical attendants declared the struggle was well-nigh over. His sight seemed to be gone—he appeared to be scarcely conscious of any thing that was passing around him—his utterance became very indistinct—and the oppression on his breathing was extreme. His old servant, who for months had scarcely lost sight of him, was unwearied in his attentions to his dying master, and studious of every thing that could alleviate his sufferings. He was sensible, which he proved by his rejection or acceptance of any thing that was offered; and as long as he was able, he never omitted to add his thanks for every attention. Throughout the night of Saturday his breathing grew shorter and shorter, till about two on the morning of Sunday, the 19th of February, when he gently breathed his last.”

Hallowed be his memory!

*Hakon Jarl: a Tragedy, in Five Acts.* Translated from the Danish of Ohlenschläger. And Poems after various Authors. 12mo. pp. 221. London, 1840. Hookham.

WE always like to turn to the literature of our northern brethren; whose early productions form so close a link with the remains of our own, and whose intercourse with our shores had so great an effect upon our whole national and political system. At this time we do so with more than usual interest, as, though none of their publications are included in the above list, we are gratified to find that the Society of Northern Antiquaries, with their learned and indefatigable Secretary, Professor Rafn, are every year making discoveries, and bringing forth publications, which throw a striking light upon the remote sea-voyages, settlements, and records of the ancient and enterprising Scandinavian race. From the latest particulars of their proceedings, with which Professor Rafn has favoured us, we see strong reasons to believe that in ages prior to any period hitherto suspected the sea-kings ploughed the Atlantic, and established colonies on many parts of the American Continent. Relics of their weapons and ornaments, and sepulture, and architecture, are found from Massachusetts to the lands possessed by the Esquimaux; and the accounts of these from various able and intelligent men are especially deserving of the attention of those antiquaries who direct their investigations to Phœnician, Celtic, and Northern remains.

The volume of the *Cyclopædia* whose title we have copied brings the history down to 1389; but touches very slightly on the subject to which we have alluded. The writer notices the “alleged discovery of North America by Biarn, in 1001,” and the visit paid to it by Leif, the son of Eric the Red, who discovered Greenland. Of the latter we are told:—

“With thirty-five persons he sailed from Herjolufnes towards the south, in the direction indicated by Biarn. Arriving at a flat stony coast, with mountains, however, covered with snow, visible at a great distance, they called it Helli-land. Proceeding still southwards, they came to a woody but still flat coast, which they called Mark-land. A brisk north-east wind, blowing for two days and two nights, brought them to a finer coast, woody and undulating, and abounding with natural productions. Towards the north this region was sheltered by an island; but there was no port until they had proceeded farther to the west. There they landed; and as there was abundance of fish in a river which flowed into the bay, they ventured there to pass the winter. They found the nights and days less unequal than in Iceland or Norway; on the very shortest (Dec. 21) the sun rising at half-past seven, and setting at half-past four. From some wild grapes which they found a few miles from the shore, they denominated the country Vinland, or Winland. The following spring they returned to Greenland. This description, as the reader will instantly recognise, can apply only to North America. The first of the coasts which Leif and his navigators saw must have been Newfoundland, or Labrador; the second was probably the coast of New Brunswick; the third was Maine. The causes which led to the voyage, the names, the incidents, are so natural and so connected as to bear the impress of truth. And Suorro, the earliest historian of the voyage, was not an inventor: he related events as he received them from authorities which no longer exist, or from tradition. Neither he nor his countrymen entertained the slightest doubt that a new and extensive region had been discovered. The sequel will corroborate the belief that they were right. The next chief that visited Vinland was Thorwald, another son of Eric the Red. With thirty companions he proceeded to the coast, and wintered in the tent which had sheltered his brother Leif. The two following summers were passed by him in examining the regions both to the west and the east; and, from the description in the Icelandic sagas, we may infer that he coasted the shore from Massachusetts to Labrador. Until the second season no inhabitants appeared; but two who had ventured along the shore in their frail canoes were taken, and most impolitically, as well as most inhumanly, put to death. These were evidently Esquimaux, whose short stature and features resembled those of the western Greenlanders. To revenge the murder of their countrymen, a considerable number of the inhabitants now appeared in their small boats; but their arrows being unable to make any impression on the wooden defences, they precipitately retired. In this short skirmish, however, Thorwald received a mortal wound; and was buried on the next promontory with a cross at his head, and another at his feet, a proof that he had embraced Christianity. Having passed another winter, his companions returned to Greenland. The following year Thorstein, another son of Eric the Red, embarked for the same place with his wife Gudrida and twenty-

five companions; but they were driven by the contending elements to the remote western coast of Greenland, where they passed the winter in great hardships. This adventure was fatal to Thorstein, whose corpse was taken back to the colony by his widow. The first serious attempt at colonising Vinland was made by a Norwegian chief, Thorfin, who had removed to Greenland, and married the widowed Gudrida. With sixty companions, some domestic animals, implements of husbandry, and an abundance of dried provisions, he proceeded to the coast where Thorwald had died. There he erected his tents, which he surrounded by a strong palisade, to resist the assaults, whether open or secret, whether daily or nocturnal, of the natives. They came in considerable numbers to offer peltries and other productions for such commodities as the strangers could spare. Above all, we are assured, they wanted arms, which Thorfin would not permit to be sold; yet, if an anecdote be true, their knowledge of such weapons must have been limited indeed. One of the savages took up an axe, ran with it into the woods, and displayed it with much triumph to the rest. To try its virtues, he struck one that stood near him; and the latter, to the horror of all present, fell dead at his feet. A chief took it from him, regarded it for some time with anger, and then cast it into the sea. Thorfin remained three years in Vinland, where a son was born to him; and after many voyages to different parts of the north, ended his days in Iceland. His widow made the pilgrimage to Rome; and on her return to the island retired to a convent which he had erected. Many, however, of the colonists whom he had led to Vinland remained, and were ultimately joined by another body under Helgi and Finnbogi, two brothers from Greenland. But the latter had the misfortune to be accompanied by a treacherous and evil woman, Freydisa, a daughter of Eric the Red, and who in a short time excited a quarrel, which proved fatal to about thirty of the colonists. Detested for her vices, she was constrained to return to Greenland; but the odour of her evil name remained with her: she lived despised, and died unlamented."

Such is the succinct account given in the volume before us; and we have only to repeat that every year there are traces found which seem to prove beyond a question that from eight hundred to four hundred years ago, the Northmen carried on a constant intercourse with that continent since held to be discovered by Christopher Columbus!!

Much of the volume is occupied with the cosmogony of Scandinavia, and the events of its royal successions, wars, and internal occurrences. These, it is well known, are of a highly romantic character. Of the way in which the former is treated we quote an example:—

"The destruction of Ymer and his offspring, the wicked giants of the frost, by the divine race, is evidently the same mythos as the defeat of the Titans by Jove; of Ahriman and the evil genii, by Ormuzd and the Amshaspands. Surtur is the Ahriman of Scandinavia. He is the author of evil, viz. of the giants; and is destined one day to assist in the destruction of the universe. We read of the great Alfadur, —another than Odin, who is sometimes called eternal. It is pleasing to read such notions of a First Cause, in such an age. To this omnipotent, eternal, and beneficent Being, who is far above all the worlds, inaccessible to any thing created, there are more allusions than one in the Edda of Sæmund. Thus the Hyndli-

mál, after mentioning the destruction of Odin, with all the gods:—

Yet there shall come  
Another mightier,  
Although him  
I dare not name.  
Further onward  
Few can see,  
Than where Odin  
Meets the Wolf.

Such notions may be regarded as traces of a purer religious dispensation—of the patriarchal. As an eminent northern writer elegantly observes.—Thus sounds the voice of the northern prophetess, the Vala, to us obscure and indistinct, through the darkness of ages. It speaks of other times, other men and ideas; if fettered by the bonds of superstition, it longs after eternal light, and, though imperfectly, expresses that longing. We may also recognise some of those mighty minds of which Pindar speaks, as wandering eternally over earth and sea. In such sounds heaven and earth announce an Eternal Being, and at the same time their own mortality,—truths which no paganism has expressed more strongly than the Scandinavian. However darkly, still it does allude to the Mighty One on high, who is above all the deities of nature,—to one mightier than the mighty, whom it dares not name,—to that unknown God whom the Athenians also worshipped. We may, however, doubt whether this notion of the One First Cause, dark as it is, was introduced by Odin into the North. In most of the relics which the ancient pagans have left us we have traces of two religions, distinct from each other,—both from Asia, but not at the same period, or from the same region. The worship of Thor, for example, seems to be much more ancient than that of Odin; and perhaps before either was known—before the light of patriarchal truth was entirely departed from the north, the elementary form of worship, the most ancient and least debasing of all superstitious, prevailed."

Again of the third month of the year, "Valaskialf:—

"Liosberli, the light-bringer, which extended from January 21 to February 19, began when the sun entered Valaskialf, the residence of Valé, and was sacred to that god. He was a son of Odin by Rinda (frost), [whence the word rind applied to hoar-frost in Scotland?] a personification of the frozen barren earth. He presided over mid-winter. As the sun was now gaining power, his festival was celebrated by illumination in the houses. In imitation of that pagan ceremony, the Gothic Christians had their Candlemas and the feast of torches. Valé too was an archer, probably from the rays of the sun, which now shot downwards with greater force. Valaskialf was said to be white, and covered with silver,—an allusion to the snowy character of the month. Valé (also called Bo) slew Hoder the blind god, who had killed Baldur. This mythos signifies that the day is beginning to triumph over the night,—for Hoder is the symbol of darkness. Valentine's day fell within the dominion of Valé, when half the month was run. Was it derived from this pagan god?"

More generally:—

"Our heathen forefathers," says Thorlacius, 'believed, like the Pythagoreans—and the farther back in antiquity the more firmly—that the whole world was filled with spirits of various kinds, to whom they ascribed in general the same nature and properties as the Greeks did to their demons. These were divided into the celestial and the terrestrial, from their places of abode. The former were, according to the ideas of those times, of a good

and elevated nature, and of a friendly disposition towards men, whence they also received the name of White or Light Alfs, or spirits. The latter on the contrary, who were classified after their abodes in the air, sea, and earth, were not regarded in so favourable a light. It was believed that they, particularly the land ones, the *δαίμονες ἐπιχθόνιοι* of the Greeks, constantly and on all occasions, sought to torment or injure mankind; and that they had their dwelling partly on the earth in great and thick woods, whence came the name Skovtrolde (Wood-Trolde); or in other desert and lonely places, partly in and under the ground, or in rocks and hills."

Thorlacius also states that "the thundering Thor was regarded as particularly inimical to the Skovtrolde, against whom he continually employed his mighty weapon. He thinks the Bidental of the Romans, and the rites connected with it, seem to suppose a similar superstition, and that in the well-known passage of Horace,

'Tu parum castis inimica mittes  
Fulmina lucis.'

the words *parum castis lucis* may mean groves or parts of woods, the haunt of unclean spirits or Skovtrolde, *satyri lascivi et salaces*."

The thunderbolts frequently striking trees will readily account for this mythos; but we shall not enter farther into so wide a subject, and conclude with a passage quoted (with a just compliment to his merits) from Mr. Keightley's "Fairy Mythology," which relates to a name now daily familiar to us, and highly honoured wherever it is pronounced,—we mean *Alberty*:—

"Whatever its origin, the word Alf has continued till the present day in all the Teutonic languages. The Danes and Swedes have their *Ellen* or *Elven* Dan, and *Elfvor* Swed (*Elvus*), and the words *Elf-dans* and *Elf-blest*, together with *Olof* and other proper names, are derived from it. The Germans call the night-mare *Alp*; and in their old poems we meet *Elben* and *Elbinnen*, male and female elves, and *Elbiach* frequently occurs in them in the bad sense of the 'Elviah' of Chaucer and our old romancers, and a number of proper names, such as *Alprecht*, *Alpine*, *Alpwin*, &c., were formed from it; undoubtedly before it got its present ill sense."

Of the poems of *Axel and Sosa*, we have to confess our inability to speak in the original; but we observe beauties here and there which shew the author to be endowed with a poetic mind. Whether the translator has rendered them well in all cases we doubt; and a single specimen will point the ground:—

"En aften han till Axel sade:  
'Här är ett bref—ett bref han lade  
uti hans händer—Axel, tag  
och rid igenom natt och dag  
till Sverige opp: här dit du läder  
du lemnar det i Radets händer.'

Thus rendered:—

"One evening Charles a letter laid  
In Axel's hand, and thus he said,  
'Take this, and onward, day and night,  
Proceed, till Sweden glads thy sight.  
Soon as her hills thine eyes are meeting,  
Greet them from me with our most greeting.'"

As a counterpoise, we select a few lines conveying fine thoughts, from the same romantic and tragic story:—

"Wouldst thou behold a true embrace,  
Go not where lovers smiling meet,  
With arms entwined and kisses sweet:  
But o'er the field of battle tread,  
And see how Hate, who feels Death's smart,  
Grapples his forman to his heart.  
Ah! swift as gales in Spring that blow  
The joys of love and pleasure go;  
But hate, and misery, and pain,  
Still faithful to the last remain!"

And Maria's dying address to Axel:—

"See, Axel, o'er the moon is cast  
A cloud, and when that cloud is past,  
My course on earth is ended.  
A spirit then, in yonder skies,  
My constant prayer for thee will rise;  
And oft, amidst the starry blaze  
Earthward, to thee, will turn my gaze.  
Plant on my grave a southern rose,  
Child of the sun, and when mid snows  
It languishes and dies away,  
Think on thy maiden true, who sleeps  
Where o'er her head the north wind sweeps:  
Short was indeed her blooming day!  
See, Axel, see, the cloud no more  
Darkens the moon—my pangs are o'er.  
Farewell! farewell! faintly she sighed,  
And strove to press his hand, and died."

We add the concluding lines of the foregoing as an example of the Swedish:—

"Dess blomningsdag varo korta;  
se Axel, nu är molnet borta,  
farväl, farväl!—En suck hon drog  
och kramade hans hand, och dog."

The last little volume is, we fear, hardly so poetical or so well translated; but we have not the original to compare.

Here is a passage from the tragedy:—

"Here do I plant, deeply in Norway's ground,  
The Christian banner. As a vigorous tree  
Amid the stones shall its strong roots shoot forth,  
And it shall blossom and bear richest fruit—  
Ay, heart-rejoicing, blest, life-giving fruit!  
With holy longings, with contrition's tears  
Its roots shall water'd be; and gentle sighs,  
Like the benign health-teeming breath of spring,  
Shall waken and mature the quickening sap."

One line of lamentation is better, and with it we finish:—

"In earth is rest, on earth is none."

*Poetry for the People, and other Poems.* By Richard Monckton Milnes. Pp. 200. London, 1840. Moxon.

It is not long since we did homage to the muse of Mr. Milnes (see *Lit. Gaz.* No. 1146), and gave our opinion of the whereabouts of his right on the forked hill. It is a great thing in these days of attempts, which leaves so many candidates at the bottom—many, we are sorry to say, out of sight entirely—to win an establishment at all upon the mountain itself, acknowledged by contemporaries, and of a nature to descend to posterity, with name and fame. This Mr. Milnes had already accomplished, and his new volume will do more than secure his enviable title.

The compositions which are specified as "Poems for the People," are only six in number, and do not occupy more than some twenty pages—a titling of the two hundred; the rest consist of about fifty miscellaneous pieces on every variety of subject, and in numerous forms of metre, including versified anecdotes, views of rural scenery, legends, "ethical sonnets," "love-thoughts," "shadows," ballads, and sketches of life and humanity. The whole may be stated to belong to the Lake School, tinged with a certain affinity to German literature and modes of thinking, and more nearly resembling Wordsworth than any other poet of our time. Mr. Milnes has the rare merit in this dangerous class of never falling into puerilities or mysticism; and, though he will mark his companionship with some typographical freaks and other minute peculiarities, there is a healthiness of mind, a gentleness of feeling, and a fine philanthropy throughout, which impart to the beauties in his productions a tone and spirit of general benevolence, patriotism, and kindly affections, creating a sympathy in all who love and desire the improvement and happiness of their fellow creatures. There is no line without a good tendency; and even where the argument may fail to convince, and the sentiment to be received as true, we cannot but admire the design of the writer, and confess

the poetry of his diction and the purity of his intention.

The volume opens with a stirring ballad on Prince Emilius, of Hessen-Darmstadt's retreat with the French force from Moscow, when

"Day and dark, along the storm the demon Cossacks sweep,  
The hungriest must not look for food, the weariest must not sleep;  
No rest, but death for horse or man, whichever first shall tire;—  
They see the flames destroy, but ne'er may feel the saving fire."

There is but one critical blemish in this poem. The emphasis falls prosaically wrong on the last line of the following stanza:—

"Once more he floated on the breast of old familiar Rhine,  
His mother's and one other smile above him seemed to shine;  
A blessed dew of healing fell on every aching limb,  
Till the stream broadened and the air thickened and all was dim."

The fatal accident which befel Mr. and Mrs. Patteson, on the Lac de Gaube (1831), affords matter for an affecting poem; and the description of the mountain lake will shew that in its grace it is equal to its feeling:—

"There is a lake, a small round lake,  
High on the mountain's breast,  
The child of rains and melted snows,  
The torrent's summer rest,—  
A mirror where the veteran rocks  
May glass their peaks and scars,  
A nether sky where breezes break  
The sunlight into stars."

Going through our pleasant task we must nevertheless pass over many things, on the merits of which we should like to dwell, to select what our limits allow in illustration of the author. Thus, for example, a fine winter's day, as touched off in a Christmas tale:—

"Free as the sun's in June, the rays  
Mix merry with the Yuhl-log's blaze;  
Some butterflies of snow may float  
Down slowly, glistening in the mote,  
But crystal-leaved and fruited trees  
Scarce lose a jewel in the breeze;  
Frost-diamonds twinkle on the grass,  
Transformed from pearly dew,  
And silver flowers encrust the glass,  
Which gardens never knew."

We must now quote a little poem entirely, which, while it confirms what we have said of Mr. Milnes' Wordsworthian assimilation, is at once an honour to his own heart and talent:—

"The Violet Girl.

When Fancy will continually rehearse  
Some painful scene once present to the eye,  
'Tis well to mould it into gentle verse,  
That it may lighter on the spirit lie.  
Home yestern eve I wearily returned,  
Though bright my morning mood and short my way,  
But ad experience in one moment earned  
Can crush the heart's enjoyments of the day.  
Passing the corner of a populous street,  
I markt a girl whose wont it was to stand,  
With pallid cheek, torn gown, and naked feet,  
And bunches of fresh violets in each hand.  
There her small commerce in the chill March weather  
She plied with accents miserably mild;  
It was a frightful thought to set together  
Those blooming blossoms and that fading child:—  
Those luxuries and largess of the earth,  
Beauty and pleasure to the sense of man,  
And this poor sorry weed cast loosely forth  
On Life's wild waste to struggle as it can!  
To me that odorous purple ministers  
Hope-bearing memories and inspiring glee,  
While meanest images alone are hers,  
The sordid wastes of base humanity.  
Think after all this lapse of hungry hours,  
In the dafurnisht chamber of dim cold,  
How she must loath the very smiling flowers  
That on the squalid table lie unsold!  
Rest on your woodland banks and wither there,  
Sweet preluders of Spring! far better so,  
Than live misused to fill the grasp of care,  
And serve the piteous purposes of woe.  
Ye are no longer Nature's gracious gift,  
Yourself so much and harbingers of more,  
But a most bitter irony to lift  
The veil that hides our vilest mortal sore."

We have hinted that we do not think the

reasoning addressed to the lower orders in the "Poems for the People" will carry complete conviction along with it. Labour will not so readily be reconciled to ease and luxury because the latter pall upon the sense; nor will the very poor be very patient because human ills assail the rich. The verses on "Alms-giving" may be considered more liberal than discreet; and, indeed, the questions here treated will chiefly resolve into moral right and generous feeling *versus* the experience of life and absolute justice. But we ought not to examine the poet's effusions as if they were political and economical essays,—tried by their own standard they well deserve our praise. *Ex. gr.* from "Alms-giving:—

"When Poverty, with mien of shame,  
The sense of Pity seeks to touch,—  
Or, bolder, makes the simple claim  
That I have nothing, you have much,—  
Believe not either man or book  
That bids you close the opening hand,  
And with reproving speech and look  
Your first and free intent withstand."

It may be that the tale you hear  
Of pressing wants and losses borne  
Is heart or colour for your ear,  
And tatters for the purpose worn;  
But surely Poverty has not  
A sadder need than this, to wear  
A mask still meaner than her lot,  
Compassion's scanty food to share."

It may be that you err to give  
What will but tempt to further spoil,  
Those who in loose content would live  
On theft of others' time and toil;  
Yet sickness may have broke or bent  
The active frame or vigorous will,—  
Or hard occasion may prevent  
Their exercise of humble skill."

It may be that the suppliant's life  
Has lain on many an evil way  
Of foul delight and brutal strife,  
And lawless deeds that shun the day;  
But how can any gauge of yours  
The depth of that temptation try?  
What man resists—what man endures—  
Is open to one only eye."

Why not believe the homely letter  
That all you give will God restore?  
The poor man may deserve it better,  
And surely, surely, wants it more;  
Let but the rich man do his part,  
And whatso'er the issue be  
To those who ask, his answering heart  
Will gain and grow in sympathy."

We are afraid that police and poor-laws do not square with this; but humanity does, in its unreflecting moods, when it bestows upon impulse, and forgets to weigh and calculate. Again, in the poem entitled "Rich and Poor:—

"When God built up the dome of blue,  
And portioned earth's prolific floor,  
The measure of his wisdom drew  
A line between the Rich and Poor;  
And till that vault of glory fall,  
Or beauteous earth be scarred with flame,  
Or saving love be all in all,  
That rule of life will rest the same."

We know not why, we know not how,  
Mankind are framed for weal or woe—  
But to the Eternal Law we bow;  
If such things are, they must be so.  
Yet, let no cloudy dreams destroy  
One truth outshining bright and clear,  
That Wealth is only Hope and Joy,  
And Poverty but Pain and Fear.  
Behold our children as they play!  
Blest creatures, fresh from Nature's hand;  
The peasant boy as great and gay  
As the young heir to gold and land;  
Their various toys of equal worth,  
Their little needs of equal care,  
And halls of marble, huts of earth,  
All homes alike endeared and fair.  
They know no better! I would that we  
Could keep our knowledge safe from worse;  
So Power should find and leave us free,  
So Pride be but the owner's curse;  
So, without marking which was which,  
Our hearts would tell, by instinct sure,  
What paupers are the 'ambitious Rich!  
How wealthy the contented Poor!"

\* This, we fear, is the gravamen of the difference of lot, and hardly a Consolation to Poverty.—*Ed. L. G.*

Grant us, O God! but health and heart,  
And strength to keep desire at bay,  
And ours must be the better part,  
Whatever else besets our way.  
Each day may bring sufficient ill;  
But we can meet and fight it through,  
If Hope sustains the hand of Will,  
And Conscience is our captain too."

But we must leave this branch of the publication to afford a taste of some of Mr. Milnes' other qualities. With the following we have been charmed:—

"A Spanish Anecdote.

It was a holy usage to record  
Upon each refectory's side or end,  
The last mysterious Supper of our Lord,  
That meanest appetites might upward tend.

Within the convent palace of old Spain,  
Rich with the gifts and monuments of kings,  
Hung such a picture, said by some to reign  
The sovereign glory of those wondrous things.

A Painter of far fame, in deep delight,  
Dwelt on each beauty he so well discerned,  
While, in low tones, a grey Geronomite  
This answer to his ecstasy returned:—

"Stranger! I have received my daily meal  
In this good company, now threescore years,  
And Thou, whoever Thou art, canst hardly feel  
How Time these lifeless images endears.

Lifeless,—ah! no! both Faith and Art have given  
That passing hour a life of endless rest,  
And every soul who loves the food of Heaven  
May to that table come a welcome guest:

Lifeless,—ah! no: while in mine heart are stored  
Sad memories of my brethren dead and gone,  
Familiar places vacant round our board,  
And still that silent supper lasting on:

While I review my youth,—what I was then,—  
What I am now, and ye, beloved ones all!  
It seems as if these were the living men,  
And we the colored shadows on the wall."

Another sweet variety is offered in a

"Pastoral Song.

I wandered by the brook-side,  
I wandered by the mill,—  
I could not hear the brook flow,  
The noisy wheel was still:  
There was no burr of grasshopper,  
No chirp of any bird,  
But the beating of my own heart  
Was all the sound I heard.

I sat beneath the elm-tree,  
I watch the long, long shade,  
And as it grew still longer,  
I did not feel afraid:  
For I listened for a foot-fall,  
I listened for a word,—  
But the beating of my own heart  
Was all the sound I heard.

He came not,—no, he came not,—  
The night came on alone,—  
The little stars sat one by one,  
Each on his golden throne:  
The evening air past by my cheek,  
The leaves above were stirr'd,—  
But the beating of my own heart  
Was all the sound I heard.

Fast silent tears were flowing,  
When something stood behind,—  
A hand was on my shoulder,  
I knew its touch was kind:  
It drew me nearer, nearer,—  
We did not speak one word,  
For the beating of our own hearts  
Was all the sound we heard."

The "Love Thoughts" are not quite to our fancy; but we are getting old, and Mr. Milnes is young. Present ideas must be better than memory! The second piece, however, is in our judgment a mistake, and susceptible of great misapprehension between the absence of the madhouse keeper and the loss of the beloved one. The third is superior, and we take it as a specimen:—

"Oh! let not words, the callous shell of Thought,  
Intrude bewixt thy silent soul and mine;—  
Try not the choicest ever Poet wrought,  
They all are discord in our life divine.

Smile not thine unbelief. But hear and say  
All that thou wilt, and then upon my breast  
Thy gracious head in silent passion lay  
One little hour, and tell me which is best.

Now let us live our love: in after-hours  
Words shall fit handmaids to sweet Memory be,  
But let them not disturb these holier bowers,  
The voiceless depths of perfect sympathy."

• "Wkkie."

The fourth is warm and natural, and free from the *conceits* which rather detract from the genuineness of some of its congeners.

We have no space for further extract or comment; that we think highly of Mr. Milnes' performance will be gathered from what we have said; and (in vindication of our chair of criticism) we must add, though they are but trifles, that we should have liked the volume more had it been without those little typographical and other affectations, which indicate a sort of coxcombry in poetry:—

"Living earth,  
And the lorn creature shivering there,  
The plaything of the savage air?

We would not, of our own good will,  
Believe in so much strength of ill,  
Believe that life and sense are given  
To any being under Heaven

Only to weep and suffer thus,  
To suffer without sin  
What would be for the worst of us  
A bitter discipline.

Yet now the tiny hands no more  
Are striking that unfeeling door;  
Folded and quietly they rest,  
As on a cherub's marble breast:  
And from the gullees lips of woe  
Are passing words confused and low,  
Remembered fragments of a prayer,  
Learnt and repeated elsewhere."

("But" instead of *and* in the fourth line after), "sepa'rate" frequently, "the" Ionian," "darke'ning," "communi'cants," "the" childly," for childish, "purposelessly," and a long *et cetera*, justify this trifling censure; and we record it on this friendly ground, that where minuteness is seen to occupy the mind we are apt to suspect the absence of the Great.

*The Autobiography of Thomas Platter, a Schoolmaster of the Sixteenth Century.*  
Translated from the German by the Translator of Lavater's "Original Maxims."  
18mo. pp. 106. 1839. London, Wertheim; Cheltenham, Wight and Dewe.

SUCH a little book as this hides itself under the multitude of big ones with which our table groans; and, as we cannot discern spirit through boards and bindings, there is no saying when we might arrive at a pleasing review, since, as Swift says,

"Who would be satirical  
Upon a thing so very small!"

But we are glad that we have found our Platter; for it is a very curious history. Of schoolmasters of our day it is not expedient, perhaps, to say much. The majority of them, we believe, are singularly unfit for the important duties they undertake. Sordid and greedy, they look more to the silver spoons and payments of their pupils than to their morals or instruction. Pompous and overbearing, from the habits of command and dictatorial power, they are ignorant of the best sympathies of nature, and the right feelings of society. The pedagogue is, indeed, too often a *bizarre* character. He does not mix with the world to obtain information or rub off asperities. He is wrapped up in self-conceit, and the consequential bantam of the schoolroom cackles about in his trifling sphere as if he were the greatest chittagong cock in Christendom. Cruelty, also, is often engrafted on his disposition; and, in short, in all the relations of life you will generally find this class behind persons of the same grade in common intelligence:—egotistical, harsh, selfish, and unrelenting. That there are high and bright exceptions we acknowledge with pleasure; but looking at the herd of dealers in education and boarding-house traffic, they are a set whom it would, indeed, be well for the rising generation, and for the country, to reform altogether.

The German schoolmaster of the sixteenth century was (as we gather from these pages) another guess-sort of being. Sometimes a beggar, and sometimes a thief, he would do any thing for the sake of learning; but it was not, as now with us, for the sake of pelf. Master Platter was a striking example of the order; raising himself from humble poverty to be a respected teacher. And his career is still more curious as a picture of the times. He was born on Shrove Tuesday, 1499, as the people were coming from mass; and this omen led them all to conclude that he would become a priest. He began, however, by being a goat-herd on a farm called Am Boden. The farmer, he tells us, "had about eighty goats, which I had to tend in my seventh and eighth years. When, therefore, I opened the stable, and did not immediately get out of the way, the goats, as I was still so little, knocked me down, ran over me, and trod on my head, arms, and back; for I usually fell on my face. When I drove them over the bridge, then the foremost ran past me into the cornfield; and when I drove these out, then the others ran in. Then I used to cry and lament, for I knew well that in the evening I should be beaten."

Among these delightful childish enjoyments he one day got fixed on a mountain precipice, and could neither advance nor retreat. Hanging on in this agreeable situation, he says:—

"I remained, therefore, a good while in this position, and waited for the help of God, for I could not help myself; except that I held myself with both hands by a little tuft of grass, and supported myself by turns with my great toes on another tuft of grass. In this perplexity I suffered extreme anxiety; for I was afraid that the great vultures that flew about in the air below me would carry me away, as sometimes does happen in the Alps, that they take away children and lambs. Whilst I stood there, and the wind blew about my garment behind, for I had no trousers on, my comrade Thomas perceived me from a distance, but did not know what it was. When he saw my coat fluttering in the wind, he supposed that it was a bird. When, however, he recognised me, he was so terrified that he became quite pale, and called to me, 'Now, Tommy, stand still!' Then he hurried upon the ledge of rock, took me in his arms, and carried me down again to where we could get after the goats another way."

At another time, he informs us, "Whilst I was with this master and minded his goats, I once fell into a boiler of hot milk which stood on the fire, and scalded myself, so that one could see the scars all my life. I was also in two other perils besides this while I was with him. Once there were two of us little goatherds in the wood, and were talking of various childish things; amongst others we wished that we could fly, for then we would fly out of the mountain to Germany (for so Switzerland was called in St. Gall). Then came a frightfully large bird darting down upon us, so that we thought it was going to carry away one or both of us. Then we both began to scream, and to defend ourselves with our shepherds' crooks, and to cross ourselves, till the bird flew away; then we said to one another, 'We have done wrong in wishing to be able to fly; God did not create us for flying but for walking.' Another time I was in a very deep fissure looking for crystals, of which many were found in it. All at once I saw a stone as large as an oven starting from the side, and as I had no time to get out of the way, I stooped down upon my face. Then the stone fell several

fathoms down to a spot above me, and from thence it made a spring away over me, so that I escaped with a whole skin. I had plenty of such joy and happiness on the mountains among the goats, of which I now remember nothing more. This I know well, that I seldom had whole toes, but often great bruises; had many bad falls; without shoes for the most part in summer, or wooden shoes; and endured great thirst. My food was in the morning, before day, a rye-broth, that is, a soup made of rye-meal. Cheese and rye-bread are given in a little basket to be carried at one's back; at night, cheese-milk: of all, however, there was a fair measure. In summer, lying on hay; in winter, on a straw mattress full of all sorts of vermin. Such are the resting-places of the poor little shepherds who serve the farmers in the wildernesses."

This was a poor life, but when Master Thomas became a travelling scholar it was not much mended:—

"My aunt Frances (he informs us) came, who wished to send me to my uncle, Mr. Anthony Platter, that I should learn the writings (such was their phrase when they wished to send any one to school). That gentleman was at that time no longer in Grenchen, but was become an old man at St. Nicholas, in the village that is called Gasse. When my farmer, whose name was the Antsche, or Anthony an der Habzucht, was aware of my aunt's intention, he was much dissatisfied; and said, 'That I would learn nothing, notwithstanding;' and added, putting the forefinger of his right hand into the palm of the left, 'The urchin will learn just as much as I can drive my finger through.' That I saw and heard myself. My aunt answered, 'Oh! who knows? God has not refused him his gifts: he may yet become a pious priest.' And so she led me to the spiritual gentleman, when I was about nine and a half years old. Then it was that my sufferings really began, for the gentleman was a very passionate man, but I a little, awkward, peasant boy. He beat me barbarously; often took me by the ears and dragged me from the ground. I screamed like a goat that had the knife sticking into it, so that often the neighbours came screaming in to him to know whether he would kill me out and out. I did not remain long with him. Just at this time there came one who had travelled to the schools at Ulm and Munich, in Bavaria, a grandson of my old grandfather. This student's name was Paul Summermatter. My friends had told him of me, and he promised them that he would take me with him, and in Germany take me to school. As soon as I heard of this I fell on my knees, and besought God Almighty to help me away from the priest, who taught me sheer nothing, but on the contrary beat me unmercifully. I had scarcely learned to sing the 'Salve' a little, and to go about the village with other scholars who were also with the priest, and were obliged to sing before the houses for eggs. Once, when we were about to celebrate the mass, the other boys sent me into the church to fetch a taper. This I stuck burning into my sleeve and burnt myself, so that I still bear about the scar of it. When Paul wished to wander again, I was to come to him to Stalden. Behind Stalden is a house that is called Zum Mülliback; there my mother's brother, Simon Summermatter, lived; he was to be my guardian, and gave me a golden florin: which I carried in my hand to Stalden, and on the way often looked at it to see whether I had it, and then gave it to Paul. Thus we left the

country. Then I was obliged on the road to beg for the necessary money, and also to share it with Paul, my bacchant. At that time schools were not yet established in all places; and young persons who wished to learn any thing, or to prepare themselves for any religious office, which at that time required little knowledge, went, either singly or in greater numbers, after renowned teachers. As they were for the most part poor people, they lived on the way on alms. And when the thing degenerated the great ones were called bacchants, because they lived well on what was obtained by begging, and led a wild and dissolute life; the little ones were called a-b-c fags.\* They, when the begging was not sufficient, did not make any scruple about stealing, which was called 'Sharp-shooting.' They were, however, usually called Scholastics, or Travelling Scholars. So bad were the school-arrangements, until the Reformation made improvements in this department also. On account of my simplicity and provincial dialect, people gave me very liberally. When I passed over the Grimsel, and came at night into an inn, I saw for the first time a stove made of tiles of white delft, and the moon shone on the tiles. Then I thought it was a large calf, for I saw only two tiles shining, and thought those were the eyes. In the morning I saw geese, of which I had never seen any before. When, therefore, they set on me hissing, as geese are accustomed to do, I ran away from them with a loud cry, for I thought it was the devil who wanted to devour me. In Lucerne I saw the first tiled roofs, and wondered very much at the red colour. Hereupon we came to Zurich: there Paul waited for several comrades who wished to go with us to Meissen. In the meantime I went for alms, with which I was obliged almost entirely to support Paul: for when I came into an inn the people liked to hear me speak the St. Gall dialect, and gave me liberally. At that time there was in Zurich a certain fellow, a great rogue, out of Leak in St. Gall: his name was Carle. He came to me once—for we lodged in the same house—and said to me, that I should allow him to give me one blow on the bare back, and that he would give me a Zurich sixer (sixpence) for it. I allowed myself to be persuaded. Then he laid hold of me stoutly, laid me across a chair, and beat me very sorely. When I had borne that, he asked me to lend him the sixer again, for he wished to sup with the landlady at night, and could not pay the reckoning. I gave him the sixpence, but never got it again. Thus were my innocence and inexperience abused. After we had waited for company about eight or nine weeks, we set out for Meissen; for me, a very long journey, because I was not accustomed to travel so far, and besides that I was obliged to provide my provisions on the way. We travelled eight or nine together—three little fags, and the rest great bacchants, as they were called, and I was the smallest and youngest of the fags. When I could not get on vigorously, then my relation Paul walked behind me with a rod or stick, and beat me on the bare legs; for I had no hose on, but bad shoes. I cannot now remember all that befel us on the road; but some adventures I have not yet forgotten. When we were upon the journey, and were speaking of all sorts of things, the bacchants narrated to one another how it was the custom in Meissen and Silesia for the fags to be allowed to steal geese and

\* Literally, 'Sharp-shooters'; but the office is probably the same as that known still in England by the name of 'Fag.'

ducks, and other articles of provision, and that nothing was done to them on that account if they could only escape from the owner."

We cannot follow all his adventures in this mode of acquiring letters and provisions. A few passages may illustrate the life:—

"Now and then after supper, in summer, we went into the beer-houses to beg for beer. Then the drunken Polish peasants used to give us so much beer, that I often could not find my way to the school again, though only a stone's throw from it. In short, here there was plenty to eat, but there was not much of study; and of true piety no one had an idea.

At last (he tells us, naïvely enough) Paul determined to pay a visit to our home, for we had not been at home during five years. Accordingly we went home to St. Gall. Then my friends were not able to understand me, and said, 'Our Tommy speaks so profoundly, that no one can understand him.' For being young, I had learned something of the language of every place where I had been."

He soon prosecutes his studies:—

"My stay at home was not long. We soon set out again towards Ulm. Then Paul took another boy with him whose name was Hildebrand Külbematter; he was also very young. To him was given cloth, such as was made in that country, for a little coat. When we came to Ulm, Paul desired me to go about with the cloth, and beg the money to pay for the making. With it I earned a great deal of money; for I understood begging well, because the bacchants had always kept me to it. To the schools, on the contrary, they did not draw me, not even so much as to teach me to read. Thus it was at Ulm too: when I ought to have gone to school, I was obliged to run about with the cloth. At this time I suffered great hunger; for all that I got, I had to bring to the bacchants, and did not dare, for fear of stripes, to eat even a morsel. Paul had taken another bacchant to live with him, of the name of Achatius, a native of Mayence; and I, with my companion Hildebrand, had to wait on them both. But my companion ate almost all himself that was given him in the houses. On that account the bacchants went after him into the street, and found him eating; thereupon they threw him on a bed, covered his head with a pillow, so that he could not cry, and beat him with all their might. That made me afraid, so that I brought home all that I got. They had often, so much bread that it became mouldy; then they cut off the mouldy outside, and gave it to us to eat. I was often very hungry, and frost-bitten too, because I had to go about in the dark till midnight to sing for bread. Now there was at that time at Ulm a pious widow, who had a son, Paul Reling, and two daughters. This widow often in winter wrapped my feet in a warm fur, which she laid behind the oven, to warm my feet when I came; gave me then also a basin full of vegetables, and then allowed me to go home. I had indeed sometimes such great hunger, that I drove the dogs in the street away from their bones, and gnawed them; I also sought together the last crumbs out of the bags, and consumed them. From Ulm we went to Munich, where I still had to beg the money for making up the cloth, which however was not mine. A year after we came again to Ulm, intending to go again once more to our native place. I brought, however, the cloth again with me, and was obliged again to beg for the money for making it up. I can still well remember that some said to me, 'What! has the coat never been

made? I believe that you are playing tricks.' What became of the cloth, and whether the coat was ever made, I know not. We made from thence a visit to our native place, and then returned again to Munich."

At Schlestadt:—

"When we came into the town, and had found lodging in the house of an aged married couple, of whom the man was stone blind, we went to the preceptor, Mr. John Sapidus, and begged him to receive us. He asked us whence we came; when we said, 'From Switzerland, from St. Gall.' He said, 'There are wicked peasants there; they drive all their bishops away out of the country. If you intend to study properly, you need not give me any thing; but if not, you must pay me, or I will pull your coat off your back.' That was the first school which seemed to me to go on well. At that time the study of languages and sciences came into fashion. It was the same year that the diet was held at Worms. Sapidus had at one time nine hundred scholars, amongst whom were several fine learned fellows, who afterwards became celebrated men. When I entered the school I could do nothing, not even read the Donatus,\* and was nevertheless already eighteen years old. I seated myself among the little children, but was like the clucking hen among the chickens."

By diligent application, however, Platter now became well versed in the scholastics of the age:—

"When (says he) I was at Schlestadt, Sapidus had a certain bachelor of arts, George von Andlau, a very learned man: he plagued the bacchantes so grievously with the Donatus, that I thought, 'If it be such a good book, then you must learn it by heart,' and as I learned to read it I learned it by heart at the same time. That turned to good account for me in the opinion of Father Myconius, my new teacher in Zurich; for he began at once to read Terence with us, and then we had to decline and conjugate every little word in a whole comedy. He used often to deal with me until my shirt was wet with perspiration through fear, and my eyes grew dim; and yet he never gave me a blow, except on one single occasion with the left hand on my cheek."

There are many remarkable sketches of the time. Thus:—

"Every thing was still popish. Many a one was to be found who could sing better than expound a gospel; and it was daily to be seen in the schools that wild bacchantes went off, and were ordained, if they could only sing a little, and understood nothing either of grammar or the Gospel."

We need hardly remark that Platter inclined to the reformed religion; or go into the particulars of his turning to rope-making and the professorship of Hebrew. The pursuit of these two vocations together is whimsically described; and we have a good deal of controversial writing on the great religious question which had sprung up to divide the Christian world. He married, and set up a school, and says:—

"I began to prepare my rope-making trade, and to keep a school. In winter I had about thirty scholars; in summer, scarcely six. Each had to pay a penny every quarterly fast, and, besides, many presents. I had many relations; one brought me eggs, another cheese, or a ball of butter. Also others whose children came to me to school, brought the like; some a quarter of a sheep; those who were at home in the vil-

lage gave milk, vegetables, jugs of wine; so that seldom a day passed in which something was not given to us. At times we have reckoned at night that in one day eight or nine different presents had been sent to us. A few weeks before my arrival, several women in Eisterthal, who were in a room together, had spoken of me, how magnificent the first mass would be that I should celebrate, and how large the offerings which I should receive. For of the Summer matters alone, the family of my mother, I had seventy-two cousins, of whom not one was yet married, and who therefore would have been able to carry their offering to the altar themselves. Through my wedding, however, all these splendid hopes were disappointed. When we began our housekeeping I borrowed fifteen Swiss bats of my uncle, Anthouy Summermatter. With that we began to trade, bought wine and sold it again, retail; also bought apples, which my wife sold again to the boys who would have them; so that we did very well, and had no want. I had never been so well off. The priests, however, were not very friendly to me, although they also did me a kindness, and often invited me as a guest, that I might not take too much to the Lutheran ways. But when I had to go to church, and help to sing the mass, it was a burden to me, and against my conscience, to be obliged to help in the commission of idolatry—to be present, and not to be able to speak my mind freely at all times."

He accordingly emigrated for conscience' sake and better prospects. Here is the picture:—

"I took my baby, that had been born meanwhile, the cradle suspended from a hook on my back, and left the place. The child's god-mother gave it at parting a double ducat. Besides that, we had also been given from twelve to fifteen pieces of money. A little household furniture, which we took with us, I carried, and the mother followed after, as a calf the cow. The books, however, I had sent over Berne to Baale; thither we also went by way of Zurich. I carried the child, and a scholar went with us, who helped the mother to carry her bundle. After looking for a dwelling for a long time, we at last got a small house which was called the sign of the Lion's Head. Dr. Oporinus was living in the great court, by the bishop's palace (where afterwards the Baroness von Schönau lived), and was schoolmaster at the castle. Through the intercession of pious people I was appointed assistant to Dr. Oporinus, and the gentlemen deputies fixed my salary at forty pounds. So much, they said, they had never given to any one before me. Of this I had to pay ten pounds house-rent; and at that time, too, every thing was dear; for a quarter of corn cost six pounds, and a quart of wine eight rapps. The scarcity, however, did not last long. I went to the market and bought a little cask of wine; I think it was an aulm, which I carried home upon my shoulder. During the drinking of this wine my wife and I had considerable disputes; for we had no drinking vessel but an anker. As soon as we went into the cellar with the anker, immediately there was a quarrel. I said, 'Do you drink; you have to nurse.' My wife said, 'Drink you; you have to study, and to work yourself to death in the school.' Afterwards a good friend brought us a glass, in shape something like a boot; with that we went into the cellar when we had bathed. This glass held rather more than the anker. The cask lasted long; and when it was out we bought another. I went into the hospital, and bought a little kettle and a tub, both of which had holes.

Just so I bought a chair, and tolerably good bed, for five pounds. We had not much superfluous furniture; but, God be praised, poor as we were from the beginning, yet I cannot remember that we ever had a meal without bread and wine. I studied every day, got up early, and went to bed late; in consequence I often had headach, and a great dizziness: so that at times I had to hold by the benches."

Quære, the cellar, the anker, the glass, and the wine?!

With this doubt we must leave Mr. Thomas Platter, though his turning printer offers great temptation to make some further extracts. We have only to add, recommending the small tome to every curious reader, that he realised considerable property at Baale, and died at a good old age.

*Sketches and Souvenirs; or, Records of Other Days.* By E. F., author of "Thoughts and Reminiscences on Sacred Subjects," "Sacred Allegories," &c. Small 8vo. pp. 239. 1839. London: Simpkin, Marshall, and Co.; Hamilton, Adams, and Co. Bath: Pocock.

THIS little work is the production of a writer who aims at "bettering mankind," and at once claims our respect. It is written in a serious and kindly spirit, and is free from that ill-natured feeling of controversy with which such productions are too often tinged. Neither are her reminiscences of other days and other scenes filled with those sad and useless regrets which are too apt to escape us when contemplating the past. The authoress has looked at human life with a calm and cheerful eye, her tear has had its smile to companion it, the gloomy pathway of life has been chequered by the sunshine that broke through the sadness of the foliage, and all has not been dark. Though she has seen that every foot-path but leads to the grave, she has paused to bask in the sunlight that slept, if only for a brief space, upon them, and plucked the few flowers that grow by the road-side. Such works make us thoughtful, nay, sometimes sad; but they must, nevertheless, be read: the journey of death must be made by us all; the great cross-roads of life all lead to one end,—the huge city of tombs. And here is a brief sketch of Hannah More, whose spirit still lives amongst us in her writings, and who, dying, left nothing that the soul hovered o'er and wished to see blotted out:—

"As I entered the drawing-room at Barley Wood, and approached the venerable lady, my respect for her worth, and admiration of her talents, mingled in a feeling nearly approaching to awe, I could almost hear the beating of my heart. I did not then know the gentleness of hers. She was upwards of eighty years of age, seated in an easy chair, and clad in a grey silk dress; her neck covered with a white handkerchief, arranged with the simplicity becoming to her age. Her beautiful silvery hair was parted on her brow; and her expressive, but truly feminine features, were shaded by a simple, though elegant cap. A shawl hung loosely on her shoulders, and, as she rose to meet us, nothing could be more striking than her whole appearance—nothing in better taste. There was no literary negligence, no studied plainness in her attire, but all was simple, graceful, and harmonious, as her character. She turned her lustrous dark eyes upon us as we entered; and, as I attempted to kiss the hand she extended towards me, with that feeling of veneration we all experience while in the presence of superior minds, she withdrew it from mine; and laying it upon

\* The Latin grammar of Ælius Donatus, a famous Latin scholar and teacher of the fourteenth century, which was then in general use."

my head, said, in a fervent, though gentle tone, 'May the God of all grace be your portion, my child!' I was deeply touched—my eyes filled with involuntary tears. She saw my emotion, and understood my silence, with that electric sympathy which exists between feeling hearts; then, immediately addressing the rest of the party, she led the conversation to indifferent subjects. I never saw a more beautiful picture of old age. She looked like the venerable parent of meekness and gentleness; and the winning melody of her voice, with the graceful urbanity of her manner, were so captivating, that, while in her society, respect and admiration softened into love, and one almost forgot, that in the cause of religion and virtue she had unsparingly attacked the vices and follies of the day."

#### MISCELLANEOUS.

*The Jubilee of the Constitution: a Discourse delivered at the Request of the New York Historical Society, &c. &c., by J. Quincy Adams. Pp. 136. (New York, S. Colman.)*—The fiftieth anniversary of the inauguration of Washington as President of the United States (30th April, 1789), was a great and memorable national occasion, and the orator has well availed himself of it to deliver a noble and stirring discourse. We select one passage as a specimen—

"And this is the day of your commemoration. The day when the revolution of independence being completed, and the new confederated Republic announced to the world, as the United States of America, constituted and organised under a government founded on the principles of the declaration of independence, was to hold her course along the lapse of time among the civilised potentates of the earth. From this point of departure we have looked back to the origin of the union; to the conflict of war by which the severance from the mother-country, and the release from the thralldom of a trans-Atlantic monarch, were effected, and to the more arduous and gradual progression by which the new government had been constructed to take the place of that which had been cast off and demolished. The first object of the people, declared by the Constitution as their motive for its establishment, to form a more perfect union, had been attained by the establishment of the Constitution itself; but this was yet to be demonstrated by its practical operation in the establishment of justice, in the ensurance of domestic tranquillity, in the provision for the common defence, in the promotion of the general welfare, and in securing the blessings of liberty to the people themselves, the authors of the Constitution, and to their posterity. These are the great and transcendental objects of all legitimate government. The primary purposes of all human association. For these purposes the confederation had been instituted, and had signally failed for their attainment. How far have they been attained under this new national organisation? It has abided the trial of time. This day fifty years have passed away since the first impulse was given to the wheels of this political machine. The generation by which it was constructed, has passed away. Not one member of the Convention who gave this Constitution to their country, survives. They have enjoyed its blessings so far as they were secured by their labours. They have been gathered to their fathers. That posterity for whom they toiled, not less anxiously than for themselves, has arisen to occupy their places, and is rapidly passing away in its turn. A third generation, unborn upon the day which you commemorate, forms a vast majority of the assembly who now honour me with their attention. Your city which then numbered scarcely thirty thousand inhabitants, now counts its numbers by hundreds of thousands. Your state, then numbering less than double the population of your city at this day, now tells its children by millions. The thirteen primitive states of the revolution, painfully rallied by this Constitution to the fold from which the impotence and disuniting character of the confederacy was already leading them astray, now reinforced by an equal number of younger sisters, and all swarming with an active, industrious, and hardy population, have penetrated from the Atlantic to the Rocky Mountains, and opened a paradise upon the wilds watered by the father of the floods. The union, which at the first census, ordained by this Constitution, returned a people of less than four millions of souls; at the next census, already commanded by law, the semi-centennial enumeration since that day, is about to exhibit a return of seventeen millions. Never since the first assemblage of men in social union, has there been such a scene of continued prosperity recorded upon the annals of time. How much of this prosperity is justly attributable to the Constitution, then first put upon its trial, may perhaps be differently estimated by speculative minds. Never was a form of government so obstinately, so pertinaciously contested, before its establishment—and never was human foresight and sagacity more disconcerted and refuted by the event, than those of the opposers of the Constitution. On the other hand its results have surpassed the most sanguine anticipations of its friends. Neither Washington, nor Madison, nor Hamilton, dared to hope that this new

experiment of government would so triumphantly accomplish the purposes which the confederation had so utterly failed to effect. Washington, far from anticipating the palm of glory which his administration of this government was to entwine around his brow, transcending the laurel of his then unrivalled military renown, in the interval between the 4th of March, when the meeting of the first Congress had been summoned, and the 14th of April, when he received from them the notification of his election as President of the United States, thus unbosomed to his friend Knox the forebodings of his anxious and agitated mind. 'I feel,' wrote he, 'for those members of the new Congress, who hitherto have given an unavailing attendance at the theatre of action. For myself, the delay may be compared to a reprieve; for in confidence I tell you (with the world it would obtain little credit), that my movements to the chair of government will be accompanied by feelings not unlike those of a culprit who is going to the place of his execution. So unwilling am I, in the evening of life, nearly consumed in public cares, to quit a peaceful abode for an ocean of difficulties, without that competency of political skill, abilities, and inclination, which are necessary to manage the helm. I am sensible that I am embarking the voice of the people and a good name of my own, on this voyage, but what returns can be made of them, heaven alone can foretell. Integrity and firmness are all I can promise: these, be the voyage long or short, shall never forsake me, although I may be deserted by all men: for of the consolations which are to be derived from them, under any circumstances, the world cannot deprive me.'

*An Introduction to the Modern Classification of Insects; founded on the Natural Habits, and corresponding Organisation of the different Families.* By J. O. Westwood, F.L.S. &c. &c. 2 vols. 8vo. London, 1840. Longman and Co.

FOR sixteen years Mr. Westwood has studied the nature of insects in their rural haunts, besides bestowing immense labour in collecting and arranging the matter which forms these two valuable entomological volumes. Between the descriptive and the technical works on the subject he has endeavoured to steer a middle course, and combine the useful features of both. Thus, notwithstanding the excellent publications of Kirby and Spence, Burmeister, Newman, Curtis, Stephens, Shuckard, Haworth, and others, the mass of information which the author has produced, and the progress he has made in improving the classification of this science, entitle him to the hearty thanks of all entomologists. There is no doubt much yet of confusion and perplexity in nomenclature, and in the distribution of orders and families, but as far as modern inquiry could go, Mr. Westwood has clearly and distinctly helped us to a guide in every thing that concerns this delightful pursuit. The student cannot make himself master of any work so generally serviceable, or so well calculated to explain every difficulty. As a *Sequel* to Kirby and Spence the *Introduction* completes the code of instruction; and a synopsis of British Genera is a most important addition to its merits. A prodigious number of figures illustrate the text, and we truly conclude by saying, that it is indispensable to the study and understanding of entomology.

*The Works of Charles Lamb.* 8vo. London, 1840. Moxon.

A NEW edition, and a sweet one, redolent of all Charles Lamb's fancies, playfulness, and kindness. A volume of more delectable light reading cannot grace the boudoir, drawing-room, or library table.

*Alton's History of the French Revolution.* Vol. VIII. 8vo. pp. 844. 1840. Edinburgh, Blackwood; London, Cadell.

DURING the progress of this able and important work we have repeatedly entered into its merits, and reviewed its contents. Of its progress, as evinced in the present volume, we need, therefore, say no more than that it fills a period of unsurpassable interest, viz. from 1809 to 1812, when the Spanish war raged in all its fury, when the war between France and Russia

commenced, and when the awful retreat from Moscow gave the most terrible blow to the ambitious career of Napoleon. All these great affairs, and the hardly less great domestic events which occurred in England, are treated with the author's acknowledged powers—beyond which any compliment from our pen would be superfluous.

#### ARTS AND SCIENCES.

##### CURE OF STAMMERING.

IT is always a pleasure to us to promote the knowledge of aught which we think can contribute to the welfare and happiness of our fellow creatures; and to employ the great privilege of the press (inasmuch as it lies in our power) in aid of beneficial objects. Upon these grounds we have more than once spoken of the cure of impediments of speech, of which we have witnessed the performance by Mr. Hunt. Of late that gentleman has added many striking examples to his previous extraordinary list of persons of both sexes, and of all ages, whom he had restored from difficulty, pain, and distortion, to facility, ease, and comfort, in the enunciation of their speech. And we recur to a mention of the fact, because we are really delighted to see such blessings conferred, by plain good sense and comprehension of causes, without quackery or mystery of any kind. The only reproach seems to be the speed and readiness with which the evil is eradicated; so that patients are apt to undervalue what has been done for them, because it is done so quickly and so simply. This is, however, a great mistake; and resembles that of the sailor who (Joe Miller tells) begrudged half-a-crown to an experienced dentist who extracted his torment at one skillful pull, when he had been tugged all about a room in his chair by a bungling tooth-drawer for a shilling! For a century there have been a multitude of modes devised for the cure of stammering, and we have examined some by which large fortunes were made: but all had defects. The best left drawing slowness of pronunciation and peculiar mannerism as substitutes for the original vice; others were altogether ludicrous pretences or injurious practices. Mr. Hunt's system, on the contrary, possesses these important qualities—it is tested at once; it cures or fails in a very few lessons; its principles are obvious even to childish understandings; and if it does not remove the affection, being merely advice, it could not hurt an infant. In our opinion, if attentively received and pursued with common perseverance, it will, in nine cases out of ten, effectually put an end to the annoyance of stammering. We are, therefore, glad to find that Mr. Hunt's practice is extending, and particularly among the higher circles of society; but, for the sake of the lower and poorer classes, we should more rejoice if the matter were taken up by the wealthy and great who have reaped the benefit of his services, and a public Institution were formed where the poor could obtain the like advantages from his skill and experience. Many maladies have their well-endowed hospitals, and the fractured limb, the impervious ear, vaccine inoculation, hernia, &c. &c. their benevolent resorts for treatment and relief. Why should not that organ through which all our thoughts and sentiments are communicated find a like remedial asylum for its defects? We throw out the hint—in a considerate and humane community it is not likely to be lost.

##### GEOLOGICAL SOCIETY.

APRIL 29. The Rev. Dr. Buckland, President, in the chair.—Three communications were

read. 1. 'On a few detached Localities along the Coasts of Ionia and Asia; and on the Island of Rhodes,' by Mr. Hamilton, Sec. G. S. The localities are, 1. Fougés (anc. Phocœa); 2. Ritri (anc. Erythræ); 3. Sighajik (anc. Teos); 4. Scalauova, near Ephesus; 5. Boodroom (anc. Halicarnassus); 6. Cnidus; 7. the Island and Shores of the Gulf of Syme; 8. Rhodes. 1. Fougés is situated at the northern limit of the gulf of Smyrna, and the formations in its neighbourhood, observed by Mr. Hamilton, are composed of trachyte, punicaceous deposits, and various trappean rocks. 2. Ritri, in the bay of Erythræ, and opposite the island of Scio, stands in a district consisting of trachyte, limestone, and sandstone. 3. Sighajik is built on an alluvial plain connecting the harbours of Sighajik and Teos, and bounded on the east, west, and north-west by ranges composed of limestones and sandstones. No igneous rocks were noticed *in situ*, but numerous blocks of greenstone are scattered over the country. 4. Scalauova stands on an insulated hill, a part of the western chain of Mount Messogis, and is formed of blue semicrystalline limestone, associated with sandstone. 5. Boodroom. The castle is built upon a rock of limestone and argillaceous shale; and the hills to the north of the town, and on one of which are traceable the remains of the Acropolis of Halicarnassus, are also calcareous; but the low hills near the shore, and on which the ruins of Halicarnassus stand, consist of volcanic sand and trachytic conglomerate. The conical hill of Chifoot-Kale, about five miles S.W. of Boodroom, and all the intermediate country, are likewise trachytic, as well as the hills to the west of Chifoot-Kale, and part, if not all, the promontory of Karabaghla, and some islets to its westward. The limestone of Boodroom dips to the N.E., and Mr. Hamilton is of opinion that the inclination may be due to the igneous rocks of Karabaghla and Chifoot-Kale. 6. Cnidus is situated near the south-western extremity of the gulf of Eos. The whole of the peninsula on which it stands is formed of blue semicrystalline limestone, shale, and sandstone, dipping 45° to the S.W. The hills rise rapidly towards the E. and N.E., and at the distance of two miles exceed 2000 feet in height; their summit being a narrow ridge a quarter of a mile in length, and consisting of calcareous shale overlaid on the S.W. side by the blue limestone. The escarpment of the ridge towards the N.E. is very steep. 7. Island and Gulf of Syme. The island is formed chiefly of a uniform mass of greyish-white, compact scaglia, with bands and nodules of silicious limestone; but in one place a greenish sandstone conglomerate occurs. The beds are occasionally horizontal, but are sometimes inclined from 20° to 35°. No organic remains were noticed by Mr. Hamilton. The southern shore of the gulf is composed of the same limestone, containing nodules of flint. At the eastern extremity of the gulf, thin beds of limestone alternate with bands "of pale red jasper," the strata dipping 50° to the N.W., but in some places they are curiously contorted. Mr. Hamilton did not land on the north side of the gulf, but he believes that it is partly composed of a brown arenaceous conglomerate. 8. Rhodes. The northern half of the island is composed of tertiary marine deposits, formed of sand, gravel, and marl, enclosing sea shells, and secondary limestone, and scaglia with associated sandstones and conglomerates. No igneous rocks were observed *in situ* by the author, but numerous pebbles of greenstone and other trap rocks occur in the conglomerates

in the centre of the island. The scaglia limestone is chiefly developed in the lofty ridge of Mount Altaïro. The upper part consists of thick beds of a grey colour without flints; beneath them occurs a thinly laminated limestone with tabular masses of flints, and lower down thicker beds again prevail, and the flints are nodular; the whole series having about 900 feet of vertical dimensions. Still lower the scaglia is interstratified with a red marly limestone, under which are thick beds of scaglia without flints. Below the village of Embona a greenish compact sandstone crops out from beneath the limestone of Mount Altaïro. The range of hills to the N.N.E. consists chiefly of the grey limestone, resting on red and brown sandstone. The Acropolis of Camiro, on the east coast of the island, six miles north of Lindo, stands on an insulated table rock of whitish scaglia, encircled with tertiary strata. The blue limestone, classed provisionally with the secondary series, forms high and steep hills along the east coast near Lindo, remnants of horizontal beds of tertiary limestone resting upon it at considerable heights. It forms also a ridge of hills between Rhodes and Archangelo, and a low ridge of rocky islets in the middle of the plain and parallel to the coast. Mr. Hamilton considers this limestone to be of the same age as that of Halicarnassus. The only point at which the author observed any older rocks, is halfway between Archangelo and Lindo, at the bottom of a deep bay, where, close to the shore, the blue limestone is underlaid by a hard, black, calcareous, crystalline rock, like the limestone on the Bosphorus. In conclusion, Mr. Hamilton gives the following general statements:—1. The scaglia is more abundant in Rhodes and the south of Asia Minor than in the north; and is the same formation which constitutes the mass of the Taurus farther eastward, and of which it appears to be a prolongation. Nummulites have been found near Adalia; and near Deenair a species occurs similar to that in the scaglia of the Ionian Islands. 2. Igneous rocks are much more rare towards the south, and are not so often associated with the scaglia as with the older limestones. 3. Trachytic and other similar productions are almost constantly associated with the blue semicrystalline limestone. In the absence of organic remains, Mr. Hamilton could not determine whether this limestone is an altered calcareous rock, or whether it has been raised from an inferior position; but he is inclined to adopt the latter opinion, as it bears a great resemblance to the limestone near Constantinople, and which is associated with transition schists.—II. 'A Letter from Mr. Otley, of Exeter, on some Specimens obtained from the New Red Sandstone near that city, and considered by the writer to be Fossil Aleyonia.'—III. 'Descriptions of the Remains of a Bird, a Tortoise, and a Lizard, from the Chalk near Maidstone,' by Richard Owen, Esq. The portions of the bird are the property of the Earl of Enniskillen, and were recognised by him and Dr. Buckland to belong to a large species. Mr. Owen considers that they consist of part of a humerus and two distal terminations of tibias. The portion of the humerus is nine inches long, with one extremity, though mutilated, nearly entire, and the other completely broken off. The extremity partially preserved is expanded, but the rest of the shaft of the bone is pretty regular and of uniform size, but slightly bent; the circumference being 2½ inches. It is unequally three-sided, with the sides flat and angles rounded. The bone resembles most nearly the humerus of the

albatross in form, proportions, and size; but it differs in the more marked angles bounding the three sides. The expanded extremity likewise resembles the distal end of the humerus of the albatross; but it is too mutilated to allow of the exact amount of similarity to be determined. Mr. Owen is of opinion, that if the nature of the bone be correctly determined, its length and comparative straightness would prove it to have belonged to one of the longipennate natatorial birds, equalling in size the albatross. The two distal ends of tibias present the peculiarly well-marked trochlear extremity; but both specimens have been crushed. Their relative size to the preceding bone, on the supposition that it is a humerus, is nearly the same as in the skeleton of the albatross. There is no bird now known, north of the equator, with which the fossils can be compared. The remains of the tortoise, or chelonian reptile, consist of four marginal plates of the carapace, and some smaller fragments of the expanded ribs. The marginal plates are narrower, in proportion to their length, than in any of the existing marine chelonias; and they deviate still more in the character of their internal articular margin from the corresponding plates of terrestrial chelonias: they agree, however, sufficiently with the marginal plates of the carapace of the emydes to render it most probable that the fossil is referable to that family of chelonias which inhabits fresh water or estuaries. The remains of the lizard are in the cabinet of Sir Philip Egerton, and consist of a series of small vertebrae in their natural relative position. The vertebrae are united by ball and socket joints; and they are proved to belong to the saurian class of reptiles by the presence of many long slender ribs, and by the conversion of two vertebrae into a sacrum. Portions of an ischium and a pubis are connected with the left side of this sacrum, and demonstrate that the reptile had hinder extremities. Mr. Owen then proceeds to shew to which division of saurians, having ball and socket joints, the fossil can be referred; and he proves, that it must have belonged to the Lacertian, in consequence of the slender, equally long ribs having articulated with short tubercular processes, and all the vertebrae, except the one immediately preceding the sacrum, being furnished with processes, and, therefore, having had ribs. He further proved, from the fossil having twenty-one costal vertebrae anterior to the sacrum, including the single lumbar, that it cannot be referred to the genera *Stellio*, *Leiolepis*, *Basiliscus*, *Agama*, *Lyriocephalus*, *Anoles*, or *Chamæleon*, but that a comparison may be instituted between it and the *Monitors*, *Iguanas*, and *Scincus*. In the absence, however, of the cranium, teeth, and extremities, he feels that a further approximation would be hazardous, and too conjectural to yield any good scientific result.

## GEOGRAPHICAL SOCIETY.

JUNE 22. Mr. Greenough, President, in the chair.—Twelve members were elected. Extracts from the following papers were read:—1. 'An Account of the newly discovered Rivers on the Northern Coast of Australia,' by Captain Wickham, R.N. Communicated by Captain Beaufort, Hydrographer.—In the course of the recent examination of the northern coast of Australia, in H.M.S. *Beagle*, a deep bay was found immediately to the westward of Van Diemen's Gulf, between Cape Hotham and the Vernon Islands, terminating in a considerable river, which was explored for eighty miles in a southerly direction, when it be-

came narrow and divided into two branches, one coming from the southward, and the other from the eastward. This river, which has been named *Adelaide*, is navigable for vessels of from 400 to 500 tons burthen nearly five miles up; the banks are about five feet high, and the lower part thickly lined with mangroves; higher up an extensive grass-plain with clumps of trees, and at the extreme point reached, the eye wandered over a vast tract thickly wooded as far as could be seen from the top of a tree. The drift-wood was lodged in the trees ten feet above the present level of the stream; and in the upper parts, magnificent bamboos, rising to the height of eighty feet, line the banks of the river: the farthest point reached was in  $12^{\circ} 56'$  south;  $131^{\circ} 18'$  east. Continuing the voyage to the south-westward for about 120 miles along the western shore of *Arnhem Land*, the *Beagle* rounded *Point Pearce*, and found an extensive opening hitherto unexplored, at the bottom of which a large navigable river flows into the sea. After proceeding up this stream in the ship for fifteen miles, the examination was continued in the boats, which ascended about sixty miles farther. From this spot *Lieutenant Stokes* went on by land, and succeeded in reaching a point about 175 miles from *Point Pearce*, in a south-east by east direction. About two miles from its outlet this river is from twelve to twenty fathoms deep, and free from all impediments: above this sandbanks are numerous. The general character of the country through which it flows is level; plains covered with coarse grass and gum-trees of small growth; towards the coast is a range of hills of moderate height. This river, as well as the other, shewed evident marks of heavy floods, particularly in the upper part, where the trees, on both banks, to the height of twenty feet from the river, are all inclining downwards at an angle of  $45^{\circ}$ . Some of these trees are of very large growth. This river was named *Victoria*, in honour of her majesty: the extreme point reached was in  $15^{\circ} 36'$  south, and  $130^{\circ} 52'$  east.—2. 'Notes on a Journey from *Erz-rüm* by *Músh*, *Diýar-bekr*, and *Birehjik*, to *Aleppo*,' by *Viscount Pollington*. Quitting *Erz-rüm* on the 5th June, 1838, the traveller passed by *Hassan Kaleh*, and *Achveran*, to *Khanús*, a small town inhabited exclusively by Armenians, on the north-eastern bank of the *Biu Gül Sú*, or river of a thousand lakes, which winds through the plains in a general south-east course. After riding eight hours in a south by east direction, a steep descent leads to the river of *Char-hol*, crossed by a stone bridge, and thence by *Sacavi*, an Armenian village, situated on a remarkable conical hill on the banks of the *Murad Su*, or *Euphrates*. On the road a party of peasants were passed sowing wheat, which they did in a very primitive manner: the sower walking before the plough, cast the grain upon the ground among the high grass and weeds, and then over all came the plough, which was drawn by eight oxen: the grain was small but very white. Crossing the *Kara Sú*, a name about as common in Turkey as *Black-water* in Ireland, the travellers reached *Músh*, after a journey of eighteen hours from *Khanús*. *Músh* is well situated on and around a conical hill at the foot of the ridge of *Niphates*; its principal trade is in tobacco, which, although somewhat coarse, is in great estimation in all the surrounding country: the bazars are large and well supplied, and among other things were *Glasgow shawls*, which are here used for turbans and girdles. On quitting *Músh*, the road lay to the west, along the foot of the

mountains, and passing by *Kizil Agatch*, a large village, gradually winds through the *Jebel Nimrud*, or *Niphates*, by a picturesque pass; in many places the air is quite perfumed by the abundance of wild flowers, which covered the ground as with a Persian carpet, so great were the variety and richness. At the Kurds' encampments much hospitality and good will prevailed, and although many of the people had never seen a Frank before, their curiosity kept within the bounds of civility. Descending into the plain of the *Tigris*, or, as the wanderers on its banks still call it, the *Hid-dekel*, an hour's journey brought the travellers to the small town of *Hazú*, where the mulberry, Lombardy poplar, and other trees, gave proof of the warmth of the climate. From this the road led by *Diýar-bekr*, *Severek*, and *Orfah*, to the *Euphrates* at *Birehjik*, and thence to *Aleppo*.—3. 'Notes on a Journey from Constantinople to Mosul, in Mesopotamia, in the winter of 1839-40,' by *William Ainsworth, Esq.* Leaving Constantinople on the 2d November, *Messrs. Ainsworth* and *Rassam* took the road by *Iznik*, *Kutáyah*, *Konfayah*, and through *Kulak Boghaz*, a pass of the *Taurus* to *Aleppo*; from this place they turned to the eastward, and passing through *Orfah*, *Mardin*, and *Nisibin*, reached *Mosul* on the *Tigris*, on the 31st January of the present year. The former part of this route, from the coast to the north side of the *Taurus*, is through a country more or less already travelled over and described; but *Mr. Ainsworth's* notes contain many new and important observations. On the 26th November, the party reached the foot of the central chain of the *Bulghar Tagh*, which, like the more eastern acclivities of the *Taurus*, is composed of tertiary deposits. The general direction of the range is from E.N.E. to W.S.W. The lateral valley of *Kolu Kushla* is well watered, and contains some small villages surrounded by vineyards and walnut-trees; and terminates in a more extensive valley nearly parallel to the central chain, containing a large rivulet which flows from the south-west. This valley is bounded to the east by a wood-clad and rocky range of limestone, and between this chain and the loftier summits of the *Bulghar* is the valley of *Aluguja*. At six miles after entering the valley of the main tributary to the *Sihun*, the road leaves the valley for a short time, crossing over hills and through a ravine, which presents great difficulties to the passage of cannon: from these eminences the road is carried almost directly upon a gentle slope to a point where the first-mentioned stream, coming from the left, is joined by another large rivulet, flowing from the right, from the valley of *Aluguja*: the two rivers united, flow through a somewhat narrow pass, and this point has been made the seat of the Turkish defences of the *Kulak Boghaz*. The peninsula which commands the centre of the valley, and is between the two rivers, is occupied by a battery of four guns and two mortars. Below, the valley, after the junction of the two streams, is crossed by a palisade, which stretches up the hill-side, on which, to the left, are two small batteries, at different heights; and on the right side, similar entrenchments exist, one at the foot of the hill, the other on the declivity. This spot is called *Shiflu Khán*, and is defended by a few gunners and *Arnaouts*, whose principal service appears to be the transport of deserters continually passing through the defiles. Travelling up the valley of *Aluguja*, we found it narrow, and the population thinly scattered, but abounding in vines, walnuts, and cherries. Here were many picturesque scenes,

heightened by the main range of the *Bulghar*, which rises almost precipitately a thousand feet above the valley. Returning to *Shiflu Khán*, we pursued the road in an E.N.E. direction: at five miles, is another palisade, carried across a narrow portion of the pass, and a battery upon the height above. At a mile and a half beyond, the road is hewn out of hard limestone rocks; and on turning the corner is the first Turkish outwork, consisting merely of a wall and a guard-house. Immediately beyond, *Mehemet Ali* has lately built a bridge: shortly afterwards, the valley opens out, and shews the first Egyptian outposts. One mile farther the road quits the valley of the *Sihun*, which flows on in a south-easterly direction, and turns for two hours up another valley to the S.W., which leads to the crest of the pass, which may be termed a plain occupying the summit-level between the waters of the *Sihun* and the *Taurus* river, and found to be at an elevation of 3800 feet above the sea. *Mr. Ainsworth's* paper then goes on to describe the Egyptian defences at some length, which he states to consist, among other works, of eight separate stone batteries, each surrounded by a foss, and approached by a drawbridge and double gates; and concludes his account by saying, "that the defences established in these passes by *Mehemet Ali* are much more important than is generally imagined; and, instead of being mere lines of fortification from which to advance upon a hostile country, their durable character, and the care, and skill, and expense bestowed upon their construction, allow them to be looked upon as a permanent line of frontier desired by the parties engaged in their erection. They are quite different from any thing observable in the Sultan's territory, even at *Varna* or *Silistria*, and calculated to be opposed to an enemy more skilled in war than the Turks; being, in point of execution, quite equal to what is commonly met with in the northern parts of France."—*Mr. Ainsworth's* route was illustrated by *Cramer's* map of *Asia Minor*, coloured by *Mr. Hamilton*, so as to indicate all the towns at which coins or medals have been found in that country, being upwards of 270 different localities, including the adjacent islands.—*Captain William Allen, R.N.*, gave an account of his former voyage up the *Quorra*, and an outline of the probable proceedings of the expedition about to proceed up that river, under the command of *Captains Trotter*, *Bird Allen*, and himself, illustrated by the original charts of the river.—On the table were the original charts of the nautical survey now carrying on in the West Indies, and on the coast of central America, under *Captain Barnett* and *Lieutenant Smith, R.N.*, and the officers of *H. M. S. Thunder* and *Lark*, being a series of beautifully executed drawings.—Also a plan of *Port Nicholson*, or *Wangi Nui*, in *New Zealand*, with a portfolio of characteristic sketches of the harbour and adjacent scenery. Communicated by the *New Zealand Company*.—Among the donations were a model in relief of *Clare Island*, on the north-west coast of *Ireland*, by *Mr. Bald*; the "Family Atlas," in forty-nine sheets, by *Mr. Betts*; a coloured plan of the *Troad*, by *Major Napier*, 46th Regiment; and *Martinière's* "Dictionnaire Géographique," in 10 vols. folio, presented by the President.

## PARIS LETTER.

Academy of Sciences, June 23, 1840.

SITTING of June 15.—*M. Poinset*, in the name of a committee, gave out the subject for the grand mathematical prize to be awarded in

1842. It is as follows:—"To find the equations of limits, which are to be joined to the indefinite equations for completely determining the maxima and minima of multiple integrals." Examples are to be added of the application of the method to triple integrals.

M. Menotté transmitted certificates from various cloth-weavers at Elbeuf, attesting that his *savon hydropfuge* had completely succeeded in rendering woollen cloths waterproof, without destroying the suppleness of the material, or imparting to it any disagreeable smell.—M. de Blainville addressed a report to the Academy on a memoir by M. Jourdan, relative to a fossil animal of the family of *Rodentia*, coming from the fresh-water limestones of the centre of France, and considered as a new generic type, *Theridomys*: also, on memoirs by MM. Delaizet and Deparieu, on the bones of *Rodentia* of Auvergne, which they referred to a new species, *Echimyis*, and to a new genus, *Archæomys*.

*Photographic Engraving.*—Dr. Donné announced to the Academy that he did not intend to carry any further his experiments in engraving the photographic image on the plate, because he found himself not sufficiently skilled in the manual part of engraving, and had not time to devote himself to learning it. He would, however, mention to the Academy what his method consisted in. After having obtained the photographic image by the camera obscura, he covered the edges of the plate with a layer of engraver's varnish, in order to hinder the mordant from attacking the copper. He then laid it horizontally, and poured upon its surface the liquid, composed of three parts pure nitric acid to four parts water, until all the parts not covered by the varnish had a thin stratum of liquid over them. At the end of three or four minutes the action of the mordant began to manifest itself; and it must then be removed in three or four minutes from that time. This however, could only be determined by a practised engraver. It was important to remove it at the right time, since if the mordant stopped on too short a time the shadows were not sufficiently bitten in; if, on the contrary, it stopped on too long, the lights were attacked, because the acid, after having acted on the mercurial globules which cover the silver in the lights, would attack the silver itself lying underneath. Certain parts of the lights that required great breadth and vigour he recommended should be blown upon so as to remove the acid during the operation, or else should be stumped out with a piece of cloth.

M. Boussingault read an interesting memoir on the proper succession of crops to be observed in agricultural operations, and on the nature and quantity of the residuum left in the soil by various kinds of crops. He laid it down as the result of the observations hitherto made (and which are still to be conducted for a series of years), that any given crop influenced a succeeding one not merely by the quantity of vegetable and azotic matter left behind by it in the soil, but also by the circumstance whether the plant forming the crop had penetrated deep into, and had exhausted, the soil or not. Thus wheat was found to grow much better after potatoes than after beetroot, and far better after clover than after either of the other two crops. The usual succession in the east of France he stated to be potatoes, beetroot, wheat, clover, and oats; but this was no doubt a faulty system.

M. Næggerath presented to the Academy some very remarkable crystals of pyroxene, found in great quantities in the scoriae of the iron-foundry of Olaberg, in the regency of

Arensberg, in Sweden. These crystals were so much mixed up with the amorphous mass of the scoriae, that the latter seemed entirely made up of pyroxene. In the furnaces in question the oxydized iron of Brilon was smelted; and the oxyhydrated iron added to it seemed to aid in the formation of these crystals. It was observed that the heated air system also helped much in forming them, and that they were never obtained when the furnace was supplied with cold air. This latter circumstance was important, as indicating a method of multiplying artificial minerals.

M. Duvernoy completed the reading of his memoir of March last, on the respiratory organs of decapodal crustacea.

At the recent sitting of the Academy, M. Arago presented to it a column of pear-tree wood, for purposes of furniture, impregnated with pyrolignite of iron, according to the process of M. Boucherie of Bordeaux, of which we gave an account a short time since. The wood was as black and as hard as ebony—or rather harder.

*Academy of Inscriptions and Belles Lettres.* Sitting of June 12.—M. Raoul Rochette read the remainder of his observations on the work of M. Mauduit, upon the Troas. This part of his report was especially interesting, from its comprising the opinion of so eminent an antiquarian on the site of the ancient Troy. He stated, that opposite to the spot where Pergama stood, and of which "etiam periere ruinae," and on the other side of the deep narrow valley of the Simois, himself, in company with M. Morey, had remarked in 1838 the vestiges of an ancient town, the circuit of which, of Cyclopean construction, left no doubt that it ought to be referred to the Homeric period.—M. Guérard terminated his notice of the Chronicle of Richer, published in the collection of Pertz, and shewed the importance of it in elucidating certain points in the History of France.

Sitting of June 19.—M. Jules de Berton read the continuation of his memoir on the topography of ancient Tyre. In this second part he treated of the times anterior to the conquest of Syria by the Arabs, and went back as far as the age of Alexander, going at great length into an explanation of the siege by the Macedonian conqueror.

The Chevalier Gazzera, conservator of the public library at Turin, and secretary of the Academy of Sciences at Turin, has published an interesting account of an inspection of the libraries of the principal towns in the south of France. He notices those of Carpentras, Toulon, Marseilles, Aix, Nîmes, Narbonne, Toulouse, and Montpellier—those of the two latter towns being the richest, and the latter possessing a volume containing six unpublished sonnets of Alfieri. One of these, the last, is interesting, as shewing the light in which the poet looked on tragedy, and as being written in the provincial dialect of Asti; being the only occasion on which, in his writings, the poet used his vernacular tongue. The four first verses of this sonnet are as follow:—

"Son dur, lo seu, son dur, ma i parlo a gent  
Ch' han l' anima tant mola e deslava  
Ch' i le pa da stupi, s' d' costa nia  
I piaso appena appena a l'un per cent."

M. Leroux de Lincy is preparing for publication, under the auspices of the Société de l'Histoire de France, a poem in 6000 verses, nearly entirely inedited, on the death of St. Thomas of Canterbury, or Thomas à Becket, written by Huerne of Pont Ste. Maxence. A fragment of this poem, taken from a MS. of the fourteenth century at Wolfenbuttel, has

been already published by M. Bekker. The present edition is to be made from a MS. in the Bibl. Roy. of Paris, of the thirteenth century. A life of St. Thomas, from a MS. in the Bibliothèque de l'Institut, will be added to it.

Professor Casalis, of Turin, is publishing a geographical, historical, statistical, and commercial dictionary of all the states subject to the King of Sardinia. Nos. 20 and 21 have recently appeared in that capital, and they maintain the character of the work for accuracy and extent of information.

M. Daunou, perpetual Secretary of the Academy of Inscriptions, member of the Academy of Moral and Political Sciences, Keeper-general of the Archives of the Kingdom, and peer of France, died a few days since. He was one of the few survivors of the learned men who flourished before the Revolution; and in him almost the last remaining great light of the eighteenth century is extinguished.—M. Redouté, the celebrated flower-painter, and Professor of Drawing at the Garden of Plants, died the other day in Paris, in his eighty-first year.

M. Cauchois has been appointed optician of the Bureau des Longitudes in the room of the late M. Lerebours.

Squarta bestie in tutto il mondo.  
Calmar beetle col primiero,  
E' missione dell' intero.

Answer to the last:—*Far-falla.*

#### LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

SIR WILLIAM BROWN'S MEDALS.—June 19.—These medals were adjudged as follow:  
*Greek Ode.*—H. M. Birch, King's College.  
*Latin Ode.*—The same.  
*Greek and Latin Epigrams.*—C. Sangster, St. John's College.—*Cambridge Chronicle.*

*To the Editor of the Literary Gazette.*

My dear Sir,—On the bust of the Duke, executed by Pistrucci for Mr. Hamilton, a cast of which we possess, is inscribed the word—OTKETIMEMITOI. It has been a riddle to me ever since I have had charge of this Museum. I wrote to Mr. Pistrucci for a solution of it, and have received the following explanation from Mr. Hamilton:—

The inscription was carved on the bust as a puzzle to Greek scholars, who might attempt to divine its meaning without knowing from what author it was taken. The English of the words is "No longer to be blamed;" and they form part of an epigram by Posidippus, consisting of four lines, of which the following is a translation. They are addressed to Lysippus, the statuary, on the statue he had made of Alexander the Great:—

"Lysippus, sculptor of Sicily, able artist,  
To the hand; the brass seems fire,  
Which thou hast fused into the form of Alexander;  
The Persians are no longer to be blamed; the steers may  
See from the Lion."

The application to the Duke and his Portrait needs no explanation.

Λύσιππος, πλάστη Σικωνίη, θαλασσίν χυλῆ,  
δαίη τεχνίτην, πῶς τοι ὁ χαλκὸς ἔσθ'.  
Ὅν παρ' Ἀλεξάνδρῳ μαρτύρ χυμῶ. ΟΥΚΕΤΙ  
ΜΕΜΙΤΟΙ

Πίστευε συγγνώμῃ βουτὶ λίοντα φουλῖν.

*Anthol. Graeca*, Vol. II. p. 49.

The idea is very neat, and if you think it worthy of insertion it would save my credit as a Greek scholar; for I have repeatedly been

asked to explain it, and been obliged to confess my ignorance. — I am, dear Sir, yours very faithfully,  
L. H. J. TONNA.

### FINE ARTS.

*Gallery of Pictures: Soult's, &c.*—At Mr. Buchanan's rooms, in Pall Mall, we have been highly gratified by the sight of this small but charming collection. There are, indeed, several pure and delicious specimens of eminent masters, which Mr. B. has brought from France and Italy, as well as a few others we have seen before. Among the former, we notice "St. Jerome in the Desert," a Vandeyck in his Rubens style of the richest colouring; "A Sleeping Infant," Guido, a gem; and "Venus Stealing Cupid's Bow," certainly one of the finest works ever painted by the artist; "The Marchesa Balbi," an admirable Vandeyck whole-length; "A Backhuyzen Sea," a *chef d'œuvre* without a blot; a Jan Steen of equal merit for his hand, and others of great beauty and noble qualities in oil. New accessions are about to be added, and we trust that our National Gallery will not suffer such treasures to be diverted from that their proper receptacle for ever.

### NEW PUBLICATIONS.

*Sketches in Belgium and Germany.* By Louis Haghe. Hodgson and Graves.

IN a notice which we gave some weeks ago of two specimens that had been sent to us of this extraordinary work, we stated to the effect "that any thing more beautiful in any style of art, that any thing so beautiful in lithography, we had never before met with." That opinion is equally applicable to the twenty-six drawings of which the whole collection consists, and at which we have just been gazing with equal astonishment and delight. We are really at a loss whether most to admire the fine choice of the subjects, the truth of the perspective, the exquisite details (rivaling the *daguerreotype*) of the architecture, sculpture, and carving, the picturesque character and costume, the varied expression, and the correct and spirited drawing of the individual figures, the masterly grouping of them, the skilful management of the chiaroscuro, or the wonderful union of vigour, delicacy, depth, tenderness, breadth, and yet minuteness, in the execution. In pointing out a few of the particular stars which form this splendid constellation, it must not be supposed that we imply any inferiority of brilliance in those which we do not name; but we were especially charmed with the following: viz. "Hall of Justice, Bruges;" "The Marriage Chamber, in the Hôtel-de-Ville, Antwerp;" "Council Room in the Town-hall, Courtray;" "Refectory of the Capuchin Monastery, Bruges;" "The Prince's Room, Hohenfelsburg;" "The Tomb of Maximilian the First, Inspruck;" "The Bourse, Antwerp;" "Screen in the Church, Dixmude;" "Church of St. Jacques, Liege;" "Tabernacle in the Church of Leau;" "Shrine of the Three Kings in the Cathedral, Cologne;" "Sacrament House, in the Church of St. Laurent, Nuremberg;" "Pulpit in the Cathedral, Treves;" "The Holy Well in the Cathedral, Ratisbon;" "The Council Room in the Town-hall, Oudenarde;" and "Private Chapel in the Residence of the Dukes of Burgundy, Antwerp."

*Dramatic Sketches.* By R. J. Lane, A.R.A. Mitchell.

WE have before us two recently published Numbers of this clever work; the one containing portraits of Vandenhoff, in "Macbeth," "Cato," and "Shylock;" the other

containing portraits of Charles Kean, in "Hamlet," "Richard the Third," and "Shylock." They are all full of character and spirit. While contemplating the last-mentioned *livraison*, we were strongly reminded both of the agreements and of the differences in the countenances of the father and the son. Upon the whole, there is considerable resemblance between them; but in the upper part of the face Edmund had much the advantage, for nothing can ever give dignity to a nose of concave formation like that of Charles; while, on the other hand, Charles's mouth is free from the goatishness which degraded the otherwise singularly fine expression of Edmund's features.

### THE FRENCH SCHOOL OF ART.

*The Louvre: Salon of 1840.*

[Seventh and concluding notice.]

NEXT to the works of Cabat, those of Troyon were the most remarkable of this year's landscapes. His canvases represented magnificent studies of trees and cattle, forming large upright pictures, painted with astonishing boldness of touch, and with a certain richness of colour that reminded us of Gainsborough's best productions. M. Jeanron's contribution this year was a study of rocks, on which some figures, skilfully drawn, and a few stunted, withering trees, gave rise to the title of "Criminals gathering the Poison from the Upas-tree in Java," which he bestowed upon it. The bold *empâtement* and the forcible colouring of the rocks excited great attention in the artistical world. Besides these, there were several excellent productions of younger and less known artists in the collection; many of them indicative of a more and more wholesome system gradually coming to pervade the French school day by day.

Gudin's principal picture was a splendid view of Constantinople from the water; in the treatment of which he displayed all the best qualities of Turner, without any of his later exaggerations. The port was crowded with vessels of all kinds: on the quay there was a sort of skirmish or insurrection going on, and bodies were being pitched into the blue waters of the sea without much ceremony. In the immediate front of the picture was a light Turkish barque rowing across the strait, while the mosques of the Apostles and of St. Sophia, with their minarets, came out grandly behind, against a golden sky. The handling was sketchy in the extreme—he painted it on the spot: but there was an immensity of vigour and talent in it that went straight to the heart of the lover of nature. The transparency of the colouring was equalled only by its brilliancy and harmony. Altogether it was an exquisite thing; but no picture was ever so much abused by the ante-Gudin clique as this identical one! Another and, to our mind, a far better picture, was his view of Gibraltar, from about four miles to the S.E., done also on the spot. Here there was an extraordinary display of his intimate knowledge of nature in the treatment of a stormy sky; and the meeting of the heavens and the waters towards the N.W. was masterly and poetical in the extreme. At ten paces' distance the eye was astonished at the numerous details he had worked into the precipitous face of the rock, and the unusual labour bestowed on the sky. At a foot's distance you perceived that if the rock and clouds had not been put in with his finger, they had been much indebted to the wooden end of his brush, and that the whole picture must have been painted during a single morning. He had two highly finished small pictures in the *salon*:

one, a sunset after a storm in the Bay of Biscay; the other, the entrance of the harbour of Barcelona at sunset: each of them a perfect gem. A long streak of red fire under a thick bank of clouds marked the limits of the sea in the first, while, in its forepart, a raft of shipwrecked men, hailing a vessel which appeared in the farthest verge of the horizon, across the red line, gave a mournful and highly expressive effect to the composition.

Gudin's great antagonist in marine painting, but his superior in all other styles, Eugène Isabey, had only one picture in the *salon*—a view of the entrance to Marseilles from the sea; the point of view being on the summit of the rocky promontory in front of the lighthouse. It was a large upright picture, painted for the Minister of the Interior, to fill a panel in the new palace of the Council of State on the Quai d'Orsay; and the natural proportions of the scene were disfigured by having to be compressed into an upright instead of a horizontal frame. The artist, however, gave such a grand and glorious expanse of Provençal sky, and of the warm-tinted mountains beyond Marseilles, that the eye gladly excused the inaccuracy for which he was not strictly accountable. The port filled with vessels of all nations, crowds of steamers enveloped in steam and smoke, all the bathers of the city out in their little gondolas, and a vigorously handled study of rocks in the foreground, made up a first-rate picture. It was covered with four or five times the quantity of pigment (proportionably we mean) that one of Gudin's held; and, therefore, had a more solid appearance. Beautiful as it was, however, we should do wrong to say that we preferred it to any of Gudin's, though there was more in it of real work and labour than all artists could in a moment appreciate.

The great flower-piece of the year was by Jacobber, of the Royal Porcelaine Manufactory of Sèvres; a very large production, quite equal to any of Van Os's or Van Spaendonck's canvases. There were several others of great merit by various painters, and one in particular, painted with wax as a vehicle instead of oil, that was peculiarly good. On the whole, the flower-painting school is well and solidly established in France; the country is not over-spread with the daubs of boarding-school misses that infest so many of our exhibitions in England, but there are a dozen artists, of very great and notable powers in this peculiar line, who will keep the reputation of the school up, and will augment it.

There was a large sprinkling of crayon drawings, nearly all portraits, of much worth, in the *salon*. This is a branch of art in which the French beat our countrymen all to nothing. They have ever cultivated it in France with peculiar zest; and they certainly have attained the art of striking off exquisite pictures with very little trouble, and in a comparatively short time. Some of the best crayon drawers in Paris are ladies.

The miniatures this year came up to the usual standard of excellence: those of Isabey, sen. and Mad. de Mirbel, being the best. Miniatures are always pretty; the men are all made as demi-gods in them, and the women as angels. How is it possible for the most crabbed critic to say any thing against them?

The water-colours were very few, and of little excellence: there were ten or a dozen nicely tinted things, but not above two or three that would have been admitted in the neighbourhood of Suffolk Street. This school is not "progressing" in France—we do not say that it is retrograding; but there is no public

evidence of any advance during the last twelve months; and the more the pity!

Architecture was absolutely null in this Exhibition: there was one good "Restoration of a Church of the Eleventh Century in Roehelm, in Alsace," by M. Perrin, and an able "Restoration of the Theatre of Taormina, the ancient Tauromenium, near Messina," by Viollet Leduc—*mais voilà tout!*

The engraving department contained two capital plates by Calamatta, the best being the portrait of M. Guizot. Paul Delaroche's grand picture (now in the possession of Lord F. Egerton), "Strafford going to Execution," has been splendidly copied by the burin of M. Dupont; and his plate in the *salon* excited universal and justly merited approbation. Rollet's beautiful engravings of Jacquand's "Louis XI. at Amboise," and "Marie de Medici," by the same exquisite artist, were also universally admired. Engraving is certainly advancing among our Gallic neighbours, though the highest branch, copperplate, is by no means so much patronised as it ought to be, and cheap publications are doing as much temporary injury to art there as they are in England. Small vignettes are, however, now turned out in much better style in Paris than they used to be; and engravings like those of "The Landscape Annual" are given to the public by Aubert, sen., the engraver, of really first-rate quality.

The works of the sculptors were good, though neither so good nor so numerous as they were last year. The best was an able and boldly executed statue of "Orestes just fallen at the Altar of Pallas," by Simart, — a fine figure, with a great display of anatomical accuracy, and an evident perception of the mythological spirit of the Greek drama. M. Maindron had a grand "Crucifixion," in plaster, in which his anatomical skill was fully developed: it was one of the best works of this kind we have ever seen. M. Lescorné had an exquisite "Andromeda," in marble, in which, like M. Simart, he shewed that he felt all the poetry of the ancient story. There was a clever bust of "Sir John Herschel," by Sue, of Nantes, in the sculpture gallery, — a good likeness of the illustrious original. One of the most striking features of this department was the series of exquisite studies of animals, of all sizes and in all materials, but principally very small and in bronze. This is a branch of art in which the French are far ahead of English sculptors; and all the shops in Paris are filled with beautiful productions of this nature that cannot be executed in England.

Several foreign artists sent contributions to the *salon*: of the Belgians we have already given our opinion; those of Italy, like all modern Italian painters, have shewn themselves below mediocrity; of the Swiss, M. Diday, the master of Calame, sent some large landscapes, good more for their subjects than for their handling; and Hornung, of Geneva, sent several of his portraits. Of this painter there is but one opinion among the leaders of the French school, in which we heartily coincide; but as a declaration of it would probably offend some of our countrymen who admired his productions when they were exhibited in London, we shall prudently put our criticisms into our pocket.

Of course there was an enormous number, as there always is, in the Louvre, of the most villainous daubs that ever disfigured canvass, and a disgusting display of the most extravagantly bad taste. But the absurd impression produced on our mind by the inspection of so much waste of labour, has been effaced by the still more glaring absurdity and injustice of the distribution of medals, crosses of the legion of (dis-

honour?), &c. that has taken place subsequently to the closing of the Exhibition. Among the very worst of the daubers rewards have fallen "thick as leaves in Vallombrosa:" as for those given to works of real merit,—

"Apparent rari nantes in gurgite vasto."

H. L. J.

#### SKETCHES.

##### FRENCH EMBASSY TO PERSIA.

IN a journal of the French mission to Persia, by M. Eugène Flandin, dated 17th March last ("Feuilleton de l'Helvétie"), we observe a few passages which we think worthy of extract. After describing the route through Azerbidjein, &c., the writer says:—

"On quitting Sultanyeh, we travelled for four days through a large and beautiful valley, watered by the river d'Ebbher, and studded with large villages, in which we were received with distinction. Among other honours paid to the ambassador, they never failed to cut the throat of a sheep, the blood of which flowed to his horse's feet, and then to offer him the bloody head. The Persians told us that that was an honour which was not usually paid, except to the princes of the royal family. Every where the country appeared to us to be fertile, and in many places it seemed to be pretty well cultivated. That which is wanting in this part of Persia, and, they say, in the whole of Persia, is labour. But what great interest in tilling the soil, and enriching it with crops, can be felt by men, the fruits of whose industry are extorted from them; and who are obliged either to be poor or to affect poverty, in order to escape the shameful exactions of which all the grantees are here guilty? Persia might be the finest country in the East, but its deplorable system of government has rendered it perhaps the most miserable."

It was amidst these sad reflections that we arrived at the gates of Casbin. This town is governed by a young brother of the Shah's, whose courtesy had prepared for us the most flattering reception. Some miles before our arrival we found on the road a crowd of cavaliers of all ranks, at the head of whom was the prince's visir, accompanied by the highest functionaries. They were escorted by a large body of cavalry, who preceded us, indulging themselves in their favourite sports of the djerid, and mock fights. The frequent discharges of musketry made by the cavaliers at full gallop, evinced the consideration in which the embassy was held; and we were quite delighted with the honourable manner of our reception when we saw at the gates of the town an immense population, whom double ranks of soldiers could with difficulty keep in order. Allowing for the curiosity which had drawn so many people together, it was impossible to doubt of our warm welcome, for which the ambassador returned his sincere acknowledgments to the Shah Zadeh, who received him next day.

On the 4th of March we at length arrived at Téhéran. As at Casbin, we were escorted by a great number of cavaliers, among whom we remarked the principal officers of the Ceygler-bey, or governor of the town. At a little distance from the walls, under a magnificent tent of red cloth, a collation was prepared. This was the place at which the local authorities were to do the honours of hospitality; and people of all ranks and classes came and grouped themselves around us to render homage to the French ambassador, whom they presented with oranges, pomegranates, cakes, and confectionary. Then came the merryandrews, men dressed in the

skins of beasts, youths dancing to the sound of tambourines and flutes, wrestlers, each armed with two clubs, throwing themselves into every variety of posture, and exhibiting the beauty of their forms, and the elasticity of their muscles. Finally, as if to purify the ground, and lay the dust raised by the crowd, water-porters, bearing immense leather bottles on their shoulders, poured water under our horses' feet. Every thing was set in motion in order to receive us worthily; even the Shah's lions were sent to meet us, and saluted us with their roars: they were merely held by a collar and a steel chain, and submitted to two men, whose only arms were a little stick of green wood. The Russian and Turkish ambassadors paid their compliments to M. la Comte de Sercey; and their suites, who came to meet us, accompanied us to the gates of Téhéran. At two o'clock in the afternoon we made our entry into that city, in the midst of a continually increasing crowd and of a double rank of soldiers, who lined all the streets through which we passed. Thunder grumbled, flashes of lightning rapidly succeeded one another, and some large water-drops, falling at the moment at which we reached the palace of the embassy, induced the Persians to exclaim that it was evident we enjoyed the protection of God, as he had permitted us to arrive before the storm. In fact, the rain soon fell in torrents; to our great satisfaction, not having seen any thing but snow since our departure from Trébisonde.

The private houses in the part of Persia through which we have travelled are very low, and it is difficult to mention more than a few having a story above the ground-floor. The manner in which the Persians build, and the quality of the materials which they employ, do not allow them to give elevation to their structures. In fact, unbaked bricks, put together with a little earth, cannot offer any great guarantee of solidity. Of this we have for some days had proofs. The weather having become very bad, and the rain having fallen for four days consecutively (which frequently happens at this season), we have seen a great number of houses give way, and suddenly fall down, obstructing the streets with their ruins; and workmen were every where visible instantly removing those ruins. But if any thing can surpass the want of foresight of the Persians in their buildings, it is the haste with which they repair their habitations. In two days after these disasters, the weather having become fine, the houses which had suffered could be recognised only by coats of mud still fresh."

#### "ZÔÉ, CAST DOWN YOUR EYES."

(From the *Gazette des Tribunaux*.)

"MONSIEUR," says a little old man, in a sandy wig, and a green coat with white buttons,— "Monsieur, I have a daughter; I intend her for a dramatic career: I esteem the arts, but I respect morality, and am anxious for my daughter's virtue. Zôé, cast down your eyes."

Zôé. "Yes, pa."

The Father. "In the present age, gentlemen,—in the age in which my child is living—for as to myself I lived in the last age, and may be said no longer to exist;—I say, then, in the age in which my Zôé is living, those who have no fortune must make one. Now, without doubt, the surest way of arriving at independence is by the theatre. We have seen, gentlemen—we now see—the daughters of gaolers shining on our first stage; we see a young Rachel enriching a numerous family. My Zôé, gentlemen, is neither the daughter of

a turnkey nor the descendant of an Israelite. I was a hairdresser, gentlemen; which induced one of my friends, a man of wit, to say, that on the day of my daughter's *début* a long queue at the door of the theatre would be indispensable."

*M. Anatole* (the young and elegant defendant). "You have a great deal of wit yourself, my worthy *M. Mousset*, but you misuse it. Pray come to our affair."

*M. Mousset*. "Zoé, cast down your eyes. Gentlemen, this young man has committed an offence against me. The facts are these:—It is my custom every morning to accompany my Zoé—my blood—to the *Conservatoire*: I wait for her in a coffeehouse near that estimable establishment. One day I observed that at the end of her lessons, and while she was crossing the space which separates the door of the *Conservatoire* from that of the coffeehouse, my young and innocent girl was accosted by a male pupil, who whispered to her some dangerous and seductive remarks. I pounced upon the audacious fellow, and ordered him, in the name of the paternal authority, to observe complete silence towards my daughter. He bowed to me very politely, and went away. I looked at Zoé, who was as red as a little cherry. Zoé, cast down your eyes."

Zoé. "Yes, pa."

*M. Mousset*. "The next day the same adventure occurred, and the same injunction on my part. Young Anatole again went away, bowing to me very courteously. In the evening, at supper-time, at the moment at which my Antigone was filially preparing my soup, two or three knocks came to the door. Zoé went to open it, and uttered a slight exclamation at the sight of the visitor who appeared. Can you believe, gentlemen, that this visitor was the young and audacious Anatole?"

*M. Anatole*. "I do not pretend to conceal it."

*M. Mousset*. "Stupefaction rendered me speechless; but the rogue, not at all disconcerted, penetrated into my apartment, kissed his hand to my daughter, and, making an inclination to me, expressed himself in nearly the following terms:—'*M. Mousset*, you will pardon the freedom of this visit. I come to chat with you on an important matter; and as nothing is ever better understood than *infer pocula*, I will accept, without ceremony, a few spoonfuls of your soup, which seems to me to be delicious. How could it be otherwise,' added he, with a sigh, 'prepared by such charming hands?' I repeat, gentlemen, that I was mute with astonishment. Before I could utter a word, the young gentleman had installed himself at my table, and by signs invited my Zoé and me to seat ourselves. I felt as if fascinated by so much impudence. I obeyed Anatole's invitation mechanically: I sat down, and was imitated by my daughter, who continued to blush like a poor little lobster."

Zoé. "Oh, pa! a little time ago you said 'cherry;' now you say 'lobster.'"

*M. Mousset*. "No matter. The audacious fellow began to help us, as if he were the master of the house. After the soup, he at length broached the object of his visit. '*M. Mousset*,' said he to me, 'you have a charming daughter; I am in love with her, and I am come to ask you for her hand.' I looked at Zoé, who was blushing like a little radish. 'Sir,' replied I, 'what is your position?'—'I am, like your daughter, a pupil of the *Conservatoire*; they allow me, as they do her, the possession of some talent; and I believe that I shall one day place myself in so good a position, that you would

have no cause to regret having confided to me your child's happiness.' 'Well,' said I to him, 'when you have acquired that position, you may call again. I by no means wish to marry my daughter before her *début*. Besides that it would interrupt her studies, I am anxious not to compromise her future life by a premature and not very brilliant match. We shall see after the *début*. If my daughter should have the luck of young Rachel, you must be aware, young man, that I could never pardon myself for having accepted you as a son-in-law, while she was as yet only a simple scholar. So, farewell; and beware how you speak to Zoé, if you do not wish me to call in the law to my assistance.' The young man rose abruptly; so abruptly, that he upset the table, the table in falling upset me, and the soup-dish rolled upon my head, and shivered itself on my forehead. I was scalded, contused, and soiled. I claim reparation for these injuries, as well as for the value of my broken soup-dish, and my greased furniture. For the personal injuries, twenty-five livres; for the fractured soup-dish, one livre, twenty-five centimes; for the furniture stained with fat broth, six livres; for my daughter's agitation, twenty-five centimes; making in the whole, thirty-two livres, ten sols; which I trust, gentlemen, you will have the goodness to allow me in the shape of damages."

*M. Anatole*. "I am sorry to contradict Mademoiselle Zoé's father, but the fact is, I never had any intention of upsetting the table. The refusal which I had just experienced agitated me profoundly; I rose to retire, and in my haste caused the accident of which *M. Mousset* complains."

The Tribunal, being satisfied with young Anatole's explanation, nonsuited *M. Mousset*, and condemned him in the payment of costs.

"Come along, Zoé," said *M. Mousset*, coldly; "you must repair this check. Apply yourself more than ever; and vow an implacable hatred to this *M. Anatole*. How! what! you look at him! You smile on him! Zoé, cast down your eyes."

#### VARIETIES.

*The Drama* this week does not offer us a single novelty. *The Concerts d'Été*, at *Drury Lane*, are every night more crowded as their attractions become better known.

*The Haymarket* holds on well with the legitimate drama; and the *English Opera* offers lighter entertainments. There are concerts every where every morning and evening; and the *Italian and German Operas* go on as usual, depending on

Taglion's toes,  
And Heinefeller's nose.

*A Trio*.—In the Haymarket bill for Buckstone's farewell benefit, on Thursday next, it is announced, in "As You Like it," that "the trio of 'What shall he have that Killed the Deer?'" will be sung "by Messrs. (1) Caulfield, (2) Green, (3) Fry, and (4) Giffin!" We never knew it take four men to sing a trio before.

*Newspaper Press Benevolent Association*.—On Saturday this excellent Institution observed its third anniversary at the London Tavern, when the Marquess of Normanby presided, and was ably supported by several noblemen, members of parliament, &c. Nearly three hundred ladies and gentlemen sat down to an elegant dinner: most of the vocalists from the Italian Opera (by the permission of *M. Laporte*) attended, besides many of native talent, and afforded a delightful treat to the lovers of har-

mony. The list of donations announced by the treasurer was, we rejoice to say, of a very encouraging description; and, indeed, we know no Institution better deserving of public support.

*Proposed New Library*.—A plan has been some time in contemplation for forming a library at the west end of the town, to supply subscribers with a superior order of books,—something, it is stated, between the British Museum and the established subscription libraries; and this week a public meeting was convened at Freemasons' Tavern, to consider of the proposition. Lord Eliot was in the chair, and the project was favourably received, and a considerable list of supporters announced. We have no doubt but that in a few years, with a sufficient number of subscribers, and the fund judiciously laid out, a capital collection of books may be got together, and a valuable institution for reading and reference established. The station, talents, and influence of those who have taken up the cause, warrant us in hoping that such will be the result. We may merely notice that few people are aware of the curious multitude of works in such libraries as Hookham's, Cawthorn's, &c. &c. Their terms for the abundance of new trash are certainly very high, but they are strange old stores of by-gone publications.

*Guiana*.—We observe, by a catalogue of above four hundred lots, that Mr. Schomburgk's interesting exhibition of natural history, Indian curiosities, &c. &c., is to be sold by auction next week,—a fine opportunity for enriching their cabinets to the scientific, and for adorning their habitations by all classes.

*Cure of Hydrophobia*.—Dr. Bellinaye has published in "The Times" an account of an Austrian schoolmaster having discovered a remedy for this appalling disease, which has been examined by the government, and, as far as the experiments have gone, approved to be successful. The medicine is *Gentiana Cruciata*, taken internally in doses proportioned to the violence of the malady; but there is also a surgical lancing of the frænum under the tongue, where the distemper first exhibits itself. The discharge of a viscous yellow matter is said to be essential to the cure; which is, however, effected after the most dreadful symptoms.

*Trafalgar Square*.—The improvement or laying out of this important part of the metropolis has been confided to Mr. Barry, who, if any one can, will do all that taste and art can accomplish to make it handsome and ornamental. By a Minute of the Woods and Forests, we see that he proposes to lower the upper side of the square, so as to make the National Gallery stand on a terrace. This will give an appearance of greater elevation to that mean structure, which nothing, however, can quite mend except demolition. The rest, we have no doubt, will be well disposed under this accomplished artist's directions; but what can he do with the Nelson Pillar? If they persist in erecting it on this site, it must add more than deformity and extinction to any effect that skill can produce on the National Gallery.

*Wyld's Battle Maps, &c.*—We last week mentioned these admirable productions, intending to go more at length into their description and merits in our present sheet. But we find that Sir George Murray is writing an illustration of them; and, therefore, consider it advisable to wait for his letterpress before we resume the subject. All we shall now say is, that the cost of getting up these plans, &c. must have been enormous,—that they reflect honour on the publisher's spirit and enterprise,—that

they furnish the clearest ideas that can be imagined of the battles, sieges, and movements in the Peninsular war,—that they display wonders of art in engraving,—and that, in short, they are most worthy of national,—say, and foreign military, patronage.

*The Society for obtaining Free Admission to National Monuments* had a meeting at the Thatched House Tavern on Wednesday, Joseph Hume, Esq. M.P. in the chair; at which the progress of the Society for the past year was very satisfactorily stated, and hopes held out of still greater benefits being obtained for the public, through the exertions of the members. The wedge is in, and there can, indeed, be no fear but that, by and by, the people will be allowed all these civilising and refining privileges.

*German Epic Poetry.*—The third of Mr. Hirsch's delightful German readings, on Thursday, was very numerously and genteelly attended. The selections were from Goethe and Uhland, and the passages chosen illustrated by some clear and original remarks on the connexion existing between the ear and eye. We believe one other lecture will close the series for the present season.

*The Regicide Pot-Boy!!!* By John Leech (Tyas), is a burlesque portrait of Edward Oxford, the patriotic imitator of Young France. A pot of porter on two tobacco-pipes, surmounted by a cap of liberty, a sword and dagger, and other symbols, add to the humour of this sketch, which is satirically addressed to a too-numerous set of morbid-minded idiots and sentimentalists who are apt to think "there is something *fine and romantic*" about murder and treason.

*M. Durand's Lectures on French Literature.*—This able lecturer, whose talents are so highly appreciated on the Continent, commenced a course of lectures at the Hanover Square Rooms, on Wednesday last. We were not present, but having had the gratification of hearing M. Durand in a private party (assembled for that purpose), it is incumbent on us to say that nothing can exceed the eloquent fluency of his expositions, and that his compression of the views of ages and periods into a narrow compass renders his illustrations extremely striking and impressive. From such discourses we learn more in an hour than we could acquire by reading in a twelvemonth.

"At the Ilford Petty Sessions, held yesterday, the magistrates decided that the holding of Fairlop Fair on Saturday and Sunday after the first Friday in July is illegal. It will, in consequence, be only allowed for a single day."—*St. James's Chronicle*, June 16th, 1840.

Shorn are the joys of Fairlop Fair,  
With show, and booth, and gaudy shop;  
And those who care its joys to share  
Will hardly say 'tis a fair lop.

June 18th. A. J.

*The Poet Clare.*—A letter in the newspapers refutes the statement that Clare was dead. He

is still in his melancholy seclusion, labouring under hallucination, poetical, but not unhappy.

#### LITERARY NOVELTIES.

A New Periodical, entitled "The Irish Penny Magazine," is announced for early publication. "The Story without an End" has been republished (London, Wilson), with a pretty story of "The Glow-worm," translated by Dr. Reich, and added to Mrs. Austen's text and Mr. Harvey's illustrations.

In the Press.

"The Egypt of Herodotus," being the whole of the second and part of the third book, with a Philological and Historical Commentary and Introduction, by the Rev. John Henrick, M.A.—"A Summer's Day at Greenwich, being a Guide to the Hospital and Park; with a Catalogue of the Pictures in the Painted Hall, an Account of the Ancient History of the Palace, &c. With Engravings. By Mr. William Shoberl.

#### LIST OF NEW BOOKS.

Rev. C. Thirlwall's History of Greece, Vol. VII. (forming Vol. 125 of the Cabinet Cyclopaedia), fcap 8vo. 6s.—The Paradiso of Dante, translated by J. C. Wright, 8vo. 15s.—Curios Notes on the Morbid Eye, by R. Hill, 8vo. 8s.—Dr. Peitchman's Latin Grammar, 1 vol. 12mo. 5s.—Black's Picturesque Tourist of Scotland, 2d edition, fcap, 7s. 6d.—Transactions of the Linnean Society of London, Vol. XVIII. Part III. 4to. 2s. 2s.—Mrs. Hall's Tales of the Irish Peasantry: Chambers' Edition, 8vo. 1s. 9d.—Flowers and their Association, by Anne Pratt, 16mo. 6s.—Guide-Cards to the Antiquities of the British Museum, in a Case, 3s. 6d.—Hand-Book of Health, 32mo. 1s. 6d.—Chemistry of Science and Art, by Hugo Reid, fcap, 6s.—Smith's Double Entry Book-keeping, 3d edition, 12mo. 2s. 6d.—J. Hannan's Look at Literature, 12mo. 2s.—The Stage, both Before and Behind the Curtain, by A. Bunn, 3 vols. post 8vo. 11s. 6d.—Thurgar's Anthologie Française, 2d edition, 12mo. 5s.—Sketches of Country Life and Manners, 12mo. 4s.—Spanheim's Ecclesiastical Annals, translated by the Rev. G. Wright, 8vo. 12s.—W. Bennett's Sermons on Miscellaneous Subjects, Vol. II. post 8vo. 7s. 6d.—Sonnets in the Italian Style, by the Rev. W. Pulling, fcap, 5s.—Hobbes' English Works, Vol. VI. 8vo. 12s.—The New Commandment, or the Christian Text, 18mo. 2s. 6d.—Greydaler, a Romance of the Mohawk, by C. F. Hoffman, 3 vols. post 8vo. 11s. 6d.—The Arabs in Spain, an Historical Narrative, 2 vols. post 8vo. 18s.

#### METEOROLOGICAL JOURNAL, 1840.

June.	Thermometer.	Barometer.
Thursday ... 18	From 48 to 65	29.76 to 29.89
Friday ... 19	... 49 ... 61	29.89 ... 29.81
Saturday ... 20	... 47 ... 68	30.05 ... 30.14
Sunday ... 21	... 51 ... 72	30.11 ... 29.93
Monday ... 22	... 53 ... 70	30.78 ... 29.72
Tuesday ... 23	... 49 ... 68	29.68 ... 29.63
Wednesday 24	... 46 ... 60	29.73 ... 29.67

Wind, south-west.

On the 18th, generally clear; the 19th, overcast, with frequent showers; the 20th, clear; the 21st, morning overcast, otherwise clear; the 22d, clear, raining very heavily about four A.M.; the 23d, morning clear, otherwise cloudy, rain during the afternoon and evening; the 24th, generally clear, rain during the night.

A brilliant meteor from south-west to south seen about ten minutes before nine on the evening of the 18th. Rain fallen, .495 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

#### TO CORRESPONDENTS.

We have to acknowledge No. I. of "The Teetotaler," a newspaper set up to propagate the doctrines of the Temperance Associations. They spell Teetotaler as we not aware. If *Te*, we could have guessed it was a distinction from Coffeetotalers, Coccolatellers, or Eau-sucré-totalers. Be the matter as it may, the journal is edited by Mr. Reynolds, the author of "Pickwick Abroad" and several other works; and is creditable to his talents and the (at the worst) harmless cause he has embraced.

We have pleasure in referring to-day to our seventh and last letter from Paris, on the subject of the Fine Arts in France; which letters, we may unobtrusively say, have conveyed more information on the subject than all previously known to the English public. We also refer with pride and gratification to the continued flow of valuable intelligence in our Parisian literary and scientific correspondence.

The Advertisements necessarily postponed this week shall appear in our next.

#### ADVERTISEMENTS.

Connected with Literature and the Arts.

ANNIVERSARY OF THE BATTLE OF WATERLOO, JUNE 16, 1840.

**MEMORIAL of the MILITARY ACHIEVEMENTS of His Grace the Duke of WELLINGTON.**—At a Meeting of Noblemen and Gentlemen of the United Kingdom of Great Britain, held on Monday, the 19th of June, 1837 (the anniversary of the battle of Waterloo falling on Sunday), it was—

Resolved, That as there is no great national memorial to record the splendid military achievements of the Duke of Wellington, it is proposed to erect, by general subscription, and in an appropriate situation in the metropolis, such a testimonial as may be worthy of those services, and of a nation's gratitude.

Resolved, That the following Noblemen and Gentlemen (with power to add to their number) be a Committee for carrying this object into effect:—

His Majesty the King of Hanover—Lord Denman, Lord Chief Justice  
His Royal Highness the Duke of Cambridge—Lord Dunfermline  
His Grace the Archbishop of Canterbury—Lord William Bentinck, M.P.  
His Grace the Duke of Rutland—Lord Francis Egerton, M.P.  
His Grace the Duke of Northumberland—Lord Colborne  
His Grace the Duke of Buccleugh—The Right Hon. Sir J. C. Hobbes  
His Grace the Duke of Richmond—The Right Hon. Sir Henry Hardinge, M.P.  
His Grace the Duke of Bedford—The Rt. Hon. Sir G. Cockburn  
Marquess of Salisbury—The Right Hon. S. R. Lushington  
Marquess of Anglesey—The Right Hon. Sir George Osborne, Bart. G.C.H.  
Marquess of Downshire—The Right Hon. Sir J. W. Croker  
Marquess of Londonderry—The Hon. Mr. Elphinstone  
Earl of Jersey—Sir B. W. Bridges, Bart.  
Earl of Powis—Sir G. N. Noel, Bart. M.P.  
Earl of Craven—Sir Robert Fitzgibbon, Bart.  
Earl of Aberdeen—Sir Henry Hallifax, Bart.  
Earl of Liverpool—Sir J. P. Bessford, Bart. M.P.  
Earl of Derby—Sir E. Kerison, Bart. M.P.  
Earl Brownlow—Sir Astley Cooper, Bart.  
Earl of Hillsborough—Sir William Anson, Bart.  
Viscount Bessford—Sir James Rivett Carnac, Bart. M.P.  
Viscount Conyngham—Sir Augustus Clifford, Bart.  
Viscount Duncan—Sir J. R. Balfour, Esq.  
Viscount Palmerston—T. B. Simpson, Esq.  
Viscount Lake—Major Smith  
The Bishop of London—Rev. G. Croly, D.D.  
Lord Southampton—Sir F. Frederic French, M.P.  
Lord Hill—General Sir George Anson  
Lord Lyndoch—Sir James L. Lushington  
Lord Downes—Sir Thomas Dallas, G.C.B.  
Lord Strathford—Sir Thomas Strange  
Lord Forester—Sir James L. Lushington, K.N.G. Chairman.  
His Grace the Duke of RUSSSELL—Sir F. TRENCH, Deputy Chairman.  
WILLIAM LEAKE, Esq. Honorary Secretary.

His Grace the Archbishop of Canterbury—The Right Hon. Lord Dunfermline.  
The Right Hon. Lord Hill.  
The Right Hon. Sir George Cockburn.

*Treasurers.*—Messrs. Drummond.  
And Subscribers will be received by the following Bankers in London:—Messrs. Call, Marten, and Co. 25 Old Bond Street; Messrs. Child and Co. 1 Fleet Street; Messrs. Coutts and Co. 5 Strand; Messrs. Cocks, Biddulph, and Co. 43 Charing Cross; Messrs. Cockburn and Co. 4 Whitehall; Messrs. Drummond, 49 Abchurch Lane; Messrs. Glyn, Harcourt, and Co. 67 Lombard Street; Messrs. Hammett, Glyn, and Co. 60 Pall Mall; Messrs. Herries and Farquhar, St. James's Street; Messrs. Hoare and Co. 27 Fleet Street; the London and Westminster Bank, 38 Throgmorton Street; Messrs. Lubbock and Co. 11 Mansion-house Street; Messrs. Matheson and Co. 25 Abchurch Lane; Messrs. Price, Marryat, and Co. 1 King William Street East, Mansion-house; Messrs. Scott, and Co. 1 Cavendish Square; Messrs. Snow, Strahan, and Paul, 217 Strand; and Messrs. Stevenson, Ball, and Son, 30 Lombard Street.

In Dublin—Messrs. Latouche and Co.; Messrs. Ball, Doyle, and Co.; and Messrs. Sir R. R. Brough, Armit, and Co. army agents.

In Edinburgh—Sir William Forbes and Co.; National Bank. And by army agents—Messrs. Cook, Hammett, and Co. Craig's Creek; navy agents—Sir James Rivett Carnac, Bart. and Co. and by the following country bankers:—Brighton—Messrs. Hall, West, and Co. Cambridge—Messrs. Mortlock and Sons. Grantham—Messrs. Kewney and King; Messrs. Hardy, Turner, and Co. Glasgow and Newcastle—Messrs. R. I. Lambton and Co. Leicester—Messrs. Mansfield and Co. Liverpool and Manchester—Messrs. Heywood, Sons, and Co. Ramsgate—Messrs. Austen and Co. Southampton—Messrs. Maddison and Co. Stamford—Messrs. Eaton, Cayley, and Co. Stifford—Messrs. Stevenson, Hall, and Co. Wrexham and North Wales—Messrs. R. M. Lloyd and Co.

Subscriptions, as they amount to 1000*l.* will in succession be invested in Government securities.

That such members of the Committee as have been in India, or are connected with India, be a Sub-Committee, for the purpose of obtaining subscriptions in India, and of adopting such measures as they may deem necessary for remitting the amount of subscriptions to the said Sub-Committee in England.

### REVIEWS OF NEW BOOKS.

#### EDUCATION.

1. *Report on Education in Europe, to the Trustees of the Gerard College for Orphans.* By A. Dallas Bache, LL.D. President of the College. 8vo. pp. 668. Philadelphia, 1839.
2. *The Common School Journal, for the Year 1839.* Edited by Horace Mann, Secretary of the Massachusetts' Board of Education. Vol. I. 8vo. pp. 396. Boston: Marsh, Capen, Lyon, and Webb.
3. *Abstract of the same School for 1838-9.* 8vo. pp. 341.—*Third Annual Report of the Board,* &c. Pp. 57.
4. *A System for the Education of the Young, applied to all Families, &c. &c.* By S. Wilderspin. Pp. 487. London, 1840. Hodson.
5. *A Practical Inquiry into the Philosophy of Education.* By James Gall, Inventor of the Triangular Alphabet for the Blind, &c. &c. Pp. 348. 1840. Edinburgh, Gall and Son; London, Houlston and Stoneman; Glasgow, Gallie; Belfast, M'Comb.
6. *The Obligations of Literature to the Mothers of England.* By Caroline A. Halsted, author of "The Life of Margaret Beaufort," &c. Pp. 178. London, 1840. Smith and Co.
7. *Central Society of Education: Third Publication.* Pp. 438. London, 1840. Taylor and Walton.
8. *A few Notes on the Public Schools and Universities of Holland and Germany; taken during a Tour in the Summer of 1839.* By H. W. Barron, M.P. Pp. 99. London, 1840. Ridgway.
9. *Substance of Lord J. Russell's Speech in the House of Commons, June 20, 1839, on the Government Plan for Promoting National Education.* Pp. 22. London, Ridgway.
10. *Substance of the Marquess of Lansdowne's Speech in the House of Lords, July 5. Same subject.* Pp. 39. London, Ridgway.
11. *A Letter to the Marquess of Lansdowne on the Government Plan of National Education.* By the Rev. J. Jacob, LL.D. Pp. 18. London, 1840. Ridgway.
12. *Recent Measures for the Promotion of Education in England.* Pp. 92. London, 1840. Ridgway.
13. *Preface to the Tenth Edition of ditto.* Pp. 13.
14. *The Mission of the Educator; an Appeal for the Education of all Classes in England.* By a Friend to Justice. Pp. 64. London, 1840. Hodgson.
15. *A Treatise on the Physiological and Moral Management of Infancy.* By Andrew Combe, M.D. Pp. 375. 1840. Edinburgh, Mac-lachlan; Stewart and Co.: London, Simpkin and Co.

THE mass of publications which we have above enumerated, and which do not exhaust the multitude that have demanded our attention (though many we have noticed from time to time), shews how strong a hold the subject of education has taken of the public mind, not only in England, but throughout the civilised world. That we have not entered upon it elaborately and at length, arises from several causes. In the first place, we think a journal so various and so limited as ours, insufficient

for a discussion which hundreds of volumes have in vain endeavoured to determine, and on which opinions differ, as it seems to us, more violently than when the argument began. In the second place, the question in Great Britain has, unfortunately, been made a political question; and it is the last of our purposes to interfere in party contentions and fights. In the third place, the statistics of education, like all other statistics, consist either of disjointed data, or are so exceedingly voluminous, that their application to elucidate the great problems involved is impossible,—in the former case, with any practical certainty whatever, and in the latter, with any useful results which individual industry and periodical literature could exhibit. The partial and the conflicting, the imperfect and the accumulated, alike prevent us from arriving at satisfactory conclusions.

It is not, therefore, that we do not acknowledge the paramount interest of this inquiry; but that we feel our inadequacy to do it justice. We might easily flaunt a one-sided paper, or lend ourselves to a sectarian object, be it high church or dissenting, religious or latitudinarian, as circumstances or inclination prompted; but we could not offer a comprehensive and philosophical view of that which so deeply affects the best human prospects and everlasting happiness of mankind. And this is our apology for classing together nearly a score of publications of contradictory kinds, but containing very considerable funds of information. The American works, 1, 2, and 3, supply much that refers both to the old world and the new. *The Report on Education in Europe* (No. 1), by Dr. Bache, is full of valuable matter. He inspected the principal eleemosynary institutions of Great Britain for the education of destitute children; Heriot's, Watson's, and Calvin's, at Edinburgh; the Liverpool and London Blue Coat Schools, &c.; and followed a similar course in Germany and Holland. His second part is directed to a like investigation of institutions for general education in Scotland, England, France, Holland, Prussia, Saxony, and Bavaria: he then examines schools of the elementary class, intended to prepare for some particular occupation in life, such as schools of agriculture, industry, &c. &c.; primary and normal schools, and secondary schools throughout Europe; and also the superior schools, for arts, manufactures, commerce, mines, &c.:—these are all reported upon with a clearness and judgment which render this volume a very valuable one for all who seek for the grounds which experience supplies in the management of such seminaries during long periods of time. The Boston publications shew the minutiae, course of instruction, and progress in that intellectual town and the State of Massachusetts.

Of Mr. Wilderspin's system we have spoken in a preceding *Literary Gazette*. As the instructor of many thousands of children, his rational theories and practice are well worthy of serious consideration.

Mr. Gall's *Philosophy* contains many very acute remarks on the development of the intellect, and thence upon the best mode of treating and assisting it.

Miss Halsted's Essay obtained the honorary premium awarded by the Gresham commemoration this year; and, from its grace and research, we should imagine well deserved the distinction. In shewing how much our literature is indebted to the mothers of England, she, by analogy, proves how greatly the first instruction and habits of youth must depend on the same influence for being what they ought, or what they ought not to be. This volume must be particularly agreeable to the female sex, to whose virtues and attainments it is dedicated.

The third publication of the Central Society of Education, like the two which preceded it, contains very valuable papers, contributed by Messrs. C. Baker, B. F. Duppa, F. Liardet, W. S. O'Brien, M.P., G. Long, W. Smith, Rev. S. Wood, G. R. Porter, and T. Wyse, M.P.; which embrace several topics of much interest in connexion with the education of the people. Mr. Barron's notes furnish intelligence similar to a portion of Dr. Bache's, though not so much in detail; and the pamphlets we have specified treat *pro et con* of the plan supported by Government for commencing a system of national education. All our readers are aware that much difference of opinion exists on this question; and especially on that part of it which provides, or fails to provide, for a foundation of religious instruction.

The last work is Dr. Combe's; but, except its last chapter, it does not come within the head of education, being occupied with admirable advice on the management of infants, from their birth to the earliest developments of the senses and rudiments of mind. The quantity of information contained in this volume is very great; and its medical and moral appliance to promote the welfare of children, displays at once the sagacity of the observer and the skill of the physician. It is, indeed, a book for parents. As the beginning of all right education, whilst the babe is yet under two years of age, we are forcibly struck by the following reflections:—

"Let us not deceive ourselves, but ever bear in mind, that what we desire our children to become, we must endeavour to be before them. If we wish them to grow up kind, gentle, affectionate, upright, and true, we must habitually exhibit the same qualities as regulating principles in our conduct, because these qualities act as so many stimuli to the respective faculties in the child. If we cannot restrain our own passions, but at one time overwhelm the young with kindness, and at another surprise and confound them by our caprice or deceit, we may with as much reason expect to gather grapes from thistles, or figs from thorns, as to develop moral purity and simplicity of character in them. It is vain to argue that, because the infant intellect is feeble, it cannot detect the inconsistency which we practise. The feelings and reasoning faculties being perfectly distinct from each other, may, and sometimes do, act independently, and the feelings at once condemn, although the judgment may be unable to assign a reason for doing so. Here is another of the many admirable proofs which we meet with in the animal economy of the harmony and beauty

which pervade all the works of God, and which render it impossible to pursue a right course without also doing collateral good, or to pursue a wrong course without producing collateral evil. If the mother, for example, controls her own temper for the sake of her child, and endeavours systematically to seek the guidance of her higher and purer feelings in her general conduct, the good which results is not limited to the consequent improvement of the child. She herself becomes healthier and happier, and every day adds to the pleasure of success. If the mother, on the other hand, gives way to fits of passion, selfishness, caprice, and injustice, the evil is by no means limited to the suffering which she brings upon herself. Her child also suffers both in disposition and in happiness; and while the mother secures, in the one case, the love and regard of all who come into communication with her, she rouses, on the other, only their fear or dislike. The remarkable influence of the mother in modifying the dispositions and forming the character of the child, has long been observed; but it has attracted attention chiefly in the instances of intellectual superiority. We have already seen that men of genius are generally descended from, and brought up by, mothers distinguished for high mental endowments. In these cases, the original organisation and mental constitution inherited from the parent are no doubt chiefly influential in the production of the genius. But many facts concur to shew that the fostering care of the mother in promoting the development of the understanding also contributes powerfully to the future excellence of the child; and there is reason to believe that the predominance of the mother's influence upon the constitution of the offspring, in such cases, is partly to be ascribed to the care of the child devolving much more exclusively upon her than upon the father, during this the earliest and most impressionable period of its existence."

And more generally with reference, not only to infancy but to more advanced age, we cordially agree with the following remarks:—

"Precisely the same rule applies to the propensities, and moral and intellectual faculties. Each and all of them are implanted in us by the Creator, with a definite constitution and definite functions, and we can no more add a new feeling or a new power, by education or other means, than we can cause apples to grow on one branch of a fig-tree and plums on another. Man will never stand in a right position towards God or towards his fellow-creatures, till he regards himself and the world around him as placed from the beginning in a definite relation to each other, and governed by laws emanating from a Wisdom and Beneficence which it is impossible for him fully to scan, but which it is for him humbly to study, and gratefully to venerate, admire, and obey. If he do this, and seek, in the simple spirit of faith and truth, to fulfil the plan marked out in legible characters by the finger of Providence in the laws of the animal economy, he will assuredly reap comfort and improvement from his endeavours. But if he presumptuously step beyond his limits, and attempt to fashion man by laws and fancies of his own, he will not less assuredly and deservedly reap pain and trouble for his reward."

This is the truth; and, without under-rating the influence of education, we are disposed to doubt the almost supernatural powers which most of the writers upon the subject attribute to it.

No doubt there is much in the adage that, as the twig is bent the tree is inclined; but

there is an original nature which all the training on earth cannot alter,—it can only modify. Education cannot make the Ethiop white, nor eradicate the inherent disposition of individual creation. To check the evil and to cherish the good propensities, even to a small extent, is not the less to be desired; but we would fain guard the enthusiasts about education against expecting too much.

There is another light also in which we would wish this mighty subject to be considered, namely, that education, while it enlarges the sphere of usefulness, virtue, and enjoyment, also, by the same processes, enlarges the sphere of mischief, vice, guilt, and misery. Misdirection, then, is very fatal; and earnest should be the endeavour that we do not make the name education only another expression for a modification of ignorance. Slight mistakes here are calculated to produce terrible consequences.

But we are being tempted into the course which we set out by stating our reasons for avoiding, and we will leave disquisition to conclude with only one remark. There is an element of education which we have never seen, nor read of in all these multitude of writings, brought forward with the promineny that belongs to it: in many of them, indeed, it is altogether unnoticed. We allude to the force of example and its result, imitation. To us it appears that this single principle is worth all the other dogmas and prescriptions put together; and that from the cradle upwards there is nothing which leads to such important effects in the conduct of human beings as their Imitation of the Examples by which they are surrounded!

*The Dream, and other Poems.* By the Hon. Mrs. Norton. 8vo. pp. 301. London, 1840. Colburn.

THE ranks of our female poets have been sadly thinned; and while we lament the bereavement of our Hemanses and Landons, it is at least a literary consolation to see One still remaining, whose talent, though not equal to theirs, is yet sufficient to delight the reader of taste and feeling, and confirm her name in the eminence on which her earliest effusions placed it. That she should have endured sorrows, which impart a tone of suffering and complaint to her compositions, we sincerely regret; and we only notice the circumstance because it is impossible to dissociate much of this volume from her personal story and consequent distress of mind. It is not for us, however, to dwell on these matters,—we respect the griefs of Genius wherever we discover them; and how much more must we do so when we find them planted as with a dagger in the breast of beauty, and the sex least formed to endure either wrong or hardship?

The dedication to the Duchess of Sutherland is so descriptive of the subject to which we have thus reservedly alluded, that we will venture to extract a few of its stanzas:—

"And unto Thee—the beautiful and pure—  
Whose lot is cast amid that busy world  
Where only sluggish Dulness dwells secure,  
And Fancy's generous wing is faintly furled;  
To thee—whose friendship kept its equal truth  
Through the most dreary hour of my embitter'd youth—

I dedicate the lay. Ah! never bard,  
In days when Poverty was twin with song;  
Nor wandering harper, lonely and ill-starr'd;  
Cheer'd by some castle's chaf, and harbour'd long;  
Not Scott's 'Last Minstrel,' in his trembling lays,  
Woke with a warmer heart the earnest meed of praise!

For easy are the alms the rich man spares  
To sons of Genius, by misfortune bent,  
But thou gav'st me, what woman seldom dares,  
Belief—in spite of many a cold dissent—

When, slandered and malign'd, I stood apart,  
From those whose bounded power hath wrung, not  
crushed, my heart.

Then, then, when cowards lied away my name,  
And scoff'd to see me feebly stem the tide;  
When some were kind on whom I had no claim,  
And some forsook on whom my love relied,  
And some, who might have battled for my sake,  
Stood off in doubt to see what turn 'the world' would  
take—

Thou gavest me that the poor do give the poor,  
Kind words, and holy wishes, and true tears;  
The loved, the near of kin, could do no more,  
Who changed not with the gloom of varying years,  
But clung the closer when I stood forlorn,  
And blunted Slander's dart with their indignant scorn."

Looking at the principal poem, *The Dream*, we may observe critically that it would have been much improved by verbal polish,—to make its thoughts "ne'er so well express" by any former writer; and that as a whole it is deficient in interest though not in moral aim. It is, in short, a very desultory essay on the imaginary and real happiness which this world may afford; and treated in a manner which is less impressive altogether than it is poetical, and beautiful in passages and parts. Wandering from theme to theme, the general effects of good and of evil dreams are well painted; but the sterner realities of life call forth more of the poet's art and force. Thus the lower met by his adored:—

"Oh! dear to him, to all, since first the flowers  
Of happy Eden's consecrated bowers  
Heard the low breeze along the branches play,  
And God's voice bless the cool hour of the day.  
For though that glorious Paradise be lost,  
Though earth by blighting storms be roughly cross'd,  
Though the long curse demands the tax of sin,  
And the day's sorrows with the day begin,  
That hour, once sacred to God's presence, still  
Keeps itself calmer from the touch of ill,  
The holiest hour of earth. Then toll doth cease—  
Then from the yoke the oxen find release—  
Then man rests pausing from his many cares,  
And the world teems with children's sunset prayers!  
Then innocent things seek out their natural rest,  
The babe sinks slumbering on its mother's breast;  
The birds beneath their leafy covering creep;  
Yes, even the flowers fold up their buds in sleep;  
And angels, floating by, on radiant wings,  
Hear the low sounds the breeze of evening brings,  
Catch the sweet incense as it floats along,  
The infant's prayer, the mother's cradle-song,  
And bear the holy gifts to worlds afar,  
As things too sacred for this fallen star."

Here is another charming morsel:—

"Sweet is the image of the brooding dove!—  
Holy as Heaven a mother's tender love!  
The love of many prayers and many tears,  
Which changes not with dim declining years,—  
The only love which on this teeming earth  
Asks no return from Passion's wayward birth;  
The only love that, with a touch divine,  
Displaces from the heart's most secret shrine  
The idol Self."

A tribute to her mother does honour to the author's heart:—

"Oft, since that hour, in sadness I retrace  
My childhood's vision of thy calm sweet face;  
Oft see thy form, its mournful beauty shrouded  
In thy black weeds, and coil of widow's wo;  
Thy dark expressive eyes all dim and clouded  
By that deep wretchedness the lonely know:  
Stiffing thy grief, to hear some weary task  
Conn'd by unwilling lips, with listless air,  
Hoarding thy means, lest future need might ask  
More than the widow's pittance then could spare.  
Hidden, forgotten by the great and gay,  
Enduring sorrow, not by fits and starts,  
But the long self-denial, day by day,  
Alone amidst thy brood of careless hearts!  
Striving to guide, to teach, or to restrain  
The young rebellious spirits crowding round,  
Who saw not, knew not, felt not for thy pain,  
And could not comfort—yet had power to wound!  
Ah! how my selfish heart, which since hath grown  
Familiar with deep trials of its own,  
With riper judgment looking to the past,  
Regrets the careless days that flew so fast,  
Stamps with remorse each wasted hour of time,  
And darkens every folly into crime!"

Our next quotation, though a brief, is a striking comparison:—

"For oh! though Fancy change our mortal lot,  
And rule our slumbers, Conscience sleepeth not;  
That strange sad dial, by its own true light,  
Points to our thoughts, how dark so'er the night.

Still by our pillow watchful guard it keeps,  
And bids the sinner tremble while he sleeps."

Another, still more poetical:—

"For then the Moon rose up, Night's mournful Queen,  
Walking with white feet o'er the troubled Sea,  
And all grew still again as she had been,  
Heaven's messenger to bring Tranquillity:  
Till, pale and tender, on the glistening main  
She sank and smiled like one who loves in vain."

But justice demands a longer example:—

"True, ere thou meet'st at that long and dreamless sleep,  
Thy heart must ache, thy weary eyes must weep:  
It is our human lot! The fairest child  
That e'er on loving mother brightly smiled,—  
Most watch'd, most tended—ere his eyelids close  
Hath had his little share of infant woes,  
And dies familiar with the sense of grief,  
Though for all else his life hath been too brief!  
But shall we, therefore, murmuring against God,  
Question the justice of his chastening rod,  
And look to earthly joys as though they were  
The prize immortal souls were given to share?  
Oh! were such joys and this vain world alone

The term of human hope—where, where would be  
The victims of some tyranny unknown,  
Who sank, still conscious that the mind was free?  
They that have lain in dungeons years on years,  
No voice to cheer their darkness,—they whose pain  
Of horrid torture wrung forth blood with tears,  
Murder'd, perhaps, for some rapacious gain,—  
They who have stood, bound to the martyr's stake,  
While the sharp flames ate through the blistering skin,—  
They that have bled for some high cause's sake,—  
They that have perish'd for another's sin,  
And from the scaffold to that God appeal'd  
To whom the naked heart is all reveal'd,  
Against the shortening of life's narrow span  
By the blind rage and false decree of man?  
And where obscure sufferers—they who slept  
And left no name on history's random page,—  
But in God's book of reckoning, sternly kept  
Live on from year to year, from age to age?  
The poor—the labouring poor! whose weary lives,  
Through many a freezing night and hungry day,  
Are a reproach to him who only strives  
In luxury to waste his hours away,—  
The patient poor! whose insupportable means  
Make sickness dreadful, yet by whose low bed  
Of in meek prayer some fellow-sufferer leans,  
And trusts in Heaven while destitute of bread;  
The workhouse orphan, left without a friend;  
Or weak forsaken child of want and sin,  
Whose helpless life begins, as it must end,  
By men disputing who shall take it in;  
Who clothe, who aid that spark to linger here,  
Which for mysterious purpose God hath given  
To struggle through a day of toil and fear,  
And meet him—with the proudest—up in heaven!  
These were, and are not:—shall we therefore deem  
That they have vanish'd like a sleeper's dream?  
Or that one half creation is to know  
Luxurious joy, and others only woe,  
And so go down into the common tomb,  
With none to question their unequal doom?  
Shall we give credit to a thought so fond?  
Ah! no—the world beyond—the world beyond!  
There, shall the desolate heart regain its own!  
There, the oppress'd shall stand before God's throne!  
There, when the tangled web is all explain'd,  
Wrong suffer'd, pain inflicted, grief disdain'd,  
Man's proud mistaken judgments and false scorn  
Shall melt like mists before uprising morn,  
And holy truth stand forth serenely bright,  
In the rich flood of God's eternal light!"

After this quotation we need bestow no  
praise on the poetry; nor will we, now, step  
out of our way to point out its little blemishes  
and faults. There are errors of construction—of  
tense and time—of rhyme—and other imperfec-  
tions; but we cannot stop to note them, where  
the sense is all so touching, and in One who  
thus speaks of herself:—

"Yet those whom man, not God, hath parted, know  
A heavier pang, a more enduring woe:  
No softening memory mingles with their tears,  
Still the wound rankles on through dreary years,  
Still the heart feels, in bitterest hours of blame,  
It dares not curse the long-familiar name;  
Still, vainly free, through many a cheerless day,  
From weaker ties turns helplessly away,  
Sick for the smiles that bless'd its home of yore,  
The natural joys of life that come no more:  
And all bewilder'd by the abyss, whose gloom  
Dark and impassable as is the tomb,  
Lies stretch'd between the future and the past,—  
Sinks into deep and cold despair at last.

Heaven give thee poverty, disease, or death,  
Each varied ill that waits on human breath,  
Rather than bid thee linger out thy life  
In the long toil of such unnatural strife.  
To wander through the world unreconciled,  
Heart-weary as a spirit-broken child,  
And think it was an hour of bliss like heaven  
If thou couldst die—forgiving and forgiven,—

Or with a feverish hope, of anguish born,  
(Nerving thy mind to feel indignant scorn  
Of all the cruel foes who 'twixt ye stand,  
Holding thy heartstrings with a reckless hand,)  
Steal to his presence, now unseen so long,  
And claim his mercy who hath dealt the wrong!  
Into the aching depths of thy poor heart,  
Dive, as it were, even to the roots of pain,  
And wrench up thoughts that tear thy soul apart,  
And burn like fire through thy bewilder'd brain.  
Clothe them in passionate words of wild appeal  
To teach thy fellow-creatures how to feel,—  
Pray, weep, exhaust thyself in maddening tears,—  
Recall the hopes, the influences of years,—  
Kneel, dash thyself upon the senseless ground,  
Writhe as the worm writhes with dividing wound,—  
Invoke the heaven that knows thy sorrow's truth,  
By all the softening memories of youth—  
By every hope that cheer'd thine earlier day—  
By every tear that washes wrath away—  
By every old remembrance long gone by—  
By every pang that makes thee yearn to die:  
And learn at length how deep and stern a blow  
Near hands can strike, and yet no pity show!

Oh! weak to suffer, savage to inflict,  
Is man's commingling nature; hear him now  
Some transient trial of his life depict.

Hear him in holy rites a suppliant bow:  
See him shrink back from sickness and from pain,  
And in his sorrow to his God complain:  
'Remit my trespass, spare my sin,' he cries,  
'All-merciful, Almighty, and All-wise!  
Quench this affliction's bitter whelming tide,  
Draw out thy barbed arrow from my side:—  
And rises from that mockery of prayer  
To hail some brother-debtor to despair!"

There is much to admire in the minor  
productions with which the volume is filled up.

*Narrative of a Tour through Armenia, Kurdistan, Persia, and Mesopotamia. With Observations on the Condition of Mohammedanism and Christianity in those Countries.*  
By the Rev. Horatio Southgate. 2 vols.  
post 8vo. 1840. London, Tilt and Bogue;  
New York, Appleton and Co.

SENT as a missionary by the American episco-  
pal church to inquire into the state of the two  
creeds indicated in the title-page, principally  
in Persia, but extending to Turkey and Syria,  
Mr. Southgate made a pretty extensive tour  
from Constantinople by sea, to Trebisonde, and  
thence to Erzurum, Moush, Bitlis, Van, Our-  
miah, Tebriz, Tehran, Bagdad, Mossoul, Mar-  
din, and Diarbeker. He thus crossed Armenia,  
part of Kurdistan, traversed Persia, and  
skirted Mesopotamia towards Asia Minor. In  
the route there is little of novelty, and we do  
not find, from the general information given  
us, that the writer observed aught of the people  
with which we are not previously acquainted.  
His statements respecting the condition of the  
Eastern churches, and of the religion of Maho-  
met, are the most interesting portions of his  
work; yet, even in these, there is little alto-  
gether new, and less than, we think, might  
have been gathered and placed in a striking  
light by an investigation of three years' con-  
tinuance, from 1836 to 1839.

A corrected map illustrates these travels;  
from which, after what we have said, we shall  
content ourselves with merely selecting a few  
specimen passages. Of Moush we are told:—

"The appearance of Moush, when ap-  
proached from the north, is peculiarly romantic.  
It stands upon the sides of an eminence, within  
a deep recess of the mountains, almost entirely  
encircled and hid from sight by their projecting  
arms and a slight elevation in front of the  
opening. The heights above were tall and  
bare, excepting where patches of snow were  
still lying undissolved by the summer's sun.  
The red sides of the hills, within and without  
the bay of the mountains, were covered with  
vines, and the eminence on which the town  
itself stands is crowned with a ruined fortress.  
But the pleasant emotions excited by the  
distant view vanish on entering the place.  
The streets are filthy, irregular, and uneven,

with rivulets of dirty water running through  
them. There are no covered bazars, and the  
few stalls which bear the name are ill-furnished  
and mean, without regularity or display. A  
brawling stream runs down from the moun-  
tains, through a deep gurge on the east side of  
the town, and goes to the Kara Sou. The houses  
are of the same description with those of Erz-  
roum. The number of poor, insane, and dis-  
eased persons is astonishing. Boys and girls  
are seen running with a single rag, and often  
entirely naked, through the streets. The  
Christians appeared to be the most thriving  
part of the population, but all complained of  
poverty. The population of the place is nearly  
5000. There are 600 Mussulman families, 250  
Armenian, and fifty Armenian Catholic. The  
Mussulmans do not call themselves Osmanlees  
but Turks; and their language approaches  
nearer to that of Tebriz than of Constantino-  
ple. They have five mosques, ten medressehs,  
and three schools. One of the mosques was  
formerly a Christian church, and bears over  
the door the date of its conversion to Islamism,  
978 of the Hijreh. The principal mosque,  
though small, has a good external appearance,  
and is the finest building in the town. I was  
permitted to enter without scruple. Several  
worshippers were engaged at their devotions,  
though it was not the hour for prayers. An old  
Mussulman, in answer to my inquiries, assured  
me that books in Kurdish were to be found in the  
medressehs, and I visited the principal one in  
quest of them. I did not then know that the  
Kurdish was an unwritten language, and hoped  
to add something to my stock of information  
by the search. None, of course, were to be  
found. The muderriss, or professor, informed  
me that all their text-books were in Arabic,  
from which he translated into Turkish and  
Kurdish, a part of the students being Kurds.  
There is no professional scribe nor seller of  
books in the town, and the chief medresseh  
has only two professors. Many of the Turks  
wear the Kurdish dress. I lodged, during my  
stay, in the house of one of the most respectable  
among them, and my room was constantly  
thronged with Mussulman visitors. Our com-  
ing excited a great stir in the town. Our  
dresses being after the fashion of the capital,  
every one knew us to be from Stamboul.  
Crowds collected as we passed through the  
streets, and gazed after us until we were out of  
sight. Various conjectures were started to ac-  
count for our visit. Some imagined that we  
were officers of the Sultan in search of recruits;  
others thought that our visit had some political  
design; and others that it was likely to effect  
the trade of the place. Either character was  
an unpropitious one, and I hastened to dispel  
the suspicions by going freely into the bazars,  
sitting with the sellers in their stalls, and con-  
versing with any whom I met. The Arme-  
nians have five churches and fourteen priests.  
One of the churches, called the Church of the  
Kenk Vedavand, or Church of the Forty Steps,  
is said to be thirteen hundred years old. It  
stands on an elevated site overlooking the  
valley of the small stream which runs by the  
town. The approach to it is by a flight of forty  
steps, from which it receives its name. We  
found there four priests, and a school of twenty-  
five boys, who were reading their lessons upon  
the flat gravestones in front of the church. We  
asked for relics, whereupon one of the priests  
conducted us to a small upper room, and taking  
a bundle from a niche in the wall began to  
open. One by one, twenty-five silk handker-  
chiefs were unfolded, when a large volume ap-  
peared. This the priest took and, reverently

kissing, opened. It was the New Testament, beautifully written on parchment in Armenian characters. We inquired its origin, and were told it was a mystery. When the Church was built the book had been found there, and had been carefully preserved from that time to the present. It had, they said, the power of working miracles, and many instances were known of the sick having been restored to health by laying it upon them. My Mussulman guide was appealed to for the truth of the assertion, and, to my surprise, acknowledged that Mussulmans even had tested its healing efficacy. As the priest was about to return the book to its place, an old man bowed with infirmities pressed eagerly forward, and seizing it in his hands, kissed it and rubbed his aged head upon it. May the day speedily arrive when all the poor and despised Christians of the East shall have this blessed book in their possession, and draw from it those spiritual truths which heal and purify the soul!"

We have, at Tehran, an amusing story of Feth Ali Khan, of whom it is stated:—

"He possessed most of the good and bad qualities of a Persian. He was vain and fond of flattery, imaginative and devoted to pleasure, yet shrewd, affable, and dignified; capable of the most arbitrary acts, yet not cruel; excessively proud of his personal appearance; fond of show and regal state, yet not an oppressive or tyrannical ruler. He professed to be a poet, and I remember to have seen a volume of his productions in the bazars at Tehran. A Persian related to me one day the following anecdote, as illustrative of the character of his efforts in this department of literature. He had just completed a new performance in metre, which he flattered himself possessed peculiar excellence. Calling, therefore, for the court poet, whom, after the manner of the East, he had constantly attached to his person, he read the poem before him, and demanded his opinion. The poet, fearing lest his own emoluments should be endangered by this growing propensity of the Shah to rhyme for himself, and being also a man of uncommon honesty, expressed a very unfavourable criticism upon the piece. The Shah, enraged at the audacity with which he spoke the truth, ordered his servants to conduct him to the stable, and tie him up with the donkey. The poor poet remained in this dolorous situation several days, when he was remanded into the royal presence, and his opinion asked upon another performance which the Shah had perpetrated during his confinement. The poet listened in silence, and when it was finished, venturing no more to express his opinion openly, he fell upon his knees before the king, and implored that he might be sent back to the stable."

We feel the full force of this anecdote; Heaven knows how often, in the course of almost every week, when persecuted by reciters of their own compositions, by the authors of manuscripts with their own reading, and by the recommendations of unbiassed but kind friends of either class, we wish from our souls that we had, were it even a stable to flee to, and an ass for our sole associate. But we conclude with some account of the present state:—

"During my visit (to Tehran, says the author) the town was less lively than usual, from the absence of the Shah, who had gone to recover the city of Herat, lost by his grandfather. His departure had drawn away about a fifth part of the population. He had started upon the expedition the 24th of July, with a force of 18,000 infantry and 200 cavalry, and three

months after was still some days distant from Herat. This was the second expedition which he had made in that direction. The previous year he had marched for Tehran with the intention of attacking Herat, but turned aside to chastise the Turcomans. In approaching their country, he adopted a truly Persian expedient for sending the terror of his name before him. He slew all the cattle which he found and threw them into a river running through their land, intending that they should float down and carry dismay all along the borders. In the event this proved to be the chief exploit of the campaign, for the Shah soon returned to Tehran satisfied, as his Grand Vezir expressed it, with 'having well skinned the Turcomans.'

The political state of the country is by no means encouraging. The Persians themselves confess that the internal affairs of the kingdom are daily becoming more embarrassed, without any prospect of improvement. There are those, not a few, who predict the fall of the present dynasty, and even of the empire, with the death of the reigning Shah. There prevails among them the same forebodings of impending evil as possess the minds of the Turks. They regard themselves as at the mercy of foreign nations, and many even regard with complacency the prospect of their national dissolution. The empire is composed of heterogeneous and discordant materials. The native population comprises two distinct people, speaking different languages, dwelling in different parts of the country, and regarding each other with mutual aversion. The Shah is a Turk of the Kujar tribe, and his sway is therefore ungrateful to the Persians of the south. The Turkish race of the north, on the other hand, are proud of the superiority which this circumstance gives them, and regard their southern neighbours with contempt. While these elements of discord exist among the people, the army is weak and inefficient. The Persians state the whole military force at 80,000 regulars and 2000 artillery. The actually efficient force, however, offers no more than 40,000 men, and there are probably no more than seventy serviceable guns. The Persians are good materials for soldiers. They are able-bodied, capable of enduring fatigue and long marches with little food, and they learn more readily than Europeans. But the military organisation of the Empire, on which its strength so much depends, is defective to the last degree. No system of reform has ever been introduced into the army. Much labour has been bestowed by foreign officers in re-organising and disciplining the forces, but as no command has been given to them, their labours have been productive of little good. The British officers pronounce the irregularity of the service a great obstacle to its efficiency. Soldiers desert by regiments, or they buy a dismission from the officers, or the officers send them away for the sake of securing their rations. Probably there is no man in the empire who has any just idea of military science, as it is understood in Europe, yet the Shah takes great pride in his army, and is full of ambition for military glory. It was recently reported that, after taking Herat, he intended to march to Bagdad and obtain possession of the city of the Caliphs, in right of its having once belonged to the Persians, and of its being the capital of the country which contains the tombs of the Saints most revered by the Shiaks. When the Shah left Tehran on his expedition to Herat, he was accompanied by several hundred military wagons which he had ordered to be made for the pur-

pose, at a very cheap rate. Before they had proceeded half a mile from the city, one hundred of them had broken down. In the former expedition it was sometimes found necessary, when the order for march was given, to send men through the camp to whip the soldiers out of their tents, and at other times they exhibited their activity in openly plundering the royal magazines to obtain provision. I mention these facts as illustrative of the low state of the art of war, not because I suppose that a reform in this particular is the most desirable species of improvement, but because, in such a country as Persia, if the work of reform does not appear here, it is hardly to be expected elsewhere. Soon after the elevation of the present Shah to the throne, it was proposed to send several young men to England for education. The proposal pleased the Shah, and an order was given for the purpose. They were chosen and brought before him. He approved the selection, and the plan seemed to be moving on successfully. Upon inquiry being made for what profession or service the young men were to be trained, it was replied that two of them were to be candle-makers, it being the opinion of the Shah that candles were a very useful article. An order was afterwards given for an estimate of the expenses, which, when presented to the Shah, so terrified him that the plan sunk at once out of notice, and was never more heard of. The only measure which seemed to indicate improvement was the establishment of a gazette at Tehran, which commenced early in 1837, under the auspices of the Shah. It was printed in Persian, and, for want of types, was lithographed. Its principal object was to laud the Shah and his measures. Still its establishment must be regarded as a step in advance, and it may yet lead to important consequences. I could not learn that there was so much as a printing-press in the country, but two have since been introduced, and are in active operation at Tebriz."

*Italy: Contributions towards a Knowledge of that Country.* By Friedrich von Raumer, 2 vols. Leipzig, 1840. F. A. Brockhaus. SUCH is literally the title of Professor von Raumer's new work from which we gave some extracts, principally relative to the Sulphur Question, in our Number of May 30. This title is, in fact, much more appropriate to the work than that of *Travels*; which, in the usual acceptance, seems to convey a rather different meaning. Among these Contributions there are, for instance, numerous statistical details, derived, as the author assures us, from the most authentic sources, and therefore highly valuable and important, but, from their nature, dry and uninteresting to the majority of readers.

Without wholly neglecting this portion of the work, we shall select from the other parts of these volumes what may be equally important and more generally acceptable to our readers. The author's journey having extended to the whole of Italy, from Trieste and Venice to Milan, Turin, Genoa, Florence, Rome, and Naples, and thence to Palermo, afforded ample scope to so observant a traveller, and we accordingly find much that is new and interesting; and if we do not in all things agree in his opinions, they are yet certainly entitled to serious consideration. At Vienna the author had an audience with Prince Metternich:—

"The first question of the prince was respecting the object of my journey, which I stated without reserve in a few words. The

prince then spoke nearly to the following effect.\* Such was the substance of a conference of an hour and a half. I said as little as possible, and the prince discoursed with the frankness, the perspicuity, the practical spirit, the freedom from empty abstractions, which characterise the great statesman; surely a very different and much more noble style than the finesse, the concealment, the equivocations, and the lies of T., and his sophistical school. Several times the prince asked, 'Are not you of my opinion?' My sincere assent could be of no importance to him, but I was rejoiced to hear the most eminent statesman in Europe confirm, in all essential points, what I have in vain preached at Berlin from the very beginning respecting the religious disputes."

We suppose that much of the information communicated in this conference has been embodied by the author in his work, without stating the source from which it was derived.

"Venice, 28th March.

"You complain, with reason, that, notwithstanding the innumerable books of travels, our knowledge of Italy is by no means complete; but is not this natural, when most travellers content themselves with describing the impression which the vehemently depreciated, or enthusiastically admired, country made on them? Hence the endless repetitions of things that are the best known, drawn from the most trivial sources. Most of them, too, derive their information from handbooks for travellers, and *laquais de place*; and if I should be enabled, in addition to the accounts of my own proceedings, to send you any thing more interesting and instructive, the merit will not be mine, but that of the persons who gave me the most powerful recommendations, as well as of those whose kind reception of me, and unparalleled desire to oblige me, and to give me all the information in their power, I can never sufficiently praise: for I am indebted to others for what I know."

The exclamation of sorrow with which many conclude, 'Italy is a ruin!' has long since excited my doubts no less than my pity. You know that the wish to find my own prepossessions in this respect either confirmed or refuted, is the chief motive of my visit to Italy; in the same manner as a similar state of mind formerly impelled me to visit England. Now, the country, the people, the government, in the several parts of Italy, are so different, that the same results cannot possibly apply to the whole; whence there will certainly be occasion to report, alternately, how some places are improving, others stationary, and others retrograding. That the beginning may seem easy and pleasant, and the improvement undeniable, allow me to reckon Trieste as belonging to Italy, and to give some important particulars respecting that remarkable city. My accounts undoubtedly come from the best authorities, and from the communications of men who are thoroughly informed. Whenever I enter the Austrian empire, I am reminded of the nature of the empire in the middle ages; that is (exclaim many persons), of something quite antiquated, nay, that has always been absurd and inexplicable. But have these critics really given themselves the trouble to convert their prejudices respecting the past and the present into opinions? Is, then, the variety of organism in the kingdoms of nature

and of mind the more insignificant; and does the worm rank above the man because anatomy and physiology teach us that it is more simple, without such important diversities and contrasted qualities? Viewed, indeed, with the eyes of the new French political wisdom, the Netherlands, Switzerland, Germany, and Italy, appear as monsters of confusion and folly. It was considered to be the true means of giving animation and life to put all this, according to the ancient proverb, on the bed of Procrustes. Every national, provincial, and local peculiarity vanished under the iron hands covered with the gloves of freedom. Nothing was desired but a head, without the diverse action of the members,—only a centralising *capitale du monde*, unconcerned if the world around became more and more the prey of death."

These reflections, which might be easily carried further, are not out of their place here, because the principles and views of the above-mentioned statesman are essentially and diametrically opposed to those new French systems."

What Trieste was under the French government, and what it became under that of Austria, affords an instructive example to enable us to judge of the different systems of government."

In the year 1717, Charles VI. made Trieste a free port; to which many further laws were added, especially under Maria Theresa. Many necessary changes were made, by which the local government was modified and assimilated to the general system of the empire; but many rights remained untouched and in force, such as exemption from excise duties, from military service and the billeting of soldiers, free importation, and trifling export and transit duties, various commercial and other privileges, the levying of taxes by the municipal authorities, paying to the state a fixed sum of only 16,000 florins per annum. The French entered Trieste on the 16th of May, 1809, and left it on the 8th of November, 1813. It is the more necessary to speak of the nature and mode, as well as of the consequences, of their government, as but too many persons in our days (to shew their penetration and wisdom) are dissatisfied with the present state of things, or pretend to be so, forgetting the natural imperfections of all human institutions, and especially the dark side of the past. In the firm persuasion, which was every where acted upon, that there was but one good system, and that this was no other than the French system of the last year or day, all the ancient conventions, laws, and institutions at Trieste, were immediately set aside, and every thing arbitrarily modelled on the French system. A poll-tax (without classes) was introduced, a land-tax, customs, excise, stamp duties, liability to military service and to the billeting of troops, &c. Instead of the free port we find the continental system; the seizure and burning of goods, forced loans, military contributions, and the imprisonment of many merchants, for the consolidation of a new kind of liberty. The consequence of all this was, that between 1809 and 1811 sixty-one merchants became bankrupts; the number of ships decreased from 900 to 200; the amount of goods bought and sold, from thirteen or fourteen millions of florins to two or three millions; and the number of the inhabitants, from 40,000 (in 1808) to 20,000 (in 1812). When the Austrians returned in 1813, much of what had been introduced by the French was abolished, some part retained. Thus, the poll-tax, the tax on the exercise of trade, the greater part of the excise duties, and part of the stamp duty;

the exemptions from military service and billeting of troops were restored, and, above all, the free port, with its great privileges and advantages."

The author here enters into long and minute statistical, commercial, and other details, in which we cannot follow him. To prove the flourishing state of the city, it may suffice to mention that the population increased from 20,000 in 1812, to 40,000 in 1826, and to 54,000 in 1839; that the number of great merchantmen that arrived in 1838 was 1778, of which 136 were English; and that of coasting-vessels, large and small, to above 8000; and the amount of the commerce by sea and land, eighty-eight millions of florins, which, in 1800, was only fifteen millions."

"Venice, 28th March.

"On this my fourth visit, as on three former ones, Venice has made an irresistible impression on me, which cannot be compared with any other. All that you see, feel, and think, is different from every other place in the world. Heaven and earth, life and death, taste and absurdity, the past, the present, and the future, meet here in a manner entirely peculiar: so much is out of all rule, nay, against all rule, and yet again, *above* all rule. When, as the traveller approaches from Lido, he sees the Palace of the Doge, the Pillars, the Piazzetta, the Campanile, the Orologio, the Procuratie nuove, and St. Mark's, gradually open to his view—when so many wonders rise from the sea, who could suppress the emotions of joy, astonishment, and enthusiasm, to descend to dry criticism on the arrangement of columns and windows? I at least, thank Heaven! was not twenty-two years ago, nor am I now, such a stock-fish."

The recollection of the former glories of Venice, her power, her wealth, her arts, and her commerce, compared with her present state of humiliation and decay, excites feelings of sympathy and regret which are even painful. It is not for us to trace the causes which inevitably led to the state of weakness to which it was reduced at the time of the French revolution. Yet, hard as the fate of Venice has been, a union with Austria was, perhaps, under all circumstances, the best thing that could happen to it. As it had grown great by commerce, the inhabitants thought to revive the prosperity of the city by laws and regulations favourable to trade, and were so loud in their wishes for a free port, that the government acceded to their desires; though it did not, and indeed could not, share in all their hopes. The author states the principles that have been acted upon since 1830. He gives the number of ships and their tonnage in 1829, the year before the opening of the free port, and also in 1838, from which it appears that there was a considerable increase, both in the number of ships and the tonnage. But the extravagant expectations that were entertained have not been wholly realised, and some persons declaim against all free ports. The situation of Venice appears the more unfavourable in comparison with Trieste. M. von Raumer discusses at some length the causes of this difference, but observes that, by the judicious and paternal conduct of the government, the falling off in the trade and population has been stopped, and for the last fifteen years things have been constantly, though slowly, improving. But much remains to be done, especially by the citizens themselves."

"At Naples," says the author, "where Heaven is so lavish of its gifts, the *dolce far niente* seems much more natural than

\* The author says in a note. "The prince spoke chiefly on ecclesiastical affairs, and then on the affairs of France and Italy. Attractive and instructive, as all he said was, the publication of it would be a great breach of propriety; which would be the less excusable in me, as similar conduct in others is highly displeasing to me."

amidst those sterile morasses, where nothing but the persevering, the most grand efforts, could raise the wonderful city of Venice. Those who have such ancestors may depend on sincere sympathy, but must not expect that idle excuses will be admitted. Why do so many strangers find employment in Venice as maid-servants, water-carriers, &c.? Why do the Venetians leave almost all laborious trades and professions to foreigners? Why do the citizens, from the patrician downwards, rather suffer themselves to be inscribed on the list of the poor than follow such trades? Why did I see more unemployed people in one day in the Piazza de San Marco, than in all England in a year? With all my predilection for Venice I cannot get rid of these questions, and reflection must connect them with the institutions for the relief of the poor.

The total number of persons inscribed on the poor-list, who in the course of the year received relief of some kind or other—money or medicine—was 41,300. Adding those in the lunatic asylums, the hospitals, workhouses, foundling and orphan asylums, the number, according to another statement, is 52,443. The government itself gives a kind of daily pay to 800 patricians; and it is said that a Jew has bought the Foscari Palace for an annuity of four or five lire daily, which he pays to two members of that ancient family. Whatever estimate we may make of the reasons and of the actual amount of poverty in Venice, these numbers naturally excite a conjecture that the distribution of relief is not always suited to the purpose, and the management of the poor (as formerly in England) does not so much extinguish as call forth poverty. At all events, 40,000 Venetians would never have stooped in former ages to have their names inscribed on the list of poor; and with a firm resolution not to do so, employment and a livelihood may be found even under unfavourable circumstances. My ideas and my feelings urge me most decidedly to raise my voice against the founding asylums, which are, besides, very expensive.

The number of foundlings now provided for in Venice is stated at ..... 3,338  
And in the Venetian provinces ..... 10,625

Now is it not a false, nay, absolutely immoral philanthropy, to open, not only to unmarried but to married parents, an easy road to sin, on which greater numbers enter every year, to deaden their feelings, and unjustly to cast on the shoulders of others the charge which Nature has imposed on themselves? It is alleged that it is to prevent infanticide. Can it then be really supposed that as many children would be murdered as there are foundlings that die, in spite of every care? Can we suppose that 10,625 women in the Venetian provinces would ever part from their children, did not the receiving box of the foundling hospital offer itself to them like the lottery wheel? Let the whole frightful institution be abolished, and let us trust the experience of whole nations, which shews that man has not yet sunk below the beasts which support and defend their offspring."

We will now subjoin some miscellaneous extracts from the letters from Venice:—

"Yesterday I saw, for the first time, the Venetian Archives; such a prodigious mass accumulated in innumerable rooms, that millions

\* From the year 1821 to 1832, for instance, 3332 children were received in the foundling hospital at Padua, of whom 1485 died before they were nine years old ("Annali di Statistica," l. vi. 215); and in the first eighteen months, 1130. In other founding hospitals the result is much more unfavourable.

of worms would have enough to devour for centuries to come, and a thousand literary gluttons would not be able to read the whole in a thousand years! The arrangement and order of the whole is admirable, but the value and the contents of the several parts are *terra incognita*. Probably these masses of materials will remain long unused, till accident, or some follower of Omar, shall destroy them.

Towards evening, I drove first to the Giudecca, and then came back by the Great Canal. Some buildings on its banks are cleaned, and look as if they were habitable; but what are they to the number of those which there are no means to keep in repair? Formerly the palaces rose from the waves, were adorned with innumerable works of art, and animated by splendid *fêtes*; and now it is thought extraordinary if a broken pane of glass is repaired, or a door which has fallen from its hinges is replaced. A thousand reasons are assigned for this, but the greatest, or the most powerful and the most constant (say persons of serious minds), is laziness. If idleness is not always the beginning of all vice, it is, however, the beginning of misery.

Wherever I come, Count S., in consequence of the recommendation of Prince M—, has already announced me, and I find every where the kindest reception. Yesterday I visited the Archives, where, however, there are only two or three volumes relative to the twelfth and thirteenth centuries, which I could run through in a few hours. However, I had reasons to be pleased with my gleanings. I found a convention between Venice and Manfred, which contains all the principles of the English Act of Navigation; likewise a treaty of Gregory IX. with Venice, for the conquest and partition of the kingdom of Sicily; lastly, a document of Conradin, in which he acknowledges Manfred as guardian, and regent of Apulia. Thus I was thrown back from the present time to my Hohenstaufen.

I hear complaints from all quarters of the scandalous manner in which, during the reign of French liberty, the treasures of literature and art were ruined and destroyed. Thus, for instance, the soldiers quartered in S. Giorgio, always paid the fare across the Great Canal with a book, which the gondolier immediately sold as waste paper.

I turn over the laws and proclamations of the democratic republic of Venice in the year 1797. What extravagant hopes! what boundless rapture! what high-flown language! And then the invasion of this paradise by robbery, pillage, billeting of soldiers, forced contributions, the contemptuous behaviour of the French, covered with polite phrases, and the rapacious hand of Buonaparte. But then admiration of him still prevailed, and *les destinées* of Venice were not yet *accomplies*. A *credo* was printed in Bolzano, so early as the 16th of April, 1797. I send it you as a curiosity:—*'Libertà Eguaglianza. Credo repubblicano. Credo nella Repubblica francese una e indivisibile, Creatrice dell'Eguaglianza e della libertà. Credo nel General Bonaparte suo figlio unico difensore nostro, il quale fu concepito da gran spirito, nacque da madre virtuosissima. Pati sopra monti e colli, fu da tiranni vilipeso e sepolto. Discese nel Piemonte il terzo di resuscito in Italia. Sali in Mantova, ed ora siede alla destra di Vienna capitale dell'Austria. Di là ha da venire a giudicare i violenti Aristocrati. Credo nello spirito della Generalità francese e del Direttorio di Parigi, la distruzione dei nemici della virtù, niuna remissione alla tirannia, la resurrezione del diritto naturale dell'*

uomo, la futura pace, libertà eguaglianza, fratellanza eterna, così sia!'"

[To be continued.]

*The History of the University of Cambridge, from the Conquest to the Year 1634.* By Thomas Fuller, D.D. Edited by the late Rev. Marinaduke Prickett, M.A. &c., and Thomas Wright, Esq. M.A. F.S.A. &c. of Trinity College. With Illustrative Notes. 1840. Cambridge: Deightons; Stevenson. London: Parker.

THE death of Mr. Prickett, shortly after this edition was commenced, left the labour of it on the hands—certainly the able and competent hands—of Mr. Wright, who has performed the task in a manner honourable to himself, to the worthy ancient Fuller, and to the Alma Mater to which both of them owe their literary allegiance. The quaint and pithy old historian is ever delightful. His antiquities are never dry; his sententious remarks always amusing. We are glad to see him again in any form; but more glad to see him attended by curious notes, and a few instances that throw a new light on University history. Thus, for example, at page 52, we observe a discovery relating to the Magister Glomeræ, which we quote.—

"The meaning of Magister Glomeræ has been a subject of much debate. In Cole's and Baker's MSS. in the British Museum, are quoted some documents which prove, beyond a doubt, that he was master of the Grammar Schools in the University, and that the Glomerelli were the 'discipuli in scholis grammaticilibus.' It appears that he was appointed by, and subject to, the Archdeacon of Ely. In the MSS. just quoted, we have copies of the order for his appointment, and of the oath which was administered to him, taken from the Ely Registers of the date 1452, in which latter were the following clauses:—*'Tu jurabis obedientiam Archidiacono Ecclesie Elyensis, &c. . . Jurabis insuper quod onera scholis Glomerie Cantebrie incumbencia juxta consuetudinem hactenus approbatam, pro tempore tuo, sine aliqua extorsione a scholaribus scholarum predictarum facienda fideliter sustinebis,' &c.* (Cole's MSS. in Brit. Mus. vol. xlii. pp. 149, 150; and li. p. 337. MS. Harl. 7040, pp. 219–221.) He was very naturally applied to, to write the University letters, and make speeches for any extraordinary occasions—an occupation which has since fallen to the share of the Public Ofator, and hence probably arose the idea that the latter had succeeded to the office of the former under another name. The Glomerelli seem, from the document given by Fuller, to have been a distinct class from the other scholars, and this we may easily imagine from the great importance which was given to the name of grammar in the old school learning. *Glomerum* is given in Duncane as an old low-Latin word for some kind of robe—may it be the origin of the name *glomerelli*, which resembles in form that of *bedelli*? Their school, or lecture-room, seems to have stood in the parish of Great St. Mary, in what the old Chantry of Barnwell calls in the thirteenth century *vicius Glomerie* and *Glomerie Lane*. (Barnw. Ch. fol. 162.) The name *vicius Glomerie* is found also in a deed of 17 Edward II. (Cole, MSS. vol. xii. p. 166), and *Glomerie Lane* in deeds of 15 and 22 Edward III. (Ibid. vol. iii. p. 90; and vol. vii. p. 175.) Since writing the above, we have met with a passage which throws so much light on this subject, and on a very important point in the history of our University, that we shall scarcely be blamed for lengthening our note. Previous

to the twelfth century, the regular course of scholastic study consisted of what were called the seven arts, at the head of which stood grammar; and a great part of which consisted in the study of, and commenting on, the ancient authors. When Aristotle's works came so much in vogue, this old course was replaced by the study of philosophy, and that branch which was so peculiarly distinguished by the name of grammar was by degrees thrown into the shade. Some of the schoolmen, and some whole schools, opposed the innovation; and about the middle of the thirteenth century there was a great strife between the different parties, which gave rise to various *jeux-d'esprit*, of which several are printed in M. Jubinal's recent edition of the works of the Trouvère Rutebeuf (2 vols. 8vo. Paris, 1838). Among the rest is a curious fabliau, entitled 'The Battle of the Seven Arts.' The scholars of Orleans had distinguished themselves by their attachment to the old system; and the subject of this piece is the discord which had arisen between this University and that of Paris. It begins thus (vol. ii. p. 415):—

\* Paris et Orlens ce sont .i.j.  
C'est granz damages et granz deuls  
Que il uns a l'autre n'accorde.  
Savez poi qui est la descorde?  
Qu'il ne sont pas d'une science;  
Car Logique, car tos jors tence,  
Clame les autors autorisus  
Et les clers d'Orlens, glomerisus.  
Si vaut bien chascuns .iiij. Omers,  
Quar il boivent a granz gomiers,  
Et seivent bien versifier  
Que d'une feuille d'un figier  
Vous ferent-il .i. vers.' etc.

\* Paris and Orleans they are two:  
It is great damage and very lamentable  
That the one does not agree with the other.  
Do you know the reason of the discord?  
'Tis because they are not for the same science;  
For Logic, who is always disputing,  
Claims the ancient authorities  
And the glomerous clerks of Orleans.  
Each of them is quite equal to four Homers,  
For they drink by great draughts,  
And know so well how to make verse,  
That about a single fig-leaf  
They would make you fifty verses.'

In the analogy of the two languages, *clers glomerisus* is exactly identical in form with the Latin *clericos glomerellos*; so that we have here the term applied in another country to the partisans of the same class of studies as were read by the *glomerelli* at Cambridge, and the term must no longer be considered a local appellation. Perhaps we must recognise in this class of the students at Cambridge the representatives of what, at a more remote period, had formed the University: as the *glomerelli* disappeared before the new course, the *magister glomeria* still remained for a time in form, though degenerated into a mere University officer, till the name itself was lost in that of his occupation of Public Orator. The name has been left to give us a glimpse of a state of things which, in all other respects, has long been forgotten. Some further light is thrown on the position of the *Scola Glomeria* in Cambridge, by two deeds of Clare Hall, in both of which we have mention of two schools 'in venella vocata *Le Glomery Lane*, super corneram ex opposito *Schola Glomeria*.' MS. Harl. No. 7029, p. 166."

Another note gives some particulars of the famous Dr. Caius, which may serve to illustrate Mr. Wright's researches:—

"Dr. Caius suffered various troubles during the earlier years of Elizabeth's reign for his presumed attachment to Popery. Thomas Byng, then vice-chancellor, writing to Lord Burghley the chancellor, on the 14th of December, 1572, gives the following account of a search

which had been made in the doctor's lodgings for 'popish trumpery.'

"And that yo<sup>r</sup> Lordshipp may see what contrary veines doo flowe from one fountaine, I am further to geve yo<sup>r</sup> honor advertisement of a greate oversight of Dr. Caius, who hath so long kept superstitious monuments in his college, that the evill fame thereof caused my Lord of London to write very earnestly unto me to see them abolished. I could hardly have been perswadid that suche thinges by him had been reservid. But caweing his owne company to mak serche in that college, I received an inventory of muche popishe trumpery; as vestments, albes, tunicles, stoles, manicles, corporas clothes, w<sup>th</sup> the pix, and sindon, and canopie, beside holy water, stoppes w<sup>th</sup> sprinkles, pax, sensars, superaltaries, tables of idolls, masse books, portuises, and grailles, w<sup>th</sup> other such stuffe as might have furnished divers massers at one instant. It was thought good by the whole consent of the heads of howsees to burne the bookes and suche other thinges as servid most for idolatrous abuses, and to cause the rest to be defacid, whiche was accomplished yesterday w<sup>th</sup> the willing hartes, as appeard, of y<sup>e</sup> whole company of that house."

"This letter is preserved in MS. Lansdowne, No. 15, Art. 64. From another letter in the same collection (No. 8, Art. 70), it appears that, in 1565, Caius had been accused by his fellows, by whom he seems to have been much disliked, not of popery, but of atheism, and there was talk of treating him 'tanquam ethnicum et Publicanum.'"

In 1612, King James I. seems to have interfered in a very arbitrary manner in the election of chancellor, and the notice of this, with an entertaining account of the election of another chancellor, when Charles I. followed his father's example in 1625–6, will suffice to finish our extracts.

Fuller says—

"After the decease of Robert Cecil, earl of Salisbury (one no less willing than able on all occasions to befriend the University) dying anno 1612, Henry Howard, earl of Northampton, was chosen Chancellor of Cambridge. He was son to Henry, earl of Surrey (beheaded 1546, for a mere state nicety), and succeeded, as to his name, to his excellent parts and industry, being bred in King's College, where he attained to a degree of eminency for learning."

On which the editor notes—

"In this election, the King and the University do not seem to have been quite unanimous. The following account of it is given in a letter from John Chamberlain to Sir Dudley Carleton, dated London, June 17, 1612, of which a copy will be found in the British Museum, MS. Sloane, No. 4173, p. 245.

"Our University of Cambridge is likewise in a peck of troubles about choosing their chancellor after the Lord Treasurer's death; for most voices going with the Earl of Northampton, he accepted it and sent them a letter of thanks, but understanding afterwards that the Duke of York was his concurrent and propounded in the election, he renounced the place and fell from them again, and the king was much displeased that his son should be put in balance with any of his subjects. But upon a fine letter of submission, and notice that it was done but by a few headstrong fellows that are since bound over to the council-table, he was pacified again. In the meantime they knew not whither to turn them for a chancellor, for all the noblemen were resolved to refuse, unless the king commanded them to accept it. But I heard this day that

going to a new election, they have chosen the same chancellor again, and the king hath promised he shall hold it."

On the later occasion Fuller tells us—

"Thomas Howard, earl of Suffolk, chancellor of the University, departed this life; an hearty old gentleman, who was a good friend to Cambridge, and would have proved a better if occasion had been offered. It argued the University's affection to his memory, that a grand party therein, unsought, unsent, unused to, gave their suffrages for his second son, Thomas, earl of Berkshire, though the Duke of Buckingham by very few voices carried the place of the chancellor."

And Mr. Wright adds—

"Fuller has not informed us correctly of the circumstances connected with the Earl of Berkshire's being proposed as chancellor, and his inference does not hold. The majority of the University appear to have been entirely opposed to the court party, and at the moment of Lord Suffolk's death, the House of Commons had presented a regular impeachment against the Duke of Buckingham. The following account of the election is extracted from a letter from Joseph Mede, Fellow of Christ's College, dated 3 June, 1626 (MS. Harl. No. 390, art. 68):—

"Worthie Sir, That you might not altogether want newes this week through your abundance the last, we have bred some, that the age being so fruitfull of wonders we academians might not be wanting to produce something for the world to wonder at. To tell you plainly, we have chosen the Duke of Buckingham our chancellor, and that with more than ordinary triumph. I will tell as much as my time will lett me. Our chancellor my Lo: of Suffolk dyed on Sunday about 2 a clock in the morning: which no sooner came to our eares on munday, but about dinner time arrives Dr. Wilson (my Lo: of London's chaplein) without letters but with a message from his Lord, that we should chuse the Duke, such being his Ma<sup>ties</sup> desire and pleasure. Our Heads meet after Sermon, where by Dr. Wren, Beale, Maw, Paak, this motion was urged with that vehemencie and as it were confidence of authoritie, that the rest were awed and persuaded, and those that would not, yet durst not adventure to make further opposition, though they inclined (if it be lawful to say so) to more advised counsell. It was in vaine to say that Dr. Wilson's bare word from his Lord was no sufficient testimony of his Ma<sup>ties</sup> pleasure, nor such as might be a ground of an act of such consequence. That we should by this act prejudice the Parliament. That in stead of patronage we sought for we might bring a lasting scandall and draw a generall contempt and hatred upon the Universitie, as men of most prostitute flatterie. That it would not be safe for us to engage our selves in publick differences. That at least to avoyd the imputation of folly and temeritie in the doing, it would be wisdom to wait our full time of fourteen days, and not to precipitate the Election. To this last was answered, The sooner the better and more acceptable. If we stayed to expect the event in Parliament it would not be worth God-ha-mercy. Upon the newes of this consultation and resolution of the Heads, we of the body murmur, we run one to another to complaine, we say the Heads in this election have no more to do than any of us, wherefore we advise what to do, and whom to set up. Some are for my Lo: Keeper, others for my Lo: Andover (Berkshire); but least we might be found over weak

being distracted, we agree that he that shall find most voices of these or any other set up, the rest should all come to him. Herenpon on tuesday morning (notwithstanding every head sent for his fellows to persuade them for the duke) some durst be so bold as to visit for the contrary in publick. Others more privately inquired how their friends and others were affected. But the same day about dinner time the Bp. of London arrived unexpected, yet found his own colledg (Queenes) most bent and resolved another way, to his no small discontentment. At the same time comes to towne Mr. Mason (my Lo. Duke's secretary) and Mr. Cosens and letters from my Lo. of Durham, expressly signifying in his Ma<sup>tie</sup> name (as they told us and would have us believe), that his Ma<sup>tie</sup> would be well pleased if we chose the Duke. My Lo. Bishop labours. Mr. Mason visits for his lord, Mr. Cosens for the most tried patron of the clergie and of schollers. Masters belabour their fellows. Dr. Maw sends for his, one by one to persuade them, some twice over. On thursday morning (the day appointed for the election) he makes a large speech in the colledg chappell, that they would come off unanimously. When the schoole bell rung he caused the colledg bell also to ring as to an act, and all the fellows to come into the hall, and to attend him to the schooles for the duke, that so they might win the honour to have it accounted their college act. Divers in towne got hackneys and fled to avoyd importunitie. Very many, some whole colledges, were gotten by their fearful masters, the bp. and others, to suspend, who otherwise were resolved against the duke, and kept away with much indignation. And yet for all this stirre the duke carried it but by three voices from my Lo. Andover, whom we voluntarily sett up against him, without any motion on his behalf, yea, without his knowledge. You will not believe how they triumphed (I meane the masters above-named) when they had gott it. Dr. Pask made his college exceed that night, &c. Some since had a good mind to have questioned the election for some reason, but I think they will be better advised for their owne ease. We had but one doctor in the whole towne durst (for so I dare speak) give with us against the duke, and that was Doctor Porter of Queenes. What will the parliament say to us? Did not our burgeses condemne the duke in their charge given up to the Lords? I pray God we heare well of it: but the actors are as bold as lyons, and I halfe beleeve would faine suffer, that they might be advanced. In the volume from which we have extracted this, it is followed by the letters of the Earl of Berkshire, the Duke of Buckingham, and the King, conveying their several thanks to the University. On the 10th of June, Mr. Mede writes: 'The parliament was wonderfully exasperated by our election, aggravating it as an act of rebellion, had sent letters to fetch up our Drs. to answer it, but the king stopped them, and commanded them not to stirre in this business of the Universitie, which belonged not to them but to himselfe. So it staid for that time, and they will (as I ever thought) find (notwithstanding their mightie threats) that they do but beat the wind and strike at sprites. Sure I am that ours feare no colours, that I may say no more.'

To say a word in favour of so excellent an edition of so sterling a book would be ridiculous: both to Cantabs of every grade, and to general readers who desire to be acquainted with the progress of learning from early times, this volume must be most welcome.

## WELLSTED'S TRAVELS.

[Concluding notice.]

WE are well pleased to have it in our power to conclude our notice of this work, which has been postponed from No. 1219, in consequence of the pressure of Scientific and Literary Societies' Reports: these having slackened, we trust, in our ensuing Numbers, to discharge similar arrears to other interesting authors. Speaking of the Euphrates, near Kerbela, we are told:—

"The river here continues at about the same breadth as at Lemlum (about 200 yards); a small island three miles to the northward, however, divides it. The banks are about sixteen feet in height, thickly covered with brushwood, and a few groves of tamarisk. At this village we found the inhabitants more peaceably inclined than at Lemlum. We purchased supplies here, and continued our researches without difficulty or interruption to Dewannea, where the district of Hillah commences, extending thence to Felugia. It is also a small walled town. The centre of the river is here occupied by small islands, several of which, during the floods, are completely inundated, but now expose verdant and cultivated fields of grain or vegetables—the banks on either hand are studded with villages, and small villas surrounded by gardens enrich the picture. These belong to opulent merchants from Hillah, who pass the hot months within them. The country, in other respects, presents a pleasing contrast to that which we have quitted; the soft and graceful foliage of the willow now entwines its branches with the date-palm, or flings its shadows over the silent and tranquil waters of the river. Formerly, this portion of the stream was intersected at right-angles by canals, the remains of which may still be traced. Preceding travellers have mistaken them for mounds of ruins. They owe their origin to the Assyrian age, and their stupendous magnitude is worthy of that period. It is somewhat singular, that they are carried far above the level of the river when at its highest, and the water with which they were filled must have been raised by either human or mechanical labour. I traced them, in some cases, five or six miles from the banks. One of these works, the Nahrwan, extended from Tamora, in a line parallel to, and at a distance of eight miles from, the Tigris to Jezefra, a distance of 150 miles, and its average breadth is 200 yards. The banks of this and some other canals are elevated 100 feet above the level of the country. How immense must have been the labour by which they were filled, and what a picture of the state of the country does it not present before us! By such means a desert was converted into a fertile province, fed with abundant streams, supplied with the costliest treasures of the vegetable world, thickly peopled with a peaceful and laborious race, and finally brought out a continuous line of cities which arose on his banks. Now, but for the narrow strip on the banks of the river, how changed the scene! Ages have swept over its gardens, its verdure has fled, its cities are shapeless mounds, and the recollections of their very existence has passed away. Excepting myself, while tracing its course, I am not aware that any other European has trod these burning solitudes."

We select another:—

"There is nothing more annoying in an eastern city than the dogs; for, although considered by the Turks and Arabs as an unclean animal, they are suffered to go about the streets in great numbers, and are caressed by them. As regards appearance or habits, they have little

in common with the dog of Europe; having long ears, a pointed nose, and more the character of the jackal. They are very fond of snapping at the heels of Europeans, whom they detect, even when dressed as other people; the natives say, by the smell. Some middies belonging to a vessel to which I was attached gave some umbrage to the inhabitants, by measures they took to rid themselves of the annoyance they suffered from several of these animals, who used to follow their heels, barking at or biting them during the day, and had taken up their quarters at the bases (as geographers say) of their house, and by their howling prevented them from sleeping at night. The 'young gentlemen' first seduced them by tempting pieces of bread, &c. beneath the windows, and then hurled huge stones down on them; but the wily curs became too wary for this after a time, and the mids sent off to the ship and procured a large fish-hook secured with wires. This they baited with fresh meat, at which the dogs eagerly snapped, and were drawn, howling and kicking, by a line to the window-sills, where one of their number acted the part of executioner, and with a sabre severed the head from the body. This continued for some time, and they had already rid themselves of a number of their foes, when one day they hooked an enormous brute, as large as a donkey, and being only two of them present, they were unable to move him. The howlings of the animal and an increasing crowd drew my attention to the object; and it was only by giving a few dollars to a slave to knock the brute on the head that a disturbance was prevented. It is curious, much as they suffer from thirst, that dogs never go mad in these towns."

We conclude our notice of *Lient*. Ormsby with a bull:—"In that position he was pierced by a spear, and at length fell under a heap of slain, the bodies of his devoted followers who fought over his remains!"

The tour in Socotra possesses most novelty; and, as far as the island is important and little known, the account of it will be found deserving of attention. Our illustrations, however, may be limited to two:—

"One intensely hot day I was strolling along the beach, when my attention was arrested by perceiving something lying there, which an Arab was just leaving. It was an old man stretched on his back, in a hollow scooped out of the sand; nothing but a tattered thin piece of cloth protected him from the fiery heat of the sun's rays; before him were some grain and fragments of half-broiled fish; but he was evidently in the last stage of existence. His companion told me, that when a man or woman became unable to work it was customary thus to expose them; food, however, being brought until they expire, when a little earth thrown over them completes their half-formed grave. Such is custom! Yet even this, barbarous as it is, is an improvement on that which formerly was practised. An old writer, speaking of the inhabitants of Socotra, says that 'they generally bury their sick before they breathe their last, making no distinction between a dying and a dead person. They esteem it a duty to put the patient as soon as possible out of pain, and make this their request to their friends, when they are on a sick bed, which, in all acute disorders, may be called their death-bed. When the father of a family finds himself thus circumstanced, and has reason to believe his dissolution is approaching, he assembles his children round him, whether natural or adopted, his parents, wives, servants, and all his acquaintances, whom he strongly exhorts to a compli-

ance with the following articles of his last will — 'never to admit any alteration in the customs or doctrines of their ancestors; never to intermarry with foreigners; never to permit an affront done to them or their predecessors, or a beast stolen from either of them, to go unpunished; and, lastly, never to suffer a friend to lie in pain, when they can relieve him by death.' They commonly perform the last request of the dying man by means of a white liquor, of a strong poisonous quality, which oozes from a tree peculiar to this island. Hence it is that legal murders are more common here than in any other country in the world; for, besides the inhuman custom last mentioned, the other requests of dying men produce numberless quarrels, and, by taking revenge of the injuries done to their ancestors, entail family feuds and bloodshed upon their posterity for a long series of years.

Of the many peculiar customs which existed before the introduction of Mahomedanism, a few only are now retained, of which the most singular is, that they do not circumcise their children until they are past the age of puberty; while with other Mahomedans this is performed at a very early age. On the eastern part of the island, amidst the mountains, I was shewn a rude stone chair, in which it is customary for the Bedowins to seat their youths (who are sometimes brought from a long distance) while the operation is performed. They have preserved the remembrance of a singular trial by ordeal formerly practised. An individual supposed to have been guilty of any heinous crime was placed, bound hand and foot, on the summit of some eminence, and there compelled to remain three days. If rain fell during that period on or near him, he was considered guilty, and punished by being stoned to death; but if the weather, on the contrary, continued fair, he was acquitted. There are, in the more remote parts of the island, said to still retain the custom of transferring their own progeny to another person. During pregnancy, it is left at the will of the mother, that the father may give the child away as soon as it makes its appearance in the world. If her consent is obtained, a fire is lighted before the door of their cave, to denote his intention, and the child, as soon as born, is sent to another family, in which it is brought up with every tenderness and attention. Children reared under this singular custom retain through life the title of 'children of smoke.' It is common for a father who thus exposes his own, to receive in a similar manner the offspring of another of his tribe. Burckhardt tells us that the sheriffs of the Hedjaz have a nearly similar custom. After the first five or six days the child, if a boy, is transferred to another tribe, and the mother is not permitted again to see him until he attains to man's estate. In this manner Mohammed their prophet was reared. Some other popular traditions were related to me, but they appeared so little peculiar or characteristic as scarcely to be worth transcription. They have a story that there is a class of women who, like the Gouls of Arabia, lie in ambush in lone and secret places, to catch and devour the weary traveller; and so prevalent is this belief, that I have heard both Arabs and Bedowins maintain that a greater number of deaths occurred in this than in any other way. The gravity, indeed, with which such opinions were maintained, even by the more enlightened of the natives, surprised me a good deal; neither ridicule nor argument had any effect in shaking their faith. The probable origin of these tales is, that bodies of the mountaineers fall occa-

sionally from the rocks, and are sometimes found to be partly devoured by vultures and other birds of prey: the love of the horrible and marvellous fills up the rest of the story. It may appear singular that while the population of the eastern part of the island is mixed and varied, that of the western still continues pure. The cause is this: the want of water, felt during the greater part of the year on this part, and its general sterility, offer so little inducement to the native Arabs to reside there, that, with the exception of some fishing hamlets, I did not, in my journeying in that part, meet half-a-dozen families. The Bedowins make no scruple to give their daughters to the native Arabs, and even to visitors who may pass but a short time on the island. These, departing with their husbands, their sons naturally follow the avocation of their fathers, and rarely, if ever, return to the pastoral pursuits of their maternal progenitors; while the females again are not married to Bedowins; for the Arabs, though they have no objection to take a Bedowin wife, would hold themselves disgraced were they to marry their daughters to any but those of their own class."

## MISCELLANEOUS.

*Tales of the Kings of England: Stories of Camps and Battle-fields, Wars, and Victories; from the Old Historians.* By Stephen Percy. Pp. 231. (London, Tilt.)—A pleasant selection of interesting incidents in our national annals, and written in a manner well calculated to lead the youthful reader to the more formal and regular study of history.

*Prometheus Britannicus, a Tragic-Comedy in one Act,* by a Rugbeian. Pp. 40. (London, Tilt.)—A smart *jeu d'esprit*, in which the new Rural Police is humorously handled; and our Rugbeian does credit to his school by founding his satire on the Greek model.

*Tables of Six-Figure Logarithms, &c.,* by R. Farley. (London, Longman and Co.)—These excellent tables are accompanied by formulae for the solution of plane and spherical triangles, and a table of constants, which add much to the utility of this small volume.

*The Templar and the Jewess. Jesonda.* (London, Schloss.)—Two more of Mr. Schloss's very nice and very cheap edition of the operas performed by the German Company.

*Nautical Sketches,* by Hamilton Moore, jun. Pp. 270. (London, Painter.)—An imitation, with illustrations; but one which does not reach sufficiently high to deserve notice as a sample of the nautical school of literature.

*Specimens in Eccentric Circular Turning, &c.,* by J. Hick Ibbeson, Esq. (London, Longman and Co.; Weale; Layton.)—A third edition, which clearly and fully explains all the art and mystery of this very curious craft. Mechanical contrivance seems carried to its highest pitch as respects this form of production.

*Hints, Theoretical, Elucidatory, and Practical, for the Use of Teachers of Mathematics, &c.,* by Olinthus Gregory, LL.D. &c. Pp. 188. (London, Whittaker and Co.)—A useful school-book.

## ARTS AND SCIENCES.

## VOLTAIC ENGRAVING.

To the Editor of the Literary Gazette.

SIR,—I take this opportunity of laying before yourself and readers a brief detail of a still further improvement of my voltaic process of multiplying works of art in metal. In my pamphlet, printed last September, I there stated I considered the process comparatively incomplete, unless we were able to apply it to the multiplication of models in clay or wood, castings in plaster, wood-engravings, &c., as the fact that galvanic deposition always requires a metallic surface to act on, seemed to set bounds to these branches of its application. I then resorted to various expedients to surmount the difficulty,—among others, that of gilding and bronzing the surfaces of such materials to a limited extent; this was successful, but still troublesome and expensive, and, more than all, the sharpness and beauty of the original was necessarily injured. I have since attempted to metallise surfaces by the use of plumbago (suggested to me many months ago by Mr. Parry of Manchester). This last process pos-

sesses some of the faults common to the others in a greater degree, and in some instances the deposition goes on partially. I am happy, however, to inform you, I have now adopted a method which answers completely, obviating all these objections, and leaving the surface of the material to be acted on as sharp as it was previous to the operation. Should I be desirous of obtaining a copper mould or cast from a piece of wood, plaster, or clay, or, indeed, any non-metallic material, I proceed as follows:—Suppose it is an engraved wooden block, and I am desirous of metallising it, in order that I may be able to deposit copper on its surface (this example will hold good for any other material), the first operation is to take strong alcohol, in a corked glass vessel, and add to it a piece of phosphorus (a common phial corked will answer the purpose); the vessel must now be placed in hot water for a few minutes, and occasionally shaken. By this means the alcohol will take up about a 300th of its bulk of phosphorus, and we thus obtain what I would term an alcoholic solution of phosphorus. The next operation is to procure a weak solution of nitrate of silver, place it in a flat dish or a saucer; the engraved face of the block must now be dipped in this solution, and let remain for a few seconds, to allow capillary action to draw it into the wood. This operation being performed, a small portion of the alcoholic solution of phosphorus must now be poured in a capsule, or watch-glass, and this placed on a sand-bath, that it may be suffered to evaporate. The block must now be held with its surface over the vapour, and an immediate change takes place; the nitrate of silver becomes deoxidised, and gives place to a metallic phosphoret of silver, which allows the voltaic deposit to go on with as much rapidity and certainty as the purest silver or copper.\* The whole process may be performed in a few minutes, and with absolute certainty of success. The interior or exterior surface of a plaster or clay mould of a statue, no matter what size, may be thus metallised with equal facility. For the process of vaporising, and should the material to be acted on not be very large, I prefer fastening it to the top of a bell-glass receiver with a bit of pitch or cement, and thus placing it over the capsule on the sand-bath; the phosphoric vapour is by this means equally diffused, and not dissipated. An ethereal solution of phosphorus also answers; and a solution of either of the chlorides of gold or platinum may be used. I am inclined to think this process, independent of its uses in galvanic precipitation, may be applicable to other branches of art. I would recommend those curious of testing its effects to try a small and sharp plaster of Paris medallion: dip its surface in a weak solution of nitrate of silver and take it out immediately, fasten it to the bottom of a glass tumbler, and at the same time have a little hot sand ready in a dish; lay the watch-glass containing a few drops of the phosphoric solution on it; now place the mouth of the tumbler over all, and the medallion will be observed almost instantly to change colour. The operation is now completed. A piece of pottery ware in the state of biscuit may be acted on in a similar manner.—I am, &c.

THOMAS SPENCER.

Liverpool, June 27.

\* These most ingenious and very curious experiments of Mr. Spencer must lead to results of equal variety and importance. We are informed that another method of preparing the wooden plates has been tried with perfect success; viz. by pouring on them the phosphoric solution itself and drying it over a strong heat. This is simple enough.—Ed. L. G.

## ZOOLOGICAL SOCIETY.

VISCOUNT BRAYBROOKE in the chair.—A motion for the closing of the Gardens on Sunday was put. After an animated discussion the numbers were, for the motion, 18; against it, 377. So that the Gardens may still be visited on Sunday. Nearly 30,000 persons visited them during the past month. Among the accessions to the menagerie in the course of that time, the Council specially directed the attention of the Meeting to the gratifying proof of her Majesty's continued interest in the objects of the Society, by the present of a Lioness from the western coast of Africa, a specimen remarkable for its beauty and very fine condition. There is (unfortunately) no truth in the report published in the newspapers, that her Majesty had presented a fine young elephant to the Society.

## PARIS LETTER.

Academy of Sciences, June 30, 1840.

SITTING of June 22.—M. Millet addressed a note to the Academy on some experiments which he had made, much about the same time as M. Boucherie, on injecting timber with liquids to prevent its decay. He had ascertained that the nature of the soil on which the timber grew was of great influence on the timber itself: thus the ashes made by timber from the Jura, growing on what was called Jurassic lime-stone, were found to contain a considerable quantity of earthy carbonates, sometimes as much as 30 to 40 per cent of their weight, with only 2 to 3 per cent of silicious substances; whereas the ashes of the same kind of timber, grown on gravelly or sandy soils in Switzerland, and especially on the Vosgian sandstones, contained much more of silicious matter than of earthy carbonates. He had also found that if osiers, for purposes of basket-making, &c., were steeped in water containing metallic salts in solution, they became exceedingly brittle, whereas if steeped in water containing alumina they retained their elastic properties.—M. Jacquemet read a paper on the means of preventing steam-engine boilers from exploding: the principal recommendation contained in it referred to a means of preventing the boilers or tubes from ever becoming empty of water, and so getting red hot.—M. Duchemin submitted to the Academy the model of a new steam-engine of his own invention.—M. A. Brongniart reported on a memoir, by M. Payen, on the chemical composition of vegetable tissues.—M. Chameroz communicated to the Academy a new method of making gas-pipes out of sheet iron, covered inside and out with a bituminous preparation preventing all rust. Pipes of this kind had been used for a considerable length of time, and found to answer perfectly.—The first Secretary of the Ottoman Embassy at Paris addressed a note to the Academy, stating (seriously) that his father, who is in the admiralty department of Constantinople, had recently seen a mermaid while crossing the Bosphorus. This communication caused a great deal of hilarity.

The Academy then proceeded to the election of members to vacancies. M. Pelletier was chosen an honorary member (*académicien libre*) in the room of the late General Roginat. Captain Bérard was elected corresponding member of the geographical and navigation section. His competitors were Sir E. Parry, Sir J. Franklin, Count Demidoff, Captain Owen, and Captain Dumont d'Urville.—M. Duhamel was appointed by the Academy ex-

aminer for the Ecole Polytechnique, in the room of the late M. Poisson.

*Academy of Inscriptions and Belles Lettres.* Sitting of June 26.—The attention of the members was called this day to the great loss recently sustained by the literary world in the person of M. Daunou. His death was formally notified to the Academy, and it was resolved that a medal should be struck in his honour. M. Victor Leclerc, Vice-president, read a highly interesting notice which M. Daunou had prepared for insertion in the great work, "*Histoire Littéraire de la France*," commenced by the Benedictines, and continued under the direction of the Academy of Inscriptions: it related to Roger Bacon, the author of the "*Opus Majus*."

*Academy of Moral and Political Sciences.*—At a recent sitting, M. Charles Lucas read a report on Bianchini's "*Financial History of the Kingdom of Naples*," and took occasion to express his surprise at no statistician from the north of Europe having, as yet, turned his attention to the two Sicilies. Dr. Bowring, he observed, had not touched upon the subject in his report on Italy, and yet, in many points of view, the Neapolitan states were highly interesting. This kingdom was the one in which the most liberal institutions existed of any in Italy; and though it might have a more Spanish character than any other in its manners, yet in its laws it was entirely French. Its codes, with the exception of the non-existence of the jury, seemed to be all copied from the French.

The Academy held its annual public sitting on June 27th. M. Rossi, in his introductory speech, paid an elaborate compliment to the memory of the late M. Daunou. He then mentioned the prizes that had been awarded for the year (which we have already noticed at various periods), and also gave out the prize subjects for the year ensuing. They are as follows:—"For a Critical Examination of German Philosophy, 1500f.;" "For a Critical Examination of the Cartesian Philosophy, 1500f.;" "For the Harmonising of the present Penal System in France with the Penitentiary System, 1500f.;" "For an Essay on the different Modes of letting Land now used in France, their Advantages and Disadvantages, 1500f." The following prizes were given out for 1842:—"An Essay on the History of the Right of Females to inherit Property among the different Nations of Europe during the Middle Ages, 1500f.;" and "For a Complete Account of the Convocations of the States-General in France, from 1302 to 1604, the Motives of their Convocation, their Powers, &c., and a Comparison of them with the British Parliaments, 1500f." The Academy gave out for 1843, as a prize subject, "An Essay on the Practical Application, in the most useful form, of the Principle of Voluntary and Private Associations for the Relief of Misfortune, 5000f."—M. Mignet read an elaborate biographical sketch of M. Broussais, the late eminent physician.—M. de Gasparin has been elected a member of the agricultural section, in the room of the late M. Tarpin.

*Ethnological Society.*—This association, lately formed in Paris, has been approved of by the government, and promises to rise rapidly into notice and influence. Its object is to study the different races of mankind under the several heads of physical organisation, moral and intellectual character, languages, and historical traditions, in order that the distinctive characteristics of each race may be thereby determined. The President is Dr. W. F. Edwards; Vice-Presidents, the Viscount de Santarem and M. Davesac; Secretary, M. Imbert des Mottes.

At one of its recent sittings several elections of members and honorary members took place; among the latter were our learned fellow-countrymen, Dr. Prichard, Dr. Lawrence, and Captain Washington, Secretary of the Royal Geographical Society of London. Numerous papers of great interest have been communicated by various members, and the Society has already enough of materials in hand to commence the publication of the first volume of its Transactions. At the sitting of June 26th, an elegantly written and learned memoir on the Parsees, by M. Pavie, was communicated; another, on some of the tribes of Abyssinia, was read by M. Lefebvre, the traveller, who brought with him to the Society two natives of Abyssinia, by whom he has been accompanied to Paris. Dr. Benet, who for two years was physician to Runjet Singh, read a memoir on the populations of Lahore, and communicated to the Society a considerable collection of Indian antiquities, objects of art, &c. The fourth volume of M. Romy's "*History of Spain*" has just been published by Furne. It forms an interesting portion of the work, as comprising the recital of the principal contests between the Christians and the Arabs. The quotations of books and documents that accompany this work give it high value: the author is a very learned man, and he is in this instance ably seconded by the graphic powers of M. Raffet, who has accompanied the text with spirited illustrations.—M. Frantin's new book, "*Louis the Pious and his Age*," is well spoken of: it is a philosophical narration of the social phenomena of the period, and forms a valuable supplement to his "*Annals of the Middle Ages*."—There is a work coming out in numbers, entitled "*Les Enfants, peints par Eux-Mêmes*," in imitation of the well-known "*Les Français, peints par Eux-Mêmes*" (which, by the way, goes on increasing in public favour):—the former is said to be intended for juvenile readers.

Sciarrada.

Sta il primiero nel secondo  
E l'inter sull'altro stà;  
Dell'inverno riparando  
Il rigor, la crudeltà.

Answer to the last:—Mani-scalco.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, June 25.—The following degrees were conferred:—

*Bachelor in Divinity.*—The Hon. and Rev. W. Herbert, some time Fellow of Merton College, Grand Compounder.

*Bachelors in Medicine.*—H. B. Leeson, Trinity College, Grand Compounder; E. Wells, Fellow of New College, and one of Dr. Radcliffe's Travelling Fellows; R. M. Coley, Queen's College; W. Twining, Balliol College.

*Masters of Arts.*—Rev. E. Marshall, late Fellow of Corpus Christi College, Grand Compounder; Rev. E. O. Trevelyan, Corpus Christi College; Rev. E. C. Shelden, St. Mary Hall; H. G. Allen, Christ Church; Rev. W. H. Weston, All Souls' College; W. Browne, Balliol College; Rev. J. S. Hodson, Merton College; T. H. Hadden, Fellow of Exeter College; Rev. G. Stott, Fellow of Worcester College; Rev. G. W. Huntingford, Fellow of New College; Rev. T. Halliwell, New Inn Hall; Rev. F. M. Rowden, R. D. Michell, Wadham College; C. E. Gray, R. Thompson, Brasenose College; J. E. Wyndham, Oriel College.

*Bachelors of Arts.*—W. Thompson, Scholar of Queen's College; H. R. Merewether, St. Alban Hall; H. M. Leffroy, Exeter College; W. S. W. Vaux, Balliol College; J. M. Sandham, St. John's College.

The Rev. W. Dalton, M.A. of Trinity College, Dublin, and the Rev. S. E. Walker, M.A. of Trinity College, Cambridge, were admitted *ad eundem*.

CAMBRIDGE, June 26th. The Members' Prizes for Latin prose compositions were awarded as follows:—

For *Bachelors of Arts*.—1. H. A. Woodham, Jesus College; 2. J. Edleston, Trinity College.

Subject:—"In illa Philosophia, in qua de vitâ hominum et moribus disputatur, tractanda, quibus principibus quasi fundamento imitti, quibusque potissimum ex fontibus recte vivendi principia haurire oporteat?"

No undergraduates' prize adjudged.  
The following degrees were conferred:—  
*Doctor in Divinity*.—Rev. M. H. Jones, Queen's College.  
*Bachelor in Divinity*.—Rev. E. D. Mortlock, Christ's College.  
*Masters of Arts*.—J. G. Packer, Trinity College; J. Coghlan, Queen's College; T. S. Coles, Corpus Christi College.  
*Bachelor of Arts*.—W. V. Fowke, Caius College.

## ROYAL ASIATIC SOCIETY.

AN ordinary general meeting of this Society was held on the 20th of June, the Right Hon. the President in the chair.—A variety of presents to the library and museum of the Society were laid on the table, and several members were elected.—Drafts of addresses to her most gracious Majesty, and his royal highness Prince Albert, on their late providential escape from assassination, were read and approved.—Col. Sykes read a short paper, containing 'Remarks on an Inscription found on a Buddhist Tope in Bhopal,' recorded in the "Journal" of the Asiatic Society of Bengal, corroborative of the opinion enunciated by him, that the proprietary right in the soil in all parts of India, and from the highest antiquity, had always been in the subject, and not in the monarch. The inscription stated the purchase of the land by the Emperor Chandragupta, and its being granted for the purpose of building a tope.—Colonel Sykes then said that he had in his hands a paper of considerable extent, the reading of which would require a much longer time than could be allowed to him by the meeting; and that, in consequence, he could only give a few extracts, which would be just sufficient to shew the nature of the paper, and the conclusions to which it had led him. He had called his memoir 'Notes on the Religious and Political State of India before the Mahomedan Invasion;' and it was founded chiefly on the Travels of the Chinese Buddhist priest, Fa Hien, who commenced his journey from China to India, A.D. 399; and upon the comments written upon those travels by the learned translators of that interesting Chinese work, Messrs. Remusat, Klaproth, and Landresse. From the extracts read, we understood that although the Brahmans had, ages ago, destroyed all literary documents which had not a tendency to confirm their own supremacy; yet the books of the Chinese, which had but very recently been accessible to European scholars, afford, in numerous cases, efficient means of clearing up much that had been concealed. The Chinese had been in the habit of making journeys through India as early as the third century before the Christian era; they had made alliances with the Bactrian kings; and they had penetrated still further to the west in their endeavours to propagate Buddhism, and to obtain its sacred books from India—its birth-place. The doctrines of *Laotseu*, professed by the Chinese, and the tenets of Buddhism, were reciprocated long before the Christian era; and in 215 B.C. an Indian Buddhist priest arrived in Shensee with a collection of religious books in the language of India. Buddhism, in fact, had been known in China several centuries before the Christian era; although it was not until that time that it began to be at all publicly promulgated within the empire. Colonel Sykes said, that although there was not time to read the arguments on which his conclusions had been founded, the value of which was entirely dependent upon the continuous chain of facts and analogies, yet, as those conclusions were but short, he would at least read so much of them as would enable the meeting to judge of the scope of his researches. He thought that

sufficient grounds were afforded for believing:—1st. That Buddhism was the prevailing religion of the whole of India, from the sixth century B.C. to the seventh A.D.; and that it was not finally overthrown in that country until the twelfth or fourteenth century. 2d. That a sort of modified Buddhism existed before the earliest of those epochs, named from an extremely remote period; there being Buddhas previous to Sakhyas. 3d. That the "Doctors of Reason," whose mystic ideas, and characteristic emblem, the *swastika*, or Buddhist cross, were diffused throughout India and China before the coming of Sakhyas, were professors of this qualified Buddhism. 4th. That India was then divided into petty principalities, though occasionally united under one monarch of commanding talent. 5th. That the princes of India were not followers of Brahminical doctrines. 6th. That the Brahminism of the Puranas, as known to Europeans in modern times, did not originate before the decline of Buddhism. 7th. That the Brahmans were a secular, and not a religious body; and that they had neither religious influence nor political power until after the invention of the Puranas; and, 8th, that the divisions of caste were secular, and not religious. Colonel Sykes, in conclusion, stated that it was far from his wish to put forth those deductions dogmatically, but rather in order to elicit the opinions of others, who were favoured with better opportunities and capabilities than himself for throwing light upon those remote ages; calling particularly the attention of the antiquarian to the facts that the oldest inscriptions in India all relate to Buddhism, and are in the Pali, and not the Sanscrit language; and that the oldest of the multitudinous coins so singularly brought to light within the last few years all relate to Buddhism, or the "fire worship."—The Society's meetings were adjourned till November.

## ROYAL SOCIETY OF LITERATURE.

IN reporting the anniversary meeting of this Society, we found that we could only give an imperfect sketch of the interesting address of the President, the Earl of Ripon; and as it embraced several subjects of literary and national consequence, we deemed it better to wait till we had it in our power to lay it correctly before our readers, which we have now the pleasure to do. It is almost invidious to point to any particular topic, but we confess that we were especially gratified with the compliment so justly paid to the genius and eminent position of M. Guizot, whose residence amongst us, as ambassador of France, is not more distinguished by good political feeling than by the cultivation of friendly intercourse with men whose talents adorn the literature of England. The following is Lord Ripon's address:—

"Gentlemen,—The Report just read to you has described so fully the condition of the Society, and its proceedings during the last year, that but little remains for me to address to you upon the present occasion, beyond a few passing observations upon some points referred to in the Report, which may appear to warrant a somewhat more particular notice from me as President of the Society. It may seem to be no part of our functions as a Literary Society to take notice of public events, which in a general sense are not likely to affect our interests; and yet there may be occasions which would warrant, if not call for, a different course. It was this feeling which led the Council to offer to her Majesty, in the name of the Society, their cordial congratulations upon

the auspicious event of her Majesty's marriage; and they felt at the same time that a similar tribute of respect was due to the illustrious Prince whom her Majesty had chosen as her consort, to the universal satisfaction of her loyal and faithful subjects. In tendering to his royal highness this expression of their feelings, the Council alluded to the reputation which the young prince had secured to himself as a cultivator and patron of literature; and they solicited, as the Report of the Council has informed you, permission from his royal highness that his name might be added to the list of the members of the Society. His royal highness was graciously pleased to accept our address in the spirit in which it was conceived; and we have now the honour to call Prince Albert a Fellow of the Royal Society of Literature. Gentlemen, I cannot but anticipate from this circumstance advantage to the credit and interest of the Society: not doubting his royal highness's readiness to aid our exertions in any manner which may seem to be open to him, we may reasonably flatter ourselves that the patronage and favour of one placed in so eminent a position as the consort of the queen, may lead to an increased connexion between us and the literary men of other countries; and especially of those parts of Europe in which the native language of his royal highness spreads far and wide those treasures of learned labour which illustrate the literature of Germany. In expressing these hopes, I am not using the language of courtly adulation, or seeking to recommend ourselves to public notice abroad by any indirect means. It would be inconsistent with the dignity of literature to do so; but it is only just and reasonable to dwell with pleasure upon the probable results of a course from which, whilst loyalty and duty directed us to pursue it, every consideration justifies us in hoping that essential advantage will be derived by our Society. In addition to the illustrious individual to whom I have just adverted, the list of our honorary members has been increased by some names to which I am anxious to allude with some particularity, as well as with unmixed satisfaction. When we find that amongst those by whom the Society is thus appreciated and honoured in other countries than our own are some of the most distinguished cultivators of learning, and most celebrated popular writers, of the Continent, I am confident that you will consider that one of the most important objects of our institution is satisfactorily fulfilled, and that the hopes have not been disappointed that upon a former occasion I ventured to hold out to you—of an increasing connexion with learned men of all countries; and believing that these gentlemen (and from some we have an express assurance to that effect) have not only given us the ornament of their names, but intend to afford efficient aid in the labours prescribed to us by the constitution of our Society, I cannot but congratulate this meeting on our receiving into our ranks such coadjutors as those whose names I am about to mention. Dr. Edward Gerhard, Archaeologist of the Royal Museum at Berlin, Member of the Royal Academy of Berlin, and of many other learned institutions, well known to scholars by his works on the Etruscan vases, the metallic mirrors of the Etruscans, and other interesting matters of the like nature. Dr. Karl Outfried Müller, Professor in the University of Göttingen, author of many valuable writings on the architecture, arts, and general archaeology of the Greeks. The utility of the learned professor's works is, I understand, fully acknowledged in the uni-

versities of this country. Dr. Augustus Boeckh, Professor in the Royal Academy of Berlin, to whom literature is indebted for various productions on similar subjects, but more especially for the magnificent 'Corpus Inscriptionum Græcarum,' of which he is the indefatigable editor. The next on the list, the Chevalier Karl Bunsen, also a labourer in the same field of research, is well known to the members of this Society as joint Secretary with Dr. Richard Lepsius, of the Archæological Institute of Rome; with which learned association, as the Report has already informed you, our Society has entered into intimate relations. It would give me real pleasure to enlarge on the eminent literary merits of these two gentlemen, but any thing which I could say respecting them would fall far short of the impression which they themselves made upon us last year, when they were so obliging as to favour a meeting assembled in this room with some very curious and unquestionable proofs of their special qualifications to do honour to universal literature. Dr. C. C. Rafn, the distinguished and active Secretary of the Northern Society of Antiquaries, has also become one of our honorary members, thus bringing us into closer connexion with that useful institution, which is peculiarly interesting to us on account of the relation that its researches bear to the ancient history of this country. But, gentlemen, it is not merely from the ranks of men whose literary celebrity is their great characteristic, and whose pursuits are habitually those of learned leisure, that we have drawn that accession to our members upon which I have to congratulate you on the present occasion. We can boast of the countenance and support of others, such as M. Thiers and M. Guizot, who have long been engaged in the multiplied cares and vicissitudes which belong to the lives of public men, and which might seem to be incompatible (if our personal experience amongst our own countrymen did not demonstrate the contrary) with a steady attachment to the less exciting objects of literary research. M. Thiers is, as you know, now placed in the eminent position of first minister of a great country, to the furtherance of whose political interests he is called upon to apply all the powers of his acknowledged eloquence, and all the resources of a cultivated understanding. And those amongst us who have read his 'History of the French Revolution,' the most distinguished of his literary works, will not fail to have found in it that philosophical acumen, that clearness of narrative, and that accuracy of detail, which have rendered it so deservedly celebrated amongst the productions of modern history. The literary reputation of M. Guizot, who is now a resident in this country, in the distinguished post of ambassador from his majesty the King of the French, is well known to all of us. Himself an eminent author, he has been at the same time an unwearied and efficient patron of literature and science; perhaps, indeed, it may be truly said, that no other individual in Europe has carried that generous patronage to so great an extent. Raised by his own talents and by the dignity of his mind above all jealousy of literary merit in others, he delights to cultivate its growth wherever it is to be found, and to witness the maturity of its fruits flourishing under his fostering care. And we may well conceive that he has derived far more gratification from the opportunities which his high station as a minister in France has afforded him, of forwarding the interests of general literature, than from all the personal power and advantages of office which from time

to time it has been his lot to enjoy. May we not venture to hope, that the selection as ambassador from France of an individual so eminent for his acquirements in pursuits so specially pacific as those which now call for our notice, may tend to render the embassy of M. Guizot a new, but not on that account a less efficient, means of cementing those friendly feelings between our respective countries, which afford so powerful a guarantee for the maintenance of the peace of Europe? Having now called your attention to such individuals, being foreigners, as have been recently admitted into our Society, it is next my duty to advert to the statement in the Report, that death has in the same period deprived us of some members, natives of this country, whose literary reputation and character give to their memory a claim to our regrets. The list of deceased members is, I am happy to observe, a short one; but it contains three names which I cannot pass by without special notice: I allude to the Venerable Archdeacon Prosser, one of the early and active friends and promoters of the Society; to the Right Rev. Dr. Butler, bishop of Lichfield, an able scholar and classical commentator, as is testified by his edition of *Æschylus*, and a liberal and discerning collector of books and manuscripts; and to the Right Rev. Dr. George Gleig, Chief Bishop of the Scots Episcopal Church, a venerable and highly respected scholar and divine. Before I conclude, it will be proper to notice the more prominent among the readings and discourses which have been brought forward in the ordinary meetings during the year. Among the papers read, particular attention is due to a communication 'On the Island of Cos,' by Colonel Leake, in which our learned Vice-President, though proposing little more than a commentary on some inscriptions copied in the island by Lieutenant Helpman, and appended to the memoir, in reality has given us a complete historical and topographical view of an interesting portion of ancient Greece. A memoir by the Rev. Dr. Nolan, 'On the great Obelisks of Karnac and Luxor, their probable authors, and the purposes for which they were erected' (the greater part of which still remains to be read), is likewise entitled to notice, on account of the extensive acquaintance it displays with Egyptian learning. Mr. Bonomi's memoir 'On Obelisks,' and Mr. Cullimore's 'On the Principles and Relations of the Successions of the early Pharaohs' (also, hitherto, read only in part), likewise warrant particular mention, as valuable contributions to the researches which have from time to time been made by our members into the archæology of that most interesting country. The discourses of Chevalier Brøndsted may be regarded as a new feature in the learned entertainments offered by the meetings of our Society, being conversational lectures rather than readings. On the first two days, our distinguished honorary member gratified his auditors with an explanation, which is said to have been equally remarkable for erudition and philosophical ingenuity, of the subjects represented on the two pediments of the Parthenon at Athens; respecting which so much has been written, without, I believe, any conclusive or satisfactory results having been previously obtained. The third, on which occasion I was myself present, was devoted to the elucidation of the beautiful graphic decorations of three ancient Greek vases; and I may be permitted to say, that I fully participated in the pleasure and conviction which followed the explanations of the accomplished lecturer. Perhaps I may be allowed to add the expression of my belief

that this mode of bringing before the Society topics to the elucidation of which it is suited, might be advantageously adopted by other members. There are many questions, particularly such as are connected with the fine arts, or with curious manuscripts, in treating which, if the objects to which the conversation referred should themselves at the time be laid before the Society, a great additional interest would be given to the discussion, and a new attraction offered to those of our members who are disposed to attend our meetings. And if the Society should think fit to leave it to the Council to consider whether it would be advisable to adopt any plan for regulating the species of lectures alluded to, I apprehend that no risk would be incurred of their deviating into controversy; an event much to be deprecated, as inconsistent with that harmony and good feeling which have always marked the proceedings of the Society."

#### ORIGINAL POETRY.

##### OH! BETTER BE POOR AND BE MERRY!

Oh! better be poor and be merry,  
Than rich as a lord, and be sad;  
For good beer laughs louder than sherry,  
Which never such happy friends had!—  
There's a tale for each drop in the tankard,  
A song for each fresh filling-up;  
Time may chide, if he will,—here we're anchor'd—  
Whilst Friendship goes round with the cup.  
For better be poor and be merry, &c. &c.

Here's the strength of old England, my hearties,  
The vigour that lies in good beer!  
Political changes and parties  
Keep outside the door whilst we're here!  
May the plough and the loom thrive together;  
May Industry ne'er know a sigh;  
And the times that bring darkest of weather  
Still shew us a brighter day night!  
Then, better be poor and be merry, &c. &c.  
C. SWAIN.

##### OH, NO!—WE'LL HAVE MANY SONGS MORE!

Oh, no!—we'll have many songs more,  
As beautiful still, ere we part;  
For 'tis thus when our feelings run o'er,  
That we find the true key to the heart!—  
And, besides, 'tis so long since we met,  
It were folly to hasten Time's flight!—  
No, stay!—we'll have many songs yet,  
Ere we whisper a word of Good Night!  
Who knows when we next may enjoy,  
Such a banquet of friendship as this?—  
Then, oh, let us find better employ,  
Than in short'ning such moments of bliss!—  
Come, hallow to Friendship once more  
The songs which our feelings delight!—  
Life is short,—oh, at best so soon o'er,  
That we need not to hasten Good Night!  
The daughter of Cælus, they say,  
Her love to dark Erebus told,  
And scattered such stars on her way,  
That the god quite mistook them for gold!  
But the gold he thought ever to claim,  
With morn died away from his sight!—  
Thus our joys will but vanish the same,  
The moment we whisper Good Night!  
C. SWAIN.

#### CONSOLATION.

Is this a deathbed?—'tis a shrine  
Where Hope and Faith together meet;—  
Where earthly love seems half divine,  
And Death itself a presence sweet!

I know that my Redeemer liveth!—  
The flowers that bloom to fade away,  
And o'er our path their perfume fling,  
Yet have a life beyond decay,  
And find again a Second Spring!  
How sweet the trust!—the joy!—it giveth!—  
I know that my Redeemer liveth!  
I know that my Redeemer liveth!—  
Unto His hand my flower of life  
With humble hope do I confide,  
And tranquil quit this mortal strife  
To bloom, my Saviour, by thy side.  
'Tis thou my flower of life receivest,—  
I know my dear Redeemer liveth!  
I know my kind Redeemer liveth!  
He calls me to His angel-land,  
To meet the loved-ones, gone before;  
He dries my tears with his own hand,  
And bids me part,—and weep no more!

Mother—to lose thy flower who grieveth—  
Take comfort!—My Redeemer liveth!

C. SWAIN.

## THE DRAMA.

**Her Majesty's Theatre.**—The opera entitled *Il Giuramento* has been produced here with slight effect. The first act is tolerable, and there are two or three compositions in the whole worthy of remembrance, but the rest is as indifferent as the plot is intricate and perplexing.

**English Opera.**—We sincerely wish we could see this little theatre more fully attended: the entertainments provided assuredly entitle it to greater patronage than it has yet received since it opened with a small band of actors, thrown by *contre-temps* from other engagements. Last week, a smart two-act farce, called *Ins and Outs*, was produced; and is supported by several old favourites of the public, in parts well suited to their abilities. Mrs. Orger is *Mrs. Smy* and *Lady Mayoress*, rich in finery and vulgarity; Mr. Brougham, an Irish fortunehunter, all bustle and brogue; Mr. R. Romer, a needy friend, sharing the "ins and outs" of his less modest chum; pretty Miss Cooper, the lady mayoress's pretty daughter; and Mr. Granby, a meddling, but good-hearted friend of the family; these, with Mr. Fitzjames, Mr. Turnour, &c. &c. get through their parts with great spirit. On Monday, a new melodrama was produced, called *The Demon Gift*. It is something like the *Bottle Imp*, and has pretty scenery. We hope it is not to banish *Thomasse Thumbé*, which is too funny to be spared just yet.

**Prince's Theatre.**—A change of a new singer or two makes no change in the general character of these entertainments.

**Hanover Square Rooms.**—On Friday, June 26th, Mrs. W. H. Seguin and Mrs. John Hullah had a concert at these Rooms, which were crowded to the very doors. The selection of music was excellent; and the promises of the programme fulfilled to the letter, or rather to the note. Madame Dorus-Gras sung a *scena* from *Robert le Diable* in splendid style, as if to shew of what her voice is capable. Her wonderful execution astonished us, while the sweetness of her tones delighted. Caradori Allan, too, was in full voice, and sung charmingly. Mrs. W. H. Seguin sung "Batti, Batti," accompanied by Mr. Hatton on the violoncello; and also took part with Tamburini in the exquisite duet, "La ci darem." Miss Rainforth, Miss Woodyatt, and Miss Edwards, were the other lady vocalists, and exerted themselves with much effect. Tamburini, Zuchelli, and John Parry, with their various styles; Mrs. John Hullah and her pupil, Master Russell, on the pianoforte; Mr. Richardson with his flute solo; Puzzi on the French horn; all combined to render this concert well worthy the patronage it received. We reserve the pianoforte playing of Liszt for a single separate line. Nothing could go beyond his two performances at this concert: in our humble opinion, the tones he produces in andante parts, leaving his extraordinary execution out of the question, are unequalled. On Wednesday, the Germans were in full force to assist at the morning concert given by a young pianiste, Henrietta Roedel, a niece, as we understood, of Hummel. The performances, vocal and instrumental, of these accomplished musicians were of a high order, and exhibited their usual excellence. Considerable applause was awarded to the extraordinary exertions of the juvenile

Roedel. Her power over the instrument is wonderful; her execution brilliant. A "Grand Concerto in A minor" (Hummel), and the "Grand Fantasia on the celebrated Prayer in Rossini's 'Mosè in Egitto'" (Thalberg), tested and proved her proficiency.

**Opera Concert Room.** Wednesday Morning.—Miss Chambers's concert was not so fully attended as the well-wishers of that accomplished and deserving lady could have desired. There were spaces in the room that we longed and expected every instant to see occupied; but, alas! to the close, at an early hour, they were void and vacant. We regret this the more, because nothing on the part of the fair caters appeared wanting. The singers were there: Persiani was there ("Oh, cara memoria!"), also E. Grisi, Miss Pitts, Miss Chambers, Brizzi, and the Solas; besides the instrumentalists, the Misses Broadhurst, Puzzi, and Chatterton. Miss Pitts was a *débutante* on this occasion, and sang with feeling and taste Cook's ballad "When time has bereft thee." Feeling and taste, also, with skill and judgment, are well known to characterise the ballad singing of the "Banker's daughter." Sig. M. Costa conducted.

## VARIETIES.

**H.B.'s 644, 5, and 6.**—The first, Lord John as Tam O'Shanter, riding the other great O (O'Connell), as his "gudemare Maggie," o'er the key-stone of the bridge, whilst Lord Stanley, as the buxom witch, is taking a terrible clutch at Maggie's tail. The next is "Snap-apple," and a lively group of boys biting at the suspended temptation, on which the faces of Lord Howick and Mr. Wood appear. On one side are Lords Morpeth and John Russell, egged on by O'Connell; on the other, Lord Stanley, Sir J. Graham, and Emmerson Tennent, encouraged by Peel. Lord Grey, above, is influencing the string a little from Lord Morpeth's wide open mouth, to the opposite party. The last is "The Great Moth," Sir F. Trench, fluttering against a Bude light; at which the worthy member who has so perseveringly endeavoured to preserve the sight of the House from this philosophical infliction of heat and brightness, will, we doubt not, enjoy a hearty laugh.

**M. F. von Martius** has been despatched by the King of Bavaria on a useful and interesting mission, which we trust will form an example to be generally and internationally followed. It is to examine the libraries and museums of France and England, and arrange an interchange of duplicate works and articles of art and virtue with those in the repositories of Bavaria.

**Dr. Crombie.**—This gentleman, so well-known and highly respected in the scholastic and literary world, finished his earthly career at his residence in the Regent's Park, on the 11th ult., aged seventy-nine.

**The Expedition to Panama** contemplates the formation of a communication across the Isthmus, and other facilities of intercourse with these important regions of the earth.

## LITERARY NOVELTIES.

## LIST OF NEW BOOKS.

The Ancient Music of Ireland, arranged for the Pianoforte, by E. Bunting, 4to. 11s. 6d.—East India Register, 2d edition, 1840, 10s.—English Book-Keeping, for Schools, 12mo. 2s.—Treatise on the Law of Insurance, by W. Phillips, 2d edition, 2 vols. royal 8vo. 2l. 10s.—Story's Law of Bailments, 2d edition, 8vo. 20s.—Pothier, on the Contracts of Sale, by Cushing, 8vo. 16s.—Hannah More's Practical Piety, royal 32mo. 2s. 6d.—The Siege of Lichfield, a Tale of the Rebellion, by the Rev. W. Gresley, 12mo. 6s.—Sir II. Davy's Works, Vols. VII. and VIII. 8vo. 10s. 6d. each.—Sir E. L. Balguy's Works,

Vol. VI. 6s.—Tour through Armenia, Persia, &c. by the Rev. H. Southgate, 2 vols. post 8vo. 15s.—Poetry for the People, and other Poems, by R. M. Milnes, 8vo. 7s.—Letters to a Clergyman on the Education of the Lower Orders, by Mrs. Tuckfield, fcap. 2s. 6d.—A Tour in Scotland, 8vo. 12s.—Rev. W. Mudge's Thirty Sermons, 2d edition, post 8vo. 7s. 6d.—Both One in Christ, by the Rev. A. M. Myers, new edition, 12mo. 4s.—Observations on the Pyramids of Gizeh in 1837, by Colonel H. Vyse, 2 vols. imperial 8vo. 2l. 10s.—Rev. W. Gresley's Treatise on Preaching, 2d edition, post 8vo. 7s. 6d.—St. Matthew and St. Mark Paraphrased in Questions and Answers, by the Rev. J. R. Cotter, 2d edition, 12mo. 4s. 6d.—Archdeacon Lylly on the Use and Design of the Old Testament, 8vo. 12s.

## METEOROLOGICAL JOURNAL, 1840.

June.	Thermometer.	Barometer.
Thursday .. 25	From 45 to 62	29.91 to 29.95
Friday .... 26	.... 47 .. 68	30.02 .. 30.04
Saturday ... 27	.... 56 .. 70	30.10 .. 30.17
Sunday ..... 28	.... 57 .. 69	30.03 .. 30.09
Monday ..... 29	.... 51 .. 70	29.99 .. 29.98
Tuesday .... 30	.... 53 .. 66	29.94 .. 29.98
July.		
Wednesday 1	.... 48 .. 65	29.84 .. 29.77

Wind, west on the 25th, and two following days; north on the 26th; south-east on the 29th; south-west on the 30th ult. and 1st inst.

On the 25th, generally overcast, rain fell during the afternoon; the 26th, morning clear, otherwise cloudy, with rain; the 27th, generally cloudy; the 28th, cloudy, a little sunshine during the morning; the 29th, generally clear, except the evening, when rain fell; the 30th ult. cloudy, raining frequently; the 1st inst. noon, clear, otherwise overcast, rain fell during the afternoon.

Rain fallen, .15 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

## WEATHER-WISDOM.

Our readers will remember that we originally took up the prophetic weather-wisdom of Mr. Murphy,—a revival of ancestral belief after the "march of intellect" had put down the famous Dr. Moore; and contributed much, between jest and earnest, to bring the pretence into notice and fashion. It has of late turned out so very indifferently, that there is little encouragement for new experiments; but the following table, which can be tested from day to day, comes to us from an individual who has long made the subject one of constant observation and study; and we are desirous of at least amusing, if not interesting, the public with his predictions for the current month. The first three days have been correct!—

1840.	Thermometer.
July 1 from 53 to 67	
2 .... 52 .. 70	
3 .... 46 .. 69	
4 .... 49 .. 66	
5 .... 51 .. 65	
6 .... 50 .. 61	
7 .... 46 .. 64	
8 .... 38 .. 65	
9 .... 36 .. 67	
10 .... 46 .. 69	

Prevailing wind, south-west; the 1st, 2d, 3d, 4th, 5th, 6th, and 7th, cloudy, with frequent showers of rain; 8th, 9th, and 10th, generally clear.

Thermometer.
July 11 from 41 to 69
12 .... 50 .. 65
13 .... 51 .. 68
14 .... 48 .. 64
15 .... 50 .. 69
16 .... 50 .. 68
17 .... 50 .. 62

Wind, variable, south-west prevailing; alternately clear and cloudy, with frequent, and, at times, heavy rain; thunder and lightning in the afternoon of the 15th.

Thermometer.
July 18 from 39 to 58
19 .... 49 .. 62
20 .... 39 .. 61
21 .... 45 .. 58
22 .... 39 .. 62
23 .... 41 .. 64
24 .... 40 .. 63

Wind, variable, south-west prevailing; except the 22d and 23d, generally cloudy, with frequent, and, at times, heavy rain; rain with thunder in the afternoon of the 24th.

Thermometer.
July 25 from 52 to 63
26 .... 41 .. 58
27 .... 43 .. 63
28 .... 38 .. 62
29 .... 46 .. 59
30 .... 47 .. 54
31 .... 54 .. 59

Wind, south-west, except on the 26th, then north; alternately clear and cloudy, with frequent, and, at times, heavy rain.

## TO CORRESPONDENTS.

"J. G. R." is declined: the subject may be fit for compassion, but not for publication.

# ADVERTISEMENTS, Connected with Literature and the Arts.

## BRITISH INSTITUTION,

**FALL MAIL.**  
The Gallery with a Selection of Pictures by Ancient Masters of the Italian, Spanish, Flemish, Dutch, and English Schools, including One Room of the Works of the late William Hilton, Esq. Keeper of the Royal Academy, is open daily, from Ten until Six.

Admission, 1s. Catalogue, 1s.  
WILLIAM BARNARD, Keeper.

## THE THIRTY-SIXTH ANNUAL

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS, at their Gallery, Pall Mall East, WILL CLOSE on Saturday next, the 11th instant. Open each day from Nine till Dusk.

Admittance, 1s. Catalogue, 6d.  
R. HILLS, Secretary.

## CHARTER HOUSE SQUARE INFIRMARY,

for the Relief of the Poor afflicted with Fistula, and other Diseases of the Lower Intestine.

President.—The Right Hon. Mr. CHAPMAN MARSHALL, Lord Mayor.

Treasurer.—JOHN HOWELL, Esq. 9 Regent Street, and Ratland Gate.

Surgeon.—F. SALMON, Esq. F.R.C.S. 19 Old Broad Street.

House Surgeon.—G. F. GILES, Esq. F.R.C.S.

The Committee of this Institution gratefully acknowledge the following Donations and Subscriptions announced at the Anniversary Festival, while, at the same time, they urgently appeal to the Public for further assistance.

A donation of Ten Guineas constitutes a Life Subscriber, and entitles the donor to two out-patients every year.  
A Subscriber of Twenty Guineas at once, or in separate sums of Ten Guineas each, is a Life Governor, and entitled to the admission of two in and four out-patients every year.

The following form of Bequest is recommended to those charitable individuals who may feel disposed to assist the Infirmary by Will—

"I give and bequeath the sum of £ to the Treasurer for the time being of the Infirmary for the Relief of the Poor afflicted with Fistula, and other Diseases of the Rectum, established in London, which sum shall be for the use and benefit of the said Infirmary; and the receipt of the person who shall be Treasurer thereof at the time when the above Legacy is paid, shall be a good discharge to my Executors for the same."

Subscriptions will be thankfully received at the Charity by the Treasurer, at the Banking Houses of Jones, Loyd, and Co.; Bernard, Dineley, and Co.; and Messrs. Ransell, Pall Mall East; by W. B. Ogden, Esq. Honorary Secretary; or the Collector, Mr. W. H. Harben, 2 William Street, Chalk Road, Pentonville.

## KING'S COLLEGE, London.—The

Professorship of the Spanish Language and Literature having become Vacant, the Council are ready to receive Applications from Gentlemen who may desire to offer themselves as Candidates.—Such Applications, accompanied by Testimonials, should be addressed, under cover, to the Secretary, on or before Monday, July 6.  
June 15, 1860.

J. LONSDALE, Principal.

## EDUCATION.—The attention of Parents

desirous of affording to their Children an Education in accordance with the increased intelligence and wants of the age is directed to an Establishment situated in one of the most fertile and healthy counties of England, conducted by a gentleman who is a member of a German university of the highest celebrity, and of several learned bodies. The course of instruction, founded on the most approved systems, comprehends the Greek and Latin Classics, the French, German, and Italian Languages, taught by Natives residing in the House, the Elements of Astronomy, the various Branches of pure and mixed Mathematics, Geography, History, &c. Impressed with a conviction that no education can be complete without an adequate knowledge of Modern Languages, the Principal has made them an essential branch of instruction in his school. Having himself resided many years on the Continent, and travelled much, he is intimately acquainted with the chief languages of Europe, and is enabled to superintend instruction in this important department of knowledge with no inconsiderable advantage to his Pupils. Altogether, this Establishment will be found to afford to Pupils possessing average talents the certainty of receiving in it a sound Classical and Mathematical Education, together with the most assiduous instructions in the principal languages of Europe; so that on entering one of our Universities, or some profession, civil, military, or naval, they may be competent to engage in more enlarged studies with unusual advantage. Letters to the Principal of Albion House School, Worcester, will receive immediate attention.

## COMMERCIAL SCHOOL, Gothic Hall,

Enfield, Middlesex, by T. Wear.—The intellectual improvement, moral character, and domestic comfort of the Pupils are the objects of unremitting attention. Terms, from 25 to 35 Guineas per annum, according to the studies pursued. Washing, Two Guineas and a Half. References.—Rev. J. J. Davies, Tottenham; & D. McNeil, Esq. Stock Exchange; and Mr. Davies, Surgeon, 195 Holborn Hill. No Day Scholars are admitted. The present vacation will terminate on the 30th instant.

## THE AUTHORS' PRINTING and PUBLISHING ASSISTANT.

"This is an indispensable little guide-book to all who would tread the thorny paths of authorship. The want of such a treatise as this has been long felt, and the desideratum is here most ably supplied. The processes of printing—the revision and correction of proofs—the preparation of manuscripts for the press—the illustrative engravings—binding—publishing and advertising—are all expounded with a fulness and clearness which leaves nothing further to be wished for. We recommend it to all interested (and who is not, in these days?) in handing down their name to posterity in the noble productions of our age."—*London Times*.  
Saunders and Oates, Publishers, Conduit Street.

## PROFESSOR WILLIS'S PATENT

LETTER-BALANCE.—The Public is respectfully informed that this instrument is now ready, and may be had of J. Booth, Duke Street, Portland Place, and all Stationers, handsomely mounted on Or-molu on Mahogany Stand, price 26s.

## THE NEW NOVEL,

# THE BANKER LORD,

In 3 vols. post 8vo.

Is now Ready at all the Libraries.

"Originality of character and situation are the distinguishing features of this novel, and they are both displayed in a very masterly manner. To exhibit the thoughtlessness and improvidence which so frequently mark the conduct of the Irish in regard to business transactions, and at the same time to show that temperance is more in fault than inclination, appears to be the motive which has led to the delineation of the character of the Banker Lord; while, to point out the defects arising from an ill-regulated education, where the object of it possesses a generous heart, a lofty imagination, and a disposition capable of the noblest acts, is equally the author's purpose in portraying that of his beautiful daughter. In the development of the story, illustrative of their fortunes, strong contrasts have been introduced, which materially heighten the general effect; and great powers of description have been brought to bear upon the many peculiarities of life in the sister island, which add much to the interest of the work. The tendencies towards good and evil, both so strongly marked in the Irish character, are shewn with considerable force and effect; and a skilful combination of love, hatred, jealousy, passion, worldliness, and extravagance, operated upon alternately by serious and humorous agency, carry us with excited feelings through the volumes, and leave us both gratified and surprised when we close them."—*Morning Herald*.

Henry Colburn, Publisher, 13 Great Marlborough Street.

## COMPANION TO THE CURIOSITIES OF LITERATURE.

## JUST PUBLISHED.

I.  
**THE DREAM, AND OTHER POEMS.**  
By the Hon. MRS. NORTON.  
1 vol. with fine Portrait of the Author, after a Drawing by E. Landseer, R.A.  
12s. bound.

"We find it difficult to overstate the deep interest we have taken in this volume, or the mingled sentiments of admiration, sympathy, and respect, with which we offer to the writer our very sincere though very imperfect praise."—*Examiner*.

II.  
**LIEUT. WELLSTED'S TRAVELS TO THE**  
**CITY OF THE CALIPHS,**  
Along the Shores of the  
PERSIAN GULF AND THE MEDITERRANEAN.  
2 vols. 8vo. with Illustrations, 25s. bound.

"In these days it is quite refreshing to come upon a narrative of travel and wild adventure like this, which recalls to mind the exploits of the old voyagers of Spain and England, whom half of the world was undiscovered and the other half unknown. The whole forms a publication of singular interest and entertainment."—*Naval and Military Gazette*.

III.  
**WOMAN AND HER MASTER;**  
OR,

**THE HISTORY OF THE FEMALE SEX, FROM THE**  
**EARLIEST AGES TO THE PRESENT DAY.**  
By LADY MORGAN.  
2 vols. post 8vo.

"Lady Morgan has imparted to history the charm of romance. We have read her series of rapid but brilliant and vigorous sketches with an interest which many a novel fails to excite."—*Weekly Chronicle*.

IV.  
**EMILY; OR, THE COUNTESS OF**  
**ROSENDALE.**  
By MRS. MABERLY.  
3 vols. with a Portrait of Emily.

"This is one of the best novels of its class that has appeared for several seasons. The fair authoress has described the modes and manners of polished society with a facility and truth of representation which none but a writer accustomed to move in the circles of which she treats, and to observe carefully what she has beheld there, could accomplish: this is the great merit of the book. The characters are all admirably drawn, and some are finished with great skill. They are so real that they seem like portraits."—*Times*.

V.  
**THE SPORTSMAN IN IRELAND AND**  
**THE HIGHLANDS OF SCOTLAND.**  
By A COSMOPOLITE.

In 2 vols. post 8vo. with numerous Illustrations, price 18s. bound.

"A most well-informed, humorous, and agreeable travelling companion. The leading features are all, more or less, of a sporting nature; and in this point of view the work has uncommon interest. It is embellished with very many spirited and interesting sketches of remarkable localities, and is altogether one of the most readable and amusing books of its kind that we have had for many a day."—*New Monthly*.

VI.  
**A SUMMER IN BRITTANY.**  
By T. ADOLPHUS TROLLOPE, Esq.  
Edited by MRS. TROLLOPE.

2 vols. 8vo. with Illustrations, bound.

"A work full of every species of interest and value which can attach to a book of travel. To the inquiring tourist who is tired of the beaten tracks of the Continent, the author opens an entire new field of travel, and smooths the path through it. To the traveller whose journeys are confined to books, he offers one in which there is as much variety as novelty, as much entertainment as information. To the philosophic observer of human nature, he presents a most interesting object of study; to the antiquarian, a most fertile field of examination; to the lover of legendary lore and of inquiry into popular superstitions, an ample fund of new and strange materials for thought and fancy. Finally, he puts on record a large body of singular and interesting facts touching an actual condition of society to which the extraordinary social changes that are at hand throughout Europe, and especially in France, may at no distant period put an end for ever. Mixed with the graphic style of the book, there is a liveliness and bonhomie which greatly add to its charm, and which make it altogether a work of universal attraction."—*New Monthly*.

### REVIEWS OF NEW BOOKS.

*Memorials of the Rebellion of 1569.* 8vo.  
London, 1840. Pickering.

THE motto on the title-page of this valuable work, "Truth is the daughter of Time," was never more appropriately applied than to the page of history. The few years last past in which historical research has been making such long strides, have added immensely to the stock of materials for the use of the future historian, and have aided in partially raising the veil with which Truth has so long been concealed. Yet every day proves more and more how Time alone is the father of Truth, although, too often, the parent has been the cause of smothering its own offspring. The more materials we find, the more evident it is how many more we want before we can bring the truth to light, and how often the very documents are destroyed, if they ever existed, which only could clear up our difficulties. It is, in this, as in all things of this world—Time gives life with one hand, while he slays with the other.

What study is more noble, when rightly pursued, than history? It is the handmaid to philosophy. The movements of the world around us exhibit a continual picture of the workings of the immaterial upon the material, of the effects of that combination which we feel within ourselves. The mathematician turns from the mental contemplation of those mighty laws which are the basis of his science, to consider their material application in the endless and complicated series of machinery which administers to the happiness and comforts of society, and to the prosperity of kingdoms. The economist looks with no less interest upon these combinations of mathematical forces, with an eye to the effects which they must produce. In like manner, the philosopher turns from the abstract consideration of the mind *per se*, of its wonderful powers, to contemplate the practical application of the latter to the world around us, to see how under the direction of that high hand which gives the impulse, individual forces, or groups of forces, men, or parties of men, have been acting upon their fellows to produce the different vicissitudes which every kingdom has undergone. The politician, also, looks back on these great operations with a practical eye, inasmuch as the same laws and the same forces continue to rule and act. He sees in them examples for imitation, and he learns from them how to avoid the errors of his predecessors, or to develop the combinations which had failed because they had not been persisted in to an efficient end. To both (the philosopher equally with the politician), whether the field of observation include in its spacious limits the mutual relations of many kingdoms, or is restricted to a single nation or to a single reign, truth, even in the minutest particulars, is absolutely essential.

History is, perhaps, more instructive, taken in detail than in general views. In the latter mode of considering it we are apt to lose sight of individual action and character: we miss all the smaller motives of action, which, though outwardly less apparent in their operation, are

often strongly visible in the result. In this respect, the history of a reign is a better field of observation than that of a kingdom, because the actors are men and not kings; and, for a similar reason, the history of a combination of events, which hang together like the parts of a machine, of a political movement complete in itself, is more interesting than the history of a certain number of years, during which a particular monarch wielded the sceptre.

The history of the sixteenth and seventeenth centuries is full of episodes, many of them of the highest interest; and no period of those centuries was more so than that during which the throne of England was occupied by Elizabeth. Of these episodes, perhaps, the one which is least known to the historian is the rebellion of the two great northern earls in the autumn of 1569. The book now before us, and which has given rise to these reflections, is a singularly important collection of original materials concerning that affair. It is composed in a great measure of documents taken from the family archives of the people who were engaged in it; although their able editor has put under contribution almost every collection in Europe which promised any thing to repay the labour. Paris, Brussels, Madrid, Lisbon, even Rome, have furnished their share of illumination.

In speaking of the author (although his book be in a great measure a collection of original materials, he has a just claim to a much greater merit than that which is generally attached to the name of editor,) we may observe that he is a gentleman well known in the world of letters, though he has chosen to publish his work anonymously,—whose time is employed in official duties, but who gives his leisure to antiquarian pursuits, and consumes the "midnight oil" to give light to the public. His book is the result of the labour of some years. Our readers will form some idea of its importance, as well as of our previous want of information on the story it tells, when we inform him that in upwards of four hundred closely printed pages the author has scarcely quoted a single printed document, or one that had previously been used. We understand that only a small number of copies have been printed, and we consider ourselves especially fortunate in possessing one. As its circulation must therefore be small, for that reason it is our intention to be more copious in our extracts than we otherwise might have been.

It will not be necessary for us to enter into a detailed account of the rebellion itself. Those who are anxious to do this must go to the *Memorials*, and the general reader will be sufficiently well aware that the main object for which the two earls (Northumberland and Westmoreland) "raised up the North Country," was to remove Elizabeth's Protestant ministers, and to re-establish the Roman Catholic religion; and, secondarily, to set at liberty Mary Queen of Scots; that after a few partial acts of hostility, the rebel army was broken up by its own mismanagement; that their leaders fled into Scotland, whence some of them escaped to the Continent; but that the Earl of Northumberland, the victim of

treachery and bribery, was delivered up to the English authorities, and beheaded at York. The *Memorials* not only give a full and distinct history of these transactions, but the book abounds in curious anecdotes of the manners and feelings of the age, with much local information; and, above all, the private letters which are printed in it for the first time, throw a singular light upon the character of some of Elizabeth's great men. The persons who figure most on the scene are Sir George Bowes, the gallant defender of Barnard Castle against the rebels, the Earl of Sussex, Lord Hunsdon, and Sir Ralf Sadler. The groundwork of the book is founded upon the original papers of Sir George Bowes, discovered among the archives of his descendants.

His correspondence throughout exhibits the character of Sir George Bowes in a highly favourable light, perfectly in accordance with the noble portrait which, with several other plates, embellishes this book. Sir George held a post in the very heart of the disaffected country, and his letters give the most exact and particular account of the progress of the rebellion. On the 19th of November he writes to Cecil:—

"My humble dutye premised, pleaseth your honour to be advertised: the muttering rumour, whereof the matters was long kept close, is now in a most fierie flame burst out, to the generall alarme of this comonwelth, and great danger, no doubt (what shewe so ever be made), to the person of the prince. These earles hathe, and dothe, everie where, burne the service booke and bible, and breake the communion tables; and set owte proclamacions and preceptes, the copies whereof I send to your honour herewithe, havinge some of them under their owne handes. They daillie alter them; for in the beginninge they used their owne names, and others, endinge with threats of spoilinge; and nowe they use the Quenes Majesties name. They, more by coercion then favor, have, oute of the Bishopricke, Richmondshire, and Allertonshire, levied greate numbers of people of foot, and hath made divers spoils of some gentlemen, but that was but armour; and of some protestants, such armour or money as they found. Their force is best in assemblings, for daillie there cometh some to them; and, at this instant, they are at Ripon. They have verie sore menaced me, because I was nere them. By vertue of such commissions as was sent unto me, I have drawen away, according to their bounden dutie, the whole gentlemen of Richmondshire, and a great number of the Bishopricke, which, with me, remainethe here at the quenes majesties castle at Barnard Castle, accompanied with four hundred footmen, and two hundred horsemen."

On the 1st of December, Sir George was besieged by the whole rebel army, and with his little force defended his castle with great gallantry during eleven days, after which he was obliged to give it up on composition, and retreated with the honours of war. In the following letter to Cecil he gives an account of the siege, with some circumstances that were not previously known:—

"It may please your honourable mastership. Yesternyght I receyved a letter from the Quenes Majestie, of the 26th of November last, with another letter from yow of the sayme date; before which tyme I receyved none from her hyghness, or Privy Councell, or yow, at any tyme sythens my entrie into her Majesties castle of Barnard Castell, which was in the beginning of thys rebellion; and beyng then commanded by her graces severall commissions to me and others, derecte, to levye power, to be in redyness to attend upon the Lord Lieutenant, to suppress thys rebellious, I had gathered thether bothe horsmen and also footmen, and keping them at Barnard Castle with me, to repair to the Lord Lieutenant, upon his Lordships call, as he had directed me, I was in the mene tyme beseged by the rebells. And conteneuing there in straye seage, with very hard dyett, and great want of bread, drynck, and water, which was our onely dryncke, save I myxed it with some wine, I fownde the people in the castle in continuall mutenyces, seeking not only by greatt numbers to leape the walles, and run to the rebells, but also by all meanes to betraye the piece, and with open force to deliver yt, and all in it, to the rebells. So far, as in one daye and nyght two hundred and twenty-six men leapyd over the walles, and opened the gaytes, and went to the enemy; of which number, thirty-fyve broke their necks, legges, or armes, in the leaping. Upon which especyall extremities, and that day our water that we had, by the intelligens of them that fled from us, being strayt or taken away, and by other great occasions, I was forced by composition offord to leave the piece; takyng with me all the men, armor, weapons, and horses; levyng my household stuffe, which I made no account of in this tyme of servyce, tho the valewe wer greatt; so as the enemyes receyved only the bare piece and stuff aforesaid, which, by the causes aforesayd, I could holde no longer. And I am come with my holle number, which this day will be three hundred horse, and one hundreth footmen, to the Lo. Lieutenant, to serve her hyghness with all my force and redy harte; trusting it wyll please her graces goodness to accompt in good part these my doynges, intendyt only to save her graces good subjects from the force of the rebells; and to bryng theym agayne in place of servyce, rather than to preserve my lyfe, the danger wherof shall never drawe me any whytt backe from her highness servyce, with my full dewty. Hereof I wryte the more shortte unto you, because I truste the Lo. Lieut. hath already certified her grace of all thyngs touching thys matter; wherein I humbly praye your favorable supporte and gudness, to holde me in case and opynion, as my symple faythe and truthe hath and shall deserve. At my comyng abroad, my storers and keepers of my houses repayred to me with the sayme speache that Jobes servants to him, (save only for my children): for I am utterly spoyled of all my goodes, bothe within and without my houses; and all my corn and cattle karried away; and my houses fully defaced, by pulling away of the dores, wyndowes, irons off the windows, syling, and all my brewe vessels and other vessels, and chymnees apperteynyng my kytchen; so that I now possess nothing but my horse, armor, and weapon, brought out from Barnard Castle; which I more esteem than twenty times so much of other things, for that by it I am enabyled to serve my good Quene, whom God preserve, and I weigh not all my losses. And thus I pray God preserve you. From Sysaye, the xliijth of December, 1569."

The taking of Barnard Castle was almost the only exploit the rebels performed. Before Christmas they had all taken refuge among the lawless borderers in Scotland. Sir Ralf Sadler writes to Cecil on the 22d December:—

"What a fond and folishe ende these rebells have made of their traitorous rebellion. They alwais fled afore us after we cam first within xij. myles of them, and we folowed after them as fast as we might, without rest; nevertheless you see how they bee escaped, which they might easily do in this wast and desolat country."

The two earls, with the Countess of Northumberland, and about a hundred horse, were received in Liddesdale by three very notable borderers, whose names still live in song—Black Ormston (accused of having been concerned in the murder of Darnley), John of the Side, and the Lord's Jock. The following extract of a letter from the Earl of Sussex, written at midnight of the same day as the last, will shew what kind of friends the rebels found on the other side of the border. The Liddesdale men were hindered from sheltering them by the fear of the regent, but they did not let pass the opportunity of indulging in their thievish propensities. An old Scottish poet has given the following account of the men of Liddesdale:—

"Of Liddisadall the common theifs  
Sa pertlie stellis now and refis,  
That name may keep hors, nolt, nor schelp,—  
Nor yet dar sleip, for thair mischeffis."

And the same poet thus characterises the border chief who gave temporary shelter to the rebel earls:—

"He is weil kend—John of the Syde—  
A greater thief did never ryde."

The Earl of Sussex, in the letter just mentioned, says:—

"I have intellygens of suche as were present and sawe it, that the next morning after the Erles came into Lydysdale, Martyne Elwood and dyvers others of the principall men of Lydysdale did rayse their force agens the Erles, Blacke Ormston, and the reste of their company, and offered the fyght; so as bothe parties were lyghted, and in the end Marten Elwood sayd to Ormston, he would be sory to enter deadly fewde with him by bloodshed, but he would charge him and the reste before the Regent, for keeping of the Rebels of England, if he did not put them out of the country; and that, if they were in the country after the next day, he would do his worste agaynst them, and all that mayntained them. Whereupon the Erles were dryven to leave Lydysdale, and to fly to one of the Armstrongs, upon the *batable*, on the borders betwyn Rydsdale and England. The same daye the *Lydersdale men stole my Lady of Northumberlands hors, and her ij. wemens horses, and x. other horses*, so as when th' Earles went away, they left her, and all the reste that lost their horses, on foote, at John of the Sydes house, a cottage not to be compared to any dogge kennel in England. Such is their present myserie; and at their departing from her, they were not 50 horse, and my L. of Westmorland changed his cote of plate and sword with John of the Syde, to be the more unknown."

There are many other curious letters relating to the treatment of the rebels by the Scots.

Next to Sir George Bowes, one of the most striking characters in the book is the honest and blunt Lord Hunsdon. In the middle of the rebellion he gives Cecil the following account of the two Earls:—

"I am sorry too heare of Westmerland's wyfulness, who hathe refusyd eythar too heare or follow theyr advyse, that hathe for his howse sake wysht hym well. The othar ys very tymerus, and as yt ys affyrmed, hathe ment twyse or thryse too submytt hymselfe, but that his wyfe beyng the stowter of the two, doth hasten hym and incorage hym to persevere, and rydes up and downe with theyr army from place to place; so as the gray mare ys the better horse."

But the letter most characteristic of the high feeling and gallant bearing of Hunsdon is his answer to the order, sent by Cecil (then Lord Burghley), to carry to York to be executed the unfortunate Earl of Northumberland, who had been sold by the Scots to the English:—

"My very good Lord,—Thys day syttyng downe too dyner, havying dyspatcht a pakket nott paste an ower byfor, I receyved your Lordship's pakket of the 8th, *whyche gave me my dyner*, fyndyng myself hardly delt withall, too be a carryer of any nobelman to executyon, intoo a place where I have nothing too do. My charge is butt in thys towne, and the Este Wardeny; and therefore for me too be putt too bryng hym too Yorke for to be executed, I can neyther thynke that her Majesty deales well with me therin, nor that I have any such frends abowt her Majesty as I accounted of; and sewrly I wyll rather suffer sum ymprisonment then do it. Sir John Forster hathe both the comodity and proffyt of all his lands in Northumberland, and he is fyttest to have the carryage of hym to York, and I wyll deliver hym safely att Alnwick, butt no further by my wyll; and therefore, my Lord, as ever I may thynke ye beare me any good wyll, or that hyr Majesty hathe any consideration of me, lett sum othar be appointed to receive hym of me, eyther at Alnwyk or Newcastle. And so assuryng your Lordship that the wrytt came to me, *I wyll not styrrs hens wyth hym untill I have anser from your Lordship agayne*. I comytt ye to God. At Berwick, 11th July, 1572."

The sale of the Earl of Northumberland by the Scots is a frightful story. Many curious documents relating to the transactions which led to it, and to his confessions, &c. after he was given up, are printed for the first time in this interesting volume. Our space will not allow us to give further extracts this week, but we shall return to it in our next number, and shall give some of the letters relating to the horrible executions in the North Country which followed the rebellion, and which were considered necessary for an example in those uncertain times.

*Sandron Hall; or, The Days of Queen Anne.*  
By the Hon. Grantley Berkeley, M.P.  
3 vols. 12mo. London, 1840. Colburn.

THE days of Queen Anne offer a good period for the historical novel. The manners of society, and the state of the people of all ranks, from the highest to the lowest, were so different from those of our time, that, though only removed by little more than a century, it is difficult to believe that they belonged to the same country, to a condition of civilisation held to be highly advanced, and to an era when genius of the noblest order cast a halo over the literary and intellectual annals of England. It might be curious to trace the leading causes of the wonderful changes that have been produced; and perhaps to shew, for instance, that the introduction of steam had not effected more than the disuse of wearing swords!

But we have not room for such philosophising here; nor would it be a fit introduction to Mr. Berkeley's work, which paints the habits and feelings of the times with so graphic and lively a pencil as to render it quite unnecessary for his critic to enter upon analyses, comparisons, and contrasts.

*Sandron Hall* will, we think, be found sufficiently entertaining by the lovers of this class of composition. The characters are well drawn, and employed in many a perilous adventure; which, though extraordinary, do not lose sight of probability. Highwaymen, gipsies, and bravos, rakehell rufflers upon town, stabbers, and tavern-hunters, figure throughout; as, in truth, they did at the period described. And besides these we have the actual Queen Anne and her court, Button's Coffeehouse and its wits, Addison, Pope, Swift, &c. &c.; and one of the incidents which diversify the fictitious narrative is no less than the celebrated "Rape of the Lock." If we name also the infamous Mrs. Hayes, Lord Lovat, Colonel Charteris, and Jonathan Wild, readers will be aware that there are enow of courtiers, politicians, brawlers, intriguers, thieves, and ruffians, to form a dramatic company adequate to represent to the life "the Days of Queen Anne."

We will not trench on the story, but merely tell that young Sandron, the son of the worthy old English family of the Hall of that name, leaves home for London, where he falls in with very questionable companions; especially one Simou Surface, who acts an eminent part in the tragi-comedy, and not only makes the hero acquainted with all the haunts of vice, but after endeavouring to debauch his mind, and leading him so far into his trammels as to blacken his fame, endeavours to rob him of his greatest treasure—the heart of the loveliest of creatures, the love of his earliest years. These efforts complicate the plot; and—but as our custom is, we shall leave them to interest the sympathies of fair readers, and reward them through the perusal of Mr. Berkeley's page. We will only say one word to recommend him more to their favour; and that is, to tell them that even in this novel he seizes occasion, in reporting a singular parliamentary effusion of the age, to put in a strong claim for their admission to be present at the debates of the legislature.

To find an extract or two, clear enough of the story not to injure its *dénouement*, is always a task for us in noticing publications of this kind; and, in this instance, it is as troublesome as ever. We must, however, adduce one or two passages; and cannot do better than look at Sir Stamford Sandron's Polonius-like advice to his son on sending him into the busy world. We have to premise that the young gentleman had just killed a favourite gamecock of his worthy sire's, in endeavouring to shoot a crow in the midst of the poultry-yard. It is thus related:—

"Ho, boy! give me my fowling-piece; there's a crow within shot." The gun was quickly handed to him by a page, and he proceeded to take aim at the bird, surrounded, as it was, by the more valuable poultry. "Don't shoot, Master Charles," exclaimed the lad from within; "if ye do, sir, ye'll shoot Sir Stamford's favourite gamecock." "Hold your peace, sirrah! do you think I do not know what I am about?" Then, as if addressing the bird mentioned, Charles continued, "One step more, old blackbreast, and you are sufficiently out of the line. Oh, rare!—a single bird sitting alone is a mark for a tyro sportsman; but when surrounded by others which are to be

cunningly missed, then there is some skill displayed in picking him off." Bang went the gun; away, though crippled, flew the crow, and over fell the gamecock, while a host of smaller fowls ran screaming off to plume their ruffled feathers. Charles looked upon the field of battle with an eye in which mirth at his mistake was blended with disappointment and regret; however, like a spoiled child, he coolly drew in his head, kicked his page, and began to dress. His toilet being accomplished, on the ringing of the bell for breakfast he descended to the parlour, when the following scene was presented to his view. At the head of the table, in the starched, stiff dress of that period, sat his mother, very much disconcerted and in tears; while, with hands buried to the very ruffs in his embroidered waistcoat-pockets, impatiently chinking in either some keys or some pieces of money, his invariable wont when any thing annoyed him, stood Sir Stamford; his bluff, hale countenance expressing as much wrath as could be contained beneath the neat little rows of white curls which, from his periwig, graced his temples. The father did not immediately address the offending son, but, looking first at his leathers and heavy riding boots, as if for a moment meditating a kick on somebody, he continued to divide his angry glances between the culprit, the housekeeper, and the defunct gamecock, whose body had been borne into the room on a tray. The instant Charles observed his mother in tears, he advanced and kissed her; while his father, motioning the gamecock's funeral from the room, seized a knife and fork, and, turning to a side-table, lustily attacked a cold round of beef. Breakfast passed in silence, and at its conclusion Charles was about to quit the parlour, when the old knight thus called him to return:—"Charles, come hither, boy, and sit down. You are to leave us to-morrow, and I would sooner give you some advice now, than put it off till the last moment: no, no; as a man is better able to bear the melancholy duty of making a will when he is in full possession of health and spirits, than he is when oppressed by sickness and on the eve of death, so can I more reasonably speak my mind now, than at the moment when I am about to part with you. You have shot—damn the gamecock!—I do not care for it otherwise than it provides me with an illustration which may regard some more serious act of your future life; you have, in this instance, missed your mark, and let it be a timely warning to you, never to attempt to strike the guilty where, by the misdirected or too hasty blow, the innocent, the gallant, and the good, may suffer. Never attempt to expose a villain if your efforts in so doing are likely to injure those who have been the unsuspecting dupes of his artifice. Never wager a larger sum than you carry in your pocket. Never shake hands with a man if you are not really glad to see him. Never forget, when you meet, to recognise your friends, and be even more careful to offer your salutation to those that are poor, or who may have been in any way distressed, whether in mind, purse, or prospects, than you are to your more affluent acquaintance; for rest assured that *they* will feel your neglect more acutely than either your equals or superiors—superiors I need not say, for a gentleman ought to have none, unless it be the family on the throne. Never run extravagantly into debt, for it is the by-path which leads to moral destruction, and grows at last into the great highroad to irremediable ruin. Some parents would tell their sons never to run in danger, or engage wantonly in love-

affairs.' Here Lady Sandron, in anticipation of what might follow, rose and quitted the apartment. Sir Stamford continued—"But, egad! I remember my own youthful days, and I am well aware that such advice is useless. Never quarrel, at least without a sufficient cause—a cause which you cannot overlook; but if it be necessary that you do take up a quarrel, then see that quarrel firmly to an end. When principal in an affair, be ever on the fighting side; when second, then cudgel your brains how, in strict honour, you can stay the effusion of blood. Be ever careful in whom you repose your honour, if a duel is in view; select your friend for his approved courage, his wisdom, and for his weight in society, and if you know not a man of this sort (they are rarely to be met with), in that case, come to me, and I will find a sword to back yours. Seek not such dangers, but never shun them when they seek you. Never betray confidence of any kind, more particularly the confidence of a woman: never be boastful of her favours, but, at the risk of life, so far as in you lies, maintain her purity and honour. I was about to add, never drink; but I fear me it will be difficult for you, in some societies, to refrain; if you should find it so, and cool chairs and clean glasses are thrice called for. Nay, I know not whether it mayn't be better in such an extreme case to drink till you are dumb, than, as honest Will Shakspeare says, to let men 'put an enemy in your mouth to steal away your brains.' I could go on with the nevers for an hour yet, but I see you are anxious to depart; go then, my boy, and take your father's blessing with you; you have never been out in the world; but a good horseman, a good swordsman, and a good shot—never mind the accursed affair of the gamecock—and a tall, handsome, manly fellow, well-schooled by my excellent and reverend friend, the Doctor Marmaduke, ought to make his way anywhere."

We have occasional touches of politics on the side of the party to which the hon. member belongs; and not abstaining from a slap or two at certain blemishes, or imputed blemishes, in the Protestant Church (see pages 19 and 23, vol. i.). But it is more to our purpose to advert to a good general remark or two wherewith to conclude:—

*Dinner-giving*.—"It is (Mr. B. observes) astonishing what gentlemen, even with money in their pockets, will do for a dinner. It has been said that the way to an Englishman's heart is down his throat; and if one looks upon the people who are tolerated in the best society, simply owing to the frequency of their dinners and the celebrity of their cook, any man who thinks twice upon the subject must be fain to admit that there is much foundation for the degrading assertion."

*Education*.—"Since her condemnation and the temporal prostration of hardihood which followed it, she had conducted herself in the most lamentable manner, betraying not ignorance of the Scriptures, but, for a woman in her station of life, rather an extensive acquaintance with and knowledge of their contents; in short, she had read them from beginning to end, and offered a strong instance of that folly which is so often practised by ladies and gentlemen in the present day, the fact of supposing that you amend the poorer classes by simply teaching them to read, or to spell the words of Scripture, without the moral cultivation necessary to make their minds fit to receive the seed and understand its value. It would be well for those who are so anxious for

the march of the art of reading to apportion on the system of the county police a preceptor or teacher to so many hundreds of the lettered populace, to keep them to their legitimate studies; for as by the culture of a field you render the surface soil more prone to receive and foster either the useless thistle-down or the generous wheat, so by a little learning you open the mind to the insinuations of the obscene and dangerous publications of the day, which to the vulgar acceptances are apt to appear more amusing at the first glance than the at-all-times-difficult-to-be-understood revelations of Scripture."

We ought to have noticed in its place, that the faithful and unfortunate gipsy Corah is portrayed with striking effect; and that there are some ballads and other poetical pieces introduced, which animate the scenes with appropriate talent.

*A Descriptive Tour in Scotland.* By T. H. C. 8vo. pp. 395. 1840. Brussels: Hauman and Co. London: Whittaker and Co.

THE printing at Brussels has not been favourable to the typographical accuracy of this *Tour*, written, we observe, from a confession near the close, by one of our native poets; that confession, however, being needless, as the taste and feeling with which the writer describes and luxuriates upon the grandeur and beauty of Scotland's matchless scenery afford abundant proof of poetical temperament and poetical powers. Reversing the initials on the title-page, we guess we could come at the individual; but as he has chosen to address the public under an *incognito*, we do not know that we have a right to disturb the secret. Enough for us that these pages are exceedingly pleasant, and carry us through many of the finest and most interesting parts of the "land of the mountain and the flood," with a charm almost like themselves. The loch and river—the gigantic height and wild glen; the seas of hills immeasurably spread, and the narrow nooks with their foaming waterfalls; the bare expanse, and the dark pine woods; and the living objects which animate them all, are painted in a delightful manner; and we, who have enjoyed almost every inch of the ground, can bear our testimony to the sparkling fidelity and truth of the pictures.

The author, in a good-humoured preface, tells his readers that he is a "hypochondriac," but there is no taste of it in his work; and whatever ails the body may have endured, the mind is clean, and fresh, and vigorous. From Glasgow the tour embraced Lochs Lomond and Katrine, thence to Loch Earn, Loch Awe, Oban, Tolermory, Staffa, Iona, Skye, Fort William, Glencoe, Blair Athol, Taymouth, Perth, Dunkeld, and other places of attraction for travellers of every kind and disposition; and, returning by Stirling, Edinburgh, and Abbotsford, it concludes within a few miles of the last melancholy spot, where he who so gloriously described the natural features of his own, his native land, rests from his earthly labours, among the mouldering remains of Dryburgh Abbey.

It will, perhaps, be our best course to treat this agreeable book by dipping into two or three of its passages of various sorts; and thus allowing the writer to shew how much better than a guide, and how entertaining as a companion, he is on Scottish ground.

At Tolermory he was drenched with rain during several days, as we presume every body is who visits that annular harbour on their way from Oban to Staffa. Yet it is a place to

be merry in despite of any weather afflictions; and if you wait long enough, you will be sure to get a conveyance to the wonderful Staffa and interesting Iona some time or other. Of the latter the author says.—

"Its appearance, as one approaches it, is bare and desolate. Indeed, in none of these western isles, except Mull, is there a bush even; and many of their inhabitants have never seen a tree, so that the sarcasm of Dr. Johnson about his walking-stick remains in full force up to the present day. The only objects that catch the eye on Iona are its glittering white beach, and the extensive ruins of its cathedral, which rise amongst the miserable cottages. Near this we anchored, and landed in the boat. Even before we touched land, we were besieged by a troop of half-naked, amphibious-looking boys, who emulously presented to our notice plateful of Iona pebbles, and, as we walked on toward the ruins, other tribes kept persecuting us, and poking their plates in our faces, ever crying out, like the Welsh children who used to torment us for our sins, 'Gie us a bawbee!' At length the nuisance became so intolerable that we were forced to turn and face the enemy, and, charging them with our sticks, compel them to retire to a respectful distance. The ruins of the cathedral are extremely picturesque; and some old richly-carved crosses in front of them are irresistibly tempting to a sketcher. While we were drawing one of these, a little, pale-looking, old man came up, and, looking over my shoulder, said, 'That which many men and horses could not move, you will carry away with you in your book,'—a speech which I dare say he has made to every person who has drawn these ruins, from time immemorial. We soon found that he was the schoolmaster of Iona, a well-known personage, celebrated in the guide-books, and himself guide to the antiquities of the island. He was, at this present, engaged in overlooking one or two haymakers, who were carrying their operations round about the cathedral, whose sacred precincts, small as they are, were turned to good account, and were rented, as he told us, by himself. He, however, left his occupation to attend us over the ruins, in which he seemed to take all the pride and interest of a personal profession. To his influence, it appears, much of their present good state of preservation is owing. He had caused walls to be propped, rubbish to be cleared away, and many a beautiful old fragment to be brought to light. So strong was his feeling for his darling ruins, that he could not speak with any patience of an Englishman having clandestinely carried off one of the figures that graced a tomb. I liked the old man, his energy, and simplicity, which was quite childlike. I think I still hear the simple tone in which, when asked any question he was unable to answer, he said, 'Ou! I know not.'

"I was pleased with the conduct of the schoolmaster when we offered him half-a-crown for his services. He would not take so much, but said, 'Ou! what have I done for it? I should not have this for just speaking a little.' In effect, we could not by any means press on him more than two shillings. Hear this, ye who say that the Scotch are grasping! We now began to think how we should bestow ourselves for the night. The schoolmaster had at first said that he was sure we could be accommodated at the manse; but, on inquiry,

• "A friend of mine, however, chooses maliciously to think that this moderation was a compromise between thrift and conscientiousness. The schoolmaster, he declared, could not bear to see money wasted, even by another man for his own benefit."

he found that the clergyman had guests staying with him, and that all his beds were occupied. There was a little inn, to be sure, but its appearance was any thing but inviting. Under these circumstances, we determined upon sleeping on board the cutter,—a decision to which we the more readily came, from the captain having said that he must weigh anchor at three the next morning, to secure the tide."

Our author does not notice the filthy state of the island, which is really disgraceful to its proprietor and the inhabitants, poor and miserable as they are. It is impossible to walk about without the danger of filth, and every corner, as well as the ancient ruins, looks wretched in the extreme. Leave we it for another quarter:—

"We landed (says the author) on the shore of Loch Aline, which name looks better in spelling than it sounds in pronunciation, for the folks call it Awlin. The entrance to this loch is extremely beautiful, and there is a picturesque old castle on an insulated rock near its head. We had brought with us a recommendation to the schoolmaster at Morvern (the village near which we landed), to enable us to procure horses for our land-journey. Our heavy baggage we left at Aross, to be forwarded by stream to Fort William, and we only brought with us such a roll as our horse could carry, in our old Cumberland fashion, my everlasting dressing-gown forming the exterior. Henry went to deliver the letter, but remained so long away that I became weary and restless, and set out, up the hill, to see what he was about. I met him about half-way, muttering maledictions on the tediousness of the schoolmaster, who had talked for a full hour before he came to the fact that there was one horse and one alone to be had, belonging to a man who was going our way and who would act as guide. There was also a saddle to the horse, a piece of luck in this part of the world. When I got to the top of the hill I was struck with the beauty as well as the simplicity of the view. The schoolmaster and an old man were sitting at the foot of a stone cross, resembling the one in Iona. Many old tombs were around. The sun was bright upon the breezy hill-top, the grass was fresh and green, and the blue waves were dancing below and gently kissing the feet of the mountains. It was such a scene of life as an old man might delight to gaze on. The charm of the scene was marred by the black and dirty schoolmaster's tedious homilies. He could not let us go till he had expounded severally all the reasons why it was supposed that the cross beneath which he was sitting had actually been brought here from Iona. At length we broke away from him, and I mounted the old grey steed which they had brought for me. (N.B. Grey or white seems the prevailing colour of horses hereabouts.) I found the animal nearly as difficult to deal with as the old schoolmaster. He chose his own pace and he took his own time, and one might as well have beaten a rock as his tough hide. After passing Loch Aline Castle, near which is a striking point of view, we observed nothing note-worthy, with the exception of the huts of the poor people, which come nearer to vegetable productions than to human habitations, their walls being entirely composed of living turf. Some of them were actual masses of long bright green grass waving in the wind, while the dark withered hue of the bracken, wherewith they are roofed, presented a singular contrast. For miles we went up a monotonous valley. Of all modes of penance commend me to riding up an endless glen, on the

back of an obstinate horse, in a broiling day when midges and flies abound. These last tormenting insects kept stinging me between my glove and my coat-cuff till (before I discovered the real cause of the irritation) I had serious fears that I had contracted the Scotch complaint that may not be named to ears polite. Such a calamity may, in truth, not irrationally be feared, from the passion that the lower orders have of seizing and shaking one's hand before one can put it out of harm's way. The poor also, amongst themselves, shake hands with as much ceremony as two Frenchmen embrace. At length, turning out of the tedious glen, we crossed a high pass and descended upon Loch Smart. Here we found quite a new order of scenery, the characteristic of which is sublimity dependent upon form alone. The mountains which surround the loch are of sterner formation than any which I have ever seen. It is a world of granite, treeless and herbless. One mountain, of giant size and noble outline, standing at the head of the loch, seems to be formed of one single block of stone. In arriving here, we seemed to be come at last to the bare bones of the earth. We now took leave of our guide and horse, and crossed to the other side of the loch (a distance of about four miles), in a boat that is kept here for the convenience of travellers. The boatmen made an exorbitant charge, which, backed by the information we had received from our guide, we successfully resisted; but the best way is always to make a bargain before-hand. We landed at a comfortable inn, a single house, at a place called Strontian, where we dined and hired a gig to Corran Ferry. When Henry took the reins, the landlord said, 'You had better let my man drive, as the beast is a wee fractious with a stranger.' We soon found, however, that the 'wee fractious' did not in any way mean that the mare was hard to manage, but hard to set a-going. In truth, I never met with an animal more disinclined to motion. However, by dint of marvellous exertions on the part of the driver, we got to Corran Ferry in pretty good time. The scenery was superb the whole way. The road lay through a wild and rocky glen, at the end of which appeared Loch Linnhe, with all its gigantic and extraordinary mountains, Ben Nevis hanging far above the rest its domelike summit in the evening sky. We crossed Loch Linnhe at Corran Ferry (our third trip by water this day), the distance about a quarter of a mile, and proceeded to this place (Ballahulish) in a sort of cart, the only kind of vehicle to be procured. It was near ten o'clock before we reached Ballahulish, having been fifteen hours on the road from Aross. We are in a quiet, comfortable inn, close to Loch Leven, and in the very heart of some of the finest scenery of the Highlands; but, as if to tantalise us, the mountains have put on their caps to-day, and rain is frequently falling. Occasionally, just to whet our curiosity, we catch glimpses of a fine pointed fellow opposite our windows; but our chief amusement is to watch the manœuvres of the ferry-boat that crosses the loch to an inn on the other side. The passage being just now a matter of difficulty, from the violence of the wind and the force of the tide, which, in consequence of the extreme narrowness of the loch, sweeps along like what one can fancy of an American rapid."

The author did not ascend Ben Nevis, as he says:—

"Whether it be that ill health has in me anticipated that period when, according to

Nature's poet Crabbe, persons are apt to exclaim,

'The view is poor—we need not climb;'

or whether I have a feeling that to have climbed two mountains is enough in one tour, or whether I dislike doing what every body else does, I can hardly tell; but certain it is I have not had the inclination to go up Ben Nevis. This, however, need not be told in Gath (the thing, if known, might bar me from any, the least, pretension to taste); it is sufficient to say, in plain mother English,

'We had other fish to fry.'

It was, nevertheless, a great loss, for no other mountain in Scotland repays the fatigue of climbing so richly as the lofty Ben Nevis. It is quite extraordinary what a difference a few hundred feet in superior height makes in hill scenery. It is then that, instead of looking at equals, you look down upon vassals; and the loftiest you have seen before becomes a footstool to the heaven-kissing summit on which you now stand. Our author, for neglecting this opportunity, almost deserved the punishment that awaited him at Ardvaser on his route to Skye:—

"The little jolly inn there is certainly 'the most villainous house in all Scotland for fleas' (Shakspeare—hem!). 'By the mass, there is ne'er a king in Christendom could be better bit,' than we were on the night of the 7th of August. Oh! the wretchedness, just as you are dropping off to sleep in scrupulously clean sheets (your fleas always harbour in the blankets), to feel a nasty tingling, which you try to think is not a bite, and, loath to be disturbed, lie still and patient, till the fact becomes indisputable, and a whole host of tormentors, flocking after the first marauder, rouse you up thoroughly to a sense of your wretchedness. Even if you have a light, it is in vain to rise and slay; for (as an old woman once said to me in flea-breeding Wales) 'if you kill one, a hundred will come to its burial.' Still you might get up and dress yourself again. But, supposing it to be pitch-dark, what perpetual restlessness of hand, even while one is almost torpid with fatigue, what tossing to and fro, what burnings, must the poor victim go through before morning! 'Flebit,—he shall weep.' It is a sort of emblematic hell, whereof the little, black, skipping animals are the imps. Why Heaven has given them such power to torment, together with such horrible agility to escape, is to me one of the mysteries of this mysterious world. I think it favours the Catholic doctrine of purgatory, only that the purgation is begun on this side the grave. If so, I have many sins to answer for. 'Ah! knew he but his happiness, of men the happiest he,' for whom these provoking demons have no peculiar affection! How gladly should I excuse the proofs of their regard which they bestow on me! Happy, too, they who have a skin flea-proof. Whenever I am flea-bottomised, it is as if I had been flogged all over with nettles. A mere flea-bite, indeed! The expression seems to me much of a muchness with that other one, 'I have only caught cold; to which a wise doctor once replied, 'Zounds, sir! would you have a fever?' We, I'm sure, were in a fever (the fleas love H—, too) when we rose, with morning's dawn at Ardvaser. Smarting all over, we sought a convenient spot behind the rocks for a refreshing dip, and found a most beautiful natural bath, formed by a circle of rocks, with bottom of pearly sand, gleaming through a depth of crystal-green water. While we refreshed ourselves therein,

the room in which we had slept, or rather watched, was prepared for breakfast. The set-out on the table was as follows. A huge tea-pot, in which, according to what we have observed to be the custom in this part of the world, the tea had been already made; cups as disproportionately minute as they used to be in Dr. Johnson's days; a plate of oat-cake; ditto of biscuits (biscuits are almost always to be had in these small inns: they have them in preference to bread, because they keep longer); a dish of fried bacon; an enormous ditto full of smoking potatoes, in their jackets; a plate of eggs, *sans* cups; but provided with flat bone egg-spoons, shaped precisely like spades (very common in this part of the world, and very difficult to dig with); salt butter in thin wafers, like pancakes, and coarse brown sugar."

With appetites such as the Highland air and exercise engender, this is not such bad fare; and as for the fleas, the king and whole court from Tiberias might be despised where a heather bed could be found. It is only when indulging in the luxury of blankets, like the Great Macrao of whom the song sings, that one is exposed to the assaults of these annoyances.

In reviewing a recent publication ("The Sportsman in Ireland," No. 1218), we vindicated the Land of Cakes from the writer's charge of imposition and cheating; and we are glad to find our opinion sustained by an author so intelligent and just as the present. He says:—

"Our departure from Blair Athol was quite affecting. Even 'the very cat was wringing her hands' with grief to lose us. Jeannie, chambermaid, wept; and Jock, ostler, blew his nose. Mrs. Stewart—kind Mrs. Stewart—stood at the door, with a bag of pears in one hand, and a bag of biscuits in the other, which she forced us to accept as our viaticum. When will our English landladies be so generous? One hears much about the Scotch loving money. They may do so; we English certainly do: but this I know, that in Scotland I have met with more liberality of treatment than any where else. Seldom, indeed, have I experienced, during my travels, that dissatisfaction which the day of reckoning so often brings, in our own dear land, because it is a day of imposition. How often, in the course of one's life, one has been entirely contented at an inn till the bill comes in; and then, as entirely indignant at finding one has so much too much to pay for having been so comfortable! In such a case, the very attentions have received during one's stay seem like treachery, somewhat resembling the hospitality of an ogre, who fattens his victims only to prey on them afterwards. Of such begin-at-home charity we have had but little cause to complain in Scotland, and least of all at Blair Athol. We departed then in peace and satisfaction, sorry to leave and desirous of coming again."

*The Letters of Horace Walpole, &c.* Vol. IV. 8vo. London, 1840. Bentley.

THIS excellent edition of a work which can never fail to amuse and interest the reader proceeds favourably on its course; and the new matters introduced, besides the portrait and other embellishments, seem only, by their fit association, to tempt us to a greater relish for the old. In the present volume, the principal additions consist of correspondence with Sir David Dalrymple, one of Scotland's historical and literary ornaments, and relate to subjects of general interest. Thus, a letter dated

Strawberry Hill, February 3, 1760, is full of matter quite germane to our literary page. It is as follows:—

"I am much obliged to you, sir, for the Irish poetry;\* they are poetry, and resemble that of the East; that is, they contain natural images and natural sentiment elevated, before rules were invented to make poetry difficult and dull. The transitions are as sudden as those in Pindar, but not so libertine; for they start into new thoughts on the subject, without wandering from it. I like particularly the expression of calling Echo, 'Son of the Rock.' The Monody is much the best. I cannot say I am surprised to hear that the controversy on the Queen of Scots is likely to continue. Did not somebody write a defence of Nero, and yet none of his descendants remained to pretend to the empire? If Dr. Robertson could have said more, I am sorry it will be forced from him. He had better have said it voluntarily. You will forgive me for thinking his subject did not demand it. Among the very few objections to his charming work, one was, that he seemed to excuse that queen more than was allowable, from the very papers he has printed in his Appendix; and some have thought, that though he could not disculpate her, he has diverted indignation from her, by his art in raising up pity for her, and resentment against her persecutress, and by much overloading the demerits of Lord Darnley. For my part, Dr. Mackenzie, or any body else, may write what they please against me: I meant to speak my mind, not to write controversy—trash seldom read but by the two opponents who write it. Yet were I inclined to reply, like Dr. Robertson, I could say a little more. You have mentioned, sir, Mr. Dyer's 'Fleece.' I own I think it a very insipid poem.† His 'Ruins of Rome' had great picturesque spirit, and his 'Grongar Hill' was beautiful. His 'Fleece' I could never get through; and from thence I suppose never heard of Dr. Mackenzie. Your idea of a collection of ballads for the cause of liberty is very public-spirited. I wish, sir, I could say I thought it would answer your view. Liberty, like other good and bad principles, can never be taught the people but when it is taught them by faction. The mob will never sing lillibullero but in opposition to some other mob. However, if you pursue the thought, there is an entire treasure of that kind in the library of Maudlin College, Cambridge. It was collected by Pepys, secretary of the Admiralty, and dates from the battle of Agincourt. Give me leave to say, sir, that it is very comfortable to me to find gentlemen of your virtue and parts attentive to what is so little the object of public attention now. The extinction of faction, that happiness to which we owe so much of our glory and success, may not be without some inconveniences. A free nation, perhaps, especially when arms are become so essential to our existence as a free people, may want a little opposition: as it is a check that has preserved us so long, one cannot wholly think it dangerous; and though I would not be one to tap new resistance to a government with which I have no fault to find, yet it may

not be unlucky hereafter if those who do no wish so well to it would a little shew themselves. They are not strong enough to hurt they may be of service by keeping ministers in awe. But all this is speculation, and flowed from the ideas excited in me by your letter, that is full of benevolence both to public and private. Adieu, sir; believe that nobody has more esteem for you than is raised by each letter."

In another letter to the same, of two months' later date, Walpole writes:—

"The 'Siege of Aquileia,' of which you ask, pleased less than Mr. Home's other plays.\* In my own opinion, 'Douglas' far exceeds both the other. Mr. Home seems to have a beautiful talent for painting genuine nature and the manners of his country. There was so little of nature in the manners of both Greeks and Romans, that I do not wonder at his success being less brilliant when he tried those subjects; and, to say the truth, one is a little weary of them. At present, nothing is talked of, nothing admired, but what I cannot help calling a very insipid and tedious performance: it is a kind of novel, called 'The Life and Opinions of Tristram Shandy;' the great humour of which consists in the whole narration always going backwards. I can conceive a man saying that it would be droll to write a book in that manner, but have no notion of his persevering in executing it. It makes one smile two or three times at the beginning, but, in recompense, makes one yawn for two hours. The characters are tolerably kept up, but the humour is for ever attempted and missed. The best thing in it is a sermon, oddly coupled with a good deal of bawdy, and both the composition of a clergyman. The man's head, indeed, was a little turned before, now topsyturvy with his success and fame.† Doddsley has given him six hundred and fifty pounds for the second edition and two more volumes (which, I suppose, will reach backwards to his great-great-grandfather); Lord Falconberg, a donative of one hundred and sixty pounds a-year; and Bishop Warburton gave him a purse of gold and this compliment (which happened to be a contradiction), 'That it was quite an original composition, and in the true Cervantic vein;' the only copy that ever was an original, except in painting, where they all pretend to be so. Warburton, however, not content with this, recommended the book to the bench of bishops, and told them Mr. Sterne, the author, was the English Rabelais. They had never heard of such a writer. Adieu!"

The humanity inculcated in the following, of June 20th, recommends it for selection:—

"I am obliged to you, sir, for the volume of Erse poetry: all of it has merit; but I am sorry not to see in it the six descriptions of night, with which you favoured me before, and which I like as much as any of the pieces. I can, however, by no means agree with the publisher, that they seem to be parts of an heroic poem; nothing to me can be more unlike. I should as soon take all the epitaphs in West-

\* "It came out at Drury Lane, but met with small success.—E."

† "Gray, in a letter to Wharton, of the 29th of April, says, 'Tristram Shandy' is an object of admiration, the man as well as the book. One is invited to dinner, where he dines, a fortnight beforehand. His portrait is done by Reynolds, and now engraving." He adds, in another letter, 'There is much good fun in 'Tristram,' and humour sometimes hit and sometimes missed. Have you read his 'Sermons' (with his own comic figure at the head of them)? They are in the style, I think, most proper for the pulpit, and shew a very strong imagination and a sensible heart; but you see him often tottering on the verge of laughter, and ready to throw his periwig in the face of his audience.—E."

minster Abbey, and say it was an epic poem on the history of England. The greatest part are evidently elegies; and though I should not expect a bard to write by the rules of Aristotle, I would not, on the other hand, give to any work a title that must convey so different an idea to every common reader. I could wish, too, that the authenticity had been more largely stated. A man who knows Dr. Blair's character will undoubtedly take his word; but the gross of mankind, considering how much it is the fashion to be sceptical in reading, will demand proofs, not assertions. I am glad to find, sir, that we agree so much on the 'Dialogues of the Dead;' indeed, there are very few that differ from us. It is well for the author that none of his critics have undertaken to ruin his book by improving it, as you have done in the lively little specimen you sent me. Dr. Brown has writ a dull dialogue, called 'Pericles and Aristides,' which will have a different effect from what yours would have. One of the most objectionable passages in Lord Lyttelton's book is, in my opinion, his apologising for the moderate government of Augustus. A man who had exhausted tyranny in the most lawless and unjustifiable excesses is to be excused, because, out of weariness or policy, he grows less sanguinary at last! There is a little book coming out that will amuse you. It is a new edition of Isaac Walton's 'Complete Angler,' full of anecdotes and historic notes. It is published by Mr. Hawkins, a very worthy gentleman in my neighbourhood, but who, I could wish, did not think angling so very innocent an amusement. We cannot live without destroying animals, but shall we torture them for our sport—sport in their destruction? I met a rough officer at his house t'other day, who said he knew such a person was turning Methodist; for, in the middle of conversation, he rose and opened the window to let out a moth. I told him I did not know that the Methodists had any principle so good, and that I, who am certainly not on the point of becoming one, always did so too. One of the bravest and best men I ever knew, Sir Charles Wager, I have often heard declare he never killed a fly willingly. It is a comfortable reflection to me, that all the victories of last year have been gained since the suppression of the bear-garden and prize-fighting; as it is plain, and nothing else would have made it so, that our valour did not singly and solely depend upon those two universities. Adieu!"

Walpole's opinion of London booksellers does not seem to have been very flattering; but no doubt they must have improved since then, and by their liberal encouragement of literature and literary men, merited all that Dr. Johnson said of them:—

"I have not (he writes to Dalrymple) bought the 'Anecdotes of Polite Literature,' suspecting them for a bookseller's compilation, and confirmed in it by never hearing them mentioned. Our booksellers here at London disgrace literature by the trash they bespeak to be written, and at the same time prevent every thing else from being sold. They are little more or less than upholsterers, who sell sets or bodies of arts and sciences for furniture; and the purchasers, for I am sure they are not readers, buy only in that view. I never thought there was much merit in reading: but yet it is too good a thing to be put upon no

\* "Lord Byron, like Walpole, had a mortal dislike to angling, and describes it as 'the cruellest, the coldest, and the stupidest of pretended sports.' Of good Isaac Walton he says:—

"The quaint, old, cruel coxcomb, in his gullet Should have a hook, and a small trout to pull it.—E."

\* "Fragment of Ancient Poetry, collected in the Highlands of Scotland, and translated from the Gaelic, or Erse language, the production of James Macpherson: the first presentation to the world of that literary novelty, which was afterwards to excite so much discussion and dissension in the literary world.—E."

† "Dr. Johnson was pretty much of Walpole's opinion. Of 'The Fleece,' he says, 'which never became popular, and is now universally neglected, I can say little that is likely to call it to attention. The woolcomber and the poet appear to me such discordant natures, that an attempt to bring them together is to couple the serpent with the fowl.—E."

better footing than damask and mahogany.

Your zeal for reviving the publication of 'Illustrious Heads' accords, sir, extremely with my own sentiments; but I own I despair of that, and every other public work. Our artists get so much money by hasty, slovenly performances, that they will undertake nothing that requires labour and time. I have never been able to persuade any one of them to engrave the beauties at Windsor, which are daily perishing for want of fires in that palace. Most of them entered into a plan I had undertaken, of an edition of 'Grammont,' with portraits. I had three executed; but after the first, which was well done, the others were so wretchedly performed, though even the best was much too dear, that I was forced to drop the design. Walker, who has done much the best heads in my new volumes, told me, when I pressed him to consider his reputation, that 'he had got fame enough!' What hopes, sir, can one entertain after so shameful an answer? I have had numerous schemes, but never could bring any to bear, but what depended solely on myself; and how little is it that a private man, with a moderate fortune, and who has many other avocations, can accomplish alone? I flattered myself that this reign would have given new life and views to the artists and the curious. I am disappointed: politics on one hand, and want of taste in those about his majesty on the other, have prevented my expectations from being answered. The letters you tell me of, sir, are indeed curious, both those of Atterbury and the rest; but I cannot flatter myself that I shall be able to contribute to publication. My press, from the narrowness of its extent, and having but one man and a boy, goes very slow; nor have I room or fortune to carry it farther. What I have already in hand, or promised, will take me up a long time. The London booksellers play me all manner of tricks. If I do not allow them ridiculous profit, they will do nothing to promote the sale; and when I do, they buy up the impression, and sell it at an advanced price before my face. This is the case of my two first volumes of 'Anecdotes,' for which people have been made to pay half a guinea, and a guinea, more than the advertised price. In truth, the plague I have had in every shape with my own printers, engravers, the booksellers, &c., besides my own trouble, have almost discouraged me from what I took up at first as an amusement, but which has produced very little of it. I am sorry, upon the whole, sir, to be forced to confess to you, that I have met with so many discouragements in *virtu* and literature. If an independent gentleman, though a private one, finds such obstacles, what must an ingenious man do, who is obliged to couple views of profit with zeal for the public? Or, do our artists and booksellers cheat me the more because I am a gentleman? Whatever is the cause, I am almost as sick of the profession of editor as of author. If I touch upon either more, it will be more idly, though chiefly because I never can be quite idle."

*Greyslaer: a Romance of the Mohawk.* By C. F. Hoffman, Esq. Author of a "Winter in the Far West," and "Wild Scenes in the Forest and Prairie." 3 vols. 12mo. London, 1840. Bentley.

Ours is a pleasant task when volumes like these come before us for review. We have followed the author cheerfully through his animated descriptions of forests and rivers,

open battle and subtle ambuscade, hair-breadth escapes and frightful scalplings. The scenes are, as the title promises, laid principally in the valley of the Mohawk during the American revolution. The hero is one of the leaders of the patriot band, and is thus introduced to the readers:—

"Tradition, too, tells especially of one speaker—a youth of scarce twenty summers, a shy student from Schenectada, who, fired by the impassioned appeals of older and more practised orators, burst through the bashfulness of inexperienced youth, and, leaping upon the rostrum, poured forth a flood of eloquence that hurried along the most sluggish natures upon its irresistible tide. 'Who,' said a bystander to a sturdy hunter, who with mouth agape and eyes riveted, as if by magic, upon the speaker, stood leaning upon his rifle near, 'who in all nature is that springald with such a tongue?' 'Why, Adam, is it you, man, that axes me who young Greyslaer of Hawksnest is? You've seen me teaching the boy afore now, where he came up to Johnston in his hollow-days, and, thof he be groun a bit, you ought to know my old scholar.' 'Lor! Balt, that ain't the bookish chap that you larnt the rifle to? the younker that stood the brunt, when scapegrace Dirk de Roos got into that bother in old Sir William's time?' 'I tell you it is though,' said the woodman, proudly; 'and a right proper shot I made of him. You see now how he plumps his arguments right into the bull's eye of the matter.'"

Farther on, the escape of Greyslaer, aided and accompanied by "The Dew," an Iroquois girl, furnishes us with another extract, though our limits will only permit our giving its conclusion:—

"They turn to leave the stream they have been following, and clamber up the sides of the glen through which it flows, and find themselves upon a narrow isthmus, with another stream, deeper and far more violent, roaring around its rocky base. Greyslaer approached the verge of the precipice, and despaired of proceeding farther. The cliff opposite was steep as that whereon they stood. The main stream, whose tributary it seemed he had been last traversing, had here cloven its way through a ridge in a channel so narrow, that any of the trees around him would span the black chasm. But he had no axe to fell one, nor would he have dared to disturb the echoes of the forest if one were at hand. At this moment the shrill whoop of the Mohawks rose fearfully behind him. They were near. He spoke a few words to his companion, seized a pendent vine that flourished near the spot, and flung himself out from the face of the cliff, as if determined to drop into the roaring current, and take his chance for escape in its angry bosom. He cast one glance back on the maiden ere he let himself drop in the tide below. She had not sprung forward to prevent him, but stood with folded arms and a look of indignant sorrow upon her brow. Was it mingled scorn and pity that he should thus desert his preserver? So thought Max, as, still holding his grasp on the vine, he permitted himself to swing back by her side. 'Surely you can swim—you do not shrink from trying that stream with me?' he cried. 'Were my brother an otter, he could not live in that terrible water,' replied the maiden. The whoop was again pealed nearer and more near; it rose, too, this time, from a dozen savage voices. The girl wrung her hands as if in despair, while Greyslaer folded his arms and leaned against a tree, as if moodily resigned to his

fate. Suddenly, however, the thought of a new device inspires 'The Dew.' She clambers like a squirrel toward the tree-top from which the vine depends; loosing a long and vigorous tendril from the stem as she ascends, she quickly passes another and a smaller one round it, so as to attach it firmly to a projecting bough; descends a few yards, and, grasping the vine tightly in her hands, darts out from the wall of foliage like a swallow from the face of a cliff, clears the chasm, and lands safely upon a dizzy ledge opposite. Greyslaer, who, unappalled for himself, had but a few moments before hung suspended over the gulf below, covers his face with his hands in the instant the daring feat is in the act of being accomplished; and, almost ere he can look again, the maid has recrossed the chasm and dropped nimbly by his side. But why do they still delay? The sound of pursuit grows nigher, yet Max refuses to take the chance of escape, of which his noble guide has so daringly set an example, until she herself is in a place of safety. The breath of an instant is precious—and now 'The Dew' again makes the airy passage, and is followed by her friend the instant he can recover the vine as it swings back within his reach. 'The Dew,' with Indian precaution, seizes it once more as he is thoughtlessly about releasing it from his grasp, and, winding the end around a heavy stone, she hands it to Max, and signifies to him to throw it into a thicket upon the same side of the stream whereon it grew. The two have then barely time to plunge into the bushes beyond them, when the pursuing Mohawks appear upon the headland opposite, and they soon after hear their baffled howl of disappointment at the broken and lost trail of the fugitives."

Some idea may be formed of the softer passages of the writer's pen from the following prettiness:—

"Greyslaer alone had his eye upon the Indian pair, and as he now fully understood their language, he was not a little amused with the cool generalship with which the Oneida made his advances. 'My sister,' said Teondetha, seating herself on a log near the opening of the slanty, the moment he discovered the vicinity of his lady-love; 'how is it with her?' 'As with the bird that has wandered from its nest, and knows not where to alight; as with the sunbeam that drops into the forest, and finds no sister ray to receive and mingle with her beneath its chilling leaves.' 'Teondetha is the tree whereon the bird would alight.' His heart is the fountain that would send back a ray to mingle with the sunbeam. Teondetha is a great warrior. He must build a lodge of his own, wherein to hang up the scalps of his enemies. Who will be there to light the pipe of the young chief?' The girl, so far from shrinking at sight of the gory trophies at his belt, gazed now admiringly upon them as her half-savage lover held them up to her eyes. 'The young chief has earned a right to smoke before the women,' she said. 'The Dew' will not extinguish his pipe when he lights it.' 'Good!' said the copper-coloured gallant; and, bending over the coals, he carelessly swept up one with his hand, and dropped it into the bowl of his pipe. He puffed away calmly for a few moments, while his thoughts seemed occupied only in watching the smoke-wreaths that circled around him. 'What sees my brother in the smoke?' asked the girl, after watching her taciturn wooer for a while. 'A bird,' replied the Indian, gravely. The girl smiled, was silent for a moment, and then

\* \* \* The meaning of Teondetha is 'a fallen tree.'"

looking down rather demurely, and pulling to pieces the twigs whereon she sat, asked—'What says the bird to my brother?' 'It says that Teondetha is a tree whose leaves will only flourish by the Spreading Dew.' The girl laughed outright (girls will laugh!), but the solemn composure of her companion seemed nowise disturbed by her merriment. The laugh, however, ceased at once, without subsiding into a titter. 'And what does my brother see now?' she resumed, as soon as she had recovered her sobriety. 'He sees a beaver.' 'And what says the beaver?' 'The beaver reminds him of a promise which 'The Dew' made many moons ago, off by the yellow waters that flow from Garoga Lake. The beaver says that those of his tribe who have no lodge become worthless castaways. 'Teondetha,' says the beaver, 'let not 'The Dew' go out of your sight again till you have built one for both of you. 'The beaver is never foolish,' murmured the girl. A heavy puff of smoke from the fire at that moment wrapped the lovers from Greyslaer's sight, and he could not see whether the Indian pair sealed this important passage of their courtship with the impress that fairer wooers would perhaps have used; but, as the smoke cleared away, he thought that he distinguished 'The Dew' withdrawing her little hand from that of Teondetha, who had slightly changed his position."

The third volume is almost entirely historical, and we skip those scenes of horror and bloodshed which have been so often told, and come to a last extract we owe to the finely drawn character of Balt, the old woodsman, who figures prominently in these pages, passing several others of equal interest,—Alida, Bradshaw, Brant, Valtmeyer, Derrick de Roos,—each offering a proof of the author's ability. But old Balt speaks:—

"I whistled to the dog: 'Why in all thunder does the old hound not come up when I call?' says I to myself, says I. 'By the everlasting hokey, if he hasn't got one foot in a painter's trap,' said I next moment, as I caught sight of the leather thong by which some Redskin had fixed the darned thing to the rock. I ups rifle at onct, and, hand on trigger, to cut the string with a bullet. 'Stop, old Balt, what are ye doing?' says I agin, afore I let fly. 'The dumb brute, to be sure, will be free if you clip that string at onct, as you know you can. But the teeth of the trap have cut into his flesh already; will you run the chance of its further mangling him, and making the dog of no valu to any one by letting him drag that cursed thing after him when he gets away? No! rayther let him hang on there a few moments as he is, till you can go judgmatically to work to free him.' With that I let the suffering critter wait until I had cut down a tree, slanted it from the top of the cliff to the ledge where he lay, got near enough to handle him, uncoiled the leather thong that had got twisted round him, sprung the trap from his bleeding limb, and helped him to some purpose. Now, yere honour, think ye that, if I had not waited patiently till all this snarl about Miss Alida had been disentangled afore Major Max got free, he would not have gone away from this court with something still gripping about his heart, as I may say; something to which the steel teeth of that painter-trap, hows'ever closely they might set, were marcful, as I may say? Sartin! sartin! he would. But now every one has heard here all that man, woman, and child, can say agin her. And here, in open court, with all these book-larnt gentlemen, and

• "Panther."

yere honour at their head to sift the business, we've gone clean to the bottom of it, and brought out her good name without a spot upon it.' We will leave the reader to imagine the effect which this homely but not inelegant speech of the noble-minded woodman produced upon the court, upon the spectators, and upon him who was most nearly interested in what the speaker said. The reader must imagine, too, the emotions of Alida when Max and she next met, and Greyslaer made her listen to the details of the trial from the lips of his deliverer; while Balt, pausing ever and anon as he came to some particular which he scarcely knew how to put in proper language for her ears, would at last get over the difficulty by flatly asserting that he 'disremembered' exactly what the bloody lawyer said jist at this part, but the major could tell her that in by-times.' These by-times, as Balt so quaintly called them—those sweet and secret interchanges of heart with heart—that full and blessed communion of prosperous and happy love—came at last for Max and Alida."

Altogether, this is a very stirring and excellent Indian romance.

#### FRASER'S TRAVELS IN KOORDISTAN. [Concluding notice.]

WE resume our review of this work with pleasure; and step at once into the general description of a very interesting region. Mr. Fraser says:—

"You are aware, I presume, that the country of Mesopotamia, that is, the tract lying between the two rivers Tigris and Euphrates, though forming no part of Arabia Proper, is principally occupied by Arab tribes; who, originally tempted, doubtless, by the fertility of the soil, so much more productive than their own deserts, have overrun not only the greater part of the country more immediately in question, but have also taken possession of the low lands on the left bank of the Tigris from the shores of the gulf, even up to Mossul. Thus the upper part of Mesopotamia, or the Jezzeerh, as it is called by the Arabs, from the river Khabour to the vicinity of Baghdad, is occupied by the Jerboah tribe, of whom frequent mention has been made in the foregoing pages. The Delaim tribe infest the immediate neighbourhood of the city; several tribes, varying in power and respectability, but the dominant and principal one of which is the Zobeid, possess the country from thence to the Skat-ul-Hye, a canal or river which crosses the Jezzeerh, connecting the two great rivers. The space from that canal to Kerna, where they meet, is occupied in like manner by many tribes, of whom the Ben-i-Rubbiyeh, relatives of the Montific, are the principal. In fact, all the others are but dependants of these two last-mentioned powerful tribes. On the right bank of the Euphrates the great tribe of Aneiza, with whom you are already in some measure acquainted, rule the country and oppress or protect, as the case may be, a multitude of smaller tribes, who are found along the river all the way from Beer to Anah. From Hillah to Semavah, the marshy tract formed by the overflow of the Euphrates, including what are called 'The Lemloon Marches,' is held by the large tribe of Khezail, powerful from the nature of their country, who are agricultural as well as pastoral, living much on the produce of large herds of buffaloes, reared on the rank vegetation of the marshes, and who are especial savages, and faithless plunderers to boot. From Semavah to the sea, the whole country belongs undisputedly to the

great tribe of Montific, who range upwards, occasionally, as far as Hit and Anah, on the confines of the Aneiza, and who give shelter to a number of dependent petty tribes. All these, excepting the Aneiza, are, nominally at least, subjects of the pashalic of Baghdad. On the left bank of the Tigris above Baghdad, the country is overrun with various small tribes of Koords and Arabs, as you have partly seen, all robbers, who plunder travellers, and commit every kind of depredation. Below Baghdad is found the powerful tribe of Ben-i-Lâm, who range the lower parts of Susiana to the Keer-kah; and beyond that river the Chaab Arabs have possessed themselves of all to the sea. A glance at the map will enable you to understand the localities of these various tribes. Now all these petty tribes being descendants of the same stock as their brethren of Arabia Proper, or wherever else the race is to be found, resemble them in all essential points of character. They all lay claim to the virtues of generosity, hospitality, justice, incorruptible integrity, and fidelity to their words or oaths, as well as to the high qualities of courage, independence, and love of freedom; and acknowledging themselves to be plunderers and robbers, obviously attach no discredit to the act of appropriating the property of strangers who may not have bargained with them for the safety of their persons and goods. In fact, like their great progenitor, their hand is against every man, until, at least, its aid or its forbearance be purchased. They love the roving and pastoral life, moving from place to place, within certain bounds, in search of pasture for their flocks and herds; though, of later years, finding a difficulty in procuring a sufficiency of grain by barter, a portion of each tribe have betaken themselves to agriculture, and cultivate a portion of its land for the behoof of the rest. These Fellah, or cultivating Arabs, are, however, held in low estimation by their roving brethren, who despise all such menial employments, as degrading to their free and noble race. Whatever virtues the Arabs of former times may have possessed, it is to be feared that few have descended to their progeny of these degenerate days, at least in those parts to which Europeans have had access. As the iniquitously acquired knowledge of our first parents opened their eyes to their nakedness, so the perception of his comparative poverty has awakened in the Arab's mind a craving for riches,—a feeling which is directly subversive of the practice of either hospitality or generosity; because the easiest way—indeed, the only way—for one of his habits to acquire them, is by force and rapine, by taking the property of others; and, accordingly, the existence of these virtues is found proportionably rare. The same may be said of integrity and fidelity. The man who is unscrupulous as to the means of acquiring riches will pay little regard to his promises or oaths. Accordingly, nothing is more common than instances of Arab faithlessness and treachery. The sacred tie of 'bread and salt' becomes an empty form which is easily evaded. The pledge given by one chief is disregarded or broken, when it suits his purpose, in the person of his brother or his uncle, who declares his own independence and right of plunder; and we hear even of a host, after entertaining travellers as his guests, and guarding them in safety on their journey to a prescribed point, himself way-laying and stripping them. Courage, like many other qualities, is the child of circumstances, and flourishes in proportion as these call it forth. The stout resistance of the Ben-

i-boo-Allee tribe to the British arms at Raus-ul-Khymah, the determined courage of Arab mercenaries in India on many occasions, and the daring (though often atrocious) exploits of the Wahabees, may serve as proofs, among many others that might be quoted, of Arab gallantry; yet so much is the reverse the case in the countries we are now speaking of, that the cowardly, yet bullying, character of the Arabs is notorious. Of this there are numerous instances. A little firmness will almost invariably bring the Arabs of Mesopotamia to reason; but this firmness must be guided by judgment and discretion, or it may lead to painful results. If blood be drawn where the superiority on the part of the opponents is overpowering, the consequences are sure to be fatal; whereas, when resistance in such situations is not offered, the Arabs seldom, if ever, murder. This was exemplified in the case of three Englishmen who were travelling, not many years since, with a caravan from Baghdad to Constantinople. At a point near Mardeen the caravan was surrounded by a large party of armed Arabs, who demanded a sum of money by way of custom. The affair would have been speedily arranged by the payment of part of this demand, but these gentlemen, who were a little way apart at the time of the attack, either dreading the result or scorning the idea of submitting to be robbed by Arabs, retired to a little rising ground, where they were speedily surrounded by a well-armed troop. Threats and furious gestures ensued, and in the scuffle, by some unfortunate chance a pistol, discharged by one of the gentlemen, shot the son or relative of the sheikh. The consequence was an instant assault, and the unfortunate travellers were cut to pieces in a moment. You have already seen that these battles are almost ridiculously bloodless—a victory is not unfrequently gained without the loss of a man; but it is to be observed that, in addition to the shyness of individuals to expose their persons to hazard, there is a wholesome apprehension of the consequences of a blood feud, which forms a powerful check upon any indiscreet propensity to violence. In the battle with the Agail, however, this principle did not come into operation, and yet you have seen how comparatively small a loss the Arabs sustained on this occasion, and how little they exposed themselves to danger. These blood feuds among the Arab tribes, pregnant though they are with atrocities and horrors, differ little in character from those of other nations, including even our own countrymen in the times of old. Volumes of details might be written on the subject; but I dare say you will be satisfied with one or two instances by way of sample, and there is one which I am tempted to relate, as having occurred within the knowledge and partly in the presence of one of our countrymen. A branch of the great tribe of Ben-i-Lam were at feud with another tribe of Arabs, whose name I have forgotten, and much blood had been shed on either side to satiate individual revenge and vindicate the honour of surviving relatives. It happened that an Englishman, travelling through Khuzistan, was received and entertained in the tent of the sheikh of the latter tribe, his entertainer, the only member of the family at home being a daughter, who acted as hostess in her father's absence. At night, the inmates of the tent, including the stranger, retired to rest; but towards morning he was awakened by shrieks, and distinguished the voice of his young hostess exclaiming, that she was murdered! All rushed to the spot, where they found the

unfortunate girl in the agonies of death, her breast pierced with three deep stabs of a dagger. While gazing on the dying victim and offering vain assistance, a voice was heard from a height close by, exclaiming: 'Yes, it is I! I have done it—praise be to God, I have murdered her!' All eyes were turned to the spot, where there was seen an old woman standing and gesticulating with vehemence. A rush was made towards her, and she either ran or was borne back to the brink of the river, on which the tents were pitched, from the high bank of which she fell into the deep stream; and, whether she perished or escaped, was seen no more. On inquiry, it appeared that this sheikh, who now had to mourn the loss of a daughter, had once had a son, who, in some former fray, had been put to death by a *pehlew* (or champion) of the other tribe; an event which called forth all the virulence of the existing feud. Some short time afterwards a stranger entered the camp, and was received with the customary cordiality of Arab hospitality. Unfortunately he was recognised by some of the tribe as the very *pehlew* who had put to death the son of their sheikh. What was to be done? He was now their guest, and by all the laws of hospitality, and by Arab customs, could not be touched. The sheikh himself was absent; and the arguments of good faith and mercy were preponderating, when the young woman now in question entered the assembly and upbraided the men with cowardice and cold-heartedness towards their chief. 'What!' said she, 'shall the murderer of your sheikh's son be in your hands and yet escape? Never let this be said—put him instantly to death, or renounce the name of men!' Still, however, a reluctance to infringe on, in so direct a manner, the laws of host and guest, restrained the hands and weapons of the men, in spite of the wrath that was boiling in their breasts, and possibly the force of that consideration might have prevailed, when the young girl herself, maddened at the sight of her brother's murderer and the idea of his escaping, seized a sword and smote him. The sight of blood was irresistible—in a moment every weapon was drawn, and sheathed in the body of their unfortunate guest—he was literally cut in pieces. The sheikh returned, and shocked at the atrocious violation of hospitality, was furious at the perpetrators: vain would he have recalled the act or repaired the injury; but that was impossible. Time passed on, and the murder, like others of the sort, was forgotten by the tribe; but not by the mother of the slain. Resolved upon revenge, she had followed the hostile camp for years, and patiently watched an opportunity, which she found not until the fatal night when the Englishman who relates the story, was by chance a guest in the tent of the sheikh, and witness to the consummation of her savage vengeance. The following still more dreadful tale of Arab revenge is taken from some memoranda of Colonel Taylor, respecting the Arab tribes, and refers to a remoter period:—the tribe of Montefic, to whose power I have referred, derive their chief strength originally from two principal clans, the Málík and the Ajwad, who, though now united, were once at deadly feud. Their quarrel was for the right of pasturage over certain tracts, and the Málík prevailed—the Ajwad were exterminated; excited to desperation by the songs and encouragements of the daughters of their tribe, every male of the Ajwad armed himself for battle, and fell in defence of the spot where his fathers had pastured their flocks. But even this sanguinary triumph

was insufficient for the cautious forecast of Suleiman, the leader of the Málík; he dreaded future retribution, should even a single individual, especially a male, of the conquered tribe survive. So he adopted the atrocious expedient of putting to death every surviving female, and securing the loss of progeny by the most horrible means. This diabolical act was perpetrated. One alone, who had thrown herself at the feet of a Málík chief, was saved by his compassion at the risk and almost by the sacrifice of his own life, for he was wounded, and nearly cut to pieces in defending his *protégé*. Of this young woman, who was pregnant at the time, was born Abdallah, afterwards the founder of a tribe which, from the peculiar origin of its head, received the appellation of 'the Orphans' Tribe.' The scene of slaughter was one of those pleasant glens which, even in the sterile and rocky soil of Arabia, are found among the mountains; where water may be every where obtained near the surface, and which in spring and early summer are covered with a rich verdure, affording excellent pasturage. It is there the wandering Arab loves to encamp; and so pleasant are those lovely spots, in contrast with the desert around, that no wonder can be excited at any struggles to maintain the right over so delightful a retreat. The valley in question is to be seen some fifteen miles to the south of modern Bussora, and to this day retains the name it received on that fatal occasion, being known as the Wád-ul-nissa, or the Vale of Women."

At Baghdad all was insurrection and confusion, and our countryman was well away even among the wild, and as it appears from him, greedy, thievish, mean, and far from hospitable, Arabs, who roam between the Tigris and Euphrates, over the Jezzeerah or lower portion of ancient Mesopotamia.

On this tour Mr. Fraser visited the sites of Selencia, Ctesiphon, Babylon, Hillah, the Tower of Babel or of Belus, and other spots, some of doubtful identity, but all of much sacred and historical interest. The whole territory, indeed, seems to be covered with the ruins of cities and remains of the most remote antiquity; pottery, scoria, bricks, inscriptions, copper, glass, cylinders, and mighty mounds, which, in all probability, were once the national temples for Sabæan, or fire-worship, of a rich and densely populated region. Under what dominion it is now may be gathered from the following, relating to a miserable hack, and then to two of the same value, presented to the travellers on leaving the Sheikh of the Montefic Arabs. They had previously refused to accept hack the first, and proceeded to another encampment:—

"Our host, who was a sheikh, and a cousin of the great man, when he saw our company, and supposed that the cost of entertaining us was to fall on him, took alarm and tried to induce us to go further up the river, assuring us we should meet with plenty of Arabs to lodge with nearer the place of crossing; but no sooner was it intimated to him that a present might be expected, than the tune was changed, and we were accommodated with all we required. While sitting at this gentleman's fire, we spied two horsemen coming up to the camp, and were informed that they were riding the horses which the sheikh had selected for us, and sent after us on hearing of our departure. On casting our eyes on them, one proved to be the very rejected yaboo of the preceding evening, and the other a quadruped of the self-same description; neither was worth ten shillings. It was a very

annoying business, as having been sent after us by the sheikh, it might be taken as an affront should we return them. I proposed to give them to the people who brought them, as to take them with us was impossible; but the men told us that to accept them, or to take them back at all, was as much as their heads were worth. Their orders were to follow me till they found me, and place them in my hands, should they even have to go to Baghdad for the purpose. Still we declared, that to take them with us was out of the question, and I appealed to the assembly round me, the Sheikh's cousin included, whether I should not more consult that chief's honour by leaving his horses than by taking them with me. 'What would be said of the Sheikh Montefic in Baghdad,' I asked, 'were we to enter that city mounted on such animals, and shew them as the gift of that great Arab chief? Would they exalt his name?' I must do them the justice to say that every man of the company agreed with me, and hung his head in shame at the transaction; but the two messengers still entreated me to consider their safety, and not to expose them to the sheikh's anger, as they could not possibly return to his presence with their faces so blackened. So I compromised the matter by writing a letter to the sheikh, acknowledging the receipt of his horses; but requesting permission to leave his bounty in his care, as I had not people enough to take care of the horses I already possessed. I trusted to rumour to do the rest, and put this great Arab chieftain to shame, if he were susceptible of such a sensation; and thus ended my intercourse with this mighty personage, the Sheikh-ul-Mushaeek, or Sheikh of Sheikhs, as he is termed, in letters addressed to him by the government, giving us a fair ground to estimate the value of Arab liberality, as well as their hospitality, in these degenerate days; for I ascertained that there was no trick of servants in the case; the sheikh had, with his own eyes, seen the beasts, and approved of them; thus, whatever may have been the Meerza's part in this shabby transaction, the disgrace of it fairly lies at his master's door."

We have now done as much as we can for this publication, and have only to give one example of an Arab superstition:—

"As we alighted at the camp this night, an old woman brought a young infant in her arms, and passed it three times under the belly of one of our horses. We were told that it was regarded as lucky to do so with a horse of a stranger guest."

From Baghdad we cannot accompany Mr. Fraser to Tehran, and thence to England; but it is a long journey, four thousand miles in a year, with bad lodging, bad feeding, road-frays, and constant impositions, nearly throughout the whole of it. Novelty and change, the most attractive of human inducements, could alone reconcile man to so much hardship and so many dangers.

#### MISCELLANEOUS.

*The Prelate.* 2 vols. 12mo. London, 1840.  
Boone.

THERE is a degree of spirit in the style of these volumes which shews the author can write; it, however, requires something more than mere desultory writing to produce a novel. We see he is announced as the Rev. S. Smith (perhaps that he may be mistaken for the Rev. Sydney, which is a trumpery ruse), and he also puts forth some arguments upon education:—and his plan has evidently been to make the characters of his fiction work

to different ends as their early impulses have been differently directed,—this he has failed to do. Ambition is the passion fostered in the youth of the Prelate; his elevation is step by step, brought about by chance; and never, save once from writing a pamphlet, does he rise by any act or exertion of his own. And in the finale he wakes from apathy to die of apoplexy. There is another person educated in these pages, and he turns out a straightforward and somewhat boorish young man, but the plan of his bringing up is not very distinctly shewn. The Cambridge scenes are well sketched, and, with the exception of the frequent dinner-table quarrels, fair pictures of college life. We should say the time is that of George III. when conviviality was more in vogue than in the moderate wineing of the present day. *The Quadroom; or, St. Michael's Day.* By the Author of "The Pilot of the Gulf," &c. 3 vols. 12mo. London, 1840. Bentley.

ON rather new ground, viz. *New Orleans and Louisiana*, when ceded by France to Spain in 1763, this is nevertheless a romance in the old style. A villainous noble Spaniard slays his brother, most unlike the gallant Lord Bateman (whose adventures those of this Ramirez very much resemble), is false to his wife, the daughter of the Emperor of Morocco, into whose dominions he is carried a prisoner by pirates, and being sent to take the government of the ceded province, commits a thousand diabolical atrocities. But in the end even-handed justice is administered, the dead come to life, a sorceress terrifies the guilty, the Quadroom turns out to be a marquess, his lovely sister, whom the monster pursues with evil designs, is his own daughter (a revolting relation), and many melo-dramatic improbabilities are perpetrated, when kings and queens, and empress's children, and Indian chiefs, &c. &c. &c., are ranged in happiness in the most approved fashion of this style of making such stories as "the world ne'er saw." Battles, stilettoes, assassinations, escapes, and other marvels, are plentifully thrown in to season the dish; and the greatest wonder of all is, that every body is not killed long before the end of the first volume.

*Works of Sir E. L. Bulwer, &c. &c.* London, 1840. Saunders and Otley.

THIS new volume is an ample one, completing "The Student," and containing the whole of the author's admired work, "England and the English." So much matter (596 pages) for so small a cost must recommend it to a very wide circulation; and it is a pleasure to us to notice with how much care and effect Sir Lytton has revised his productions, and enriched them with valuable additions.

*The Ladies' Knitting and Netting-Books*, by Miss Watts, 1st and 2d Series. (London, Miland.)—From babies' hoods and socks, through mittens and muffetees to scarfs and rugs, all kinds of fancy works, loop stitch, puri stitch, double stitch, wets, and a hundred other matters of which we know as much (perhaps) as of the arrow-headed characters of the Modes or Persians,—every thing is here made easy to the meanest capacity; and those who wish to learn knitting and netting have nothing to do but read Miss Watts.

*Mrs. Loudon's Ladies' Garden and Bulbs. Part IV.* (London, Smith.)—This part is adorned with the many beautiful varieties of *Glaucolus*; than which no bulbous plant is more gay and rich. Every colour of the rainbow brightens the hues of these graceful flowers.

*An Inquiry into the Causes of the Pressure on the Money Market during 1839*, by J. W. Gilbert. (London, Longman and Co.)—A pamphlet of sixty-three pages, chiefly on the banking questions and the currency of the country. The writer objects to a sole bank of issue; but why should not the government itself undertake this national duty? *A History of Prices, and of the State of the Circulation*, in 1838 and 39. With Remarks on the Corn-Laws, &c., by W. Tooke, Esq. F.R.S. 8vo. pp. 308. (London, Longman and Co.)—Resuming the important subjects which his former publications discussed, Mr. Tooke has in this volume displayed the same ability and unwearied research in bringing down his information and argument to the

latest time. His views on the corn-laws, and opinions in favour of lowering the price of agricultural produce, are again enforced by a reference to the prices of commodities of various kinds; and he has also thrown out some suggestions, of much public interest at this period, on certain alterations which he proposes in the system of banking. The book is one for the study of all politicians and political economists.

#### ARTS AND SCIENCES.

##### PARIS LETTER.

Academy of Sciences, July 7, 1840.

SITTING of June 29.—M. Geoffroy Saint-Hilaire announced that there had been born at the Garden of Plants, on the 26th, a fawn, the father of which was of a species peculiar to Java, or which at least had not been met with out of the Sunda Islands; and the mother was the axis of continental India. This, he observed, would tend to modify the doctrine of the permanency of species.—M. Jules Guérin mentioned that he had four times succeeded in curing convergent strabismus of the eyes by the section of the muscles, although in rather a different manner from that practised by M. Dieffenbach.—The rest of the sitting was occupied by private business.

There has been presented to the Academy a small work, containing the results of the observations made during 1839 at the observatory of the Roman College, under the direction of Padre F. Vico. The first part of the observations relates to the determination of the latitude and longitude of the observatory. These are deduced from the average of more than 4000 observations; and the latitude ascertained to be 41° 53' 52"·13, differing by 2" from that determined by Conti and Oriani. The difference of longitude between the observatory and those of Naples and Altona had also been determined: in the first case, by simultaneous observations of shooting stars; in the latter, by very careful observations of the moon and stars. Another part of the observations relate to the nebula of Orion, in which the observers think that they have remarked some notable changes; and also to the rings of Saturn, the existence of a great number of subdivisions in which is hereby apparently confirmed. A remarkable part of the operations of the observers is that relating to the determination of the rotation of Venus on her axis, and the duration of the rotation. This they have effected by observing the spots on the surface of that planet with a first-rate telescope of Cauchy's manufactory during the day, the radiation of the planet being then much less; and they have found the duration of the rotation to coincide with what Schroeter had previously determined, viz. 23<sup>h</sup> 21<sup>m</sup> 7<sup>s</sup>.—M. Regnault has been elected a member of the Academy, section of chemistry; and Sir E. Parry has been elected a corresponding member, section of geography.

*Application of the Theory of the Contrast of Colours.*—M. Chevreul, whose interesting experiments and communications to the Institute on this subject we have several times noticed, has published a highly valuable volume, in which the results of his inquiries are described and applied to painting, sculpture, tapestry, manufactures, decorations of houses and theatres, ladies' dresses, uniforms of soldiers, horticulture, &c. &c. Having already mentioned more than once his theory as to the laws of contrast arising from juxtaposed colours being supplementary to each other or not, we need not now do more than allude to it, and observe that the influence of one colour on another is much greater than is generally imagined. M. Chevreul's book should be in the hand—we would almost say in the head, or even the eye—of every body interested in the forementioned

subjects. We proceed to quote some instances of the practical application of the theory.

When the eye has looked at a red object for a considerable time, it has a tendency to see all things tinted with the supplementary colour, green; and hence if a person about to purchase red cloth examines fourteen or fifteen pieces in succession, the four or five last will appear less red to him than the first ones did, although they are identical in colour and brilliancy. The dealer, in this case, ought to shew the purchaser some pieces of green cloth; and if the eye of the purchaser dwells on them so long that the normal state of the eye is altered, it will have a tendency to see all things tinted with the complementary colour, red; and then a piece of red cloth presented to him will appear more red than it really is. Several manufacturers, not aware of the influence of colours on their eyes, having ordered plain stuffs of a red, violet, or blue colour, to have black patterns printed on them, have often complained that the patterns so printed on the red had a greenish tinge; those on the violet, a greenish yellow tint; and those on the blue, a brownish or orange tint. M. Chevreul has proved the error in several cases, by cutting out white paper so as to cover all the stuff except the black pattern, which has then come out of the most brilliant black;—and, again, he has cut out the black pattern from one stuff and applied it to another, when it was found to change its tint on account of its juxtaposition. Applying his theory to the decorations of the interiors of theatres, where as much light as possible is wanted, he infers that light colours ought to prevail; that blue or crimson should never be used; that white ought to prevail in the fronts; and that a rose colour should never be used for the backs of the boxes, because that colour would give a green tint to female complexions. On the contrary, a light green is the best colour to use, this making the complexion look more rosy than it really is. Similar observations apply to the interior of houses: all reds, orange tints, and violets, are extremely disadvantageous to the complexion; dark colours are difficult to light up. Among the light colours, the best are yellow, or light green, or light blue; all these being favourable, not only to the woods used for furniture, but also to the complexions of females. After these, whites, whitish tints, and greys, are not disadvantageous. As applied to the uniforms of soldiers, M. Chevreul remarks, as a fact well known, that a uniform of well-contrasted colours will look much better than one all of the same colour, after the same degree of wear and tear. Green and red form one of the most striking and advantageous contrasts, being supplementary colours to each other; the red making the green look more green than it is, and the green producing a corresponding effect on the red. Dark blue and scarlet are good, because the former, by its supplementary colour, orange, adds force to the scarlet; and the scarlet, by its supplementary colour, blueish green, adds intensity to the blue. Green and yellow form a good uniform for cavalry. In treating of ladies' toilettes, M. Chevreul says that he can only apply his theory to the white race of females; all the coloured population offering such a strong contrast that gradations of colour are of little effect with them. For ladies with fair hair, or dark hair, those colours that produce the greatest contrasts are the best. Thus, for fair hair, sky-blue is very becoming, because it approaches the nearest to the colour which has for its supplement an orange tint, which is the foundation of the tint of the hair

and complexion in this case. Yellow and orange-tinted red are becoming to ladies with black hair on account of their brilliant contrast; and again, the supplementary colours of these two, viz. violet and blueish green, are also becoming, because they harmonise with the blackness of the hair. Rose-coloured things should never be put in absolute contact with rosy complexions, because the latter are sure to lose by the comparison; they should be separated either by white lace, or blonde, or, in case of a cap or bonnet, by locks of hair. Pale green is exceedingly becoming to pale complexions, because it makes them appear more rosy than they really are; but it is unfavourable to ruddy complexions, because it increases their redness. A violet-coloured dress will make a fair complexion look green, and will make a yellowish complexion look orange. Violet should never be used for fair complexions except of a very deep tint, so as to make a strong contrast. Orange is bad for all complexions. Dead white, such as calico, is good for clear complexions, but very disadvantageous for those that are the contrary. On the other hand, the white of muslin, or tulle, in folds, or *en ruche*, is more advantageous. Our fair countrywomen who have been in Paris, and know what the colours of French stuffs are, will appreciate these hints: those who know only the coarse gaudy tints of English dyers will find them nearly incomprehensible. M. Chevreul should open a special course of lectures for ladies!

The Royal Academy of Sciences of Turin has elected among its foreign members M. Elie de Beaumont, the great geologist, and M. de Blainville, the eminent professor of zoology. The fourth volume of the "Monumenta Historiæ Patriæ, edita jussu Regis Caroli Alberti," being the first of the series including the chronicles of Savoy, has just been presented to the King of Sardinia. Its contents are as follows:—"1. Anciennes Chroniques de Savoie. 2. Chronique du Comte Rouge (Amédée VII.), par Persinet Dupin. 3. Chronica Latina Sabaudie. 4. Chronica Abbatie Altecumbæ. 5. Chronica Juvenalis de Aquino. 6. Epitome Historica Dominici Maccanesi. 7. Mémoires sur la Vie de Charles IX., Duke de Savoie (Carlo III.), par Pierre Lambert, Seigneur de la Croix. 8. Discorso Historico di Giuseppe Cambiano, Signore di Ruffia."

We see that Nos. XXIII. to XXVI. of the "Museo Scientifico, Letterario, Artistico," of Turin, are just out. The plates are numerous and good, and the articles more than usually interesting.

M. Marochetti, the eminent sculptor who produced the fine equestrian statue of Emmanuel Philibert, of Savoy, in 1838, has been intrusted with the execution of the monument of Napoleon to be erected in the Church of the Invalides. It is to be in the style of that of Francis I. at St. Denis, and is to be surmounted by an equestrian statue of the emperor.—The Minister of the Interior has purchased M. Simart's spirited statue of Orestes, exhibited in this year's *salon*.

Sciarrada.

Il primier dai Lidi coi  
Sempre spira e spirerà;  
Balbettar l'altro fra noi  
Dal fanciul si sentirà,  
Tosto appena i primi accenti  
L'asua lingua snoderà.  
Sceso già dall'Emisfero  
Tutto assorto in sua beltà,  
Glove un dì rapito l'intero,  
Il cui nome ancor si dà  
All'eterna, ov' ebber culla  
Arti, studj, e civiltà.

Answer to the last:—Cor-petto.

#### ASHMOLEAN SOCIETY.

JUNE 22. The President in the chair.—Professor Daubeny communicated a paper 'On Self-registering Meteorological Instruments,' and urged their employment wherever it was practicable; and pointed out a method for registering the height of the barometer and thermometer during the day, by means of a slip of photogenic paper, progressing at a certain rate by means of clock-work, and placed behind the instruments. He then alluded to a plan of his own for registering the intensity of the solar light, and likewise to similar inventions of a less imperfect description, proposed by Mr. Jordan, of Falmouth, and by Sir John Herschel. He next proceeded to point out the construction of Oler's Self-registering Rain-gauge and Anemometer. The professor concluded by expressing his wish that these instruments should be procured for the Ashmolean Society, and set up somewhere within the precincts of the University, where they could be consulted at pleasure, and daily registers kept of the results obtained. The President, Dr. Buckland, then proposed that a subscription should be set on foot for their purchase, which was agreed to.—The Keeper of the Museum gave the following description of book-worms:—"There are various species of book-worms, the one probably most familiar to most of my hearers is the allegorical book-worm, man. He is a very voracious devourer, generally in proportion to the extent of his intellect, but he is pantophagous. Those animals I am about to describe to you confine their appetites to the food found in the various materials of books, whether paper, leather, or parchment. They spare neither sacred nor profane literature—neither the most pious, the most eloquent, the most learned labours of our most zealous divines, the most sublime musings of our poets, nor the most elaborate investigations of our lawyers and critics, the theories and practice of our medical, nor the minute researches of our scientific, philosophers. All these have in their turns fallen a sacrifice to the depredations of the *Anobium*, the *Dermestes*, and *Lepisma*, *Squamatum*, *Argentum*, *Cauda triplici*. 'How dear are our books,' says an eminent naturalist, 'our cabinets of the various productions of nature, and their collections of prints and other works of art and science to the learned, the scientific, and the virtuous! Even these precious treasures have their insect enemies. The larvæ of *Crambus pinguinalis*, whose ravages in another quarter I have noticed before, will establish itself upon the binding of a book, and spinning a robe which it covers with its own excrement, will do to it no little injury. A mite (*Acarus eruditus*) eats the paste that fastens the paper over the edges of the binding, and so loosens it. I have also observed the caterpillar of another little moth, of which I have not ascertained the species, that takes its station in damp old books, between the leaves, and there commits great ravages; and many a black-letter rarity, which in these days of bibliomania would have been valued at its weight in gold, has been snatched by these destroyers from the hands of book-collectors. The little wood-boring beetles, *Anobiumperlinax*, and *Striatum*, also attack books, and will even bore through several volumes.' Mr. Peignot mentions an instance where, in a public library but little frequented, twenty-seven folio volumes were perforated in a straight line by the same insect (probably one of these species) in such a manner that, in passing a cord through the perfect round hole made by it, these twenty-seven volumes could

be raised at once. The animals last mentioned also destroyed prints and drawings, whether framed or preserved in a portfolio. The *Termes pulsatorius*, which is accused of frightening the timid at night, as the death-watch, is also accused of being a depredator of books."—*Oxford Herald*.

#### BOTANICAL SOCIETY.

FRIDAY, July 3.—Mr. D. Cooper, Curator, in the chair.—Exhibited specimens of *Buxbaumia aphylla*, found on the Sedlam Hills in Scotland; of *Lapsana communis* with glandular hairs, and of *Malva sylvestris* with incurved petals, by Mr. Gardiner, jun., Mr. Buckland, and Dr. Bossey. Also, living specimens of *Iris foetidissima*, *Ophrys apifera*, *Gymnadenia conopsea*, *Lilium maritagon*, *Aspidium dilatatum*, and other interesting plants, sent from the neighbourhood of Reigate, Surrey, to the Society, by Mr. H. M. Holman.—A very extensive donation of books, seeds, and specimens of woods, was presented by Dr. Macreight, V.P.; and an interesting paper by Dr. Bossey, 'On the Elementary Tissues of Plants,' was read.—Adjourned.

#### LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, July 2.—The Rev. J. W. Whitmore, M.A. of Trinity College, Dublin, was admitted *ad eundem*.

The following degrees were conferred:—

Doctor in Medicine.—H. B. Leeson, Trinity College, Grand Compounder.

Doctor in Music.—G. J. Elvey, New College, Organist of St. George's, Windsor, and Private Organist to her Majesty.

Masters of Arts.—W. L. Collins, Scholar, Rev. S. G. Dudley, Jesus College; Rev. F. G. Hopwood, Christ Church; M. Harrison, Scholar of Corpus Christi College; Rev. W. Grem, Rev. J. M. Barlow, Worcester College; Rev. F. M. R. Barker, Oriel College; Rev. J. W. Horsley, University College.

Bachelors of Arts.—A. Clifton, Lincoln College; J. F. Austen, F. P. Phillips, Christ Church; E. Bather, Postmaster of Merton College; T. Goff, Oriel College; H. J. Drury, Worcester College.

The following subjects are proposed for the Chancellor's prizes, for the ensuing year, viz.:—

For Latin Verse—"Vie per Angliam ferro stratae."

For an English Essay—"The Pleasures and Advantages of Literary Pursuits, compared with those which arise from the Excitement of Political Life."

For a Latin Essay—"De Etruscorum cultu, legibus, et moribus, eorumque apud Romanos vestigia."

Sir Roger Newdigate's Prize: for the best composition in English verse, not limited to fifty lines, by any Undergraduate who, on the day above specified, shall not have exceeded four years from the time of his matriculation—"The Sandwich Islands."

Theological Prize—"The Study of Ecclesiastical History." The subject here stated was appointed by the judges for an English essay.—*Oxford Herald*.

#### GRECIAN ANTIQUITIES.

Athens, June 18.

The Antiquarian Society of Athens ("H i, 'Aθῆναις Ἀρχαιολογικὴ Ἑταιρεία") held its third anniversary general meeting on the evening of the 31st May (12th June), by brilliant moonlight, under the columns of the Parthenon, on the Acropolis, which was attended by nearly all the members at present at Athens. The Councillor of State, M. Rizo, who is the President of the Society, addressed the members in a very able and eloquent speech, congratulating the Society on the increasing interest which it continues to create, both in Greece and in Europe, and the support it derives from distinguished antiquarians in England, France, Germany, and Italy; and stating that the present King of Denmark, the Crown Prince of Prussia, and the Archduke Charles of Austria, had enrolled themselves among the list of members. The Secretary, M. Rangavee, then read the report of the proceedings of the Society during the past year, and an account of the receipts and expenditure; from which it appeared that the operations had been principally directed to the opening and clearing

away the rubbish round the Tower of the Winds and the beautiful Portico of the Agora, the restoring and finishing the Temple of un-winged Victory (*Nikē Apteros*), in front of the Propylea, and clearing out the Grotto on the Pnyx, known as the prison of Socrates; and that it is the intention of the Committee, during the present year, to bring to Athens the colossal marble lion at Chersonæa, and place it upon a suitable pedestal in some commanding situation. A ballot was then taken for the election of the officers and members of the Committee. A great concourse of people were drawn by curiosity and the brilliancy of the moonlight night to witness the proceedings, amongst whom were a great many ladies. This Society is one of great merit, and well deserving the support and co-operation of the British public, as its sole object is to restore and preserve the noble remains of antiquity, which abound every where in this classic soil, and make excavations for further discoveries. Several of their labours have been crowned with success, and many beautiful statues, and valuable and interesting inscriptions, have been brought to light by their exertions, and placed in the National Museum in the Temple of Theseus.

#### FINE ARTS.

##### NEW PUBLICATIONS.

*Views in Rome.* Engraved by W. B. Cooke.

*Accompanied by Literary Sketches.* By H. Noel Humphreys, Esq. 4to. pp. 216. Tilt.

As these fine representations of the ancient mistress of the world appeared in numbers, we repeatedly paid our well-deserved tribute to their merits. To an accurate picture of the striking and picturesque features of Rome they add all the effects which taste and skill in the arts are competent to produce. We have now, therefore, only to express our approbation of the entire manner in which the literary portion of the work has been contributed by Mr. Humphreys. It enters into the feeling of the artist and the interest of the subject. Thus the opening:—

"In our earliest thirst for travel, Italy is the magnetic point to which our longings are most powerfully directed. Paris, with its theatres, its turmoil of society, its endless gaieties—the Rhine, with its teeming legend and castellated crags, its 'cloud-capp'd towers' and lofty battlements—Switzerland, with its lakes and its glaciers—and even Spain, with its romance and its Alhambra, cannot be fully appreciated till the craving for Italy has been satiated. I have often watched the tourist in Switzerland, admiring with but a hurried and compulsory admiration—an admiration wrested from him by the majesty of nature; quite different to the spontaneous devotion paid to the first clod of Italian soil, which he is so anxious to reach that he cannot enjoy the present. During a visit to the Mount St. Bernard, I witnessed a peculiar display of this feeling. A party of young Englishmen, properly wrought upon by the sublimity of the scene, and discussing with becoming admiration the stupendous exploit of the modern Hannibal, of which it is the arena, forgot in a moment all the legitimate associations of the spot, upon being told that the Italian frontier was scarce a hundred yards distant: they rushed forward, passed the boundary, and were in—Italy; and though knee-deep in snow, and surrounded by the dense grey atmosphere that frequently shrouds the summits of the Alps, imagined a moderated temperature and purer air—it was

actually Italy; and there is a magic in the name alone, that, to an ardent imagination, fills out the dream of genial climate and cerulean skies. They had not resolution to return to the Valais, and prosecute their route by the Simplon, as originally intended, but hurried at once to the land of promise, by the difficult and much less beautiful pass of St. Bernard."

The approach to Rome is described with equal enthusiasm. In the city itself, he writes:—

"I thought of all I had read in my youth upon the absorbing subject of Italy; of the lasting impression that her sunny skies, her history, her fall, the glorious wrecks of her greatness, mouldering in their picturesque beauty, her subsequent revival of art and learning, and her struggles for liberty, had left upon the minds of all who have visited her, from the early pilgrims of the dark periods of the fifth and sixth centuries to the youthful wanderings of Milton, and from that time even to the visits of the fashionable tourists of our day. The aspect of Rome never failed to awe, even after her power had fallen; when martial myriads 'no longer mustered in her gates,' and her name conveyed no terror to the approaching barbarian. Like a stupendous wreck upon the waters, dismantled, disabled, and deserted by her crew, around which the savage in his canoe, issuing from the reedy creek of his wild island, paddles wondering and over-awed as he floats beneath her towering hull, the work of arts beyond his comprehension, lay conquered Rome, at the feet of the savage hordes who had subdued her. Similar impressions were produced upon the minds of the early pilgrims from the savage north, when the stupendous fabrics of Rome appeared before them—they seemed above the power of man to create or destroy, as they stood, still perfect in all their great features, towering over the ruins of lesser works. Above all others, the Coliseum aroused such feelings, seeming in its ponderous circle to stamp the city with the signet of eternity; and, under the influence of its stupendous magnificence, superstitious awe dictated the prophetic proverb recorded by the Venerable Bede, in the eighth century—'While the Coliseum stands, Rome shall stand; when the Coliseum falls, Rome will fall; when Rome falls, the world will fall;' and this proverb, quoted by Gibbon in his 'Decline and Fall,' is still remembered, and repeated by the populace of Rome. Even after the barbarian had defiled her sacred places, and dispersed her treasures, a spell remained about the name of Rome; the influence of which has been felt and acknowledged by all capable of expressing the feeling, from the early pilgrims to the days of Petrarch, and even through the withering philosophy and scepticism of the eighteenth century to the days of Byron."

As a variety, we copy a portion of a lively description of the carnival; and with it recommend the volume to every lover of the arts, and to their graceful combination with literature.

"Again, by the aid of friendly powder, the precise time of transition from the summer hues of brown or auburn, or the deeper jet, to the withering tinges of autumn, would be concealed; and even a head decorated with the condemned tint of the carrot would answer the purpose of the powder-puff, as well as one of raven black. This was exemplified in the Corso, for the *confetti* prepared for the occasion, of which thousands of pounds' weight were exposed for sale in all the adjacent streets, would have been found, upon analysis, to contain about ninety-nine parts of chalk or flour

to one of sugar; so that the powdering was soon most complete; and, after the respective toilets were once fairly equalised, the few long faces gradually widened, and all was animation and gaiety,—*ce n'est que le premier pas qui coûte.* The sharpest engagements took place under a balcony occupied by Prince C—, with some English companions, and a party of French; they had an immense supply of *confetti*, and each time a carriage of friends passed beneath (this strife only takes place amongst *connoissances*) they were greeted with a few pounds of sugar-plumbs, emptied from a large soup-plate, or projected from a tin engine somewhat resembling a huge extinguisher; whilst the sharpest discharge was from a kind of sling, formed of a piece of whalebone about eighteen inches in length, to the end of which is affixed a sort of spoon, or rather ladle, which being drawn back until the handle is nearly double, and suddenly let go, discharges the missiles with almost the force and precision of Perkins's gun. One luckless carriage was stopped by a halt in the line, just under this tremendous battery, and the facility and effect with which the first discharge was administered, only gave *gusto* to the continuation of the attack, which soon half filled the carriage. Retaliation was vain, for the nearest carriages and even pedestrians, seeing such a decisive attack upon the devoted vehicle (actuated by the same principle upon which a lame dog is worried by all the species), joined in the attack, and all parties were nearly lost in the cloud of smoke-like dust. Such a scene can scarcely be described; the men of the party attempted to return the salute—while those of the gentler sex, giving up all hopes of victory, crouched beneath their parasols from the pitiless hail-storm; and the coachman, dressed as a woman, displayed to the utmost advantage a most magnificent pair of legs in his endeavours to raise the head of the carriage. 'The mirth and fun grew fast and furious'—when the line again moving forward, extricated the sufferers from their perilous situation; and all was for a moment comparatively calm. The traces of the combat were, however, still visible: a dense white cloud might be observed slowly rising towards the third story of the Palazzo G—, and a desperate gang of little urchins were scrambling among the horrid feet, collecting the *confetti*, which were now ankle-deep, to sell again at half-price to the less aristocratic combatants who fought on foot, who, not having the means, like the balconists and carriagists, of carrying large quantities of ammunition, were compelled ever and anon to renew their stock of projectiles from the nearest source. Bang! bang! the signal cannon! This is to clear the street for the horse-race. Every carriage is now obliged to take the first turning out of the Corso, to the right or left; by which arrangement the whole length of the street is cleared in an incredibly short time, without confusion. And all being clear, the maskers and mummers take full possession; and in the interval previous to the race, all bow to the now imperial sway of the sceptre of Momus.

'Love making, laughing, morris dancing, mumming, Guitars, and every other sort of strumming,' are now the order of the day."

*Heath's Waverley Gallery. Part IV.* Tilt. THIS part of the principal female characters in Scott's "Romances" presents us with "The Unknown," from "Red Gauntlet;" "Catherine, the Fair Maid of Perth," and "Queen Berengeria," from "The Talisman;" the latter the most poetical of the three, though

Catherine is a pretty Scotch lassie, doing the humane in conveying food to the prisoner.

*A Series of Picturesque Views on the River Quorra* ("the Niger of the ancients") is announced by Captain William Allen, R.N., and we are glad to see under the patronage of H.R.H. Prince Albert; whose auspices will, we trust, be propitious, not only to this work, but to the expedition to the same quarter now preparing to sail. We have pleasure in adding that all these preparations are proceeding in the best possible manner, and Captains Trotter and Allen will probably leave us on their interesting enterprise soon after the middle of October.

#### *Holy Family by Coreggio.*

A FINE picture ascribed to Coreggio, consisting of two female and a child's head, is now exhibiting in Pall Mall, by Mr. Atherstone. It is a wonderfully pure and transparent piece of colouring, and the flesh tints are of rare tone and beauty. We have before now confessed our want of sufficient acquaintance with the productions of this master to deliver an opinion upon the authenticity of works attributed to him; but we can truly state that this is a charming and uncommon specimen of art. It is stated to be from a convent near Parma; and the group is portion of a large and well-known picture by Coreggio. A splendid fresco female head, also said to be by him, is in the same room, and is a very striking and attractive performance.

#### *E. T. James, D.D. Bishop of Calcutta.*

THIS delicately executed and expressive portrait is engraved by E. Finden, from an electrotype plate on Mr. Smee's plan, by E. Palmer; and is a beautiful specimen of this new process in art.

#### BIOGRAPHY.

##### LUCIEN BUONAPARTE.

THIS celebrated man died at Viterbo on the 27th ult., aged sixty-two. When the history of the time in which he lived comes to be sifted by posterity, he will unquestionably appear as one of not the least extraordinary of the extraordinary family of which he was a member. His courage and talent had much influence in exalting it to its giddy and prodigious height; and he remained, true to his principles, the rejector of proffered crowns. But his later devotion to literature (a distinguishing and most honourable characteristic in most of the race to which he belonged) is the feature which entitles him to this brief record in our Journal. His epic poem of "Charlemagne," and his work on the magnificent Etruscan vases discovered on his Italian domains, besides other literary productions, prove his claim to this tribute; and we render it willingly to an individual whose high intellectual attainments, and great simplicity of manners, rendered him an object of interest and admiration to all who ever enjoyed the gratification of meeting him in social or private life.

#### SKETCHES.

##### ICELAND AND LAPLAND.

WE had not room in our Number 1201 for the illustration of the Lappish portion of Mr. Dillon's work, which, agreeably to our promise, we now insert to complete our review.

"At last (he says), after an indefinite number of hours, we reached our halting-place. Winding a watch, or even taking

it out of the pocket, was quite out of the question, as the hands became frosted by exposure without gloves, even for a few minutes. Considering, however, that we had travelled seventy miles since morning, it could not be less than eleven or twelve o'clock when we heard the welcome news that we had finished our day's work. I was dozing at the time, keeping just sufficiently awake to balance the sledge, when we came to a standstill, and the wapphus released my deer; as the thong which I steered him by was twisted round my wrist, I was soon thoroughly awakened by his half hauling me out of the pulka, inside which I was laced by cross ropes. I naturally looked round to survey my resting-place for the night, but was some time before I discovered a sort of circular trench, within which the ground rose to an apex, perhaps three feet higher than the surrounding plain. By this time the wapphus having disengaged, my companion offered to conduct us to the 'gamma,' as it is called in Finmark. In the side of the trench, upon closer examination, there appeared a doorway about four feet high, which led into a vestibule of corresponding grandeur. When I had crept into this place, for the accumulation of snow inside made it impossible to enter in a more dignified manner, I found a little door which opened into a room about twelve feet square. The roof sloped up to an opening in the middle, which served to let the smoke out. Four upright posts with crossbars occupied the centre, where the fire was to be made, and the kettles to be hung. The traveller must, indeed, have been fastidious who could have been dissatisfied with these arrangements, or thought that the state had not done enough in providing this refuge for strangers. At the time, I recollect I was most thankful, and felt delighted at finding that we had picked up several companions who intended to halt at the same place. These were Laplanders and Finlanders, journeying, like us, to the coast, and accoutred in the same way. There lay a good deal of snow about the floor of the room, but there was little danger of its thawing, as, notwithstanding a large fire which was speedily made with brushwood collected in the neighbourhood, the thermometer shewed more than fifteen degrees of cold of Réaumur. When the company had sat down round the blaze, the kettles were brought out, and frozen reindeer's meat chopped up, and partially thawed. A very substantial meal of meat and broth was soon prepared, and several long pulls at the brandy-bottles took off the chill from the party. They soon became very talkative, and the only thing I had to regret was not being able to enter into conversation with them. I had brought a bottle of port wine from Tornea, and it had hitherto escaped unburnt amid the perils of all kinds that had threatened it. The moment was now arrived when its strengthening powers were to be put to the test, but, alas! it cracked just as I had succeeded in thawing it, and my companions and I were obliged to substitute snow-water, out of a greasy wooden ladle that had served for baling out the wapphus' broth. As for the reindeer, they were left to pick up the moss in the neighbourhood, their owners only taking the precaution to leave the halter and trace on them. Beyond this they gave no more trouble than if they had not existed, and the guides returned to the 'gamma,' where they did ample justice to their fare. It has been remarked, that the Greenlanders can devour an extraordinary quantity of food at a sitting, and their bre-

thren, the Laplanders, who resemble them in other respects, probably do not yield the palm to them in this. Before drinking they took the precaution of warming, or at least taking the chill off, their corn brandy in a saucepan—a practice which I have since observed to be much in use among them. The addition of pipes and tobacco put them into particularly good-humour, and doubtless much wit was bandied about, for laughing became the order of the day. Now that the cravings of hunger were appeased, and each had wedged in his body so as to have a sight of the fire, we became sensible of one inconvenience which, however grave, had as yet been unnoticed. The fresh fuel collected in the neighbourhood caused a most awful smoke. Every part of the gamma was filled with it, and it was impossible to sit in comfort; as for standing up, it was out of the question, as there was immediate danger of being stifled. Once or twice I was obliged to rush out into the open air, but was soon driven back to the hut by the bitterness of the cold. Nothing, however, could inconvenience the natives, and gradually the labours of the day, aided by their potations, sent them to sleep. The group was curious, and I never saw a heap of human bodies jumbled together in such glorious confusion. As the area of the gamma, unoccupied by the embers, was far from sufficient for the number who required a place, many lay with others piled on their legs, and with their faces within a very few inches of the fire. My companion shewed no inclination to talk, and finding by the snoring that every one had betaken himself to sleep, I followed the example of the rest, and soon forgot the troubles of the day. When I awoke the fire was out, and the remains of last night's supper frozen hard in the kettles. My limbs were stiff with cold, and ached from the uncomfortable position in which I had passed the night. By the light that came through the hole in the roof, I perceived the day must have been far advanced, and some indications of preparing for departure were apparent. The interior of the room was now visible, and the light did not improve my ideas of the comforts of the place. The whole of the ground round the fire was covered with snow, and icicles hung from the roof. Some time was spent in settling who should go in search of the cattle, as no one seemed inclined to leave their breakfast. At last the youngest of the party fastened on his long snow-shoes, and in a few minutes after was scarcely visible, sliding in the distance. The weather had hitherto been fine, though intensely cold, and we were lucky in being able to leave the gamma so soon. Travellers are often detained there three or four days by a sudden fall of snow, or a violent head-wind. Not unfrequently, when overtaken by a storm, they are unable to reach this or any other refuge, and are obliged to bury themselves in the snow, and remain thus imbedded till the return of moderate weather. The pulkas are piled on the weather side, and with this slight shelter they contrive to defend themselves against the cold, and wait in comparative warmth till they can proceed."

## ORIGINAL PORTRAY.

## MERIT TO MANCHESTER.

Merit to Manchester!—hath she not been  
Nurse of the Sciences?—Friend of true worth?—  
Mother of Commerce, whose greatness is seen  
Like an outburst of glory pervading the earth!—  
Merit to Manchester!—still with her Trade,  
Instruction—Intelligence—Charity, rose!—  
What She is,—her own sons have with Industry made,  
And may she ne'er lose what to labour she owes!

Merit to Manchester!—is it mean skill  
To have founded the seat of Mechanical Art?—  
To have fed the wide ocean with fleets at her will,  
Whilst the universe made her rich bosom its mart.

Merit to Manchester!—loved is her name  
Wherever invention and Talent appear;—  
She has sons who, like Dalton, unite her to Fame;  
Who, like Lavoisier, mark her to Genius dear!

Merit to Manchester!—though not of those  
Who may add a new leaf to the wreath of thy crown;—  
Still my heart with a prayer for thy happiness glows;  
Still may God thrive thee ever, my dear Native Town!

C. SWAIN.

## THE DRAMA.

THERE is little in the drama to require our notice this week. At the Haymarket, Mr. Kean has essayed the overpowering task of *Macbeth*; and at the Prince's Theatre, Gluck's *Iphigenia in Tauris* has been produced with considerable effect. There is much in the music to merit the public attention.

On Thursday, the enterprise of the English Opera company brought forward another new melodrama called *The Corsair*, which was performed with great spirit, and received with loud applause by a well-filled house.

## VARIETIES.

*Antarctic Expedition.*—Captain Mapleton, already well known for his persevering exploration in the Southern Seas, has sailed from the river, in the Eliza Scott schooner, for the Antarctic. He will do little if he does not do more than is related in Mons. D'Urville's obscure and turgid report of his wonderful discoveries—of nothing, that we can detect, which was undiscovered before!

*Copyright.*—We regret to observe from the parliamentary reports, that Mr. Serjeant Talfourd's Copyright Bill has been again shelved till another session. One might think that instead of an act of justice to every author, and of general encouragement to the depressed literature of England, it were a Bill of Wrongs, to be thus treated by the legislature!

*Ancient MSS.*—A catalogue of the valuable collection of manuscripts in the Cathedral library of Chartres has just been printed, under the direction of M. Chasles, and other literati of that town, for private distribution among literary men. We understand that this excellent example is about to be followed at Boulogne, and other local libraries on the Continent.

*French Literature.*—M. Durand continues his lectures with increasing attraction. On Wednesday last (having the preceding Wednesday delivered an excellent discourse on Italian literature, &c.) he came more directly to that of his native country, which he illustrated in an ample and most interesting manner.

*Musio.*—M. C. Dhuy, well known to the foreign musical world as a very fine guitarist, and whose theoretical works in musical literature are highly esteemed, has, we understand, visited London not only as a musical professor, but in order to publish a dictionary of music, and instructions for the instrument on which his practice is so beautiful. He has already played in some private assemblies, where his skill, taste, and execution, have been greatly admired.

*Dr. Weissenborn*, of Weimar, lately presented to the Zoological Society two specimens (male and female) of the black variety of the common hamster (*Cricetus vulgaris*), and a head, preserved so as to display the cheek-pouches of that animal. The doctor states that he possesses a common pigeon, just fledged, in

which no vestiges of the organs of vision can be traced. The orbits are tolerably well developed, and lined with a sort of half-mucous membrane, and therefore destitute of feathers. He had never heard of a similar defect in any animal; and in one where the incubation is extra-uterine, it appears doubly wonderful or anomalous. The bird is quite healthy, and presents in its habits several curious anomalies, which may be traced to its monstrosity.

*Squib.*—A production of *Letters (Belles Lettres*, if you please) can nowhere be so appropriately bestowed as in the *Literary Gazette*: so here is the first bulletin touching

The China War.

The war that now our trade with China fetters,  
Is nothing but a mere affair of letters!—  
A question 'tis of O—P—M and T:  
The Chinese War-Commissioner is E,  
And we are going to bombard them by C,  
Because their notions and our own don't G,  
And they won't let our Smuggling Clippers B.

## LITERARY NOVELTIES.

Dr. Royle has completed his beautiful and scientific "Illustrations of the Botany and other Branches of the Natural History of the Himalayan Mountains, and of the Flora of Cashmere," in two imperial quarto volumes.

## LIST OF NEW BOOKS.

Illustrations of the Hand-Books of Travellers, 12s.—Ten Illustrations of the Landscape in Devonshire, with Notes by Dr. Buckland, 11. 1s.—An Essay on the Prostate Gland, by R. A. Stafford, 5s.—Transactions of the Provincial Medical and Surgical Association, Vol. VIII. 8vo. 11. 11s. 6d.—Sandron Hall; or, the Days of Queen Anne, by the Hon. Granville Berkeley, M.P. 3 vols. 11. 11s. 6d.—The Servant Girl in London, 18mo. sewed, 1s.—The Grecian Drama, by the Rev. J. R. Darley, 8vo. 12s.—Hardy's Strangers' Guide through Dublin, 2s. 6d.—Mitchell's Life of Wallenstein, 2d edition, post 8vo. 10s. 6d.—The Palace of Architecture; a Romance of Art and History, by George Wightwick, imperial 8vo. 21. 12s. 6d.; India proofs, in Morocco, 51. 5s.—The History of England, by Julia Corner, 12mo. 3s. 6d.—Meddings with the Muse, by J. A. Simons, post 8vo. 7s.—Retrospect of Medicine and Surgery, 1840, by W. Braithwaite, Vol. I. 4s. 6d.—The Album of Love, 12mo. 5s.—Washington, by M. Guisot, translated by H. Reeve, post 8vo. 7s. 6d.—Lyell's Principles of Geology, 6th edition, 3 vols. 12mo. 11. 4s.—The Rod and the Gun, by J. Wilson, &c. post 8vo. 10s. 6d.—Jamieson's Scottish Dictionary, Part II. 4to. 17s. 6d.—The Christian Year, 19th edition, 8vo. 10s. 6d.—Bampton Lectures, by Edward Hawkins, D.D. 8vo. 10s. 6d.—The Life of Luther, royal 8vo. sewed, 3s.—The Oriental Portfolio, Part II. 11. 1s.—Memoirs of Dr. Henry Bathurst, Bishop of Norwich, 2 vols. 8vo. new edition, 12s.—New and Complete Concordance on the Basis of Cruden, post 8vo. 9s.—Rough Notes of the Campaign in Sindh, &c. by Major J. Outram, 12mo. 9s.—The Quindroom; or, St. Michael's Day, 3 vols. post 8vo. 11. 11s. 6d.—Comments from the Text of Blackstone, by J. B. Bayly, royal 8vo. 11. 8s.—Jones's Collection of Twenty-one Sermons in Welsh, 8vo. 4s.—The Life of Richard Davies in Welsh, 12mo. 11. 6d.—The Orations of Demosthenes, translated with Notes, by Owen Flintoff, 8vo. 3s.

## METEOROLOGICAL JOURNAL, 1840.

July.	Thermometer.	Barometer.
Thursday ... 2	From 57 to 66	29.78 to 29.60
Friday ... 3	... 55 to 65	29.58 to 29.49
Saturday ... 4	... 51 to 70	29.79 to 29.82
Sunday ... 5	... 55 to 69	29.65 to 29.61
Monday ... 6	... 50 to 67	29.72 to 29.48
Tuesday ... 7	... 48 to 64	29.50 to 29.67
Wednesday 8		

Prevailing wind, south-west.

On the 2d, cloudy, with frequent showers of rain during the day; the 3d, afternoon clear, otherwise cloudy, rain at times; the 4th, evening overcast, with rain, otherwise clear; the 5th, morning cloudy, rain fell about 1 p.m., otherwise clear; the 6th, generally clear, except the evening, when rain fell; the 7th, evening overcast, a shower of rain about half-past 3 p.m., otherwise clear; the 8th, morning clear, afternoon and evening cloudy, with frequent showers of rain.

Rain fallen, .21 of an Inch.

Edmonton.

CHARLES HENRY ADAMS.

## TO CORRESPONDENTS.

The "Gent" with the American Book for Subscription, and the immediate call afterwards with the volume at the small price of a Sovereign, the same being worth about ten shillings, is, we believe, the most assiduous and persevering of "Go-ahead" chaps. He has levied his contributions very numerously and successfully.

Dedicated, by permission, to Her Majesty.  
**THE LAND-BIRDS COMPLETE.**  
 In 3 large vols. 8vo. with 575 Woodcuts and 22 Plates of Digestive Organs, &c. price 2l. 16s. in cloth.  
**MAGGILLIVRAY'S HISTORY OF BRITISH BIRDS**, comprising detailed Descriptions of the Form and Structure, and a full Account of the Habits of the entire Series of Land-Birds.

Just published,  
**Vol. III. containing the Birds of Prey**, Shrikes, Swallows, Woodpeckers, Cuckoos, Crows, &c. and a systematic Index to the Three Volumes, with Ninety-five Woodcuts and Nine Plates (700 pp.), price 24s.  
 Vols. I. and II. are also sold on British ornithological science with which I am acquainted.—*J. J. Audubon.*  
 London: Scott, Webster, and Geary, Charterhouse Square.

In 8vo. price 12s. boards,  
**PROPEDIA PROPHETICA**; a View of the Use and Design of the Old Testament, followed by Two Dissertations—I. On the Causes of the rapid Propagation of the Gospel among the Heathens. II. On the Credibility of the Facts related in the New Testament.  
 By **WILLIAM ROWE LYALL, M.A.**  
 Archdeacon of Colchester; Co-Dean of Bocking; and Rector of Rivingtons, St. Paul's Churchyard, and Waterloo Place.

In small 8vo. price 7s. 6d. in boards, the 2d edition of  
**ECCLESIASTES ANGLICANUS**; being a Treatise on Preaching, as adapted to a Church of England Congregation. Contained in a Series of Letters to a Young Clergyman.  
 By the Rev. W. GRESLEY, M.A.  
 Late Student of Christ Church.  
 Rivingtons, St. Paul's Churchyard, and Waterloo Place.

In 12mo. price 4s. 6d. cloth and lettered, the 2d edition of  
**THE GOSPELS OF ST. MATTHEW AND ST. MARK** Paraphrased and put into Question and Answer, on a new Plan; intended for the Use of Parents and Teachers.  
 Dedicated, by permission, to the late Lord Bishop of Cloyne, By the Rev. JOHN OW COTTER, M.A.  
 Rector of Tanishannon, and formerly Chaplain to the Female Orphan House, Dublin.  
 Rivingtons, St. Paul's Churchyard, and Waterloo Place.

Price 6s. the Fifty-fifth Number of  
**THE BRITISH CRITIC AND QUARTERLY THEOLOGICAL REVIEW.**  
 Reviews:—The Courts and the Kirk—Bentham's Utilitarian Moral Philosophy—Decanal Chapters and Clerical Meetings—Persecution of Protestants in Germany—Diocesan Training Schools—Papism and Almsgiving—Notices of New Theological Works.  
 Rivingtons, St. Paul's Churchyard, and Waterloo Place.

**SUITABLE FOR PRESENTS AND REWARDS FOR YOUNG PEOPLE.**  
 Crown 8vo. neat in cloth, price 4s. embellished with a Frontispiece.  
**RECOLLECTIONS OF CHILDHOOD**;  
 or, Sally the Faithful Nurse.  
 By **PRIMOGENITA**.  
 One of the Contributors to "The Penny Sunday Reader."  
 London: Hatchard; Rivingtons; and L. and G. Searcy. Bristol: Light and Ridler; and Chilcott. Canterbury: H. Ward.

**NEW VOLUME OF DR. ARNOLD'S ROMAN HISTORY.**  
 8vo. price 18s.  
**HISTORY OF ROME.**  
 By **THOMAS ARNOLD, D.D.**  
 Head Master of Rugby School; late Fellow of Oriel College, Oxford; and Member of the Archaeological Society of Rome.  
 Vol. II. from the Danish Invasion to the End of the First Punic War.  
 Also, a 2d edition of Vol. I. price 16s.  
 B. Follens; J. M. Richardson; J. Behn; J. Bain; S. Hodgson; R. Hodgson; and L. A. Lewis, London; J. H. Parker, Oxford; and J. and J. Deighton, Cambridge.

**BLACKWOOD'S EDINBURGH MAGAZINE**, No. CCXCVII. July 1840.  
 Contents:—  
 I. Syria.—II. Cicula Pasha; a Chapter of Turkish History.—III. Carmen Triumphale.—IV. On Personification. Part 2.—V. The Tobias Correspondence. No. I.—VI. The History of Europe.—VII. Circassia.—VIII. Ten Thousand a-Year. Part 9.—IX. Germany. By Charles Julius Weber.—X. Lord Stanley's Irish Registration Bill.  
 William Blackwood and Sons, Edinburgh; and T. Cadell, London.

**ALISON'S EUROPE, VOL. VIII.**  
 Price 15s. in boards,  
**THE HISTORY OF EUROPE**; from the Commencement of the French Revolution to the Restoration of the Bourbons.  
 By **ARCHIBALD ALISON, F.R.S.E.**  
 Volume Eighth, bringing down the History to the Opening of the War in Germany, in 1812.  
 Volume Ninth will be published in November. This Volume completes the Work, bringing down the History to the Battle of Waterloo; and also containing a Copious Index to the whole.

Lately published,  
 A 3d edition of the First and Second Volumes, price 17. 10s.  
 A 3d edition of the Third and Fourth Volumes, price 17. 10s.  
 The Fifth, Sixth, and Seventh Volumes may be had separately, price 15s. each.  
 William Blackwood and Sons, Edinburgh; and T. Cadell, London.

THE NEW NOVEL,

## THE BANKER LORD,

In 3 vols. post 8vo.

Is now Ready at all the Libraries.

"Originality of character and situation are the distinguishing features of this novel, and they are both displayed in a very masterly manner. To exhibit the thoughtlessness and imprudence which so frequently mark the conduct of the Irish in regard to business transactions, and at the same time to show that temperament is more in fault than inclination, appears to be the motive which has led to the delineation of the character of the Banker Lord; while, to point out the defects arising from an ill-regulated education, where the object of it possesses a generous heart, a lofty imagination, and a disposition capable of the noblest acts, is equally the author's purpose in portraying that of his beautiful daughter. In the development of the story, illustrative of their fortunes, strong contrasts have been introduced, which materially heighten the general effect; and great powers of description have been brought to bear upon the many peculiarities of life in the sister island, which add much to the interest of the work. The tendencies towards good and evil, both so strongly marked in the Irish character, are shown with considerable force and effect; and a skilful combination of love, hatred, jealousy, passion, worldliness, and extravagance, operated upon alternately by serious and humorous agency, carry us with excited feelings through the volumes, and leave us both gratified and surprised when we close them."—*Morning Herald.*

Henry Colburn, Publisher, 13 Great Marlborough Street.

"Perhaps the most interesting, the most beautiful, and the cheapest series yet offered to the public."—*Athenaeum.*

## THE NATURALIST'S LIBRARY.

Conducted by Sir W. JARDINE, Bart. F.R.S.E.

Just published,

**DOGS.** By Lieut.-Col. HAMILTON SMITH.

Illustrated by 38 coloured Plates, with Portrait and Memoir of D'Azara, being the 28th Volume of the Series. In this Volume is given a complete Synopsis of the Canids, including the genera Canis, Hyena, and Proteles; forming with the First Volume, lately published, the best Natural History of the Dog extant.

List of Volumes already published, any of which may be had, done up as separate Works, price 6s. each:—

**ORNITHOLOGY.**

- 1 and 2. **HUMMING BIRDS.** 68 coloured Plates, with Portraits and Memoirs of Linnaeus and Pennant.
3. **PEACOCKS, PHEASANTS, TURKEYS, &c.** 22 coloured Plates, with Portrait and Memoir of Aristotle.
4. **BIRDS OF THE GAME KIND.** 32 coloured Plates, with Portrait and Memoir of Sir T. N. Raffles.
5. **PIGEONS.** 32 coloured Plates, with Portrait and Memoir of Piley.
6. **PARROTS.** 32 coloured Plates, with Portrait and Memoir of Bewick.
- 7 and 8. **BIRDS OF WESTERN AFRICA.** 68 coloured Plates, with Portraits and Memoirs of Bruce and Le Vaillant.
- 9 and 11. **BIRDS OF GREAT BRITAIN and Ireland.** 68 coloured Plates, with Portraits and Memoirs of Sir Robert Sibbald and Smellie.
10. **FLY-CATCHERS**; their Natural Arrangement and Relations. 22 coloured Plates, with Portraits and Memoir of Baron Hübner.

**ENTOMOLOGY.**

1. **INTRODUCTION**, not yet published.
2. **BETTERIES**: Coleopterous Insects. 32 coloured Plates, with Portrait and Memoir of Ray.
3. **BRITISH BUTTERFLIES.** 36 coloured Plates, with Portrait and Memoir of Werner.
4. **BRITISH MOTHS, SPINXES, &c.** 32 coloured Plates, with Portrait and Memoir of Madame Merlan.
5. **FOREIGN BUTTERFLIES.** 33 coloured Plates, with Portrait and Memoir of Lamarck.
6. **HONEY-BEE.** 32 coloured Plates, with Portrait and Memoir of Huber.

"The pictorial illustrations, in respect both to form and colouring, are perfection."—*Atlantic Journal*, May 1840.

S. Highley, 32 Fleet Street, London; W. H. Lizars, Edinburgh; W. Curry and Co. Dublin.

**MAMMALIA.**

1. **MONKEYS.** 32 coloured Plates, with Portrait and Memoir of Buffon.
2. **LIONS, TIGERS, &c.** 38 coloured Plates, with Portrait and Memoir of Cuvier.
3. **RUMINATING ANIMALS**, containing Deer, Antelopes, Camels, &c. 35 coloured Plates, with Portrait and Memoir of Camper.
4. **RUMINATING ANIMALS**, containing Goats, Sheep, Wild and Domestic Cattle, &c. 33 coloured Plates, with Portrait and Memoir of John Hunter.
5. **THICK-SKINNED QUADRUPEDS (Pachydermata)**, consisting of Elephants, Rhinoceroses, Tapirs, &c. 21 coloured Plates, with Portrait and Memoir of Sir Hans Sloane.
6. **WHALES.** 32 coloured Plates, with Portrait and Memoir of Lacede.
7. **BRITISH QUADRUPEDS.** 36 coloured Plates, with Portrait and Memoir of Ulysses Aldrovand.
8. **AMPHIBIOUS CARNIVORA**, including the Walrus and Seal, and the Herbivorous Cetacea, Mermaids, &c. 23 coloured Plates, with Portrait and Memoir of François Peron.
- 9 and 10. **DOGS.** 70 coloured Plates, with Portraits and Memoirs of Don Felix D'Azara and Pallas.

**ICHTHYOLOGY.**

1. **FISHES OF THE PERCH GENUS, &c.** 32 coloured Plates, with Portrait and Memoir of Sir Joseph Banks.
2. **FISHES, Vol. II.** particularly their Structure and Economical Use, &c. 23 coloured Plates, with Portrait and Memoir of Salviani.

With Seven Plates, price 18s. the  
**PHILOSOPHICAL TRANSACTIONS**  
 of the ROYAL SOCIETY OF LONDON for 1840. Part I. containing Papers by Sir John F. W. Herschel, Bart. V.P.R.S.; Michael Faraday, Esq. D.C.L. F.R.S.; Major Edward Sabine, V.P.R.S.; the Rev. B. Powell, M.A. F.R.S.; the Rev. W. Whewell, B.D. F.R.S.; Sir Francis Palgrave, F.R.S.; Thomas Maclear, Esq. F.R.S.; John P. Gassiot, Esq. F.R.S.; William Hopkins, Esq. M.A. F.R.S.; and John F. Daniell, Esq. F.R.S.

Other Works published by the Royal Society, viz.:—  
 Indexes to the Philosophical Transactions, from Vol. I. to Vol. CXX. Three Parts, etc. Part I. 21s.; Part II. 12s.; and Part III. 5s.  
 Abstracts of the Proceedings of the Royal Society. 3 vols. 8vo. at 7s. 6d. per Volume.  
 Catalogue of the Scientific Books in the Royal Society's Library. 1 vol. 8vo. 15s.

Old Catalogue of all the Books in the Library of the Royal Society in 1825. 4to. 2s. 6d.

Six Discourses delivered at the Anniversary Meeting of the Royal Society, on the award of the Royal and Copley Medals. By Sir Humphry Davy, Bart. President. 4to. 3s.

Report of the Committee of Physics, including Meteorology, on the Objects of Scientific Inquiry in those Sciences. 4vo. 1s.

Forms for Contemporaneous Meteorological Observations. Single Sets, 1s.; or 25 Sets, 90s. (Set Two large Sheets.)

Sold by R. and J. E. Taylor, Red Lion Court, Fleet Street.

In 8vo. price 1s.

**CHRISTIANITY THE GUARDIAN OF HUMAN LIFE**; a Sermon, preached in the Church of St. Nicholas, Deptford, on Trinity Monday, June 15, 1840, before the Corporation of Trinity House.

By **HENRY MELVILLE, B.D.**  
 Minister of Camden Chapel, Camberwell; and Chaplain to the Tower of London; formerly Fellow and Tutor of St. Peter's College, Cambridge.  
 J. G. F., and J. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 2 vols. post 8vo.

**THE ARABS IN SPAIN**; a Historical Narrative.  
 E. Churton, Library, 96 Holles Street.

In 8vo. cloth, price 7s.

**MEDDLINGS WITH THE MUSE.**  
 By **J. A. SIMONS.**  
 Simpkin, Marshall, and Co. Stationers' Hall Court.

Printed by **HANNAH PAGE MOYER**, of Brook Green, Hammersmith, and **GEORGE BARCLAY**, of Number 2 Pall Mall Place, Pall Mall, both in the County of Middlesex, Printers, at their Printing Office, Number 28 Castle Street, Leicester Square, in the said County; and published by **WILLIAM AKMIGER SCRIPPS**, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, July 11th, 1840.

### REVIEWS OF NEW BOOKS.

*The Rod and the Gun; being Two Treatises on Angling and Shooting.* By James Wilson, F.R.S.E., and by the Author of "The Oakleigh Shooting Code." 12mo. pp. 439. Edinburgh, 1840. Black.

HE that spares "the Rod" spoils the child, may be as true as any say of ancient wisdom; but yet, even in the severest hours of our criticism, we could as willingly commit felony as dream of acting otherwise than spare the rod in a case like the present.

The "fly leaf" is enough to secure us. It exhibits five fly-hooks of various designations, but especially one dubbed "the Professor," at which we were constrained to rise, and so got hooked without the possibility of escape. It would be of no use to run, and leap, and flounder, and sulk, and lash the surrounding element: "the Professor" has us, and we may as well let him draw us along and land us as pleasantly as the thing can be done. And yet he is a remorseless monster; worse than the "quaint, old, cruel coxcomb," Izaak Walton, whose *gentle-ness* has been thus described as *barb-arity* by those human worms who do not understand and love the art piscatorial. How could the Professor (we mean the man, not the hook)—how could the Professor send such a volume as this to London? Revelling in his descriptions of nature with all the joyousness and luxuriance of Nature herself, had he no feeling for us of Cockneyshire, who cannot taste the delights on which he expatiates with so much gusto? Why torment such of us as have remembrances with raking up the memories of by-gone times; and filling with vain and vague imaginings such others as can form no idea of crystal stream, or loch, or mountain, except from his descriptions? The sons of business and children of confinement in the metropolis, whose whole existence is one course of CAPITAL PUNISHMENT,—though abolished for shooting at queens and other offences hitherto deemed worthy of the death,—have they not enough to annoy and distress them without being so vividly assailed with contrasts of leisure, and free roaming, and sports independent of all circumstances, and regardless of all weathers? Fie, oh fie! 'Mr. Professor, for the selfishness of such principles, and the recklessness in wounding such feelings! What can we do? where seek solace? It is barely possible to steal a few hours to the Thames or docks; and thence, by patient attention to a piece of painted cork, which appears to be moved by your sighs, or something below, be enabled to declare upon your honour that you think you had two nibbles and a bite; or, by some happy concurrence, you may have a friend who has a pond, and who munificently offers you a day's fishing therein; and then, with ground-baiting, punting, and persevering, you may actually catch and drag to light three or four very small perch, or very small dace. As for tench or carp, you must be content with the assurance that several have been put in, and since been seen there. Or, happier still, you may absolutely contrive to be allowed to cast your line into what is termed in the home counties a running stream, where there are real

trouts to be seen in the clear water, and which trouts see you with less satisfaction than you see them, but with the mutual understanding that neither party is to increase the intimacy, or fancy any chance of coming to any closer connexion. And it is to persons thus situated that the Professor addresses his glowing pictures of sunrises and sunsets; balmy airs and ever-green landscapes; and dashing waters where abundance reigns, and the trout and salmon all but jump into the creels of the enraptured angler!

And, as if to add to the grievance, his style and playfulness would, under other circumstances, be altogether enchanting:—

"The prevailing attributes and domestic economy of fishes may be described as exactly the reverse of those of birds. These gay and airy creatures possess the power of surveying distinctly, at a glance, an immeasurable extent of horizon; their acute perception of sound appreciates all intonations, and their glad voices are exquisitely skilled in their production. Though their bills are hard, and their bodies closely covered by down and feathers, they are by no means deficient in the sense of touch. They enjoy all the delights of conjugal and parental affection, and perform their incumbent duties with devotedness and courage. They cherish and defend their offspring, and will sometimes even die in that defence; and of all the wonderful labours of instinctive art, none is so beautiful as the formation of their mossy dwellings. With what deep and continuous affection does the female brood over her cherished treasures!—how unwearied is the gallant male in his tender assiduities, and with what melodious love does he outpour that rich and varied song by which he seeks to soothe her sedentary task!—

'Over his own sweet voice the stock-dove broods!'

But close at hand, on that umbrageous bough, sits the fond partner of his joys and sorrows; so that it is in no spirit of selfish, solitary musing that he ever murmurs by woodland stream or shadow-haunted brook, 'a music sweeter than their own.' The slender-winged and glossy-plumaged swallow, which skims the verdure of the new-mown meadow, or dimples the surface of the breezeless lake,—the ponderous, but giant-pinioned eagle, winging his way from distant isles, o'er waters glittering with redundant life,—the proud, far-sighted falcon, which, launching from some hoar cliff, or lightning-scathed peak,

'Doth daily with the wind, and scorn the sun,'

—the wild and fearful lapwing, with graceful crest and dark dilated eye, are each and all enslaved for many a long-enduring season by this love of offspring, and toil in its support from dewy morning until latest eve. But it is far otherwise with our voiceless dwellers in the deep, who exhibit but few attachments, are conversant with no interchanging language, and cherish no warm affections. Constructing no dwelling, they merely shelter themselves from danger among the cavernous rocks of the ocean, in the silent depths of lakes, or beneath the murky shade of the overhanging banks of rivers; and the cravings of hunger seem alone

to exercise a frequent or influential action over their monotonous movements. We must not, however, conceive that the life of fishes is not one of enjoyment, for we know that the Great Creator 'careth for all His creatures;' and it ought, perhaps, rather to be said that we cannot appreciate the nature of their feelings, than that they are in any way fore-doomed to a negation of pleasure. Assuredly, however, the hand of Nature has been most prodigal in bestowing on their external aspect every variety of adornment. Their special forms are infinite, their proportions often most elegant, their colours lively and diversified—and nothing seems wanting, either in their shape or structure, to excite the unfeigned admiration of mankind. Indeed, it almost appears as if this prodigality of beauty was intended solely for such an end. The brightness of metallic splendour—the sparkling brilliancy of precious gems—the milder effulgence of the hues of flowers, all combine to signalise fishes as among the most beautiful objects of creation. When newly withdrawn from their native element, or still gliding submerged amid its liquid coolness, their colours fixed or iridescent, are seen mingling in spots, or bands, or broader flashes,—always elegant and symmetrical, sometimes richly contrasted, sometimes gradually softened into each other, and in all cases harmonising with a chaste fulness of effect, which Titian and Rubens might envy but could never equal. For what reason, then, it has been asked, has all this adornment been so lavishly bestowed on creatures which can scarcely perceive each other amid the dim perpetual twilight of the deep? Shakespeare has already said, that there are 'more things in heaven and earth than are dreamt of in our philosophy;' and we fear it is no answer to the foregoing question to add, that the same observation applies with even greater truth to the 'waters beneath the earth.'

In details our author is not less admirable, and it is truly surprising how many flashes of genius he has thrown into his subject. The practical is so gilded and embellished by the sparkling and beautiful, that the work is quite as charming for the general reader as it is instructive to the fisher. We select an instance or two:—

"As expert angling never was and never will be successfully taught by rule, but is almost entirely the result of assiduous and long-continued practice, we purpose being very brief in our general disquisition on the subject. We shall commence by stating our belief that fly-fishing, by far the most elegant and interesting branch of the art, ought not to be regarded exclusively as an art of imitation. It no doubt depends on deception, which usually proceeds on the principle of one thing being successfully substituted in the likeness of another; but Bacon's distinctive definitions of simulation and dissimulation place the subject in a truer light. As simulation consists in the adoption or affectation of what is not, while dissimulation consists in the careful concealment of what really is—the one being a positive, the other rather a negative act—so the great object of the fly-fisher is to dissimu-

late in such a manner as to prevent his expected prey from detecting the artificial nature of his lure, without troubling himself by a vain effort to simulate or assume, with his fly, the appearance of any individual or specific form of insect life. There is, in truth, little or no connexion between the art of angling and the science of entomology; and, therefore, the success of the angler, in by far the greater proportion of cases, does not depend on the resemblance which subsists between his artificial fly and the natural insect. This statement is, no doubt, greatly at variance with the expressed principles of all who have deemed fishing worthy of consideration, from the days of Isaiah and Theocritus, to those of Carrol and Bainbridge. But we are not the less decidedly of opinion, that in nine instances out of ten the fish seizes upon an artificial fly as upon an insect or moving creature *sui generis*, and not on account of its exact and successful resemblance to any accustomed and familiar object."

Our own observation induces us to acquiesce to the utmost of these remarks: we have caught many a fish when our hook was torn to tatters, and nothing resembling a fly remained, except it were the loose hackle hanging by the shaft. But, again:—

"The great secret in fly-fishing, after a person has acquired the art of throwing a long and a light line, is perseverance,—that is, constant and continuous exertion. Fish are whimsical creatures, even when the angler, with all appliances and means to boot, is placed apparently under the most favourable circumstances. Let him, however, commence his operations with flies, which, upon general principles, he knows to be good,—for example, a water-mouse body, and dark wing; hare-ear, and moorfowl wing; red hackle, and teal or mallard wing. It may frequently happen that for an hour, or even two hours, he will kill nothing; but then it will as often happen, that for another couple of hours, he will pull them ashore with a most pleasing celerity.

"Awake but one, and lo, what myriads rise!"

Next comes a pause of another hour or more, during which little or nothing is obtained, so that if the intermediate period is frittered away on green banks, eating biscuits, success is doubtful or impossible. We believe that the appetites and motions of the finny tribes are regulated and directed by certain (to us) almost imperceptible changes in the state of the atmosphere, with which, as they do not proceed from any determinate or ascertained principles of meteorological science, it is not easy for the angler to become acquainted; and therefore the only method to remedy the *désagrément* thus arising, is to fish without ceasing so long as he remains by the 'pure element of waters.' The art of angling, if worthily followed, and with an observant eye, will probably one day or other be the means of throwing considerable light on the science of electricity, at present one of the most obscure, though at the same time the most important and pervading, of all the subjects of physical learning. Professor Forbes has promised us to do something in this line, and will give in his 'Report' the first time the British Association holds its meeting at Aberfoyle or Rowardennan."

No doubt he will, whenever the meeting indicated by the Professor's joke takes place at either of these sweet seclusions. In a similar vein is the following note, after giving a good account of Mr. Shaw's experiments on the spawning, &c. of salmon:—

"In the present summary of the great parr question, we avail ourselves, in the first place, of our own exquisite knowledge of the subject; secondly, of Mr. Shaw's earlier papers published in the 'Edinburgh New Philosophical Journal' (July, 1836—January, 1838), and of his more recent communication on the same subject, crowned by the Keith Testimonial ('Transactions of the Royal Society of Edinburgh,' vol. xiv. part ii.); and thirdly, of a learned and lucid exposition of the case in a late Number (ccxciv.) of 'Blackwood's Edinburgh Magazine,' very generally attributed to Lord John Russell."

We must quote another bit of humour; on the pregnant causes of bookmaking:—

"But why prolong our precepts,—for what knowledge can a man acquire of this or any other glorious art by reading? Or what will book-learning avail when one comes not only to 'speak o' loupin' ow'r a linn,' but actually to do it, or lose his fish, which has already done it;—and see! on either side how thick a screen of rocks and tangled brushwood! Where be your rules, O angler! cut and dry, when a man begins to change his mind, and wishes to change his direction, 'mid some delusive ford of unknown depth, when giant trees are vehemently stooping,—the howling winds above,—beneath, 'the hell of waters?' Can a Christian learn to skate by the fire-side? Can a sailor be taught to leap a five-barred gate on board of ship, or avoid saddle-sickness when on actual horse-back, by studying either 'Riding made Easy,' or a treatise on tanning? Can a landsman escape sea-sickness when at sea, by acquiring a knowledge of Clerk's 'Naval Tactics' on shore? Can an ass become a philosopher by reading an Encyclopædia both by day and night? Can a philosopher cease to be an ass by not reading it either by night or day? Never! never! never! In sad and simple truth, the writing of a book on almost any subject is what J. G. L. would not inelegantly call 'humbug.' Then why do you write one yourself? inquires our gentle and considerate reader. Just for one or other of the many reasons which induced yourself to do so—for we know you write—retorts the author. Pleasure, pride, poverty, happiness, hunger, anger, disdain, contempt, candour, fear, love, hatred, hope, knowledge, malice, misery, dissimulation, philanthropy, philoprogenitiveness, conceit, arrogance, ignorance,—these are a few of the many fertile sources from which the things called books,—'of the making of which there is no end,'—are ever flowing. We say it in shame, sorrow, and contrition,—we never yet met a man who had not written one or more books, and do not expect ever to meet with so perfect a human being on this side the grave. We once for a few brief hours in early life deemed that we had done so, even on this 'dim spot' which men call earth. We were returning, about twenty years ago, by the Carlisle mail from Clovenford, after a toilsome but delightful and productive day in Tweed's crystalline streams. The evening had closed with many a murky frown, the night was dark and boisterous, and in the course of our homeward journey we could scarcely distinguish by the 'ineffectual fire' of Ostler's lantern, as it flickered on the trickling rain-bespattered windows, a bulky fellow-traveller, who kindly talked to us alternately of trouts and trees, and withal in such a racy natural way, that we rubbed our hands with joy, and cried internally *eureka*, here is a man who never wrote a book. Our impression on this point grew stronger and stronger each succeeding mile, and when at

length reaching 'our own romantic town' we sprung out beneath the glare of lamps upon the glistening pavement, quite delighted by the novelty of our previous situation, and holding up our arm to aid the descent of our unlettered friend—Reader, it was Sir Walter Scott!"

We must now, however, close these pages with two other piscatorial observations:—

"Whatever may be the physical temperature of fishes, there is nothing in their history more remarkable than their power of enduring the extremes of heat and cold. The breeding powers of that brilliant species of Chinese carp, commonly called the gold-fish, are greatly accelerated by water kept at a constant temperature of 80° Fahr.; yet Mr. Hoete, a naturalist of Vienna, has seen that species recover freely after being frozen up in ice. Fishes exist naturally in various baths and thermal springs, of which the temperature ranges from 113 to 120 degrees; and Humboldt and Bonpland were witness in South America to fishes being thrown up alive, and apparently in good health, from the bottom of a volcano, along with water and heated vapour, which raised the thermometer to 210°, that is, to within two degrees of the boiling point. Contrast this with Dr. Richardson's account of the species of carp common in the fur countries of North America.

Even the sense of sight may be supposed to find but feeble exercise in those profounder depths where so many of the inhabitants of ocean dwell, although the largeness of the visual organs in many species probably in some measure makes amends for this deficiency of light. But even in those species the eye cannot change its direction; still less can it alter its focus, so as to accommodate the vision to a varying distance, for the iris neither dilates nor contracts, and no teaching will induce the pupil to do otherwise than remain for ever the same in all degrees of light. No tear moistens the glazed surface, no eyelid clears or protects it—but then we rejoice to think of the perpetuity of Tweed's crystalline flow, how constant and continuous are its gentle murmurs, how free from those dry specks which men call 'dust,' and how gently she laves the never-fevered temples of her (tee) total inhabitants. Yet the eyes of fishes, though often in themselves beautiful exceedingly, do still, from their want of variableness, exhibit but a dull and feeble representative of that expressive organ, so full of life and animation in the higher tribes."

*The Palace of Architecture: a Romance of Art and History.* By George Wightwick, Architect. Illustrated with a Coloured Map, and 211 Plates and Woodcuts. Plates Engraved by Le Keux, Brooke, Cates, Humphreys, and Winkles. The Woodcuts by Brooke. Imperial 8vo. pp. 209. London, 1840. Fraser. THIS very handsome, in these days we may say this unique, volume, is truly a work *sui generis*; original alike in conception and execution. Enamoured of the beauties of architecture, the author does not seem to feel, as in the case of Beauties of another kind, that they are *passé* when aged, or liable to be disparaged when examined in detail, feature after feature. On the contrary, increase of appetite has grown upon him with the contemplation of his object; and he breaks out in glowing and enthusiastic terms the moment he approaches the general description, nor becoming cold and staled as he descends into the more minute parts.

His design is, as we have remarked, original, and especially so as applied to a scientific subject, where the technicalities of art wage war

with the imaginative faculties. In a closed labyrinth, he has secretly erected examples of the various great styles of building which have flourished from the most ancient times; and, after stimulating us with a stirring introduction, throws open the gates, and reveals the mysteries to the public gaze. He then proceeds through the separate divisions; and, in language redolent of poetry, and yet so clear and correct in its references to the science that one might build by its instructions, goes through the architecture of nations, from remote antiquity to the present day. The *opening* literally runs thus:—

"At length, the rude oaken gate, which had been closed for so long a period against the curious without, shook under the blows of destruction lustily dealt from within! The hour of a wondrous development was at hand, and anxious numbers had assembled to witness it. The wooden barrier tottered—separated—fell—and disappeared! revealing, to the astonished gaze of the expectants, a portal of strangely compounded architecture—a masonic riddle—teeming with multiplied significance, and exhibiting a kind of monstrous combination, in which discordant features sought to harmonise themselves within a general outline of forced uniformity. The dark rock of India, the granite of Egypt, the marble of Greece, and the freestone of Italy and Middle Europe, were here commingled; each compartment being as distinct in form as in material, and the whole, in its conjunction, wearing an aspect which, at the same time, challenged admiration and defied criticism."

It is, with all its *bizarrerie*, a very picturesque gate, and might adorn any park or palace entrance in Europe.

The owner of this strange architectural labyrinth addresses the outsiders, and says:—

"My friends," says he, "enter now who will. I have hitherto excluded you, to avoid the importunities of partially informed advisers and the perplexities of contradictory counsel,—the premature judgment of those who cannot, during the progress of a work, anticipate its effect on completion; and the meddling of the short-sighted, who will not perceive that the sovereign dominion of the whole demands an universal tribute, which may necessarily qualify the perfection of each individual part. You will see within this domain an epitome of the architectural world. Mine is, as it were, a palace of congress, wherein you will be successively addressed by humble (but, it is hoped, characteristic) representatives of the great families of design in ancient and Mahomedan India, China, Egypt, Greece, ancient and modern Italy, Turkey, Moorish Spain, and Christian Europe. In two or three of the buildings inviting your later notice, you will observe an arrangement and modified style, illustrating my particular notions of the manner in which modern feelings, customs, and requirements, may be most efficiently met; but in all other examples, I seek chiefly to inform you of the principle and sentiment which govern and distinguish the several varieties of architecture represented."

This speech fully explains the nature of the publication, which, we need only add, is richly embellished with engravings and woodcuts, and must have cost a large sum of money in its production.

Passing through the palace gate, we visit *seriatim* the ten compartments (the eleventh and last being a plan of the writer's own domestic abiding place), and are taught the circumstances and forms of the Indian, Hindu,

Chinese, Burmese, Egyptian, Greek, Roman, Constantinian (transition), Norman Gothic, pointed Gothic, Moorish, Turkish, Persian, Mahomedan Indian, Italian (pointed), Palladian, Protestant Cathedral, Soanean, and several Anglo and other varieties. On viewing these, the author exclaims, in an ambitious tone—

"Can we possess more stable proofs of the piety and chivalry of old France, England, and Germany, than their sublime cathedrals and baronial halls? Can we seek more convincing testimony to the refined luxury of the Spanish Moor, than in the arcaded courts and magic chambers of the Alhambra? Or, is it necessary to look for more conclusive evidence of the influence exerted by the Mahomedan religion, than is manifested in the countless mosques and splendid mausoleums of Turkey, Arabia, and Hindostan? Thus, architecture either affords information where history is silent, or confirms the facts which history asserts. It promotes speculation and facilitates belief. It teems with the oracular inscriptions of entombed empires. Within its ruined temples yet live the echoes awakened in ages long passed. It symbolises the mighty impulses of emulative nations, imbued with sentiments of grandeur, durability, and beauty: commemorating, by the majesty and character of their edifices, the political strength and moral elevation those nations may have attained; and, more than all, it co-operates in manifesting the fulfilment of those sacred prophecies, in the deep truth of which is rooted the ever-thriving tree of Salvation. In no instance does architecture shew its importance so impressively as at Petra in Idumæa, where, in its most singular and romantic guise, it develops to the wondering present the mysteries of the prescient past, and speaks from the 'clefs of the rock,' and from 'the heights of the hill,' to the 'astonished one who goeth by.' Gorgeous temples, sculptured and excavated rocks, tombs, and theatres, remain to tell that this was the 'Edom' once recognised as the 'terrible,' 'the proud,' peopled with 'the wise and the understanding': that this is the 'Edom,' now 'small among nations,' and 'greatly despised,' wherein 'wisdom is no more,' and from which 'understanding is perished': that this is the Edom, once the populous and opulent abode of the descendants of Esau; now 'a desolation and a curse'—a habitation for dragons, and a court for owls: that this is, in fine, Edom—the theme of prophetic warning, the evidence of prophetic truth, the 'fallen' beneath Isaiah's curse! Since, then, it is the province of architecture to perpetuate a nation's character, and secure for it the estimate of ages yet to come—if not of nations yet unborn,—it behoves, that we insure its favour by unitedly rendering the homage of earnest sympathy, cultivated taste, and matured judgment. The value of its full appreciation is evident, when we observe the strength of 'local love,' and the desire ever felt by the citizen for the improvement and beauty of his native place or established residence. The numerous architectural abortions to be found in many a modern city, however detestable in themselves, are, nevertheless, testimonies to the existence of that spirit, and of those means, which, under the guidance of knowledge, would produce monuments worthy of pretension, instead of gewgaws manifesting pretension only. To the extent, therefore, of our material at least, let us exert ourselves in the task of reformation; bearing in mind that in every new work we seek: to express, not only the limited excellence of what now is,

but the anticipated virtue of a day not yet arrived."

The argument that architectural remains are symbolic of the character of the people who raised the edifices, is wrought out with poetic energy; and the nature of the whole design may be gathered from the following passage:—

"The error of architectural authors has been that of writing technical treatises for professional readers; or for those very few among the public who have, from some accidental circumstances of education or travel, acquired a love for architectural study. Even the writings of the amateur have been rather distinguished by critical connoisseurship than genuine feeling; and the consequence has been that the less-informed but more susceptible readers have declined to enter on a pursuit which seems to them to be little more than a course of mathematics. They have hitherto refused to believe that the sympathies, awakened by the perusal of a novel, can remain otherwise than asleep under the tedious infliction of a dry detail of architectural styles and proportions. Perhaps, among those who may honour us by perambulating our templed gardens, some may be found equally willing, and more competent, to carry on the work which it has been our effort to commence. They may agree with us in thinking that architecture (and, indeed, art in general) should be adopted by our schools and colleges, as an essential in the education of every lady and gentleman. The mere act of acquiring a knowledge of its elementary principles would involve, at least, a beneficial exercise of the youthful memory and observation. In riper years, the philosophy and poetry of the art would become the subjects of willing attention. At our universities, professorships would be established, and a general knowledge of the temple-architecture of the world enforced by examination. If the plays of Sophocles and Euripides are standard subjects in college education, why not the works of Ictinus and Phidias, which are equally exponents of the Greek mind? If the mathematics are imperative at Cambridge, why not combine with them the geometrical principles of design? If the reasoning faculties are exercised by the one, are not those of the imagination chastened by the other? And now we would, finally, address a concluding question to our fair countrywomen. Can they do better than give some of their leisure to an art so essentially decorative as that of architecture? Themselves the chief ornaments of the mansion,—should they not have a kindred feeling for that mansion's beauty? The needle becomes not the female hand more than the pencil: nor is the music of harmonising forms and proportions less suited to their delicate comprehensions than the melody of dulcet sounds. To them, especially, we make our last appeal."

The first division is entered by the Indian Gate, which, like the Palace Gate, is a fine specimen of art, though in this instance it is not fanciful. Then follow many pagoda and other shapes, at once grotesque and elegant; as the Moorish are voluptuous and indicative of refined luxury. The other styles are treated in a similar manner; but we should be at a loss to afford an idea of them without the help of the beautiful engravings by which they are illustrated. We may, however, avail ourselves of some of the woodcuts, and first beg attention to one of Hindu:—

"Here is a specimen of a compound column, which for elegance of design is equal to any corresponding example Imperial Rome ever produced. Nor let it be supposed that it was

in design only that the ancient Hindoos occasionally exhibited their perfection; there are many instances in which they have shewn a power of execution, and an artistical feeling, which would not have disgraced Athens in its better days. Had the religion of the Indian been purer, and had the mass of his countrymen been enlightened, what might not have been accomplished by his energetic power and fanciful vigour?"

We are by and by told:—

"The Chinese Gate next seeks your favour—like pantomime after tragedy. We take China next to India, on account of its geographical proximity; and we regard it with some degree of affection, as the emporium of quaint crockery,—the parent-soil of the plant yielding that precious beverage 'which cheers, but not inebriates,' and which has enabled us to 'drink deep' without the sequent necessity of 'sermons and soda-water.' It is, in fact, impossible to be grave on the subject. Besides, the cavernous gloom of the Hindu locality has so chilled our hearts with dank feelings, and so agitated our minds with fearful sentiments, that we would fain sun ourselves in the butterfly paths of that singular people, who support their political standing among nations simply by an unvarying and philosophical resolve to stand still. Now, look at that gateway. Was there ever anything so unmistakably tea-garden? How is it that tea-men, and the proprietors of Bohemian bowers, have not long ago adopted this as 'the flag and sign' of their vocation? Ye rustic renters of suburban cottages, who have a gravelled walk in your garden, and in your cot a spare room with a sanded floor, how is it ye see not the superior convenience of that cross-board for publishing to the Sabbath-free apprentice the welcome tidings, 'Tea made, and water boiled?' Yet, again; look at that gateway. There is a refinement about it, a light-some prettiness, and a fitness, which should recommend it to the notice of the very first architect who may be commissioned to build a tea-mart, a real China warehouse, or a hall of congress for te-to-tality."

This may serve as another example of the author's manner; and our next extract will do as much for both his letterpress and illustrations:—

"We have possibly dwelt too minutely on the characteristics of a style, which has been already rendered familiar to us from our childhood by the common blue platter of the English dinner-table. How constantly have we, as the roast and the boiled have disappeared, still continued

to feed on the contemplation of the pagoda, charmingly overshadowed by that tree, so rich with its globular fruit—of the bridge, with the three little petticoated mandarins proceeding over it—of the zig-zag fence below—of the cabined boat in the mid distance—and of the two winged denizens of air, whose position has led to a yet unsettled inquiry as to whether they are amorously or inimically engaged! Do not spurn the 'piece of plate' presented to you, in testimony of the patience and attention with

which you have followed us thus far; for you know not of what value even so trifling an article may hereafter become. Think of Hericulanum and Pompeii. Volcanoes may 'spit fire;' Pekin may be buried in ashes; Canton may be entombed in lava; Nankin may 'topple' into the momentary gulf of an earthquake; but this plate of blue porcelain may yet be preserved to perpetuate an idea of the architecture of the Chinese, and to illustrate their impossible notions of vertical perspective."

The peculiarities of the different styles of architecture in different ages and countries, as well as their accordances, are well pointed out; and we see how Egypt and Greece lavished their art on porticoes, while others sought for glory in magnitude, elevation, rich ornament, or other quality of art. The following may serve to exemplify this:—

"Before you quit the precincts of Egyptian design, we beg to recall your remembrance to the hypothesis advanced in page 50, that the tent of original Egypt, in its union with the caves of Nubia or India, produced the temples of the Nile. We will next solicit your attention to a parallel case, in which the timber cabin of the early Greeks, united with the stone buildings of the Egyptians, produced the temples of the Athenian Acropolis. Here is the primitive hut. Imagine, then, a highly

Secondly, conceive an alliance between the form of building last delineated, and the Egyptian model next below:—

The Grecian would be too partial to his established outline to permit of any essential alteration; but he would at once adopt a more masculine scale of proportion; and combine with the grace of form the majesty of substance:—

susceptible people, rapidly advancing in power and refinement, having already so far improved upon their original cabin, as to have arrived at the subjoined result:—

Even as the marriage of the powerful Jupiter with the lovely Latona produced the heroic beauty of the Apollo, so sprung the substantial and elegant Doric from the union of the Achaean forest-maid with the giant of the Theban quarries. This brings you to the commencement of another chapter in your 'travel's history.'"

Also:—

"Corresponding with the importance of the cupola in Roman architecture is that of the

central tower and spire, as the most prominent external feature of Gothic pointed design. We lay stress on the word 'external,' because the tower does not, like the cupola, equally enhance the internal grandeur of the edifice. The purpose of the steeple is simply external. Its object is to arrest the eye, or, with its bells, to address the ear, of the devout Christian; to shew him where, and tell him when, he may offer up his prayers and praises amid the assemblage of the faithful. Those pinnacles, clustering round its base, may, indeed, be said to symbolise the congregation of penitents at the foot of Mercy; while the crockets on its ascending lines not inaptly typify the prayers that 'fly upward.' But the sentiment suggested by the spire is not only that of ascent. Its 'fine-less' point, connecting heaven and earth, not only figures the terminated course of man's supplication, but also the source of his hope: and, instead of regarding the spire as rising towards the throne of Mercy, we may apply it to the illustration of Divine forgiveness descending from that throne; as symbolising the ever-expanding capacity of God's love—of that 'unity' which, 'beginning in the prince' above, diffuseth itself over all below, like the 'precious ointment that ran down even unto the skirts of Aaron's clothing.' The sentiment, then, excited in our mind by the Gothic pointed cathedral, is that of a reciprocal motion between heaven and earth. The building is as a tree, thriving upwards, to encounter the fruitful showers and sunshine which descend from above. However perfect in its general outline or minutest decoration, it still seems to be growing. Each stage of the buttress looks like the shoot of the season; and each pinnacle and canopy appears to teem with buds of promise. The tracery of the windows, though beautifully adjusted to its limits, seems to anticipate a yet extended space, wherein it may assume new forms, and revel in more varied foliations. All may seem consummate in its degree; but the degree appears to be unlimited."

Universally speaking, the author says:—

"In truth, architecture,—as the personification of a power, which has never been propitiated, save by the universal and spontaneous devotion of great nations,—may be considered as dead. She lies, as it were, buried in a vast mausoleum, composed of fragments from the temples of Vishnu, Isis, Jupiter, Mahomet, and Christ; from which the dissipated states of partitioned empires have been since obtaining materials for sectarian churches, palaces, manufactories, and shops; sometimes mixing up the fragments, any how—just as they come to hand; sometimes critically assorting, and re-employing them, in a manner which at least deserves the praise of self-consistency. The distinction between the olden time and the modern age is typified in the forms of the one and the fashions of the other. Instead of examples of architecture, we have now architectural examples. Whatever religious impulses have been given to the modern world, there has been no new religion; and, whatever great and gorgeous work of architecture has been since accomplished, it has been 'great and gorgeous' only. It has served to exemplify the particular taste of a Bramante, a Palladio, or a Wren; but it has manifested the spirit of adoption rather than the power of design,—the skill which combines, more than the imagination which invents."

And with this we conclude our imperfect notice of a remarkable work, which will be one of the best modern ornaments we have seen of every good library, and particularly where a love of the arts and of architecture, embellished by genius, may be acceptable to the owner.

*Letters from the Old World.* By a Lady of New York. 2 vols. 12mo. New York, 1840. Harper and Brothers.

THIS is, indeed, the age of railroads and steam, when we have a lady writing her familiar travels over Egypt, Syria, the Holy Land, Greece, Asia Minor, and Turkey. They say the American men go "right a-head;" but, after this, may we not more aptly say so of the American women? There were many curious scenes for a female to see; but our fair traveller seems to have made light of them all, and to have roughed it like the best male creature that ever breathed.

Over such a route it would be absurd in us to attempt to play at Follow my Leader; and especially as we have traversed almost every corner of it in other company. But we owe it to our transatlantic author to give a specimen of her composition, which may serve to shew the manner in which she has performed her task:—

"When our party set out in the morning for the tombs by way of the valley, my husband went to pay a visit to a Greek who resides near the mountain opposite, and behind the Memnonium. The object of this visit was to negotiate with him for some antiquities which he was said to possess. The pasha had some time since forbidden, under very heavy penalties, any excavation or search for antiquities and treasures to be made in any part of his dominions, giving as a reason that the fellahs neglected the cultivation of the soil, and, consequently, curtailed his revenues. Another reason is alleged for this arbitrary order; it is, that several collections of Egyptian antiquities have been sold in England lately at enormous prices by private speculators. This has excited the old Shylock's cupidity, and he has forbidden the exportation from the country of the least article of *vertù*. The Greek's house was watched day and night by some of his arguses. We thought, however, that by a little backshew soporific, the guards might be put *hors du combat*. The old Greek was too much in fear of the bastinado to break the law, and the negotiation resulted much to our disappointment. Our principal object was to obtain one of the beautifully ornamented mummy-cases, with its Pharaoh or pontiff within it untouched. He shewed my husband a great number which he had obtained some time previous, but dared not part with one. All that could be obtained were the spoils of one beautiful female mummy, supposed to have been a person of great distinction. It was enclosed in three distinct coffins, one within the other; the innermost splendidly decorated with painting and gilding. We obtained the face which was carved on the inner case, and supposed to be an exact resemblance to the person enclosed when alive. The face is heavily gilded, and the gold perfectly fresh. From this same body we obtained the bead ornaments, idols, and a small basket of biscuit, in as perfect a state as when it came out of the oven three thousand years ago. Also a small wooden tablet covered with white linen, on which are painted certain hieroglyphics, said to be a funeral prayer by those learned in this mystic lore. Last of all was a large shawl or funeral pall, three yards long, by one and a half wide, with a fringe on each end. It is made of linen, and as perfect as when it came from the loom of Egypt or India. The Greek said that he had hidden in a tomb in the edge of the desert a great number of this superior order of mummies, from which we might select a couple for a small price, if we

could prevail upon some Arab to smuggle them on board in the night; but our time was then too short to enter upon this contraband speculation. From the point where the Greek's house was situated, my husband determined to scale the mountain wall, and meet us at the tombs of the kings, which he did, while the thermometer stood at one hundred and thirty. He found the altitude of this rocky barrier to be seven hundred and fifty feet at this its lowest point. Every night we lay alongside the shore at Thebes, we had messages sent us through our interpreter Giovanni, from some fellahs on shore, that, if the gentlemen would land at midnight, and meet them at a given point, they would sell them any quantity of *anticas*. But they must come alone with their money, and with no witness to betray them. These were hard terms; but, contrary to my entreaties, they determined to follow the old adage, 'nothing venture, nothing gain.' So one dark night, precisely at twelve, they put themselves under the charge of their swarthy guide, first arming themselves well with a double brace of pistols each and a dirk. After wading a mile through wheat-fields up to their chin, they came to the edge of the desert, and another half-mile brought them and their conductor to the outskirts of an Arab village. They entered a mud-walled court, which was built in front of a ledge of rock. At the further end was an excavation, which was the entrance to a chamber hewn in the rock. This was the habitation of the person to whom they had trusted themselves. All the furniture of this domicile was a mat or two on a raised platform of rock, two or three water-jars, and a cooking vessel, with a few rude agricultural instruments. The female part of the family were not 'at home,' and the equally loquacious dogs were carefully kept out of the way. Until now not a word had passed. They were here joined by some other being, who could not be distinguished in the dark. They groped their way down a few steps into another chamber, when, for the first time, a light was struck. This excavation in the rock proved to be a tomb of ancient times, but now perfectly black with smoke. They descended several other flights of steps to other chambers, and wound through an intricate passage until they came to a small, low apartment, about ten feet square, at least two hundred feet from the first entrance. Such had been the hurry and precipitancy of these movements, that the Frank gentlemen had no time to reflect upon the possibility of danger, or of being betrayed. When this thought rushed upon them, they were for retreating immediately, but this would have been unavailing without a guide. Here they said that Cromwell's caution came quite *à propos*, 'Trust in God, but keep your powder dry.' In this chamber the great negotiation for *anticas* was to be made. The guide made a sign to them to be seated on the side of an old sarcophagus. Soon after which came in another, and another dingy imp, each with something wrapped up in the skirt of his garment. The torch was stuck in the ground in the centre of the room, around which half a dozen squalid creatures seated themselves. One brought out a large stone image similar in form to the musical Memnon, very roughly cut, and evidently a counterfeit. Next a half bushel of *scarabæi*, as large as terrapins, also counterfeits, and made from the soft chalk rock, and then boiled in asphaltum, to give them the genuine mummy odour. These sharpers tried several more such shallow tricks, all of which failed.

They then produced a large bronze vessel, covered with hieroglyphics, a genuine antique; at the sight of which the antiquity-hunters from the New World could not restrain their emotion. Taking advantage of this, they demanded ten times its value, nor would they abate a piastre. Twenty dollars, or even fifty, were not too much for an old kettle in which Pharaoh's chief butler was wont to boil his rice. Their price was a hundred. Some very handsome, small, genuine *scarabæi* were produced, which, together with a half bushel of porcelain or blue-glazed earthen idols, some painted wooden ones, and a few other equally rare articles, were the final result of this great under-ground trade. And glad were the speculators to get off so cheap, and to be returned in safety to the boat. We made heavy purchases in the dark of papyri, most of which turned out to be bits of old Greek manuscript rolled up *secundum artem*, and sealed with asphaltum—regular cheats. We, however, procured several genuine and very curious ones. As soon as we had returned from our visit to the tombs of the kings we ordered all our men on board and drew off into the stream, ready for a fair start in the morning, after we had seen the sun rise once more on Luxor's obelisk and Carnac's towers."

Another extract will display the imaginative or excitable qualities which belong to the New World in treating of the Old:—

"During the time we were last in Cairo, we revisited many of the interesting objects within the city and in its environs. Among the latter, about twelve miles off, was the site of the ancient Heliopolis, the On of Scripture, where, long before the time of Moses, was a university, in which not only he, but many foreigners of distinction, were taught 'all the wisdom of the Egyptians.' The whole site of the city lies deep buried beneath the alluvial soil, deposited by the overflowings of the Nile. There is nothing now to be seen but the mounds that mark the line of wall which enclosed the area of the temple, the latter having entirely disappeared: its materials having been employed in the building of Alexandria. One single monumental stone marks the grave of the 'City of the Sun'; it is a solitary obelisk, with its tall spire still pointing towards the same meridian course of the God of Day which it indicated four thousand years ago. My visit to this now desolate spot awakened in me feelings which nothing I had yet seen in Egypt (or any other part of the world) had the power to arouse. What was it to me, individually, that I was within the very tomb of the great Sesostrius, or stood in the shade of the musical Memnon, where sat Cambyzes the Destroyer, while his myrmidons were doing their worst upon the beautiful city? Among the ruins of Memphis there is nothing left whereby to fix the identity of any particular spot, of which one might say with certainty, Here stood Moses and there Aaron; while there sat the Pharaoh, surrounded by his court, beholding those miracles in which we are directly interested, inasmuch as they emanated from that God whom we now worship, the God of Abraham, of Isaac, and of Jacob. But at Heliopolis, who can say that the great law-giver, previous to his divine mission, while the years of his youth were being spent at this great fountain of knowledge, did not many a time and oft recline against this same obelisk (one of the most ancient now existing in all the land of Egypt); and, while his tutor-priest of On was endeavouring to imbue his youthful mind with the subtle mysteries of his

craft, the young Israelite was inwardly true to the religion of his fathers, and looked forward to that day when he should confound the wisest of his masters, and be the deliverer of the chosen people of God? You may, perhaps, imagine the feelings with which I opened the books of the inspired writer while seated at the foot of this same obelisk; but it is impossible that you can realise the emotions which I felt on a spot so identified with the earliest history of our Sacred Scriptures. I read chapter after chapter, from that which records the arrival of the young Israelite slave in Egypt, to the exodus of the subsequent great nation of God's peculiar people. The heat of the mid-day sun compelled us to seek shelter in a grove near by. There, among orange and lemon-trees in full bearing, we seated ourselves beside a copious spring of living water (the only one we had seen in all Egypt), the stream from which served to irrigate the whole of this Egyptian paradise. It was doubtless this delightful fountain, and the groves which it nourished, that suggested the idea of this appropriate site for a secluded seat of learning. How often at this same fountain has Moses drunk? While the priests of Baal were engaged in their splendid mummeries at the shrine of their beastly god, is it not fair to presume that the chosen instrument of God's power and will often fled from the disgusting rites of the temple to the seclusion of this grove; shaking from his garments the profane incense of Saba, to inhale the delightful odours of this retired spot, while he bowed the knee to the only true God? I am no enthusiast, nor do I desire to be sceptical, even in matters so unimportant as these; for it is delightful to be able to believe, while wandering among such authentic localities, and to give way to feelings which all the sophistry of the sceptic has not the power to subdue, in those whose hearts are open to conviction. The juggling priestcraft of modern times seizes hold of every sacred locality, and invests it with a false glare of legendary lore, whereby to turn every trivial circumstance to its own immediate profit, and drive a lucrative bargain in relics among the ignorant and bigoted; thus putting weapons into the hands of the sceptic, and furnishing ample scope for the levity of the scoffer. Tradition from the earliest times says, that at this same fountain and in this grove reposed the Holy Family on their first arrival in Egypt. There is growing beside this copious spring a sycamore-tree of enormous size and extraordinary great age. The various monkish legends connected with this spot attribute to this tree the power of working miracles, and make it contemporary with the Holy Family. Independent of the certificate of the priesthood, it is not impossible, nor do I think it improbable, that this venerable relic of other ages was in existence at the birth of our Saviour. In many parts of the world there are trees which date far beyond that period; and, if the accounts of naturalists of known veracity are to be depended on, there are trees in various parts of the world more than double the age assigned to the great sycamore of Heliopolis. That Joseph and Mary, with the infant Jesus, reposed under this same tree, there is little room for doubt, and much to strengthen the belief, that the Holy Family did halt beside this fountain when they first came into Egypt. When the 'flight into Egypt' took place, it is not at all probable that Joseph went from Bethlehem down to the coast of Gaza, and from thence along the highroad to Pelusium; for, by so doing, he would be exposing himself

and his sacred charge to the vigilant police of Herod. It is most probable, that he went directly south to Hebron, and thence by the caravan route across the desert to Suez, and from there to Memphis. By this route he would soon be out of the reach of pursuit; and the first point which the thirsty and wayworn traveller from Suez attains in the cultivated parts of Egypt, is Heliopolis, with its refreshing fountain of living waters. It is not unlikely, therefore, that the venerable tradition is true, so far as it relates to the Holy Family having reposed beside the fountain, whether they came directly across the desert or by way of Pelusium; for the road from the latter place to Memphis skirted the edge of the desert, and On was one of the halting-places on the route. You may think that I have taken much unnecessary pains to establish the grounds for my belief in this tradition, and that it is of little moment whether or not the infant Saviour and his parents drank at this spring. To me, however, it is a source of much satisfaction to be able to believe, with some degree of reason, that I have quenched my thirst at the same fountain with the Saviour of mankind."

#### TOUR IN SCOTLAND.

[Concluded from our last.]

OUR author's testimony to, the warmth of Highland hospitality (even at Inns) afforded a pleasant break to our notice of this work; which we now proceed to close with matter not so acceptable to our feeling. Journeying south and homeward, he says:—

"I have seen Abbotsford, and I hardly know whether I do not regret that I have done so.

'And is this Yarrow? this the stream  
Of which my fancy cherished  
So faithfully a waking dream—  
An image that hath perished!'

It is not the Abbotsford of my imagination, nor of the author's description. Where is the 'romance in stone and lime?'—Dwindled to a mere story. In the exterior of the dwelling there is no congruity, no massive nobleness. In the interior there is no space for ghosts to play at hide-and-seek. If there be a few odd holes and corners, they appear rather like small remnants of a scanty cloth that has been cut into a thrifty garment, than the 'ample room and verge enough' of true antiquity. Nothing is on a great scale. Ichabod,—the glory is departed. In this, as in other instances, exaggerating describers have much to answer for. At their hands, one demands an account of one's demolished hopes and scattered visions. Could these haunt them in an army, it would be but just retribution. Had I heard nothing about Abbotsford, I might have been much pleased with it, as a mansion externally picturesque and internally comfortable; but now—Of itself there is something strange in the feeling with which one sees a place about which the imagination has long been busied. When that which was an airy nothing, a fluctuating possession of the mind, liable to change by the breath of a word or the touch of a pencil, assumes a fixed and a substantial shape; when the treasure of the fancy becomes the property of memory; when thoughts are turned into events, and surmises into certainties; all this is ever strange: but, should the place essentially contradict our preconceived notions, should one glance destroy our castles in the air, and build up cottages in their room, it is bewildering. Truth seems to have turned juggler,—our senses to betray us. We have not only to learn, but to unlearn; and, in the first

conflict of old and new sensations, we feel pretty much as did the poor gentleman, in the 'Médecin malgré lui,' when informed that the heart lay on the right side, and the lungs on the left. But I will dwell no more on my surprises and disappointments at Abbotsford. After all, I had not come to see a fine place, but the abode of one of the greatest men that ever lived. Besides, the presiding spirit is gone, the wand of the mighty magician is broken. It is not fair to judge of Rome now that its palmy days are over. How could we, who were led over the house by a servant girl, who could tell us scarcely any thing, judge of the impression which Abbotsford must have produced upon any favoured guest, to whom Sir Walter himself acted as guide, when the relics of antiquity with which the rooms are stored received the life-light of his eloquence; when the iron-studded door of the Tolbooth, the gun of Rob Roy, the hunting-bottle of King James, the instruments of torture, dignified by the constancy and fortitude of patriots and martyrs, all and each drew forth the infinite variety of his legendary lore? Now all was silent, all was dispiriting. About the whole place was an air, not exactly neglected; no! for every thing is well kept, but there were slight tokens that told of death. The vistas were grown up, the trees darkened the windows, the flowers wanted the last touch of neatness, the rooms, though fully furnished, had not an inhabited look. The whole reminded me of those most beautiful lines in 'Gertrude of Wyoming':—

'Seek we thy long-lost home?  
Its charms are fled—  
Unheard the clock repeats the hours.  
And, should we thither roam,  
The empty hall, the joyless tread  
Would sound like echoes from the dead.'

These melancholy impressions became stronger when we were told that we were in the room where Scott died; nay, on the very spot where he drew his last breath. After his return from Italy, the dining-room had been fitted up for him as a bed-room, and there was the Merlin chair in which he used to wheel himself about, in his sickness and helplessness. How sad! The wielder of other men's intellects was reduced to impotence over its own. I had only to recall his own words, and the whole scene seemed present to me. Poets must be prophets; else, how could he have attained to such a pathetic embodying of what was to happen to himself, as he has given in his introduction to the 'Chronicles of the Canongate'? It is thus: 'The easy chair filled with cushions, the extended limbs swathed in flannel, the wide wrapping-gown and night-cap, shewed illness; but the dimmed eye, once so replete with living fire, the blabber-lip, whose dilation and compression used to give such character to his animated countenance; the stammering tongue, that once poured forth such floods of masculine eloquence, and had often swayed the opinion of the sages whom he addressed; all these sad symptoms evinced that my friend was in the melancholy condition of those in whom the principle of animal life has unfortunately survived that of mental intelligence.' In Scott's study all things were calculated to bring him before me even more vividly and distinctly. There was not only his writing-table, which must have witnessed so many of his immortal works—not only his own well-used leathern chair, but, in a small closet, in a turret opening out of his chamber, was a whole suit of his clothes hung up, together with the shoes he had last worn, his hat, and his favourite walking-stick. The effect was quite startling! Is there any thing one identifies with a man so much as his

clothes? Visitors even from the other world appear to their friends in the garments they have usually worn, as if their clothes had become so much a part of themselves, that they too had lived in their owner's life, had died at their owner's death, and had sent spiritual representatives of themselves to the land of shadows. Walter Scott, above all other men (except, perhaps, Napoleon), has bestowed an individuality on his garments, widely known, and cognisable by all. Who is not acquainted with his white hat, his green coat, his gaiters, his 'clouted shoon'? There they were, and there he was. The air of that small chamber became hot and choking. I thought of his kindness to me (and who was kinder to young poets than himself?); I thought of him as I last saw him in London, broken with sorrow and premature age, and I certainly found my way out of the turret without the help of my eyes."

Every tourist possessed of the slightest sensibility must lament the unfeeling *show* of sacred things—or things which ought to be sacred—at Abbotsford; the only possible excuse for which may be, that its present owner is far off in India, and not aware of what is done. For ourselves, we can say that the sight of Scott's very wearing apparel—the clothes in which he was last clad—his helpful stick, his broad and capacious hat, the chair on which he sat on the eve of his death, and the spot on which he gave up his mighty though wasted spirit, shocked us beyond description. It is too early a day to flaunt such relics before every eye, or to gratify vulgar curiosity for a small fee. A generation should elapse before these exhibitions are made; and then they ought only to be witnessed with solemnity, as precious recollections of the venerated and immortal, not as gewgaws and trumpery for every idle sight-bunter. But we are glad to leave this subject, and finish our review of the interesting volume before us with a clever *jeu d'esprit*, suggested by the frequent matutinal calls on sleepy travellers. It is

"*A Diatribe against Early Risers.*—Why I endure them not is on this account,—there is a manifest intention on their part to let no one sleep longer than themselves. They evidently act from malice prepense; though the degree of malice doth, in different subjects, vary. There is your ill-natured malicious and your good-humoured malicious, but they both meet at the same goal—the destruction of your peace and quiet. These again are but subdivisions of two great peace-destroying bodies of men—the early risers upon compulsion, and the early risers by habit. Those who are early risers upon compulsion merely, the more saturnine portion revenge their wrongs upon the happier part of the community by robbing them of the blessings which themselves are forbidden to share any longer; while the more hilarious shout and stamp from vainglory at finding themselves in so unusual a predicament as to be stirring before the rest of the world. But their vainglory requires witnesses. They have done a meritorious thing; forsooth, they must proclaim it! and so they cackle over their morning achievements with as come-here-and-see-me an invitingness as Dame Partlet when she has laid an egg. But belonging to the early risers from habit, there is a deeper malice (a good-natured, habitual, early riser is so nearly an anomaly, that I will say nothing under that head); a more hideous, because spiteful, joyousness; a sort of impertinent, swaggering, bouncing pretension, as if they were better than their neighbours (your early riser is the true Pharisee); a wish by all the

noise they can possibly make to advise the whole world that they are abroad; that they have got to the ant, and considered their ways. They clap their wings, strut about, and crow to the tune of 'up in the morning early,' like so many dunghill cocks, sounding an insulting challenge to the whole race of slumberers, sleepers, and morning dozers (those truly excellent of the earth), and frightening the peaceful propriety of the morning, which, of all times, most requires to be ushered in with stillness. I know not how others may feel, but if I begin my day stormy, I am of an unquiet spirit, thereafter, till nightfall. If unhappily denied morning sleep (which is best), I would, at least, bathe my spirit in (which is next best) morning tranquillity. One may gather calmness and strength against the calamities of the coming day from the murmurings of distant falling waters, or the sighings of the wind through the tree-tops; but from noise! During the early hours one's mental should be as lenient as one's bodily food. One requires mild nourishment.

'Vacuis committere venis,  
Nil nisi bene decet.'

says Horace, or the Latin grammar. Most true; and depend upon it that from those who transgress the golden precept not much good, and very little greatness, can be expected. What beautiful imaginings can dwell with him who lingers never in the fairy land of morning dreams? What a lean, consumptive soul must he have who feedeth it never with the fatness of morning quiet? I will allow that an early riser may make a laudable politician, historian, polemic, mathematician, or metaphysician. He may have a vast talent for accumulating money. Early rising, and late taking rest, and eating the bread of carefulness, he may rise to be a bishop, or peradventure a judge; ay, a capital judge, as good as Jeffreys (was it not he, by the way, who always asked old women if they did not get up early?); but of the highest faculty in man, imagination, he must be incapable. He could never be a poet. He could not construct an immortal 'Castle of Indolence,' like dear idle Thomson, who loved to eat peaches as they grew on the wall, keeping his hands all the time in his breeches' pockets; nor could he write essays like Elia, that wise spirit who had heard of 'sun-risings, and suchlike gauds,' but saith he has no desire to have ocular demonstration of the same, knowing that what he gained in fact he would lose in fancy. Talk to me of early birds and orient clouds, quotha! What are they to the melody and the splendour which we dreamers hear and see? I should not like to have an early riser for my friend. The very look of such an one is repulsive,

'Adust and thin,

Wrapped in a night-gown of his own loose skin'; red-eyed and blinking for want of the precious collyrium of sleep; wrinkled and old before his time. Ask dear Aunt S—how she has continued to be a second Ninon. She will reply by ten hours' sleeps and morning slumbers. Early risers live not half their days, while they fondly think that they redouble them. Granting even that they exist to a good old age, can that be called life which is never more than half-awake? for your early riser is the drowsiest of drowsy animals, abridging himself of his natural rest at night, in order, as it would seem, to remain nodding all day. Oh, fallacy! Life must be measured by its intensity, not by its duration. Like Cæsar, I cry, 'Give me men who sleep o' nights'; ay, sleep soundly the whole night through, and do not call it day

until the world hath undergone a good, and sufficient, and Christian-like airing! Give me men who sleep heartily when they do sleep, and are wide awake when awake; men who give good generous measure in all things; no lean conspirators against slumber; in short, no early risers. Different persons have different standards whereby they estimate the virtue of others. Shakspeare saith, that the man who has no music in his soul is fit for treason, stratagems, and spoils. Some have thought that he who loved not apple-dumpling could by no means be a good man; others, that a distaste for Trinity audit ale argued a sinister twist in the moral constitution: but slumber is my touch-stone, and I lack faith to believe that an early riser can be aught but a proud, unfeeling, fussy, uncomfortable sort of person. An unquiet conscience he must surely have; for a bad conscience is proverbially the foe to slumber. With such even to be acquainted is dangerous; for, possibly (though scarcely with a good motive), your early riser may invite you to his house, and either ignorance or some imperative obligation may cause you to go thither. Then, oh! the misery of being gently, yet firmly told, as you are dropping off to bed at past twelve o'clock, scarcely able to hold your candle straight for very drowsiness, 'We always breakfast punctually at eight!' To which, perhaps, is added, 'And we have prayers a quarter before.' You retire disconsolate to your chamber, wishing to sleep for a week, but sure you shall not be allowed to do so for five hours. Within your room all gives dreadful note of preparation for vigilance. Your bed, of scantiest drapery, is placed right opposite the window, the uncurtained window, which is shaded only by a small half-blind of thinnest muslin (your room looking east, and the season being summer, we'll suppose). Possibly you might have escaped somewhat of the early morning sun, had not the pillow, with perverse cruelty, been placed at that end of the bed which will insure the benefit of the first ray of light coming full upon your eyes. After having been kept awake for an hour or so by the servants about the house, putting things to rights for the night (early risers are hard task-masters to their servants), you at length sleep the dead sleep of mere exhaustion. In due time the blistering of your eyelids, from the fervent salutes of Dan Phobus, awakes you. You throw your handkerchief over your eyes, and sleep again, soon to be again aroused by household noises, and children exercising their lunge. (There are generally children in an early house.) About six o'clock there is usually a lull, the work being done, and the children having somewhat exhausted their energies; but just as you are dropping into a forgetfulness of your woes, into the sleep which, of all others, most 'knits up the ravelled sleeve of care,' just then you are startled, flurried, and set a throbbing through every pulse, by that infernal invention, 'being called,' as the saying is. Bounce comes a loud, inveterate knock at the door, accompanied by the words, 'Sir, I've brought you hot water.' It will soon be seven o'clock. Faint with sleep, you call out to man Thomas to set down his thimbleful of lukewarm liquid (it is never more in an early riser's house; they are always dirty people), and haply dose again; but, through the glimmering consciousness of uneasy slumber, you hear the summonings of a dozen bells, the servants' breakfast half-hour bell, the servants' breakfast-bell, the children's breakfast-bell, the half-hour parlour-breakfast-bell, the prayer-bell, &c. &c. In very obstinacy and ill-humour, you deter-

mine not to get up; but, after the prayer-bell, come thumps at your door innumerable from reminding servants or vivacious children, till, fairly conquered, you rise, and dress in haste, interrupted by at least three repetitions of 'Sir, my master thought, perhaps you didn't know as how the family was at breakfast,' and scurry down to the parlour, where you find only a slabbered table-cloth, cold tea, and as cold, though civil regrets, that the custom of the house is never to wait for any body; or, it may be, you are greeted with a forced jocularity, and (by way of novelty) are called 'the late Mr. So-and-so.' Pity dwelleth not in the breast of an early riser. Again, I repeat, the very soul grows lean from early rising. After this philippic, dear G—, I feel vastly relieved. Marvel not at its bitterness, for, on these my travels, often have my slumbers been invaded. You know that it is the last drop which makes the brimming cup overflow, and this last violation of my morning tranquillity was the unbearable thing that split my patience. I am now meek and mild again, and have been repeating to myself, in sober sadness, some beautiful lines by T—, from an 'Ode on Sleep,' which I am so happy as to possess in manuscript:—

'Oh that mine  
Were some dim chamber, turning to the north,  
With latticed casements, bedded deep in leaves,  
Which, opening with sweet murmur, might look forth  
On quiet fields from broad overhanging eaves,  
And ever, as the Spring its garland weaves,  
Were dark'nd with encroaching ivy-trail,  
And jagged vine-leaves' shade.

How pleasant were it there, in dim recess,  
In some close-curtain'd haunt of quietness,  
To hear no tones of human pain or care,  
Our own or others', little heeding there  
If morn, or noon, or night,  
Pursued their weary flight;  
But musing what an easy thing it were  
To mix our opiates in a larger cup,  
And drink, and not perceive  
Sleep, deepening, lead his truer kinsman up,  
Like undistinguish'd night, dark'ning the skirts of  
eve."

#### RAUMER'S ITALY. [Second notice.]

WE shall now follow our author to Milan, and our first extract shall be a conversation with the celebrated author of the "Promessi Sposi":—

"Manzoni lives so retired, and so positively refuses to see every body who does not almost force himself upon him, that in my preceding visits to Milan I did not venture to seek his acquaintance. I learned from a Mr. B— (to whom I was recommended by the English consul at Trieste, and who has married an English lady) that he was ready to receive me, and as B— was prevented I was introduced by Baron T. Manzoni was surrounded by his family, who, however, did not mix in our conversation. His manners are very easy and quite unaffected, but he speaks with animation and fluency. As I had heard that he had written an essay against historical novels (thus against himself), I turned the conversation on that subject, and defended those novels. That is to say, I observed that bad novels, whether *with* or *without* a historical foundation, were bad; but the novel and the drama allowed such a foundation, and often rested more firmly upon it than on mere, often incongruous, invention. Manzoni replied, that the historical and invented parts did not coalesce, but fell asunder, and real truth was always wanting. The history of the novel, he said, shewed that by degrees more truth was demanded, and space conceded to history, which proved those to be in the right who required either pure history or pure

invention, and rejected all mixture; the whole led to prejudice and deception. Thus he had often been asked, what part of the 'Promessi Sposi' was true or fictitious? and such a question was always a reproach. I took leave to deny this, and wished, for instance, to know whether the *unnamed* person was founded on a historical character? Manzoni answered in the affirmative, and reminded me of Goethe's reproach, that the historical and the fictitious parts of the 'Promessi Sposi' were too much separated; whereas he had purposely endeavoured to keep them so distinct that no error on that point should be possible. On my side I alleged that, if considered and treated according to the rules of art, historical and poetical truth are one and the same; and that, in my estimation, Don Abbondio, in the 'Promessi Sposi,' was more of a living person than a thousand priests whom I saw in the streets. Shakspeare's Caesar seemed to me more historical than the Caesar of many an historical compendium, and I would not exchange Homer for the historical osteology of his poems. Manzoni conceded this, in the case of such extraordinary minds, and extolled in particular Shakspeare's unparalleled impartiality, and his power of transforming himself into every character. The drama, too (which, by its very form, must break the historical narrative), did less injury to truth, he thought, than the novel. A reference to Schiller's, Mary Queen of Scots, and Don Carlos, gave occasion to restrict this proposition; against which Manzoni affirmed that a novel, which, like 'Tom Jones,' did not trouble itself about history, but represented only situations and manners, was more true, intelligible, and attractive, than if it scattered in the work historical, for the most part unknown, truth. I reminded him how differently the greatest and best-known characters were conceived and represented in what are esteemed the truest histories, and how, therefore, the energy of historical and poetical genius has such a powerful influence, and not unfrequently essentially leads and determines the judgment. I allowed that he (Manzoni) was perfectly right with respect to all bad novels, but I, on the other hand, in my sincere commendation of his 'Promessi Sposi,' thus he spoke against himself, I for him."

In a subsequent visit, M. von Raumer tells us:—

"Our conversation turned on the affair of the Archbishop of Cologne. Manzoni, you must know, is an implicit, complete, systematic, Catholic,—as is natural, when the *form* alone is considered, and the *substance* made subordinate. There is, said he, only *one* real remedy, only *one* efficacious means against disorder, rebellion, &c., namely *authority*, and this is found only in the *Pope* and his *infallibility*. As soon as you resist this, or deviate from it, all ties are broken and a general dissolution follows. The highest duty of every body is, to submit to authority."

From the very valuable statistical information we select the following:—

*Silk.*—"Of all branches of industry, the culture of silk has increased the most; it is also the simplest, the cheapest, and the most profitable. In the kingdom of Lombardy and Venice it acts almost a more important part than the breeding of sheep in the north of Germany. Every year the number of mulberry-trees increases, which (without hindering the cultivation of the soil) cover the fields from the Lago Maggiore to Treviso. The provinces of Brescia, Cremona, Verona, and Mantua, are those in which silk is chiefly cultivated; the mode of

treatment used in the Brianza (south of Como and Lecco) is reported the best; and Milan (and next to that, Bergamo) is the centre of the whole trade. The amount of silk in the year 1800 was estimated at 1,800,000 lbs.; it is now 7,000,000 lbs. It is affirmed that in twenty years the amount has increased threefold, and the value sixfold. This led to false speculations, intended to throw the whole silk trade into a few hands, and cause an artificial rise in the prices. Ill-founded hopes were excited that these prices would and must rise without interruption. Hence followed, in the years 1834 and 1835, an immense reaction, very similar to what we remember in Germany with respect to the wool trade. The same danger that threatens our wool trade from New Holland menaces the silk trade from Asia. The importation of silk into London from Asia had increased thirty-six and a half per cent in the years 1825 to 1838. In 1800 to 1802, it amounted to 1,350,000 lbs.; in 1830 to 1832, to 6,138,000 lbs. Notwithstanding these facts, the culture of silk in Italy is constantly increasing, and the prices seem to be firmly established. The silk manufactories have also increased in Lombardy, but they are inconsiderable in comparison with the raw material produced, and employ 2349 looms and 3276 persons. The following is the quantity of silk produced in Italy:—

"In Piedmont and Genoa .....	lbs.
Lombardy, Venice, and Southern Tyrol ..	2,000,000
Parma, Modena, and Lucca .....	7,000,000
Tuscany .....	550,000
Papal dominions .....	300,000
Naples and Sicily .....	800,000
Total .....	1,850,000

Which, according to the high prices of 1836,\* were of the immense value of 374,000,000 of lire. If we will not draw from this one great fact the inference which the ancient worshippers of the balance of trade would certainly have drawn from it, it, however, sufficiently refutes those who (without regard to the diversities of countries and people) would have nothing but manufactories, and consider all wealth as derived from them. It is estimated that the quantity of raw and spun silk, brought annually into the European markets in bales of seventy-three and a half kilogrammes (about 150 lbs.) is—

"From Italy, after deducting what is } Bales.	
used in the country .....	34,000
.. France .....	10,500
.. India and Bengal .....	9,500
.. China: Canton .....	4,000
.. Persia .....	7,500
.. Asia Minor .....	3,500
.. the Levant and the Islands .....	3,500
.. Spain .....	1,500
Probable Amount .....	74,000

"Of these there are worked up:—

In France .....	Bales.
.. England .....	22,000
.. Prussia .....	28,000
.. Austria .....	7,600
.. Austria and Germany .....	5,000
.. Russia .....	6,400
.. Switzerland .....	5,000
Total .....	74,000

"If we did not know it from other sources, it would result from the preceding short notes that the kingdom of Lombardy and Venice is a rich country. Much has been done by the government and communes for public objects, roads, canals, bridges, churches, town-halls, &c. The roads in particular, as well in the plain

country, as over the mountains (the Splügen, the Stilfser Joch, &c.), are in the best order, and are constructed and kept in repair without tolls. But, on the other hand, this wealth is very unequally divided, and with the rich there are numerous poor. I must here repeat what I have already said in my letter on Venice, that there is scarcely any country which has greater and richer charitable institutions than Northern Italy. In proof, I will add some facts. In the Venetian provinces (exclusive of the capital) the annual revenue of the property of these institutions is 1,000,000 of lire. In the city of Milan the net property of the charitable institutions and hospitals (besides what the state and the communes contribute) is 61,500,000 of lire. Of the various institutions, the great hospital is at the head of the list with 18,500,000, and then follows a long list of institutions for orphans, foundlings, widows, aged poor; an establishment of brothers and sisters of Mercy; a Mont de Piété, which lends on pledges on reasonable terms, &c. Banks of savings have also been introduced, but are yet in their infancy."

The next hundred pages of our author's work are filled with an elaborate and (as derived from the most authentic official sources) highly valuable and important view of the government and administration of the Austrian dominions in Italy; on which he concludes:—

"At all events I have acquired the well-founded conviction that the country is constantly advancing, and that the Austrian government is judicious, just, well-intentioned, and suitable to the country. The native Italian might wish and require much beyond this; but let them beware of precipitate endeavours to realise, lest they embrace a cloud instead of a goddess."

From the remaining pages we shall select a few miscellaneous extracts:—

"The population amounted in the years

In the Venetian portion, to ..	1824.	1836.
.. the Milanese portion, to ..	1,894,000	2,094,000
	2,194,000	2,474,000

It has, therefore, increased about 12 per cent. A greater increase was partly prevented by the cholera, and is, besides, impossible in so thickly peopled a country. The population of the several parts of the country is very different: thus, the district of Milan has the most, viz. 95,000 inhabitants; those of Borneo and Chiavenna the fewest, viz. 400 inhabitants to a (German) square mile (equal to twenty-one English square miles). In the latter there are twenty mountains above 7000 feet high, where cultivation is impracticable. Excluding the mountainous parts, there are 9300 inhabitants to a (German) square mile."

*Crimes, &c.*—"In my letters upon England I have observed that very hasty and false conclusions were often drawn from the number of crimes committed in a country. The number in general, for instance, proves very little, unless the nature of the crimes is specified; and even then much remains obscure, if various circumstances are not attended to, such as distress, war, bad harvests, as well as the state of society, the national character, &c. The more facts, however, we collect from different countries, the more able we are to avoid errors and false conclusions, and the nearer do we come to the truth. The following view of the offences committed in the duchy of Milan in the space of ten years, may therefore be found interesting:—

High treason .....	1860	1830	1831	1832	1833	1834	1835	1836	1837	1838	1839	1840	1841	1842	1843	1844	1845	1846	1847	1848	1849	1850	1851	1852	1853	1854	1855	1856	1857	1858	1859	1860

children born in Milan, or a fifteenth of all the children born in the country, were therefore cruelly abandoned by their parents! What immorality! what injudicious expenditure! The interference of the authorities, and an alteration in the laws, might be more successful in this matter than many other well-meant attempts to eradicate crime. And do not thefts of the money and effects of strangers appear almost innocent compared with the robbery here committed by parents on their own children? I will here mention another point connected with this subject. In explanation of the proportionally small number of illegitimate children, they alleged to me, not only the ease and the indiscretion with which early marriages are contracted, but the vigilant control under which young unmarried females are kept. Another explanation, on which much stress is laid, is more remarkable, namely, that it is considered as much more innocent to have illicit intercourse with married women than with girls, and the women take the same view of the matter; that among the foundlings there is therefore, perhaps, a much greater number of illegitimate children born in than out of wedlock; that the procreation of natural children out of marriage is thus avoided, and those born in marriage are not without a father recognised by the law, who (if they are not exposed) must provide for them. This view appears to me far more immoral than the contrary; the greater evil and wrong is substituted for the less, and the devil is cast out by Beelzebub the chief of the devils."

## MISCELLANEOUS.

*The Moral and Intellectual School-Book, &c.*, by W. Martin. Pp. 348. (London, Harvey and Darton.)—A pleasing selection from good writers in prose and verse.

*Sketches of Country Life and Country Matters.* Pp. 127. (London, Livingston.)—The sound old principles of the old school earnestly enforced by a writer who belongs to it.

*Recollections of Childhood, &c.* Pp. 125. (London, Hatchard and Son.)—Another little book for the good of good children.

*Christian Consolations, &c.*, by J. Hackett, D.D. Bishop of Lichfield and Coventry. Pp. 96. (London, Burns.)—A new edition of an eminently Protestant book, to which is prefixed a brief account of the pious author.

*The Christian Gentleman's Daily Walk*, by Sir Archibald Edmondstone, Bart. Pp. 175. (Same Publisher.)—A new work of the same class and character, in which Sir A. Edmondstone inculcates the performance of Christian duties among the higher orders of society in a sincere and impressive manner.

## ARTS AND SCIENCES.

## PRESERVING THE DEAD.

*Antiseptic (Gannal) Process.*

WE observe from the parliamentary reports that a petition was presented in the House of Lords on Tuesday last, from a Mr. Roberts, claiming a compensation from Government for the invention of a process for preserving dead bodies, &c., which he had communicated under the belief that he would be rewarded for making his discovery generally known, in preference to securing it by a patent. Of the nature of Mr. Roberts's process we can, of course, have no knowledge; but the subject is one of much public interest, and we had, within a few days previously, been directing our inquiries into the particulars of the art, as practised by M. Gannal in France, and introduced into this country by Mr. George Smith. At Mr. Smith's house we had examined several specimens of natural history prepared by this means; and also an infant, which was, however, coated over with wax, so as to prevent our ascertaining the exact state of preservation. A

\* This is too vaguely expressed; it is not a third of all the children born at Milan, for they are brought from the country also, but a number equal to such.

female hand, after a year or two, was perfectly intact, uninjured in form, and something of a leathery consistency. The bowels of animals, the human brain, and various birds and beasts, are all in the most beautiful condition, without disagreeable odour, or any unpleasantness to offend the senses. Mr. Smith put into our hands a description of the invention and its progress, from which we select the following particulars, though we, at former periods, noticed the general fact in the *Literary Gazette*:—

"Among the numerous discoveries made, of late years, in the science of chemistry, none has, probably, been more favourably received on the Continent than 'The Gannal Process';—so designated in France, from the name of the eminent chemist and natural philosopher by whom it was first discovered in the year 1826; and who, after fourteen years' unwearying skill and labour, has at length succeeded in bringing it to its present state of perfection. The attention of the proprietor was first directed to the subject in the year 1838, shortly after his being appointed the correspondent for England of the 'Entreprise Générale des Inhumations,' established in Paris, by royal ordinance, for the conducting of funerals, both public and private; and so strongly impressed was he with the conviction of the many useful purposes connected with science and the public health to which it might be rendered applicable, that he was induced to visit M. Gannal at Paris, and thereby become an eye-witness of his various experiments: and the results of his personal observations were so highly satisfactory, that he lost no time in entering into an agreement with M. Gannal, by which that gentleman reserved to himself the patent presented to him by the French government, and the proprietor became the sole possessor of the discovery for England.—M. Gannal engaging to visit London, for the purpose of superintending those arrangements which are now announced as being completed. To the preceding statement, the proprietor begs leave to subjoin a brief notice of the origin and progress of the discovery in France; the rigid investigation it has undergone; the opinions of the Royal Academy of Sciences, and of the Royal Academy of Medicine of Paris, as to its decided superiority over every method hitherto known; the national rewards which have been bestowed upon the discoverer; and the extraordinary rapidity with which it has established itself in the public favour. In 1835, the Academy of Sciences of Paris, at the express desire of M. Gannal, appointed a commission to inquire into, and report to them upon, the merits of his discovery. The commission lost no time in entering upon their labours, and, on the 28th of December in that year, reported to the Academy that, after a careful investigation of the matters referred to them, they felt themselves justified in bearing testimony to the extraordinary preservative qualities of the process. They added, that they considered it capable of being rendered highly useful to various purposes of science; and, considering the obstacles he had encountered, and the difficulties he had overcome, they recommended that a sum should be awarded to M. Gannal, to encourage him to proceed with his experiments. In the same year, in consequence of a letter addressed by the Minister of Commerce and Public Works to the Academy of Medicine, that learned body appointed a commission, consisting of five of its most distinguished members; namely, Messrs. Saucer, Roux, Dize, Guéneau de Mussy, and Brechet, to institute a diligent inquiry. The result was an elaborate report, drawn up by Brechet, in which the commission stated that they considered it their duty to direct the attention of the Academy and of the Government to the great value of the discovery; and they expressed a hope that an advance of the public money would be made to the discoverer, to enable him to bring it to perfection. In 1837, the same commission made their second and definitive report; in which they state that, during the preceding two years, M. Gannal had been incessantly occupied upon a series of experiments, with a view to ascertain the best mode of preserving animal substances, and that he had at length succeeded in discovering a fluid, by the antiseptic properties of which the remains of deceased persons might, by the simple and delicate process of injection by one of the arteries be preserved, for a considerable length of time, without any material change of feature or discoloration of countenance. After detailing a variety of experiments, of which they had been eye-witnesses, and all of which had been attended with complete success, they gave it as their unanimous opinion that M. Gannal had rendered an important service to science and humanity; and they further recommended that their report should be forwarded to the Minister of Public Instruction, directing his attention to a discovery capable of being applied to so many useful purposes; and likewise to the Minister for Commerce and Public Works, as a means whereby the public health might be placed on a surer foundation. Both commissions dwell upon the great utility of the process in preserving subjects for scientific purposes, in sultry seasons or in hot climates; in preventing the danger arising to professional men, from accidental wounds or punctures made in their own hands, in the course of practice; and in enabling deceased persons to be kept, for any length of time, in all cases where the causes of death may have been of a doubtful nature."

To M. Gannal the Montyon prize was awarded, we are told; and,

"In consequence of the above powerful testimonials, the process has been introduced into the great anatomical schools in Paris. In nearly all the recent internments of distinguished individuals the old and revolting mode of embalming has been superseded by the new and simple method; and the Government of France, in cases of suspicious death, where the preservation of the body is likely to lead to the furtherance of the ends of public justice, have resorted to the process; and with such success, that, in a recent instance of the murder of a youth at La Villette, the body, by being exposed, in a state of perfect preservation, at the receptacle of La Morgue, in Paris, for more than two months, led to the discovery of the murderer."

There cannot be a question, we think, of the many useful and important purposes to which such a process may be applied; though with our customs for ages and national feelings it may be doubtful whether any very considerable number of persons would adopt the plan for, as it were, embalming for a great length of time the forms of those they loved in life. "Dust thou art, and unto dust thou shalt return," is the Divine sentence; and except in such cases as are pointed out in Mr. Smith's paper, it will be held by many that there is no good in retarding the event even for thousands of years, as with the Egyptian mummies. These are objects of curiosity; but where are the hearts to be solaced by their lasting conservation?

Yet against contagion or infection, if this process be a guard, it may be employed to an invaluable extent. How much would the horrid vaults under our churches be benefited by it! How readily may it be employed in preserving pet animals, as well as, generally, all specimens of natural studies and anatomical preparations!

An incision is made in the carotid artery, and two or three quarts of liquid injected, which speedily pervades the entire frame; and, even where putrescency is already manifest, converts the whole animal economy into a substance impervious to decay. Mr. Smith truly observes that he has been encouraged to impart the process

"From having witnessed, in numerous instances, the extreme distress occasioned to relations and friends by the early appearance of decay, and from his conviction that such distress will be greatly alleviated by means of the said discovery. He conceives, also, that where the place of sepulture may be situated at a distance, or where the members of a family may happen to be absent, it must be a source of great satisfaction to know that a process is ready for application, on the instant, and at a moderate expense, which will preserve the body for an unlimited period from incipient decay, without alteration in its appearance or the presence of the slightest effluvia—which arrests putrescency and the liability to cause contagion—which occupies but a short space of time in the performance, and is unattended with any distressing exposure or disfigurement of the person—which may, when desirable, be performed in the presence of the nearest friends of the deceased, without giving pain to minds of the most delicate sensibility—and by the application of which the usual, but very revolting, mode of preserving the remains of the dead by embalming will be superseded."

The expense, we understand, is only a few pounds—five at the utmost; and the testimony of Mr. Smith, one of the first Undertakers in London, is sufficient to convince us of its applicability and value in many cases connected with the disposal of the dead. Were it only to preserve the bodies of strangers who die here till their relatives or friends could come up from distant places, it would be of important service. Without going farther into the matter at present, we hope our readers will agree in considering that it is a subject as particularly deserving of public consideration as any to which we could devote an equal space in our columns.

## PARIS LETTER.

Academy of Sciences, July 14, 1840.

SITTING of July 6.—M. de Blainville presented to the Academy the seventh livraison of

his "Osteography of Vertebrated Animals;" this number is occupied with the description of insectivorous animals. The author mentioned to the members the great obligations he considered himself under to the Zoological Society of London for some valuable drawings of an animal, quite unique in European collections.

M. de Collegno, Professor of Geology in the Faculty of Bordeaux, sent a memoir on the tertiary formations of the Gironde. He divided these formations into three groups, corresponding to the three stages recognised by M. Dufrenoy as prevailing in the south of France. The inferior tertiary formation might be divided into two:—one an inferior marine calcareous series, characterised by orbitolites, which seemed identical with the *Orbitolite plana* of Vaugirard; this series appeared at Pouillac, Blaye, and Plassac, and disappeared under the Dordogne at Bec d'Ambes. Above it was the other series, also a marine calcareous group, containing bones of asteria, as numerous as at Compiègne or Laon, and lenticular masses sometimes extending into regular strata. This latter series, which forms hills 240 feet high at Lormont and Cenon, is only a few inches above the Garonne at Cadillac and St. Macaire; at Caudrot it disappears altogether. The middle tertiary group was divisible into two series; the lower being an argillaceous one, often calcareous, containing fresh-water fossils; and the upper, being a sandy, calcareous stratum, with numerous marine fossils, of which the *Ostrea virginiana* is the most characteristic. At Blaze, this series lies on the orbitolitic calcareous group; at Ste. Croix du Mont, on the calcareous stratum, with asteria; and, more to the south, on elevated strata of the chalk series. The strata containing the *Ostrea virginiana* were prolonged towards the Agenais, and formed the cliffs of La Réole. The third, or uppermost group, is composed of a quartzose sandstone, which, near Pau, becomes a regular pudding-stone. M. de Collegno stated that this statement differed very little from Duhamel's arrangement; but as he had verified it from independent observation, he had thought it worth while to detail it.

M. Duhamel read a very elaborate memoir on experiments upon musical strings, with a view to determine the laws of their vibrations.

A memoir from M. Petit, of Toulouse, was read, on the continuation of the experiments by M. Mathieu, at the Observatory of Paris, for determining the difference of the vibration of the pendulum, and therefore of the flattening of the earth at Paris and Toulouse. After very careful experimentation, the results were found to be as follows:—

Depression of Earth.	Difference between Numbers of Oscillations at Paris and Toulouse.		Excess of Observations over Theory.
	Calculated.	Observed.	Oscillations.
309-14	18-7586	18-7700	+ 0-0174
1			
309-98	18-6080	18-7700	+ 0-1610
1			
308-75	21-5695	18-7700	- 2-7995

M. Petit thought that the difference of 2-7995 oscillations more than what the theory indicated, arose in great part from local influences, and that in part it was owing to errors of observation.

M. Breguet, jun., presented an ingenious apparatus for registering the heat of the weather at all hours of the day. An axis made to communicate with a metallic thermometer, and acting on a needle, causes the latter, by a circular movement, to indicate variations of

temperature corresponding to a graduated scale; and by an ingenious contrivance the needle is stopped from making any further indication at the end of each hour, and a fresh paper presented to it; so that at the termination of each hour it writes down the exact temperature of the atmosphere at that particular moment.

Delloye's "Bibliothèque Choisie" is a cheap and useful reprint of several standard works, the copyright of which has expired. The volumes are only fifteen sous each, and the series comprises the "Memoirs of the Duke de St. Simon," the "Souvenirs of the Marquise de Crequy," "Ossian," Lewis's "Monk," "The Comedies of the Princess Amelia of Saxony," &c.—The eighty-fourth livraison of Poiteau's "Pomologie Française" has appeared. The plates are as carefully coloured, and as well executed, as any of the series.—Three odd books are advertised: Heaven defend us from being forced to wade through them! One is entitled "Etudes sur les Réformateurs contemporains.—St. Simon, Fourier, Owen, &c." by M. Reybaud. The second is "Messianisme: Union finale de la Philosophie et de la Religion," by M. Wronski; and the third is "Du Savoir vivre en France au 19<sup>me</sup> siècle; ou, Instruction d'un Père à ses Enfants," (!) by Mme. la Comtesse de Bradi (!) O'Brady?

#### Sciarada.

Colmo il petto di rabbia e dispetto,  
No, non tene di Glove che fremo  
Ma lo sfida orgoglioso il primiero.  
Col secondo più lieto e giocondo  
Rende al core il piacere d'amore,  
Quella Diva che nacque dal mar.  
E' vezzeoso l'intero, odoroso,  
E d'Aprile ornamento gentile  
Dagli amanti prescelto frai fior.

Answer to the last:—Euro-pa.

#### LITERARY AND LEARNED.

##### UNIVERSITY INTELLIGENCE.

OXFORD, July 8.—C. O. Dayman, M.A. of St. John's College, Cambridge, was admitted *ad eundem*.

Mrs. Denyer's Theological Prizes.—The subjects for the year 1841 are—"On the Divinity of our Blessed Lord and Saviour Jesus Christ." "On the Sufficiency of the Holy Scriptures for the Salvation of Man."

CAMBRIDGE, July 4.—The following degrees were conferred:—

Bachelor in the Civil Law.—Rev. J. Tidmore, Trinity Hall.

Bachelors of Arts.—B. B. Blackwell, J. F. Fanshawe, Corpus Christi College.

July 6th.—T. R. Bently, M.A. of Trinity College, Dublin, was admitted *ad eundem*.

July 7th, Commencement-Day.—The following Doctors and Masters were created:—

Doctors in Divinity.—Rev. M. G. Beresford, Trinity College; Rev. J. Holmes, Queen's College, Master of the Grammar School, Leeds; Rev. J. Young, Trinity College, Master of the Grammar School, Houghton-le-Spring, Durham; Rev. M. H. Jones, Queen's College, Rector of Llanthony Skirrid, county of Monmouth.

Doctor in the Civil Law.—J. S. Roupell, Fellow of Trinity Hall.

Doctors in Physic.—R. W. Rothman, Fellow of Trinity College; G. Budd, Fellow of Caius College; T. A. Barker, Downing College.

Masters of Arts.—C. J. Abraham, J. Buller, G. Williams, King's College; S. Allen, E. N. Ayton, A. V. Bazett, H. W. Blake, W. Browne, H. N. Burnous, A. J. Canham, W. J. Conybeare, J. L. Crompton, F. Dumergue, D. Fraser, M. Garrit, J. Gordon, L. Guthrie, J. F. Hargrave, F. W. Harris, R. R. A. Hawkins, J. Henry, C. J. Herries, T. Hodgson, W. G. Humphry, R. G. Jebb, R. Jennings, J. G. Johnson, J. Kirkpatrick, J. Lewis, H. E. Lowe, G. D. Lowndes, H. Lund, B. Maitland, G. Morison, H. M. Oddie, J. Phillips, B. C. C. Pine, W. F. Pollock, H. B. Reynardson, W. S. Richardson, B. B. H. Rodwell, W. H. Rough, C. M. Roupell, G. Scott, R. L. Surtees, G. M. Sykes, A. Thacker, T. L. Thurlow, G. F. Townsend, W. Vizard, C. Wagstaff, W. W. Watson, W. A. S. Westoby, J. Wilson, T. D. H. Wilson, J. Windle, B. T. Woodd, C. S. Wright, Trinity College; F. L. Birch, E. Boys, C. H. Bromby, J. L. Brown, E. Brumell, J. C. D. Charlesworth, T. Clarkson, W. Coombs, J. P. Eden, C. Fardell, J. E. Fell, A. Fitz-Herbert, W. N. Griffin, F. W. Harper, H. Hayton, J. Herbert, J. Hickman, F. Jeffery, G. Jeudwine, R. W. Kennion, G. Martin, J. H. Mills, H. Niven, J. Pardoe, R. W. Pierpoint, R. C. Savage, H. Scadding, C. Smalley, W. Sparling, J. Thurlow, C. Tower, E. J. Walmsley, T. Whythead, H. O. Wood, St. John's Col-

lege; D. L. Cousins, F. W. Freeman, J. Freeman, J. S. Newman, St. Peter's College; J. Bell, G. S. Elsworth, E. F. King, H. S. Laycock, G. C. Pearson, J. Pulein, R. Whitworth, Clare Hall; R. W. Cory, G. E. Day, W. M. H. Elwyn, R. A. Gordon, A. G. Hildyard, Pembroke College; J. R. Akers, F. W. Baker, T. Blackall, S. N. Dalton, H. Drury, Caius College; J. L. Bennett, G. Bull, H. T. Hill, M. G. Hodgson, R. Parker, W. J. Partridge, J. Pulling, G. F. Simpson, J. E. Troughton, A. Watson, Corpus Christi College; T. Coward, T. H. Howard, O. Reynolds, T. Sandon, W. R. Smith, H. Ward, J. Whitley, F. Wilson, Queen's College; G. M. Carrick, B. W. Dudley, W. Goodall, W. E. Harrison, H. C. Holmes, M. Hutton, H. J. Jackson, E. Selwyn, H. Windsor, Catherine Hall; D. A. Beaufort, D. Bruce, G. A. Clarkson, W. H. Hodgson, W. Metcalf, R. A. Rackham, G. V. Reed, W. Thomson, Jesus College; H. R. Bramwell, E. H. Daniell, J. Deck, G. Fleming, J. R. Hogg, H. S. N. Hubert, H. B. Mason, J. O. Routh, J. Williams, Christ's College; J. W. Buckley, W. H. Ibbotson, R. W. Johnson, V. Raven, C. S. S. White, S. H. Widdington, Magdalene College; W. H. Roberts, H. R. Smythies, R. Thorp, E. H. Thompson, Emmanuel College; H. Touseil, T. Westmoreland, Sidney College; T. Dawson, Downing College.

July 9th.—The Degree of Master of Arts was conferred upon J. Bayldon, of Jesus College.

#### FINE ARTS.

##### POPULAR IMPROVEMENT.

Report of the Committee of the Society for obtaining Free Admission to National Monuments and Public Edifices, &c. &c.

"DURING the past year the object of the Society has steadily progressed [advanced]; further opportunities have been afforded to the people, whose good behaviour, wherever they have been freely admitted, has fully confirmed the opinion of the friends of unrestricted exhibition, and in general has disarmed its opponents of all excuse or pretext on that ground. At Hampton Court, an addition has been made to the free exhibition by opening the Admirals' Room with a collection of portraits, mostly English, of the two last centuries. The rooms called the Princes' Apartments, and Cardinal Wolsey's fine Hall, are also to be thrown open to the public. In the course of twelve months the number of visitors to the pictures has amounted to 116,000, the greatest proportion being on Sunday afternoon and on Monday, and no less than 57,000 of them during the months of July and August. The Tower of London is also to be rendered more satisfactory as an exhibition, by the construction of a more spacious room for the crown jewels, which will be assimilated to the Armory portion, at a reduced admission-fee of sixpence. From May 1839 to May 1840, the number of visitors to the armories, at sixpence each, amounted to 80,000; in the preceding year, at one shilling, about 40,000; and in 1837, at two shillings and the warden's fee, but 10,200; so that the money received by the authorities at the reduced fee is nearly twice as much as on the old system at two shillings, and the number of visitors is almost eight times as great; perhaps nearly as many as the regulation of rounds every half hour, under the care of the wardens, will allow. At the British Museum, the admissions have not been so numerous as two years ago, owing to the closing of various departments, preparatory to their arrangement in the new rooms. But in a few months the completion of the improvements will open a wider field for public amusement and instruction. At the National Gallery, the number of visitors evinces increasing taste; in 1839 it was 397,000. The Museum of the East India House was visited the first year of free exhibition by 15,000 persons, and during the twelve months just expired, by 9840. The want of a catalogue impedes public interest. That of Sir John Soane, in Lincoln's Inn Fields, has been seen by 7837 in the last season. The admissions to the Edinburgh College of Surgeons' Museum was, in 1839, on ordinary days, 9219,

and on the day of the Queen's coronation, 25,000. Last year the visitors on the usual public days amounted to 11,000. So completely has the liberal exhibition of that collection removed a deep-rooted prejudice. In addition to the above and other establishments previously open to the public, government has cancelled the practice of taking fees for the exhibition of the Regalia of Scotland; and in the fourteen months that they have been shewn without charge, 36,900 persons have seen them. In reply to a request from the Chairman of your Committee for the gratuitous admission to Holyrood House, his grace the Duke of Hamilton stated:—

"September 19th, 1839.

"I wrote to my Deputy Keeper there, saying that I should never sanction the right of any demand for seeing the Abbey, and that no demand must be made, leaving to the discretion of those who visited the palace to act as they thought proper."

"Several private Institutions have also liberally opened their doors to the public at our suggestion, beyond those already mentioned; viz. the Lancaster Natural History Museum, weekly; that of Manchester; the Liverpool Royal Institution and Botanical Garden; and the Norwich Museum. Your Committee will not cease to hope that the Royal Academy will answer the public expectation, and throw open annually its exhibition to the people without charge, during some period, however limited; for it is most desirable that the institutions in the metropolis, as they can no longer set the good example, should at least follow that which, in provincial towns, has been attended with such happy results to all classes of the community, as well as to the institutions themselves, and claims the applause of every friend to human improvement. The following extract from the last report of the Royal Institution of Liverpool is particularly gratifying:—

"The Committee contemplate no part of the experience of the past year so much satisfaction, as the success that has rewarded their attempt to bring the poorest classes of the community into connexion with the pure and exalting influences to which this building is devoted. Their faith in the good feeling of the public, and in the aptitude of all minds—even the lowest, to receive refined and elevating impressions, has not disappointed them. Your museum has been crowded monthly by thousands, whose eyes fell for the first time upon whole kingdoms of nature, and with whom no previous knowledge or familiarity broke the effect of freshness and wonder. During the last year, the first Monday in every month has been a public day. The numbers availing themselves of this privilege, and shewing their appreciation of it, have been as follow:—

In 1839, January.....	130
..... February.....	350
..... March.....	1500
..... April.....	2500
..... May.....	4480
..... June.....	3280
..... July.....	5335
..... August.....	4656
..... September.....	2620
..... October.....	7060
..... November.....	4000
..... December.....	5260

Total..... 41,161

In 1840.—January, 5500; and on Monday, February 10th (day of the Queen's marriage), 11,360."

"The uniform propriety and intelligent curiosity of these vast multitudes demonstrate that nothing is wanting but the opportunities of forming taste, and a generous and respectful spirit of sympathy manifested towards them, to take away from the English people that character of rudeness and insensibility to the beauties of nature and art which has so long been a national opprobrium. In opening these opportunities to the labouring classes, this Institution cannot but feel that it occupies the place of a public benefactor and instructor, awakening in uncultivated minds feelings and ideas calculated to soften the rudeness of manners, and to increase the happiness and the virtue of life. With the sense of beauty and wonder dead in the mind, the poor man lives in a mean

"To the above may be added that in March, 1840, there were 5580 visitors; in April, 1st Monday, 4007; and at Easter in that month, 2277: so that from May 1st, 1839, to May, 1840, the number was 54,195 admitted free."

and ungraced world. No greater blessing can be conferred upon him, than to open his mind to the cheap and refining pleasures that every where surround him,—to the wonders and glories of the universe amid which he dwells. And it is, to ourselves, a justification of these expensive and refined tastes, that they are not selfish and exclusive indulgences."

"In a similar spirit of benevolence, the Rev. Mr. Gunn thus communicated to us the opening of the Norwich Museum to the working classes without charge:—

"February 11th, 1840.

"I have been, and am witnessing, one of the most pleasing scenes I was ever present at. The door of our Museum is thronged with a succession of visitors; they are admitted five hundred at a time, for half-an-hour each batch (six thousand have been admitted). It is decidedly the lion of the day; neither the exhibition of the military, nor any other, attracts so many; the greater part are of the lower order—all remarkably decorous, and I overhear frequent exclamations of satisfaction and delight."

"In consequence of a report that the Annual Exhibition of Pictures at Newcastle would not a second time be opened, for a certain period, to the public without charge, your Committee wrote to Mr. Greenhow, the Honorary Secretary of the Society for promoting the Arts in that neighbourhood, and were informed by that gentleman, that—

"No doubt was ever entertained by the Committee of the desirableness of opening their Exhibition to all classes; but the question did arise whether admission to a temporary exhibition was as useful as the application of the proceeds of a small entrance-fee to the purchase of works for a permanent collection, which is always open without any charge. The proposal was overruled by a general meeting, and the Annual Exhibition was again thrown open to the public; a few individuals munificently agreed to make up any deficiency in the receipts that might arise."

"We also learn that the Liverpool Botanical Gardens, which are thrown open gratuitously twice a-week to the public, have been visited by five or six thousand persons each day. When we consider how much has been done in the last three years—when to the thousands admitted without charge to so many collections of all that is beautiful and curious, we add the hundreds of thousands who for a small fee have seen the splendid exhibitions of Nature and of Art got up by the Mechanics' Institutions of Manchester, Derby, Sheffield, Birmingham, Leeds, York, the Potteries, Bolton, Liverpool, &c., we have reason to congratulate our country on the extension of taste and intelligence. The knowledge of our proceedings has begun to spread abroad, and eminent men on the Continent have expressed their satisfaction that England should at length take part in the great competition of popular civilisation through refined taste. They consider the proceedings of this Society as calculated, not only to efface a national reproach, but also to cement the reciprocity of good feeling between nations capable of assisting each other in progressive improvement. But a few years ago, Mr. Couder, the eminent artist, and distinguished member of the French Institute, came to England on purpose to study portions of the Cartoons at Hampton Court. After his arrival, he learnt that he must apply to the Lord Chamberlain for permission, that a fortnight would elapse before he could expect a reply, and a sum of four guineas be required for the warrant. The fee appeared to him disgraceful, and the delay so serious, that he returned without accomplishing the object of his voyage. Now every one, foreign or native, may at will study those master works of art. This Society, having observed the frequent insufficiency of catalogues of public galleries and museums, has appointed a committee to consider and report on the best means of rendering those explanatory vehicles of knowledge more useful and popular: its members have examined a great number of the cata-

logues of various European collections, and hope to arrange a plan that will combine their principal excellencies in an effective and economical form. The interest excited in favour of museums of science or of art is likely to lead to permanent and important results. The Chancellor of the Exchequer and other influential persons have expressed their willingness to promote such means of education by grants, if the mode of applying them be unobjectionable and economical. A letter lately received from the Secretary of the Montrose Natural History and Antiquarian Society, shews at how small a cost encouragement and assistance may be afforded. That Society having raised, by subscription, a sum barely sufficient to build suitable premises for their increasing and valuable collection, is anxious to obtain a remission of duties on the building materials, which they feel confident would enable them to place their specimens in convenient and safe order before winter. The benefit conferred on all institutions for the promotion of literature and science by the legislature exempting their premises from the assessment of taxes to the queen, is an important feature in the history of our civilisation, and it is hoped that it will be made complete by a similar exemption from parochial rates, as it is evident that any tax on popular knowledge must be injurious both to the funds and the moral condition of the people; but of course such advantages ought to be on condition of some concurrent advantage to the public in general, such as free admission to museum or to lectures. Without this it becomes an especial favour to a class of persons able to pay for instruction, to the exclusion and injury of those who are more in want of it. Your Committee considers that the future extension of liberality and knowledge, the accomplishment of your great and benevolent object, would be based on a more solid and safe foundation if such conditional relief were conceded.

(Signed) JOSEPH HUME, *Chairman.*  
GEO. FOGGO, *Hon. Secretary.*

"June 24th, 1840."

#### MR. PARRIS'S DECORATIONS.

MR. PARRIS, of whom it may be truly said that he undertakes nothing which he does not enhance and adorn by his fertile talent, has, during the week, thrown open his rooms with specimens of paintings executed for the decoration of the Duke of St. Alban's residence at Redbourne Hall. These are indeed worthy of the name which has been so long prostituted by common daubers, paper-hangers, distemper-washers, and upholstery men. They are decorations charming to behold; and of which any nobleman may be proud. The subjects are English, Italian, Swiss, French, Indian, &c.; and all imagined with the grace and feeling that belong to the artist's pencil, whether employed on the magnitude of a Colosseum, or the diminutive size of a palmbreadth sketch. In frames of picturesque shapes, they must form the most pleasing occupants of the elegant panels into which the apartments are divided. We know not which of the pieces we admired most—perhaps the French, with its Watteau-like groupings. But every one is freshly and beautifully painted. We believe that the expense of such embellishments is moderate in the extreme; and if so, we shall soon see them in many a handsome mansion.

#### DUKE OF LUCCA'S PICTURES.

A CATALOGUE of ninety-two pictures, sent from the ducal palace of Lucca for sale in this

country, is now before us; and we had, on Thursday, the pleasure of seeing twenty-two of the number exhibited in the gallery of the Society of Painters in Water-Colours, in Pall Mall East. Among them are some splendid specimens of art; and those pictures which may not be esteemed great from their intrinsic merits, are, nevertheless, interesting as examples of masters little known in England, and of ancient painters who have paved the way to the glories of later efforts. Of the first order is "La Madonna dei Candellabri," on wood, by Raphael; an oval of about two feet in diameter, and valued at nine thousand guineas. It belonged to the Borgheze Gallery, and is a remarkable specimen of the master, though, in parts, not such an one as we could worship with our highest admiration. The two lights which give it its name are ineffective and out of place; and it is only in the head of the Virgin, and the extremities of all the figures, that we feel the exquisite purity and powers of Raphael. "Jesus before Pilate," by Gerard Honthorst, is by far the finest thing of that artist we ever saw; and his title of "delle Notti" was well earned, if he had never painted but this one wonderful exhibition of reflected light. Three Carraccis—Annibale, Ludovico, and Agostino,—like the delle Notti from the Giustiniani Gallery, and already sold,—are perfect specimens of that extraordinary family. They represent events in the history of Christ, and have all noble parts; but "The Woman of Canaan," by Annibale, is the *chef-d'œuvre*, and full of beauty. There is another by the same hand, but inferior. Two by Francisco Francia, on wood, are of the second order; as is an unpleasant, though very forcible, "Massacre of the Innocents," by N. Poussin. A small "Crucifixion," ascribed to M. Angelo, is unlike his usual style; and a Barroccio, "Noli me Tangere," is curious, as partaking much of the manner of Greuse, on a large scale. A Hemmeling is a singular and most minutely finished piece; and others display extraordinary qualities, the whole forming a school where the connoisseur may view with delight and the artist study with advantage such features as the distribution of lights, the utmost simplicity, perfect colouring, imagination, and reality, which the genius of the painter suggested and his subjects required.

## NEW PUBLICATIONS.

*Napier Sturt.* Painted by J. Lucas. Engraved by C. E. Wagstaff. Boys. The youngest son of Mr. Sturt, M.P. and Lady Charlotte Sturt, a handsome boy with a handsome canine companion, here forms an interesting picture, and in design and engraving does honour to the arts.

*Sir T. Phillips, the Mayor of Newport.* By F. Williams. Engraved by W. Geller. Boys. PAINTED whilst the gallant mayor was suffering from his Chartist wounds: this likeness should be hung in every town-hall and council-chamber to teach magistrates their duty. It is an unaffected and well-posed portrait, with simple expression, but all indicative of the character of the individual.

## THE DRAMA.

*Drury Lane.*—Novelty after novelty keeps up the attractions of the delightful concerts at this theatre. During the week several celebrated overtures have been added to the stock; a valze and an echo quadrille by M. Jullien, in a very uncommon though extremely agreeable style of composition; and several changes in the solo performances. We see by the bills that

Herr Frisch is shortly to appear. If his merit be any thing near his fame, it will create a sensation amongst all flute-players.

*English Opera House.*—Since our last notice, *My Uncle's Card*, a broad farce, has been successfully produced. It is a mere trifle, and does not call for criticism: it makes people laugh, which is a great recommendation. On Thursday, Miss Fortescue, whom we have before noticed as a very clever young actress, played *Lady Elizabeth Freelove*, in *A Day after the Wedding*, with much spirit and animation.

## VARIETIES.

*Death of Mr. James Ward.*—This able performer died on Wednesday week, under fifty years of age, and after a long period of illness and suffering. We fear that many of his later years have been sadly clouded; and that to bad health has been superadded pecuniary distress, and all those pains which the law inflicts upon unfortunate debtors. His performances on the stage have consequently been for the last two or three seasons enfeebled and spiritless efforts; deficient in that force and manliness which recommended his earlier acting to favour; for though not in the first rank of his profession, Mr. Ward displayed very considerable powers, and was in many parts very effective on the stage. Off it, he was a gentleman of information and polished manners—the son, as we have heard, of General Prescott, whose name is familiar to the public for his services in American warfare.

*Improvements of London.*—[We cannot better comply with the desire of the writer of the following note, than by printing his own simple but expressive apology.—*Ed. L. G.*]

*St. Paul's Churchyard, July 12, 1840.* Sir,—If you could spare a few lines in your influential Journal on Sir F. Trench's plan of embanking the Thames, you will confer a lasting benefit on hundreds of persons residing in London, who, from having large families, are unable to afford even the expense of taking them to the Parks. While thousands are yearly expended on useless schemes, the health of the inhabitants of crowded cities is little thought of by those members of Parliament who, perhaps, seldom, if ever, witness the misery of living in narrow, unwholesome streets. The poor of London claim a few moments of your valuable time.—Your obedient, humble servant, A CITIZEN.

*Nelson Pillar.*—The Committee of the House of Commons on this subject met on Thursday, with Mr. Gally Knight in the chair, and examined several persons eminent in the arts on the subject of this national monument and its proposed site. We rejoice in this, and trust that the objection we offered to its being placed in Trafalgar Square (see *Lit. Gas.* No. 1223) will be felt by every person of taste who has a voice in the matter. Bad as the National Gallery is, and destructive of all true beauty in this locality, it would be infinitely worse with such a column in the middle of it. The Committee meet again on Monday.

*Discovery of the Antarctic Continent.*—An interesting rather than important geographical discovery has this year been made in the Southern Antarctic Ocean, of an island or continent with a coast of 1700 miles from east to west, but situated so far to the south as sixty-four to sixty-six degrees; it will be unavailable for tillage or settlement, though highly useful for seal and whale fishery. The most singular coincidence is, that it was discovered by the French and Americans on the same day, January 19, 1840, at the distance of 720 miles from each other. By reference to the map, it will be seen the above discoveries are in the longitude of New South Wales, and a continuation most probably of the same continent, for a series of large islands was discovered in

1830 by Mr. John Briscoe, of the navy, who, when commanding the brig Tula, on a sealing voyage, fell in with the land in lat. 67°, long. 50° (that of the Mauritius), and coasted it for 300 miles. He was also driven off by severe weather and icebergs.—*Sydney Herald.*

*Auctions.*—Curious things are brought to auction. The famous Eglinton Tournament armour, for example, and all the fine collection made by Mr. Pratt. We also see the great Nassau Balloon announced to be sold in this manner. One knock of the hammer will bring it down.

## An Elegy.

Farewell to the pride of the club,  
Ferried ruthlessly over the Styx;  
We shall look a long time for a sub,  
Such as Anthony Septimus Hicks.

Who like him fill'd the president's chair?  
Who the punch so divinely could mix?  
Or warble an opera air,  
Like Anthony Septimus Hicks?

In cravats he was always supreme,  
And in rings, and in pins, and in sticks;  
And the waistcoats were every one's theme  
Of Anthony Septimus Hicks.

He'd an excellent judgment in curls,—  
In bracelets, nets, worsted, odd tricks;  
And he'd always an arm for the girls,  
Had Anthony Septimus Hicks.

Alas! he was cropp'd in his prime:

It was cruel in Death to transfix  
One who knew how to while away time,  
As did Anthony Septimus Hicks.

But don't let us grieve for him now:  
It's no business of ours—but old Nick's—  
To determine the when and the how  
Of Anthony Septimus Hicks!

SNOOX.

James Macmillan, Esq.

Jacob Montefiore, Esq.

Captain Alexander Nairne

John Pirie, Esq. Alderman

Henry C. Roberts, Esq.

Alexander Rogers, Esq.

R. Thurburn, Esq.

With power to add to their number.

Auditors.—Sir J. K. Reid, Bart. M.P.; Sir J. H. Pelly, Bart.

Solicitors.—Messrs. Freshfield and Sons.

Bankers.—Messrs. Roberts, Currie, and Co.

Secretaries.—R. Macdonald Macpherson, Esq.

Superintendent of Steam Vessels.—Captain James Barber.

Temporary Office, 8 Tokenhouse Yard, Bank.

The practicability of maintaining a Steam Communication with India by way of the Red Sea has been fully proved by the experiments tried by the East India Company, though from the inefficiency of the vessels employed by them, and the unavoidable irregularity of the Indian Daks, its advantages and facilities have not been completely developed, while other reasons, arising from the urgency of the public service, will prevent the East India Company from ever maintaining the communication with the required certainty.

The communication, moreover, has been of small value to passengers, because confined to the line between Suez and Bombay; from whence to the eastern side of India there is great difficulty in the transmission of letters— whilst the conveyance of passengers and parcels is most expensive, and at seasons wholly impracticable. Neither can passengers arriving at Suez from England depend on finding the means of conveyance thence to India.

The British Government has recognised the necessity of instructing the Post-office service to private associations in all cases of distant steam navigation. The considerations which have led to this conclusion on the part of the Government apply with tenfold force in the case of the East India Company.

It is therefore proposed to establish a Company to carry into effect a plan which, by means of steam ships of large tonnage and powerful engines, shall connect the intercourse between Calcutta, Madras, Ceylon, and England, in one unbroken chain, reducing the communication as nearly to a certainty as any human calculations and efforts can accomplish. It would be most desirable that the Presidency of Bombay should also be included in the general arrangement, and there can be no doubt that eventually this will be done; but for the present the East India Company purpose to retain this in their own hands.

With the foregoing views, communications have been opened with the Steam Committee in India, and by the last mail the Directors have received remittances of money, with the assurance of additional subscriptions, provided the line between Suez and Calcutta, &c. (now wholly unoccupied), be established in the first instance.

To meet the wishes of the Indian public, and looking to an immediate profitable return in the general call for such a preliminary step, it is proposed to purchase and despatch to Calcutta, with the least possible delay, the largest steam vessel procurable, to be employed between port and Suez, making four voyages from each place in the year.

To carry the entire service into effect for a regularly monthly communication, it is intended to build seven steam ships of such tonnage and power as to be applicable to the route by the Cape of Good Hope, in case of any interruption to that through Egypt.

The vessels will be also so constructed as to admit of their carrying an effective armament in case of any warlike contingency.

The number of passengers annually passing between Europe and our Indian possessions was 8109 in the year 1838-9, of which 603 only were from Bombay, leaving 7506 for sailing ships between Calcutta, Madras, and Ceylon, and Europe; and it may be fairly assumed that at least one-third of that number will immediately adopt the shorter, cheaper, and more expeditious route which will be offered by the establishment of the proposed first steamboat, that many persons will avail themselves of the Company's ships as a conveyance from port to port in India, and that there will be expected a great increase of travellers consequent on increased facilities.

From detailed calculations which have been made on those data which experience has already furnished, the estimated outlay, charges, and revenues, are exhibited in the following abstract:—

Outlay.	
Building and fitting seven steam ships, cost of stations abroad, and incidental expenses	£200,000
Annual Charge.	
Wages, coals, victualling, insurance, &c., sinking fund for wear and tear, and renewal of ships, and charges of all kinds	£80,000
Income.	
Passengers, less victualling and land transport	£280,000
Freight, consisting of light parcels, periodicals, bullion, &c.	24,000
	£304,000
Yielding a clear annual surplus of	£200,000
or upwards of 11 per cent upon £200,000.	

No contribution for Post-office service has been included in these calculations; but there can be no doubt that the Company when once in operation, must be employed by Government to carry the Mails.

To carry into effect the Plans of the Company, the following outline is proposed:—That steam ships shall start on a fixed day in each month from England and Calcutta; the time calculated on for the performance of the route being, from

England to Alexandria	14 days.
..... Ceylon	35 to 37 ..
..... Madras	38 .. 40 ..
..... Calcutta	48 .. 45 ..

The route across the Isthmus of Suez to be at the charge, and under the superintendence, of the Company.

The sum of 600,000l. will amply suffice for establishing a monthly communication between Calcutta, Madras, Ceylon, and England; but the capital is fixed at 800,000l. to enable the Company to include Bombay at a future period, and also to provide steam ships for such branches as may hereafter be thought desirable, so as to extend the communication to all parts of India and places to the Eastward.

Application will be made to the Crown for an Act of Incorporation to limit the responsibility of the Members of the Company.

The Capital Stock of the Company to be 800,000l. in 16,000 shares of 50l. each; 10l. per share deposit to be paid on the allotment of the shares; 10l. in three months from that time; 5l. in three months from second payment; and the remainder by instalments of 5l. each, until called for by the Directors upon three months' notice. 5000 shares have been reserved for the Subscribers in India, of which a considerable number have already been subscribed for in Calcutta and in Madras, and a deposit paid upon them. The Directors are to prescribe the mode of paying the Indian shares, and to equalise them with the payments on the shares in London.

In case of failure to pay any instalment when due, the shares and all previous payments made in respect thereof to be forfeited.

The general affairs of the Company to be managed by a Board of Directors in London, the qualification of each of whom shall be Fifty Shares, to be elected by the Shareholders resident in England.

The affairs of the Company in India to be managed by a Board of Directors in Calcutta, and to be elected by Shareholders resident in India, with a Local Committee at Madras and Ceylon, being Shareholders similarly qualified.

Two Auditors to be appointed, their qualification to be Twenty Shares each.

In all the affairs of the Company the Proprietors holding	
10 shares to be entitled to 1 vote.	
25 .. .. .	2 ..
50 .. .. .	3 ..
100 .. .. .	4 ..

but no person to have more than one vote.

The first Directors to remain in office five years, after which three of the Directors shall go out of office annually, and an election by the Proprietors shall take place to supply the vacancies; but such Directors may be re-elected.

There will be half-yearly meetings of the Company, at which dividends will be declared, and all other usual business transacted.

The Charter will prescribe the constitution of the Company, and provide for the establishment of Local Committees for the management of the Company's concerns in India.

For the convenience of Subscribers resident in India, a clause will be inserted in the deed of settlement to enable them to vote by power of attorney in all matters of general interest.

Application for shares to be made, according to the annexed form, on or before the 2d of August next.

## FORM OF APPLICATION FOR SHARES.

Gentlemen, I request you will insert my name as a Subscriber to the East India Steam Navigation Company for Shares, or such number as may be allotted me; for which I hereby engage to sign the deed of settlement, to pay the required deposit of 10l. per share, and all further calls that may be hereafter made upon me.

To the Chairman and Directors of the East India Steam Navigation Company.

## EDUCATION.—The attention of Parents

desirous of affording to their Children an Education in accordance with the increasing intelligence and wants of the age, is directed to an Establishment situated in one of the most fertile and healthy counties of England, conducted by a gentleman who is a member of a German university of the highest celebrity, and a most accomplished scholar. The course of instruction, founded on the most approved systems, comprehends the Greek and Latin Classics, the French, German, and Italian Languages, taught by Native reading in the House, the Elements of Astronomy, the various Branches of pure and mixed Mathematics, Geography, History, &c. Impressed with a conviction that no education can be complete without an adequate knowledge of Modern Languages, the Principal has made them an essential branch of instruction in his school. Having himself resided many years on the Continent, and travelled much, he is intimately acquainted with the chief languages of Europe, and is enabled to superintend instruction in this important department of knowledge with no inconsiderable advantage to his Pupils. Altogether, this Establishment will be found to afford to Pupils possessing average talents the certainty of receiving in a second Classical and Mathematical Education, superior to the most judicious instructions in the principal languages of Europe; so that on entering one of our Universities, or some profession, civil, military, or naval, they may be competent to engage in more enlarged studies with unusual advantages. Letters to the Principal of Allion House School, Worcester, will receive immediate attention.

## CORREGGIO.—Under the express Sanction

of the Trustees of the National Gallery.—Subscribers are respectfully informed that the Lists for Proof Impressions of Mr. Doel's forthcoming Engraving, from the Picture of "Ecco Homo," by Correggio, are Close, and the Pictures of the same artist in the early part of the French Revolution from the Colonna family, at Rome, by Sir Simon Clarke, who, not succeeding in removing it from Italy, was induced to part with it to Murat. It was bought, together with the picture of "Mercury instructing Cupid," by the same master, from his widow, by the Marquess of Londonderry, and from him by Parliament, for Eleven Thousand Guineas the two works.

Another and similar work will shortly be announced, forming the second of a Series of large elaborate Line Engravings, from the Pictures of the most eminent Italian Masters, including (besides Correggio) Raffaele, Da Vinci, Carracci, Titian, Guido, &c. Mr. George T. Dog, 26 St. Peter's Square, Hammermith. June 20, 1840.

## ROYAL MANCHESTER INSTITUTION ASSOCIATION, for the PROMOTION of the FINE ARTS.—The Council have determined to Form an Association in connection with the Annual Exhibition of Pictures, under the above title, on a plan similar to the one so successfully adopted at Edinburgh, by "The Association for the Promotion of the Fine Arts in Scotland," which has in six years, by a progressive increase, raised its annual subscription list from 7500l. to 41812l., and purchased for the Association works of art to the amount of 15,8832l.

The objects of the Association are to encourage artists to send choice and valuable pictures to the exhibitions; to disseminate a love and taste for art in every department; to enable all classes to become acquainted with the various processes of works of art, which will greatly assist in forming a character and more correct taste in all ranks of life, but especially amongst the artisans and others employed in our various manufactures.

An engraving will be made, from time to time, of such of the works of art exhibited and sold in the exhibitions, as the committee may consider advisable; by which means a very important branch of art will be encouraged, and the subscribers will all receive, almost, if not entirely, the value of their subscriptions.

The Association will be under the management of a committee chosen by the members.

The Council hope that the Association will receive support and encouragement from every patron of art; and they trust that all who may be willing to become subscribers will immediately forward their names, and likewise those of their friends whom they can induce to subscribe. Parties residing at a distance are requested to forward their subscriptions along with their names.

The Council are glad to observe that Mr. Louis Magnus, of this town, one of the subscribers to the Edinburgh Art Association, won at the distribution the first prize, viz. a magnificent picture, by Allan Ramsay, the picture may now be seen at the shop of Mr. J. C. Grundy, in Exchange Street.

T. W. WINSTANLEY, Hon. Sec.

## Rules.

1st. Every subscriber of one guinea shall be a member for one year, and the subscriber of a larger sum will be entitled to the privilege mentioned in article 8th. Subscribers who do not intimate the contrary to the secretary previous to the 1st day of May in every year, will be understood to continue their subscriptions.

2d. The whole amount of the subscriptions shall be devoted, after the necessary deduction for expenses, to the purchase of a selection from the works of artists exhibited in the annual exhibition of the Royal Manchester Institution; with this single exception, that it shall be in the power of the committee of management, when thought advisable by them, to engrave, for distribution among the subscribers, such works of art as may appear worthy of the distinction, provided always that a sufficient number of purchases shall have been previously made.

3d. A general meeting of the members shall be held annually, when a committee of management will be appointed for the ensuing year, each member having a vote in the appointment of such committee.

4th. This committee shall consist of twelve gentlemen who are not artists, six of whom will go out annually.

5th. The committee shall be intrusted with full powers to purchase what may appear to them the most deserving works of art exhibited.

6th. The purchase of these works shall take place during the period that the exhibition is open to the public.

7th. Upon the close of the exhibition, the different works purchased shall become, by lots publicly drawn, the property of individual subscribers.

8th. A subscriber of one guinea shall be entitled to one chance; of two guineas, two chances; and so on.

9th. The committee of management shall annually publish a report, wherein they shall state the principles that guided them in the selection of the works of art they may have purchased, and enter into such other details as may appear to them proper.

10th. At the general meeting a secretary and treasurer shall be appointed, who shall be ex-officio members of the committee of management; and whose special duty it will be to keep correct lists of all the subscribers, to collect their subscriptions, and, under the direction of the Committee, to carry into effect every arrangement for furthering the object in view.

## MISCELLANEOUS AND AMERICAN

BOOKS.—The Public are informed that the Stock of R. J. Kennet, No. 14 York Street, Covent Garden, is now selling at greatly reduced prices, for ready money, by order of the Trustees. The Collection comprises Works in History, Biography, Topography, Classics, &c., and the best American Works. The Lease and Pictures can be had on easy terms, very suitable for a young man about to commence business, the situation being central and commanding.

### REVIEWS OF NEW BOOKS.

*Sir Henry Cavendish's Debates of the House of Commons, during the Thirteenth Parliament of Great Britain; which met in May 1768, and was dissolved in June 1774; commonly called "The Unreported Parliament."* Drawn up from his Notes; and now published by J. Wright, editor of the "Parliamentary History," &c. &c. Parts I. and II. Large 8vo. double columns, pp. 320. London, 1840. Longman and Co.; Hatchard; Ridgway; Calkin and Budd; Rodwell; Booth; Allen and Co.; Bigg and Son.

WHEN this publication was announced, we noticed the parliamentary importance and the national interest attached to it; and now that we have before us a sufficient example of it, whence to form a judgment of the whole, we hasten to give it that aid which its valuable character demands, by stating our opinion of its very great merits in both points of view. It, in fact, completes the parliamentary history of times of the highest consequence, by supplying an essential link in the chain, the loss of which has always been a subject of regret and lamentation. This, of course, also stamps it with the national stamp as an important historical desideratum. But besides these recommendations, what must public curiosity feel with regard to two hundred speeches by Burke, uttered during the first seven years that he sat in parliament, and all entirely new to us? But all the contents, and the reports of the speakers, are of such biographical and constitutional interest, that it would be difficult to point to a single debate in which there was not much to engage our earnest attention: the dry party question of the choice of Speaker—the exclusion of strangers from the gallery, which led to this extraordinary performance of Sir H. Cavendish, who appears to have rapidly improved in the execution of his task after the earlier attempts—the London and Boston riots—cession of Corsica—Wilkes's petition, and the privileges of Parliament—the beginning of the American troubles—the *Nullum Tempus* Bill—the East India Company's affairs—the civil list—copy-right—the Quebec Government Bill, &c. &c.—all are, more or less, deserving of perusal and consideration.

Truly does the announcement state, that, besides the speeches of Burke, the collection contains "a number of the most valuable speeches of Mr. George Grenville, Lord North, Mr. Dunning, Mr. Thurlow, Mr. Wedderburn, Mr. Fox, Colonel Barré, Mr., afterwards Chief Justice, Blackstone, Alderman Beckford, Sergeant Glynn, Mr. Dowdeswell, Lord John Cavendish, Sir George Savile, &c. It embraces the whole of the stirring period of the publication of the 'Letters of Junius,' and exhibits the feeling which prevailed in the House and in the country previous to the unhappy contest which took place between Great Britain and her American colonies."

Of such a publication, it is clear that no extracts can convey an adequate idea: it is only as a whole that it can be properly viewed and estimated. But we will venture to quote, for their own sake and the sake of the speaker, a few sentences from Burke, March 8th, 1769,

in moving to appoint a committee to inquire into the conduct of Government during the riots in St. George's Fields.

"I never, sir, did rise up in this house with so great a weight upon my mind as oppresses it at this moment; the first time I ever presumed to lay any proposition from myself before the house. The more I have considered the subject, the more I have, for a long time, suffered under great anxiety; urged by duty on one side, deterred by a sense of my own imperfection on the other. At first, I was in haste to bring this matter under your consideration. I then put it off, from day to day, from week to week, that it might be taken up upon grounds entirely public; totally separate from any temporary views; totally separate from any personal or private purpose whatever. I well know that a task of this kind is one of an invidious nature; liable to be misrepresented with regard to the facts, and also with regard to the conduct and motives of the individual who brings it forward. From the very nature of the thing, there are disagreeable and awkward circumstances hanging about it. It is impossible that there should be any one subject, which has been the object of popular excitement, that has not been mixed with popular dross; mixed with the ideas of violent and factious men: there are things which it is impossible to separate from it. I believe there never was an object of public discontent that had not such disagreeable circumstances hanging about it. Let gentlemen look back to the reigns of Charles the First and Second, and to that of James the Second. Whoever will be at the pains to examine into that interesting period will find, in the writings upon the side of liberty, the highest discontent; much violent, stern, indecent wrangling of characters; which must have ruined and disgraced such a cause, if the cause of liberty could be ruined or disgraced. The writings of the people on the other side of the question were more unexceptionable; by no means breathing the things upon the popular side. It was the quality of the court at that time, and it is the quality of courts at all times, to be dangerous in their candour; whereas the vulgar are violent in the outset, but honest in their intentions. The question for our consideration is, whether it is not absolutely necessary for us not to be influenced by such distinctions; whether it is not our duty to separate the feelings of the people from their judgment; to consider their interest with their real intentions? If we do not do something like this; if we form, and lay it down as a rule, that the grievances of the people are not to be redressed so long as their ideas are absurd, they never will be well governed. Whenever the people are aggrieved, they will be violent: whenever the people are violent, they will be absurd. If we neglect this, the very grievance and the cause of it will be the reason why it should never be redressed at all. In order, sir, to keep this important question from being overloaded by what is bad, by what does not belong to it, I shall beg leave to state what I disclaim doing. The first thing I will say is, that any one thing whatever upon which the judges' determination has passed, I do not in-

tend to agitate: whatever has the sacred seal of judgment impressed upon it, I shall leave untouched. I will not touch the sacred ark that rests upon the table of our laws. God forbid we should suspect any thing wrong there! In the next place, I do not propose to deprive government of any one power or authority it has in the world; to take from it its judicial or executive power; to take from it any civil or military power whatever. In the third and last place, I heartily and totally disclaim all ideas of a lax and faint execution of justice: any thing that tends to weaken the springs of the executive power of this government. Peace and order are to be preserved at any price; if the voice of the magistrate cannot do it, the constable must do it; if the constable cannot do it, the sword of the soldier must do it; if it cannot be purchased without blood, it must be purchased by blood. Liberty ought not to exist in a country where peace and order are not observed. I appeal to the sense of the house, how far I have ever been from entertaining any violent notions upon the subject of liberty. My ideas upon that head have been kept a little below the level. Not that I think that that good principle ought to be checked, but I rather chose to fit it to my own knowledge and abilities. I would choose that I should stick by my principles, and they by me, to the end, for ever. I am by opinion, by principle, by constitution, an enemy to all violence whatever. There is an innovation from above as well as from below: power can innovate as well as be innovated upon. I premise this, because such an innovation has been, as I conceive, attempted in this country: an innovation tending to subvert, first its liberty, next its order; and to introduce, instead of order and decorum, confusion into this country. Depend upon it, sir, this country will not let go its liberty without a struggle. An attempt has been made to introduce into the administration of our justice a martial police, upon a principle, as I understand, acknowledged, avowed, supported, winked at, by the greatest lawyers in the kingdom. Some of the great men in place, those in authority, may declare otherwise: but I say, they have expressed a desire and a design of incorporating the military with the civil constitution of this country: they teach the magistrate to look to the military power as his first instrument, and not as the final and desperate resource in cases of necessity. If such an opinion shall prevail, it will, sir, be an innovation well worth the attention of the house."

And, after going over the case,—

"I say, sir, let us examine into the cause of these discontents. Let us do so, because it will calm the minds of the people: they will not look for illegal methods of redress when they can have legal ones. If we listen to the general reasoning of the gentlemen opposite, we pass a bill of indemnity for every misdeed of office; for every thing is done *colore officii*: they are always committed upon the existence of some excess, of some disturbance. This doctrine was never heard in good times: it would never be borne in good times. I may be told that the duty of this house is, not the

suppressing of riots, but the redressing of grievances: but, sir, you may watch over and control the executive government of the country. Breaches of order should be severely punished, according to the rule and measure of the law, and the spirit of the constitution. If they do not do their duty, it is our duty to see that they are severely animadverted upon. If ever the time should come, when this house shall be found prompt to execute and slow to inquire; ready to punish the excesses of the people and slow to listen to their grievances; ready to grant supplies and slow to examine the account; ready to invest magistrates with large powers and slow to inquire into the exercise of them; ready to entertain notions of the military power as incorporated with the constitution;—when you learn this in the air of St. James's, then the business is done; then the House of Commons will change that character which it receives from the people only. It is impossible, sir, that your mace can keep its dignity: a military guard cannot keep it; for the moment a military guard comes, you have lost your power. In what I have offered to the house, I trust I have laid ground before you for an inquiry. I do, therefore, with great submission and humility, move," &c. &c.

The attorney-general, in reply, thus characterises Burke's oratory:

"I do not mean to follow him in all the flights of his imagination; into those agreeable illusions of fancy which he indulges in, upon all occasions. I have taken down his words."

This is as much as our limits allow us to do, though it is for a work which, when completed, will fill up a gap of much consequence both to politics and history; and we consider it to be indeed a fortunate circumstance that Mr. Wright should have discovered the manuscripts of Sir Henry Cavendish from which alone the *lacuna* could be supplied. It is fortunate that they should have fallen into the hands of so able and experienced an editor; and we trust that his labours will meet with their due reward from members of the legislature, statesmen, and the public at large.

*The Paris Sketch-Book.* By Mr. Titmarsh. With Numerous Designs by the Author on Copper and Wood. 2 vols. 12mo. London, 1840. Macrone.

WHERE a man of Mr. Titmarsh's talents, with pencil and pen, can have been concealed from us we cannot divine. Some of these papers have appeared in periodicals, and we have admired them, laughed at them, thought about them. But the name of Titmarsh is not familiar to our ears, and we never met an owner of it in the literary, fashionable, indifferent, or aristocratic society with which it is our chance occasionally to mix. It must, we opine, be assumed by some quaint humorist, some clever, facetious rogue, who, like most rogues of a less creditable class, delights in tricking the world by an Alias. We may be mistaken, and if we are so, request Mr. Titmarsh to come forward and receive our apologies in person. We are ready to walk with him, chat with him, dine with him, sup with him, drink with him, do any thing with so agreeable a fellow, but go out with him. Only let him, we repeat, come forward. At any rate, when we go to Paris we shall certainly call upon and patronise the incomparable tailor to whom his work is thus inscribed:—

"Dedictory Letter to M. Arets, Tailor, &c.  
"27 Rue Richelieu, Paris.

"Sir,—It becomes every man in his station to acknowledge and praise virtue wheresoever

he may find it, and to point it out for the admiration and example of his fellow-men. Some months since, when you presented to the writer of these pages a small account for coats and pantaloons manufactured by you, and when you were met by a statement from your creditor, that an immediate settlement of your bill would be extremely inconvenient to him; your reply was, 'Mon Dieu, sir, let not that annoy you; if you want money, as a gentleman often does in a strange country, I have a thousand-franc note at my house which is quite at your service.' History or experience, sir, makes us acquainted with so few actions that can be compared to yours,—an offer like this from a stranger and a tailor seems to me so astonishing,—that you must pardon me for thus making your virtue public, and acquainting the English nation with your merit and your name. Let me add, sir, that you live on the first floor; that your cloths and fit are excellent, and your charges moderate and just; and, as a humble tribute of my admiration, permit me to lay these volumes at your feet.—Your obliged, faithful servant,

"M. A. TITMARSH."

The essays of which these volumes consist are in number nineteen, and in character very miscellaneous. In most of them wit and humour are the prevailing features, but all of them display besides a keen sense of the ridiculous and a hostility to humbug, a penetrating insight into the wheels by which men and the mixed world around him is moved, and a thorough dislike to the foibles and vices he hesitates not to lash and expose. The first paper, under the title of "An Invasion of France," is an entertaining description of a journey from London to Paris, and the second a ludicrous account of the misadventures of Mr. Pogson, an ambitious bagman in the drug line, who attempts to figure as a man of the *ton* in the latter city. From the "Invasion" we copy a few pages as a sample:—

"About twelve o'clock, just as the bell of the packet is tolling a farewell to London Bridge, and warning off the blackguard boys with the newspapers, who have been shoving 'Times,' 'Herald,' 'Penny Paul-Pry,' 'Penny Satirist,' 'Flare-up,' and other abominations, into your face—just as the bell has tolled, and the Jews, strangers, people-taking-leave-of-their-families, and blackguard-boys aforesaid, are making a rush for the narrow plank which conducts from the paddle-box of the Emerald steamboat unto the quay—you perceive, staggering down Thames Street, those two hackney-coaches, for the arrival of which you have been praying, trembling, hoping, despairing, swearing—sw—, I beg your pardon, I believe the word is not used in polite company—and transpiring, for the last half hour. Yes, at last, the two coaches draw near, and from thence an awful number of trunks, children, carpet-bags, nursery-maids, hat-boxes, band-boxes, bonnet-boxes, desks, cloaks, and an affectionate wife, are discharged on the quay. 'Elizabeth, take care of Miss Jane,' screams that worthy woman, who has been for a fortnight employed in getting this tremendous body of troops and baggage into marching order. 'Hicks! Hicks! for heaven's sake mind the babies!'—'George—Edward, sir, if you go near that porter with the trunk, he will tumble down and kill you, you naughty boy!—My love, do take the cloaks and umbrellas, and give a hand to Fanny and Lucy; and I wish you would speak to the hackney-coachmen, dear, they want fifteen shillings, and count the packages, love—twenty-seven packages,—and

bring little Flo; where's little Flo?—Flo! Flo!—(Flo comes sneaking in; she has been speaking a few parting words to a one-eyed terrier, that sneaks off similarly, landward.) As when the hawk menaces the hen-roost, in like manner, when such a danger as a voyage menaces a mother, she becomes suddenly endowed with a ferocious presence of mind, and bristling up and screaming in the front of her brood, and in the face of circumstances, succeeds, by her courage, in putting her enemy to flight; in like manner you will always, I think, find your wife (if that lady be good for twopence) shrill, eager, and ill-humoured, before and during a great family move of this nature. Well, the swindling hackney-coachmen are paid, the mother leading on her regiment of little ones, and supported by her auxiliary nurse-maids, are safe in the cabin; you have counted twenty-six of the twenty-seven parcels, and have them on board, and that horrid man on the paddle-box, who, for twenty minutes past, has been roaring out, NOW, SIR!—says, now, sir, no more."

The other papers present us a hundred temptations to quote in justice to the writer; but we shall content ourselves with a few short specimens taken almost at random from the two with which the work concludes. The first is on French dramas and melodramas, an excellent and biting criticism on these follies and monstrosities:—

"There are (says the writer) three kinds of drama in France, which you may subdivide as much as you please. There is the old classical drama, well-nigh dead, and full time too. Old tragedies in which half-a-dozen characters appear, and spout sonorous Alexandrines for half-a-dozen hours: the fair Rachel has been trying to revive this *genre*, and to untomb Racine; but be not alarmed, Racine will never come to life again, and cause audiences to weep, as of yore. Madame Rachel can only galvanise the corpse, not revivify it. Ancient French tragedy, red-heeled, patched, and be-periwigged, lies in the grave; and it is only the ghost of it that we see, which the fair Jewess has raised. There are classical comedies in verse, too, wherein the knavish valets, rakish heroes, stolid old guardians, and smart, free-spoken serving-women, discourse in Alexandrines as loud as the Horaces or the Cid. An Englishman will seldom reconcile himself to the *roufflement* of the verses, and the painful recurrence of the rhymes; for my part, I had rather go to Madame Saqui's, or see Deburan dancing on a rope; his lines are quite as natural and poetical. Then there is the comedy of the day, of which Monsieur Scribe is the father. Good heavens! with what a number of gay colonels, smart widows, and silly husbands, has that gentleman peopled the play-books! How that unfortunate seventh commandment has been maltreated by him and his disciples! You will see four pieces, at the Gymnase, of a night; and so sure as you see them, four husbands shall be wickedly used. When is this joke to cease? Mon Dieu! Play-writers have handled it for about two thousand years, and the public, like a great baby, must have the tale repeated to it over and over again. Finally, there is the Drama, that great monster which has sprung into life of late years; and which is said, but I don't believe a word of it, to have Shakspeare for a father. If Mr. Scribe's plays may be said to be so many ingenious examples how to break one commandment, the *drame* is a grand and general chaos of them all; nay, several crimes are added, not prohibited in the Decalogue, which was written before dramas

were. Of the drama, Victor Hugo and Dumas are the well-known and respectable guardians. Every piece Victor Hugo has written, since 'Hernani,' has contained a monster—a delightful monster, eaved by one virtue. There is Triboulet, a foolish monster; Lucrèce Borgia, a maternal monster; Mary Tudor, a religious monster; Monsieur Quasimodo, a hump-backed monster; and others, that might be named, whose monstrosities we are induced to pardon—nay, admiringly to witness—because they are agreeably mingled with some exquisite display of affection. And, as the great Hugo has one monster to each play, the great Dumas has, ordinarily, half-a-dozen, to whom murder is nothing; common intrigue, and simple breakage of the before-mentioned commandment, nothing; but who live and move in a vast, delightful complication of crime, that cannot be easily conceived in England, much less described. When I think over the number of crimes that I have seen Mademoiselle Georges, for instance, commit, I am filled with wonder at her greatness, and the greatness of the poets who have conceived these charming horrors for her. I have seen her make love to, and murder, her sons, in the 'Tour de Nesle.' I have seen her poison a company of no less than nine gentlemen, at Ferrara, with an affectionate son in the number. I have seen her, as Madame de Brinvilliers, kill off numbers of respectable relations in the four first acts; and, at the last, be actually burned at the stake, to which she comes shuddering, ghastly, barefooted, and in a white sheet. Sweet excitement of tender sympathies! Such tragedies are not so good as a real, downright execution; but, in point of interest, the next thing to it. With what a number of moral emotions do they fill the breast; with what a hatred for vice, and yet a true pity and respect for that grain of virtue that is to be found in us all; our bloody, daughter-loving Brinvilliers; our warm-hearted, poisonous Lucretia Borgia; above all, what a smart appetite for a cool supper afterwards, at the Café Anglais, when the horrors of the play act as a piquant sauce to the supper! Or, to speak more seriously, and to come, at last, to the point. After having seen most of the grand dramas which have been produced at Paris for the last half-dozen years, and thinking over all that one has seen,—the fictitious murders, rapes, adulteries, and other crimes, by which one has been interested and excited,—a man may take leave to be heartily ashamed of the manner in which he has spent his time, and of the hideous kind of mental intoxication in which he has permitted himself to indulge. Nor are simple society outrages the only sort of crime in which the spectator of Paris plays has permitted himself to indulge; he has recreated himself with a deal of blasphemy besides, and has passed many pleasant evenings in beholding religion defiled and ridiculed."

As he has elsewhere severely handled the French novelists, he here shows up some of the pieces of Victor Hugo, Dumas, and others, and especially the immoral and irreligious tendency of their compositions; but we must leave this theme to give a few touches of the last paper, "Meditations at Versailles," in which it is not easy to decide whether the drollery or the striking reflection prevails most in exhibiting the versatile powers of the author:—

"The palace of Versailles has been turned into a bricabrac shop, of late years; and its time-honoured walls have been covered with many thousand yards of the worst pictures that eye ever looked on. I don't know how many leagues of battles and sieges the unhappy

visitor is now obliged to march through, amidst a crowd of chattering Paris cockneys, who are never tired of looking at the glories of the Grenadier Français, to the chronicling of whose deeds this old palace of the old kings is now altogether devoted. A whizzing, screaming steam-engine rushes hither from Paris, bringing sheals of *badauds* in its wake. The old *coucou*s are all gone, and their place knows them no longer. Smooth asphaltum terraces, tawdry lamps, and great hideous Egyptian obelisks, have frightened them away from the pleasant station which they used to occupy under the trees of the Champs Elysées; and though the old *coucou*s were just the most uncomfortable vehicles that human ingenuity ever constructed, one can't help looking back to the days of their existence with a tender regret, for there was pleasure, then, in the little trip of three leagues; and who ever had pleasure in a railroad journey?—Does any reader of this venture to say, that, on such a voyage, he ever dared to be pleasant? Do the most hardened stokers joke with another?—I don't believe it. Look into every single car of the train, and you will see that every single face is solemn. They take their seats gravely, and are silent, for the most part, during the journey; they dare not look out of window, for fear of being blinded by the smoke that comes whizzing by, or of losing their heads in one of the windows of the down train: they ride for miles in utter damp and darkness, through awful pipes of brick, that have been run pitilessly through the bowels of gentle mother Earth; the cast-iron Frankenstein of an engine gallops on, puffing and screaming. Does any man pretend to say that he enjoys the journey?—he might as well say that he enjoyed having his hair cut; he bears it, but that is all; he will not allow the world to laugh at him, for any exhibition of slavish fear; and pretends, therefore, to be at his ease; but he is afraid, nay, ought to be, under the circumstances. I am sure Hannibal or Napoleon would, were they locked suddenly into a car; there kept close prisoners for a certain number of hours, and whirled along at this dizzy pace. You can't stop, if you would;—you may die, but you can't stop; the engine may explode upon the road, and up you go along with it; or, may be a bolter, and take a fancy to go down a hill, or into a river: all this you must bear, for the privilege of travelling twenty miles an hour. This little journey, then, from Paris to Versailles, that used to be so merry of old, has lost its pleasures since the disappearance of the cuckoos; and I would as lieve have for companions the statues that lately took a coach from the bridge opposite the Chamber of Deputies, and stepped out in the Court of Versailles, as the most part of the people who now travel on the railroad. The stone figures are not a whit more cold and silent than these persons, who used to be, in the old cuckoo, so talkative and merry. The prattling grisette, and her swain from the Ecole de Droit; the huge Alsatian carabinier, grim smiling under his sandy mustaches, and glittering brazen helmet; the jolly nurse, in red calico, who had been to Paris to shew mamma her darling Lolo or Guguete;—what merry companions used one to find squeezed into the crazy old vehicles that formerly performed the journey! But the age of horse-flesh is gone,—that of engineers, economists, and calculators, has succeeded; and the pleasure of *coucoudom* is extinguished for ever. Why not mourn over it, as Mr. Burke did over his cheap defence of nations, and unbought grace

of life; that age of chivalry, which he lamented, *à propos* of a trip to Versailles, some half a century back? Without stopping to discuss (as might be done, in rather a neat and successful manner), whether the age of chivalry was cheap or dear, and whether, in the time of the unbought grace of life, there was not more bribery, robbery, villany, tyranny, and corruption, than exists even in our own happy days,—let us make a few moral and historical remarks upon the town of Versailles, where, between railroad and *coucou*, we are surely arrived by this time. The town is, certainly, the most moral of towns. You pass, from the railroad station, through a long lonely suburb, with dusty rows of stunted trees on either side, and some few miserable beggars, idle boys, and ragged old women, under them. Behind the trees are gaunt, mouldy houses, palaces once, where (in the days of the unbought grace of life) the cheap defence of nations gambled, ogled, swindled, intrigued; whence high-born duchesses used to issue, in old times, to act as chambermaids to lovely Du Barri, and mighty princes rolled away, in gilt carriages, hot for the honour of lighting his Majesty to bed, or of presenting his stockings when he arose, or of holding his napkin when he dined. Tailors, chandlers, timmen, wretched hucksters, and green-grocers, are now established in the mansions of the old peers; small children are yelling at the doors, with mouths besmeared with bread and treacle; damp rags are hanging out of every one of the windows, steaming in the sun; oyster-shells, cabbage-stalks, broken crockery, old papers, lie baking in the same cheerful light. A solitary water-cart goes jingling down the wide pavement, and spirts a feeble refreshment over the dusty, thirly stones. After pacing, for some time, through such dismal streets, we *deboucher* on the grand place; and before us lies the palace dedicated to all the glories of France. In the midst of the great, lonely plain, this famous residence of King Louis looks low and mean. Honoured pile! time was when tall musketeers and gilded body-guards allowed none to pass the gate;—fifty years ago ten thousand drunken women, from Paris, broke through the charm; and now a tattered commissioner will conduct you through it for a penny, and lead you up to the sacred entrance of the palace. We will not examine all the glories of France, as here they are portrayed in pictures and marble: catalogues are written about these miles of canvases, representing all the revolutionary battles, from Valmy to Waterloo,—all the triumphs of Louis XIV.—all the mistresses of his successor,—and all the great men who have flourished since the French empire began. Military heroes are most of these: fierce constables in shining steel, marshals in voluminous wigs, and brave grenadiers in bearakin caps; some dozens of whom gained crowns, principalities, dukedoms; some hundreds, plunder and epaulets; some millions, death in African sands, or in icy Russian plains, under the guidance, and for the good, of that arch-hero, Napoleon. By far the greater part of 'all the glories' of France (as of most other countries) is made up of these military men; and a fine satire it is, on the cowardice of mankind, that they pay such an extraordinary homage to the virtue called courage, filling their history-books with tales about it, and nothing but it. Let them disguise the place, however, as they will, and plaster the walls with bad pictures as they please, it will be hard to think of any family but one, as one traverses this vast gloomy edifice. It has not been humbled to the ground.

as a certain palace of Babel was of yore; but it is a monument of fallen pride, not less awful, and would afford matter for a whole library of sermons. The cheap defence of nations expended a thousand millions in the erection of this magnificent dwelling-place. Armies were employed, in the intervals of their warlike labours, to level hills, or pile them up; to turn rivers, and to build aqueducts, and transplant woods, and construct smooth terraces, and long canals. A vast garden grew up in a wilderness, and a stupendous palace in the garden, and a stately city round the palace: the city was peopled with parasites, who daily came to do worship before the creator of these wonders—the Great King. ‘Dieu seul est grand,’ said courtly Massillon; but next to him, as the prelate thought, was certainly Louis, his vicergerent here upon earth—God’s lieutenant-governor of the world,—before whom courtiers used to fall on their knees, and shade their eyes, as if the light of his countenance, like the sun, which shone supreme in heaven, the type of him, was too dazzling to bear. Did ever the sun shine upon such a king before, in such a palace?—or, rather, did such a king ever shine upon the sun?”

A pictorial representation of the grand monarch, which illustrates this sketch, is a fair proof of Mr. Timmarsh’s graphic talent. It consists of three figures, the appearance of which may be gathered from the description of them:—

“But a king is not every inch a king, for all the poet may say; and it is curious to see how much precise majesty there is in that majestic figure of Ludovicus Rex. In the plate opposite we have endeavoured to make the exact calculation. The idea of kingly dignity is equally strong in the two outer figures; and you see, at once, that majesty is made out of the wig, the high-heeled shoes, and cloak, all fleurs-de-lis bespangled. As for the little, lean, shrivelled, paunchy old man, of five feet two, in a jacket and breeches, there is no majesty in him, at any rate; and yet he has just stepped out of that very suit of clothes. Put the wig and shoes on him, and he is six feet high;—the other fripperies, and he stands before you majestic, imperial, and heroic! Thus do barbers and cobblers make the gods that we worship; for do we not all worship him? Yes; though we all know him to be stupid, heartless, short, of doubtful personal courage, worship and admire him we must; and have set up, in our hearts, a grand image of him, endowed with wit, magnanimity, valour, and enormous heroical stature. And what magnanimous acts are attributed to him? or, rather, how differently do we view the actions of heroes and common men, and find that the same thing shall be a wonderful virtue in the former, which, in the latter, is only an ordinary act of duty.”

And with this we finish, most cordially advising our readers to possess themselves of these volumes for their autumnal refreshment in the provinces, and at watering-places and other resorts.

*Rough Notes of the Campaign in Sind and Afghanistan, in 1838-9. Being Extracts from a Personal Journal kept while on the Staff of the Army of the Indus.* By Major James Outram, 23d Regiment, N. I. Now Political Agent in Sind. Illustrated with Plans of Ghizni and Khelat. 12mo. pp. 262. London, 1840. Richardson. Reprinted from the Bombay Edition.

ARMY bulletins and long despatches give the general information relating to events which

afterwards becomes history; whilst extracts from private letters and newspaper correspondence supply, bit by bit, particulars of considerable interest, which also serve to complete the accounts for which the public look. But in addition to these sources of intelligence it will be acknowledged that there can hardly be a better adjunct than the daily journal or diary of a competent witness, who has taken part in all the circumstances described; and been employed in the expedition and operations respecting which we desire to obtain an accurate and sufficient knowledge. The very minutiae and incidental notices of such a record make its value; and we are led by it to be as it were spectators of and actors in the various affairs, the progress of which it marks with intimate detail from hour to hour, and from day to day. We have, accordingly, read these *Rough Notes* with much advantage, even after perusing the many voluminous documents which have already issued from the press on the subject of the *Campaign in Sind and Afghanistan*—a campaign of extreme importance to our Indian Empire, whether we consider its effects in extending our present geographical and political relations, or the foundations it has laid with regard to our future prospects. Yet it is a very simple and straightforward narrative of what he saw and what occurred to the writer, who accompanied Sir John, now Lord Keane, as an extra aide-de-camp; and left Bombay with the commander-in-chief and his suite, in the *Semiramis*, 21st November, 1838, and landed at Mondavie on the 2d of December. On his route through Sind he was engaged in several matters of military consequence, especially in the procuring of camels for the use of the invading force; and his statements concerning the Ameers who rule that country shew that it was well for us that we had not to traverse their dominions in a backward course. Parts of Cutch, the Bolan Pass, and Afghanistan, were next crossed, and the brilliant storming of Ghizni crowned the toils and perils of this difficult march. We have next a very interesting account of the pursuit of Dost Mahomed Khan, who would most likely have been taken prisoner by Major Outram, had not his native allies played false; and then the operations against the Ghiljees, restless and bitter enemies of the English, and the capture of Khelat, with which the great success of the war was finally achieved.

The covert hostility of the Ameers of Sind, who were only overawed by the superiority of our force from coming into conflict, was succeeded, as we advanced, by the predatory and murderous attacks of a hovering multitude of banditti, known by the name of Beloches. These daring and desperate marauders were round the camp by night and by day, inveigling followers to ambush and certain death, cutting off stragglers, and boldly assailing piquets and carrying away horses, camels, and plunder. The following are examples of this distressing species of warfare:—

“Passed the bodies of two Beloch robbers on the road, said to have fallen yesterday in a skirmish with the people belonging to Ahmed Khan, a person of some authority in this country, who is accompanying the brigade in advance. Accounts received from it mention an affair, also with robbers, on the line of march yesterday, in which a Sepoy of 19th regiment was wounded, who is since dead. This, however, occurred within two miles of camp, and the bodies we saw were eight miles from it. A Havildar and five Sepoys of the 19th regiment, N. I. succeeded in repulsing a large body of

Beloches, who attempted to carry off two camels, of which the former were in charge, but the robbers were more successful the previous day, having seized some camels which were escorted by two of the horse artillery recruits, who escaped slightly wounded, although they do not appear to have used their own arms, or to have resisted the attack. The party of the 19th, N. I. is supposed to have killed two and wounded a third, all of whom were carried off by their comrades. Accounts from the advance represent the daily increasing audacity of the Beloches, notwithstanding that many have been shot in their attempts made on the baggage, and two others hanged. They have been too frequently successful in their object to be readily deterred, and have killed numbers of our followers; each day’s accounts mentioning several casualties both among the Shah’s troops and the Bengal corps. Here are plenty of running streams and green crops in abundance, but no supplies whatever. —3d. A halt. In the course of yesterday, information was brought to us that some stragglers had been attacked. A detachment of horse was sent out, which overtook a small party of the robbers, who were leading off two of our camels. On seeing the horsemen they threw away their arms, and attempted to conceal themselves in holes and bushes; but four were slain, and the others made prisoners. The stragglers proved to be three Europeans, who, having gone off the line of march to sleep, were surprised, one of them being killed, the second wounded, and left for dead, whilst the third effected his escape. It is believed that in the course of the day above twenty camels, with much other plunder, fell to the banditti hovering along the line of march and about the camp, where they continued their attempts during the whole night. The dragon sentries, being on the alert, cut down a camp follower, who, when challenged, attempted to sneak off instead of replying. Accounts, from the artillery brigade in advance, state, that on the route we are to follow to-night, their baggage was repeatedly attacked by large bands of robbers, six of whom had been killed without any loss on the side of the British, save one man and two horses slightly wounded. The last three days have been very hot, the thermometer ranging from 104° to 108° in the shade. A violent storm of wind and dust blew during the night, accompanied by a few drops of rain: one camel-man was wounded to-day; but no other damage was ascertained to have been done by the Beloches.

“A striking proof of the audacity of these banditti was given shortly after breakfast this morning, when three of them came on horseback to the very skirts of the camp, and, having stripped two camel-men of their property, drove off six camels. The cries of the sufferers being heard at the tents, some troopers instantly mounted, and, giving chase, rescued the camels, and brought in the head of one of the plunderers. Several other Beloches being observed skulking in a jungle that skirted the river about a mile distant, a party of the cavalry was sent out, which succeeded in killing thirteen of them, besides making four prisoners. At a deep ravine that crosses the road, about five miles from the last camp, our rear-guard, consisting of a detachment of H.M. 17th, and Queen’s Royal Regiment, was reconnoitred by a body of fifty or sixty Beloches; but a volley dispersed them, although with what loss is not known. No casualties occurred amongst our own people in the affair to-day.”

We should mention that the Bolan Pass was

in front of the writer, and distant some days' marches.

"No accounts have been received from Sir John Keane, or from the envoy, since they entered the pass on the 29th ultimo; and for many days past we have received no post whatever from Shikarpore. Open communication with front and rear is, in fact, entirely cut off, except by large detachments, which are invariably either attacked or menaced by strong bodies of Beloches: even Cossids in disguise have rarely contrived to elude the vigilance of the banditti, who are ever on the watch around us. The 35th Bengal Regiment of Native Infantry, which passed up three days ago, is reported to have had a smart brush in the pass, but the particulars are not ascertained. We are obliged to wait here for the convoy of provisions coming from Shikarpore under Captain Stockley, whom losses, from repeated attacks by Beloches, drove to seek refuge, on the 2d ultimo, in a fort, two marches on this side of Shikarpore, since which date no tidings have been received of him.—6th. Despatches from Captain Stockley announce his arrival yesterday at Bony, three marches hence. He intended halting there to-day, and arriving here on the 9th instant. It appears that Captain Stockley was reinforced on the 20th instant by Brigadier Dennie, in person, with the wing of a regiment, and some horse, since which date, although frequently menaced by large bodies of horse, no attempt had been made upon the convoy. In occasional skirmishing, one or two had been killed on each side; and two of the prisoners taken had avowed themselves the servants of an influential chief residing not far from Baugh, who has directed his followers to do their utmost to injure the supporters of the Shah,—the Beloches being resolved, they say, never to submit to him. This avowal, together with the systematic, determined, and continued aggressions of armed bodies along our whole line of march, for so many days past, makes it very apparent that our tormentors are instigated by something beyond mere individual plunder; and there can be little doubt that Dost Mohammed Khan, with the Candahar chiefs, must be exercising an influence over the chieftains of this country, stronger than that established by our gold. Native report states, that the quiet enjoyed by us, for the last two days, is caused by Beloches having assembled in the hills, with the intention of opposing us in the Pass. This is the best policy that could be adopted by the Affghans: had they faced us in force, they must have been conquered, with great *éclat*, to Shah Shooja's cause, which would thus at once have been established; but, by permitting the main army to surmount the pass unmolested, and then letting loose swarms of marauders on our rear, to cut off our supplies, while, at the same time, they destroy every thing in our front, they take the only possible mode of opposing us with success. Whether they have adopted this plan or not, we have no means of ascertaining being altogether ignorant of what is transpiring in advance; but occurrences in the rear savour strongly of an organised system of opposition."

Between the Bolan and Kojack Passes the same annoyances continued:—

"Marched to a river, six and a half miles distant, which we crossed; but, in consequence of the difficulty of passing guns over it, we did not advance farther. A mutilated body was found on the ground. The ravines about the river, being full of crannies and fissures, afford cover to numerous banditti, who lose no oppor-

tunity of carrying off whatever they can lay their hands upon—murdering every camp follower who comes in their way. A peon, in charge of three camels that were grazing close to camp, was cut down this morning, and the camels carried off, and an officer's horse was seized when leading down to water at mid-day, and ridden away. Parties sent in pursuit traced the robbers to villages at no great distance, strongly situated among the ravines on the river bank, and filled with armed inhabitants. These turned out, to resist any attempts to follow the robbers to whom they had given refuge; and as neither time nor policy could authorise an attack, we were obliged to content ourselves with representing the aggression to the envoy.

On this road we passed the bodies of many murdered followers, others being also found lying about in the vicinity of our camp. Under pretence of shewing them water and provisions, the natives had enticed these men, solely for the purpose of murdering them in cold blood."

Portions of Major Outram's journal have unfortunately been lost, and a severe accident which he met with caused another *hiatus*. The Ghiljee tribes adhered to Dost Mahommed, and the pursuit of that Khan after the taking of Ghizni, and also of these his adherents, is a story of almost Eastern romance in the way of adventure. The pursuit of Mahommed was so hot, that but for the impediments thrown in the way officially by Hadji Khan Kakur, *alias* Nusseer-ood-Dowlah, who commanded the Affghan part of the pursuers as an officer of Shah Shooja, he would most probably (as we have said) been made prisoner. *Ex. gr.:*—

"7th August. We marched at day-break, and, on arriving at Hurzar, found traces of the Ameer's encampment of yesterday. Perceiving these, Nusseer-ood-Dowlah stopped, on pretext of affording a little rest to his men, and was anxious to induce us to follow his example; but I insisted upon advancing at once with our own detachment. About a mile farther on the road, we were met by deserters from the camp of Dost Mahommed Khan, who informed us, that they had left the Ameer early this morning at Kalloo, and that there were then no signs of his being about to depart. I rode back instantly to Hadji Khan to apprise him of this piece of intelligence, entreating him to come on at once with his Affghans; but he again loudly protested against the madness of such a proceeding, declaring that we must inevitably be defeated, and thus bring disgrace upon the head of the Shah;—that by our precipitation we should drive the Ameer to desperation, whereas by his own *tudbeer* (precautions) he had closed the roads beyond Bamian, whence the fugitive could not possibly escape; and if we were but prudent, must assuredly fall into our hands. The Affghans, he added, were weary and hungry, and their immediate advance was therefore out of the question. Finding it impossible to overcome his scruples, I arose, and was proceeding to mount my horse, when Hadji Khan, following me, seized me by the arm, and loudly entreated me not to think of advancing, threatening rather to detain me by force, than to permit my rushing on certain destruction. Upon this I broke from him with the assurance that, although he might come on or tarry as he pleased, it was my full determination to march upon Kalloo, and, finding Dost Mahommed Khan there, to attack him, when, should I prove unsuccessful, his would be the disgrace, and he should answer for the consequences. At 3 P.M. we reached Kalloo, only to have the mortification of find-

ing, that Dost Mahommed Khan had departed so many hours previously, that he must, ere then, have surmounted the Kalloo Pass, the highest of the Hindoo-Koosh. With horses and men knocked up, night fast approaching, and no signs of support from the Affghans, every one of whom had remained behind with the Khan at Hurzar, it was, of course, perfectly useless to proceed farther. We had already been nine hours in the saddle, and had crossed the Hajee Guk Pass, twelve thousand feet above the ocean; the snow, from that height, being observable, lying at least fifteen hundred feet below us. When compared with the cross-paths, by which we had previously advanced, however, the road from Yourt had proved excellent. In the evening we were so fortunate as to obtain a meal of flour for our men, encamping for the night at the foot of the Koh-i-baba, literally 'the Father of mountains.' The summit of this peak, which has derived its name from the circumstance of its being the loftiest of the Hindoo-Koosh, is elevated twenty thousand feet above the level of the sea, and is covered with eternal snow. On the morning of the 8th, we were joined by Captains Taylor and Trevor, with a reinforcement of thirty troopers, and about three hundred Affghans—whose presence appeared to have inspired Nusseer-ood-Dowlah into coming up also; although he had not scrupled yesterday to leave us to face Dost Mahommed Khan by ourselves, and, equally unaided, to repel the *chuppao*, or night attack, which he confidently predicted would be made on the part of the Ameer, and of which he himself entertained great alarm. Being ourselves, however, well aware that it was the sole object of the fugitive to escape, we had felt convinced that no attempt of an offensive nature would be made. Here Hadji Khan again urged upon me the necessity of our halting for further reinforcements, averring that Dost Mahommed Khan would undoubtedly make a determined stand at Bamian; beyond which place there was no prospect of his escaping, all the roads having been closed by the arrangements which he had made to raise the Huzarabs and other tribes. To this I again replied as before, that it was only by overtaking Dost Mahommed Khan at Bamian, that we could feel at all assured of his making a stand there; whereas, by delaying, we, in my opinion, rendered the escape of the fugitive certain, my reliance on his (Hadji Khan's) *tudbeer*, being, at best, very slender. He then went over the old ground, and reiterated the certainty of our being defeated, to the tarnishing of the Shah's fame; but I informed him that there was in our dictionary no such word as 'retreat,' and that we did not choose, under any circumstances, to risk our own fame by suffering Dost Mahommed Khan to effect his escape unmolested, so long as there existed the most remote prospect of our being able to overtake him—concluding by assuring him, that the disgrace would fall upon those who hung back from the encounter, and would, in no degree, attach itself to us, so long as we strove, at all hazards, to effect the object upon which we had been despatched by the Shah. On my proceeding to mount my horse, the Khan again laid hold of me, and after endeavouring by entreaties to detain me, had recourse, as before, to menaces of force, which ended in his actually withholding the guides. Breaking from him, however, and marching on my men without them, I was soon afterwards agreeably surprised at perceiving the Hadji also advancing, a step to which he had, I presume, been forced by very shame. In the course of this day we

surmounted the pass of Shatur-i-gardan, or the Camel's neck, of which the altitude is not given by Sir Alexander Burnes, who, finding it impassable from snow in the month of May, was obliged to adopt a more circuitous route. We estimated the height to be at least three thousand feet above the pass of Hajee Guk, over which we had travelled yesterday; the acclivity being so extremely steep, that we were compelled to lead our horses the whole way up; and the descent, although less abrupt, being even greater than the ascent. Arriving after dark, at a deserted village at the foot of the ghaut, we halted on the banks of a stream which flows into the Oxus, less with a view of resting our fatigued horses, than to admit of the Affghans coming up. On learning from me my intention of pressing on to Bamian at two o'clock in the morning, Nusseer-ood-Dowlah implored me not to think of advancing until dawn, few of his own people having yet arrived, and there existing, in his opinion, no probability whatever of Dost Mahommed Khan's escaping beyond that place. At length, finding that all other arguments failed in shaking my determination, he plainly informed me that he was so surrounded by traitors amongst the Affghans, that he could not venture to march with them at night. 'In broad daylight,' he continued, 'I may be able to take them on, but if you do encounter Dost Mahommed Khan, not one of the Affghans will draw a sword against him, nor will I be responsible that they do not turn against yourself in the *milie*.' On my return he insisted upon sending a guard with me, having previously stated, that it was not safe that I should proceed unattended amongst the Affghans, so far even as my own bivouac. 9th August.

Whilst in the act of mounting our horses at break of day, information was brought in that Dost Mahommed Khan, instead of halting yesterday at Bamian, as, from the reiterated assurances of Hadji Khan, we had been led to anticipate, had, on the contrary, passed through that place in the forenoon; and his family having previously been sent on, had himself pushed forward at once to Akrahad, another march in advance. This morning he was to be at Sygan, twenty-five or thirty miles farther, on the verge of the Shah's territory; and, to-night, at Kamurdunda, under the protection of the 'Waly,' an independent Uzbek chieftain, who is at enmity with Shah Shooja ool Moolk. Upon receiving this intelligence, I informed Nusseer-ood-Dowlah, that, should it prove to be correct, he should answer with his head for the escape of the Ameer Dost Mahommed Khan. Arriving at Bamian, twelve miles in advance, we there found about seventy horsemen, who had shortly before been dismissed by the Ameer: and they, as well as two spies belonging to the mission, whom we also found, confirm the information received this morning, together with all that had previously been reported to us respecting the strength of his escort."

On their return after this baulk, the treacherous Hadji was arrested by the kings; and we may sum up his doings with the following notice:—

"It appears that he commenced life in the humble capacity of a melon-vender, and raised himself to the highest rank, by cunning and enterprise, though, strange to say, invariably changing sides, when his interest prompted him to do so. Having deserted Dost Mahommed Khan, to join the Candahar Sirdars, he abandoned the latter, on our approach to that

city, thus forcing them to fly, without striking a blow. For this service, Shah Shooja ennobled him, by the title of Nusseer-ood-Dowlah, and conferred on him a jaghire of three lacs of rupees annually, in the vain hope of purchasing his fidelity; but it has now transpired that he had actually leagued himself with others to attack the king, on any change of fortune; and, with this view, had stood aloof with his Affghans, until the day after Ghizni fell, when he presented himself with the most lavish professions of devotion. Again, he was intrusted with the pursuit of Dost Mahommed Khan, it being naturally supposed that he was too deeply committed against that chief to admit of a possibility of their coalition; but he was, nevertheless, engaged in a correspondence with him during the whole proceeding, and the result has been shewn in the foregoing pages. It is now only necessary to add that he is a state prisoner at Chunar."

We have not touched on the sieges of Ghizni and Khelat, nor on any of the chief operations of the war, as they are all before the public, though Major Outram's versions of them are interspersed with new particulars; nor, indeed, have we room for much more of his other matters. Two extracts alone will illustrate, as far as we can, the proceedings against the robbers and murderers, the Ghiljees, who stood out even after the defeat of their rulers. Major O. states:—

"Made a night march, in order to surprise the Kanjuk banditti, whose haunt I had ascertained to be in the Indran mountains, eighteen miles to the eastward. Arrived, as the day broke, at a deep dell occupied by the gang; and while the infantry advanced from the front, I despatched the horse, in two bodies, to cut off retreat from flanks and rear. The ground being very broken and difficult, however, most of the enemy had found time to ascend a precipitous hill, along the ridge of which they must have escaped, had I not fortunately been mounted on an exceedingly active horse, and thus been enabled to gallop, ahead, and deter them from advancing until the cavalry came up. Finding themselves completely surrounded, they defended themselves most stoutly; and maintained their position until their ammunition was nearly all expended, when on a general rush being made from every quarter at once, they were induced to throw down their arms, after sixteen of the most desperate of their body had been killed, and several others wounded. Even the women assisted in the fray, by handing ammunition to their husbands, and throwing stones at our troops. The loss on our side amounts to three Sepoys and one horse killed, and two lieutenants, one Rissaldar, and one Duffadar, and several men and horses wounded. In the evening we returned with one hundred and twelve prisoners, comprising some women and children, who, with the men killed in the attack, form the whole of the Kanjuk gang then present. Not a soul contrived to escape, and the whole of their arms and property, together with a hundred and twelve camels, have fallen into our hands—nearly all the latter bearing the Company's mark, shewing that they were stolen from the British army during its advance. —23d. Selected forty-six of the most desperate of the prisoners for transmission to Cabul; where they will, in all probability, be executed, in presence of the troops for the murder of Colonel Herring. —25th. Marched to Shore Kutch, fifteen miles. —26th. Advanced to Chulluk, six miles. —28th. To Mooskhail, fourteen miles, where Mehta Moosa Khan, one of

the refractory Ghiljee chiefs, and leader of the fanatic army, which threatened the British camp the day before the fall of Ghizni, came in and surrendered."

By these means, the whole line of country between Cabul and Candahar was freed from anarchy, plunder, and assassination; and, for having performed so distinguished a part in producing this desirable effect, we cordially take our leave of the author and recommend his volume to every deserved favour.

*The Moor and the Loch: containing Practical Hints on most of the Highland Sports, &c.* By John Colquhoun. 8vo. pp. 128. 1840. Edinburgh, Blackwoods; London, Cadell.

LAST week we got the "Rod and the Gun," as it should seem, timeously out of our literary way, to make room for the corresponding *Moor and the Loch* now presented for our notice. But Mr. Colquhoun is a very different writer from Professor Wilson, and does not attempt to poetise and enrapture us into catching trout and bringing down partridges. He, on the contrary, is a matter-of-fact adviser; and if he enliven his precepts at all, it is by a story of some memorable day's work in the sporting line, or an anecdote from actual observation of some animal trait hitherto unnoticed. His object is to supply minute directions for obtaining the greatest success in the pursuit of grouse, black-game, wild-fowl, roes, &c. &c. (with the exception of red-deer stalking, which he has, with good taste, left in the illustrious hands and illustrated volume of Mr. Scrope, see *Lit. Gaz.* No. 1147); and of salmon, sea-trout, and other fish in fresh and salt-water lochs,—not to mention the destruction of foxes, martins, fourmarts, wild cats, eagles, kites, and other enemies of game and poultry, whom it is the wish of every farmer and sportsman to see utterly confounded and exterminated.

His page, therefore, does not afford us the wide range which the *dis* and *ex-cursive* Professor's did; but still, as he professes that an inducement to try these recreations must be beneficial to dyspeptic persons, indolent voluptuaries, and midnight opium-chewers, it is due from our benevolence to say a little in furtherance of such humane views. Not that we should like, were it our fate to move on Highland heather this autumn, to meet with many of this description of people—the dyspeptic we should keep a long way to leeward; hob-a-nob with the voluptuary only at the evening dinner meal, so glorified by the pleasant fatigues of the day; and leave the somnambulist fast asleep in the morning,—but merely out of Christian charity, the strength of which may be estimated by the fact of our helping to encourage such people to migrate from their apothecaries, kitchen-ranges, and feather-beds, with a chance of encountering any one of them on a health-breathing mountain, in a whisky quail and boothie with dried bannocks, or in shooting quarters where truckles are scarce, and sheets known only as sheets of water alternating into sheets of ice.

The instructions for moor-sports are practical and good, and the observations the fruits of experience. Thus:—

"No man ought to beat the same range oftener than twice a-week, as grouse, after being dispersed, do not collect in the evening like partridge, but are often some time before they gather: the best days are those with a warm sun and light breeze. When the weather is windy and rainy, after October, they flock; and it is of no use to disturb them till it is fine again, when they disperse. You may

expect good sport the first black frost. A sort of lethargy seems to come over the birds: I have seen several in a day standing up, without an attempt at concealment, within forty yards—a rare opportunity for poachers and bad shots. Many suppose that grouse change their ground with the changes of weather, and even lay down rules what parts of the mountain they frequent according to its variations. I have watched them narrowly for many years, and am firmly of opinion that they only shift to the longest heather on the lea side of any knolls near their usual haunts, when they want shelter from the sun, wind, or rain; except, indeed, in winter, when many of them come down to lower ground than they ever frequent at other times. I have likewise heard it asserted that grouse descend the hills to feed: this I also believe to be erroneous; and have no doubt that, at feeding times, they only move to the first short, sweet patch of young heather, the tender tops of which form their chief food during a great part of the year. The young packs eat the seeds of the various grasses and weeds that grow in the moors; and are particularly fond of sorrel. At the hatching time the hen devours quantities of earthworms with great avidity. Black-game do not pair like grouse; and shooting the hen\* and young birds at the beginning of the season, is a simple business. You have only to make yourself master of the places they frequent. They may always be found near a short thick rush, which can be easily seen on the moor, the brown seeds of which form the principal food of the young packs. When your dogs point near these rushes, and especially if they 'road,' you may be almost sure of black-game. The old hen generally rises first, the young pack lying like stones; no birds are more easily shot. The old cocks, even in August, are never very tame: they are sometimes found singly; at others, in small flocks from six to ten. Their food on the moor consists of cranberries; another berry, found in mossy places, called in Scotland the 'crawberry,' and the seed of the rush before named. They being very strong on the wing, have not the same reason as the young packs for keeping near their food, and are often found far from it, especially in the heat of the day; shelter from the sun being their chief object. There can then be no better place to beat for them than among thick crops of bracken. Should you find them in such good cover, they will often give you a capital double shot. As the season advances, black-game are the wildest of all birds. Fair open shooting at them is quite out of the question."

The following is curious:—

"Black-game and grouse are easily tamed; ptarmigan, I believe, never. The keeper of the pheasantry at Rosdhu had a black-cock, a grouse, a partridge, and a pheasant confined together. They agreed pretty well, and the grouse, being a hen, hatched two successive seasons. The first year the whole of this cross-breed died; but the next, with great care, a couple were reared. They were both cocks, and, when come to their full plumage in winter, were a blackish brown, something between the colour of a grouse and a black-cock.

\* "Many gentlemen are now beginning to shoot the hens, observing the great increase of black-game and decrease of grouse in some districts. This may in part be attributed to the advance of cultivation; but I cannot help thinking the black-game have a good share in driving off the grouse—as I know of one instance where the latter were killed off, and the former again returned to their own haunts. I believe it is also more than suspected that the capercaillie, wherever they are introduced, have a great inclination to dispossess both."

They were presented by my late father to the Glasgow Museums, where they may now be seen."

No doubt; and by the natural history section of the British Association next September.

Mr. Colquhoun's remarks on the choosing and training of dogs strike us as being very correct and worthy of attention; and his notice of mountain foxes, so much larger, stronger, and even more cunning than the poultry-stealing scamp of the lowlands, of other vermin, and especially of the wild-cat, is interesting. Of the latter he says:—

"The wild-cat is now rare in this country. Although I have spent a great part of my life in the most mountainous districts of Scotland, where killing vermin formed the gamekeeper's principal business, and often my own recreation, I have never seen more than five or six genuine wild-cats. Many, on reading this, will perhaps wonder at my statement, and even give it a flat contradiction, by alleging the numbers that have come under their own notice. Nay, I was even gravely told by a gentleman from the south of England, a keen observer and fond of natural history, that there were wild-cats there,\* and the skin of a cat killed in one of the southern counties was sent to me as a proof; this, I need hardly say, was the large and sleek coat of an overgrown tom, whose ancestors, no doubt, had purged upon the hearth-rug. I am far from meaning there are no cats running wild in England; of course, wherever there are tame cats, some of them, especially the very old ones, will forsake their homes, and live by plunder in the woods. These may also breed; but their progeny, though undomesticated, will always be widely different in habits, in appearance, in strength, and in ferocity, from the true cat of the mountains. I have seen no less than thirty of these naturalised wild-cats trapped in a single preserve in the Highlands; some of them might have been mistaken for the genuine breed. The colour in both was pretty much alike, but there were other points which clearly shewed their domestic origin. They were, in fact, a cross between the wild and tame cat. I have seen many of this kind stuffed in museums and collections, as fine specimens of the wild-cat, and believed to be so even by those who might have known better. The unerring marks of the thorough-bred species are, first, the great size,—next, the colour, which does not vary as in the domestic animal, but is always a dusky grey, brindled on the belly and flanks with dingy brown,—hair long and rough,—the head exceedingly broad,—ears short,—tusks extremely large. Another very distinguishing point is the great length and power of the limbs. It stands as high as a good-sized dog. But perhaps the most unfailing mark of all is the tail, which is so long and bushy as to strike the most careless observer. In the males it is generally much shorter than in the females, but even more remarkable, being almost as thick as a fox's brush."

From the piscatorial portion of the volume we shall copy but one extract, which is worthy of note by the student of nature. He is speaking of two salt-water lochs, and says:—

"I shall mention two curious facts, relative to the sea-trout and salmon, which it is difficult to account for. One is, that the former will take greedily in one loch, while you may troll a

\* "I have been frequently assured that wild-cats have been killed on the Cumberland and Westmoreland hills; but, never having seen any specimens, I cannot speak from my own knowledge. There is no doubt that martins exist in some of the most hilly and wooded districts of England."

whole day in its next neighbour, though full of them, without getting a single bite. This was precisely the case in the two lochs alluded to. The other, that, although you may see the huge tails and back-fins of salmon rising all round, I never heard of one taking the bait; and during the whole of my trolling in the salt-water, I have only killed one grilse. This is the more strange, as the salmon is not at all shy of the spinning-bait in the fresh-water loch."

As a close, we have only to compliment the author on his pleasant story of "The Rock Ousel," at Glencroes, and the very pretty poem which the incident of its supernatural piping inspired. They are graceful conclusions of a volume which the sportsman in the north will do well to add to his wallet of literary stores, few though they may be.

#### MEMORIALS OF THE REBELLION.

[Second notice.]

WE continue, as we promised, our extracts from this curious volume. The letters of Sussex, Hunadon, Bowes, and others, furnish a terrible picture of the consequences which followed the suppression of the rebellion. One of the first documents relating to this subject is the following note of the numbers to be executed "by marciall laws:—"

"List of persons appointed to be executed in the county of Duresme, 4 Jan. 1569(70).—300 and odd be appointed in the county of Duresme, to be executed by marciall law:—

"Of the citie of Duresme, the aldermen and townsmen .....	30
Of constables .....	40
Of serving men, of the meaner sorte and worst disposition, taken prysoners .....	30
Of townsmen of Darne-ton .....	16
Of the contrey men appointed to be executed in every towne where they dwell .....	172
Of those that did leape over the walles at Barny Castle .....	20
Whereof, at Duresme .....	80
At Darne-ton .....	41
At Barny Castle .....	20
In towns and villages in the contrey .....	172

"A like execution shal be don at Richmond, for Richmondsheire, when the Marshall hath finished this execution; but the boke is not perfit, nor the number certen. Like execution shal be don at Allerton, Topli, and Thirake, for the North Ridings; but the numbers be yet uncerten. Like execution shal be don at Ripon, Boroughbrig, Wetherby, and Tadcaster, for the West Ridings; but the numbers be yet uncerten. Besides the execution don in the great townes, ther shal be no towne where any men went owf of the towne to serve the Earles, and continued after the pardon proclaymed; but one man, or more, as the bignes of the towne is, shal be executed for example, in the principall place of that towne. The common people were dispersed when th' Erles left Duresme; and, therefore, th' execution is the longer in doing, by reason of th' apprehending and examininge of the constables; otherwise the giltye might escape, and the unglyte suffer, and none of the constables that be found faultie be spared."

On the same day, the Bishop of Durham writes:—

"The number off offenders (in the bishopric) is so grete, that few innocent are left to trie the giltye."

On the 8th January, Sir George Bowes writes to the Earl of Sussex as follows:—

"My humble dewty, &c. The executions ar done, or wyll this daye and to-morrow be done throwe all the Byshoppricke, accordinge to youre L. direction, savinge in a parte of Darne-

ton Ward, where as yet I command; althoghe I have bothe by daye and night cawsed to search their townes, but they be wholy fiedd, the names of which townes I send your Lordship in a billet heare inclosed; which be of the worst doyars of the whole country, and lieth, for most part, of the street. But I hope that upon my goynge from Darneton, they will draw home, upon whose coming I have taken such order, that I will send of my horsemen sodenly; and hopeth, by that meanes, to get them, thinking very convenient that they should have the harder justice for their evell dealinge. I have taken such order with thes that dealeth with the goods of thos executed, that they should deale favorable with the wyfes and children, so as they might not onely not have cause to complaine, but be satisfied; and, so far as I knowe, so they are: for in all Darneton, by this composicion, I caused to make for me an agrement with the wyfes, cometh but to £8; for wher I fynde them, and hathe many children, I take nothing at all. And for the more favinge of them, I have committed the doyeng hereof to the worshipful neighbours, with instructions to favor the poor, and to deal favorable with all. I have newly taken order for receit of prysoners to be received from the Lord Scrope, but my servants wayted all a day and night before I got them word what to do: and I humbly desyre to know whether I shall staye thes prisoners at Barnard Castle, or bring them to Richmond, where I fear there will be very strait rowme, for I hear it is very full; and this daye, by x of the clock, by God's grace, I will be there. But sewre tyme is convenient to be somewhat prolonged; for in this cawsse I find the constables, in sundry places, hathe accused thos that did least, and excused the greatest offenders; and many of themselves that denyed before your Lordship to be with th' Erles, bothe was with the rebels in all their journeyes, and streined the rest to the same by hard wordes; which I have sought for, but cannot get; for which cause I meane not, from hensforth, to delyver any of the constables before the justice be ended, and then, if they be clear, to let them passe. I use even that cawsse your Lordship did, and execute none that hathe not bothe bene of the first journey, and in some of the second journeyes, accompanied with the rebels."

On the 23d of the same month, Sir George gives the following account of his labours to his cousin, Ralph Bowes:—

"Good cōsyn Rawffe,—My hartye comendacions remembred, with desyre not to thynke muche that I have forborne so longe to wryte, which ys for no other cawsse, then that I could not fynde tyme, or have fyt caryage. For the morowe after that I came out of Barnard Castell, I was appointed Marshall of the Armye, under the ledyng of th' Earle of Sussex, which fylled me so full of cawses dewing the marche, as I had skarce fyve houres of the xxliij. to rest my weryed head and bones; and immedeatly after, beyng appointed to passe in a cyrcuyte through the Byshopprygge, Richmondschyre, Allertonshyre, Cleaveland, Rippon, and so to Wedderbye, for sytting of theys rebels by martyall lawe. In which cyrcuyte and journey, theyr ys of them executed six hundreth and odd; so that now the auctors of thys rebellyon is cursed of every syde; and sure the people are in marvelous feare, so that I trust there shall never suche thing happen in these partes agayne; neyther can th' Earles, with the rest of their conspirators, wynne credyt to styrr any mans heart."

The details of these wholesale executions are

truly heart-rending. The British Museum, and other depositaries of state papers, contain great numbers of letters from different persons at that time, begging the lives of their friends and relations, who were condemned to die for the part they had taken in the rising. The most singular thing of this kind is a letter from the bluff and plain-speaking Hunsdon, who asks for the life of one Asculph Cleasby, because the said Cleasby would be useful in furthering his son's suit with one of the daughters of Lord Conyers. On the 24th March he writes thus to Cecil:—

"Sir,—The cawsse why I have requyred the stay of Askold Cleasby, ys specyally, bycawsse he ys one that may doo verye muche with one of my L. Conyarsys daughters and ayars, [heirs], whom I am about too gett for my sun Harry; whyche wyll the better be brought too passe by hym, beyng yn grete credytt with all the sisters. He ys besydes no notoryus offender, as ytt ys now well knowne, and was followde more of mallice then otherwyse. He hathe not one foote of lande, and, therfor, goode Mr. Secretary, move hys Majestie for hys pardon. And so, havng wrytten to youe thys mornyng, I comytt ye to God. From Yorke, thys 24 of Marche, 1569."

Cleasby, though led to the place of execution, received a pardon from the queen, who writes to Sussex, Hunsdon, and Sir Thomas Gargrave:—

"We are pleased that Henry Johnson, for his symplicity, and John Markenfeld, for his youth, and Asculph Cleasby, at ye request of you, our cōsyn of Hunsdon, shal be forborne from execution."

There are some very curious depositions relating to the actions of the clergy, and others, who had taken part in the "Popish practices" of the earls. The following confession may serve as an example:—

"Elizabeth, wife of Will. Watson, says, that on St. Andrew's Day she went to the Cathedral to see mass; but the throng was so great that she could not. She sat down at the lower end of the church, and said her prayers; she was not shriven. That when Mr. Swyft's wife's sister wept, she said to her, 'The dyvell wepe with thee!' For which words she is heartily sorry."

We will take leave of this excellent volume, which has afforded us much entertainment and information in the reading. After quoting the latter part of a very remarkable letter of the Earl of Sussex, who, after complaining of the behaviour of the Earl of Warwick and the Lord Admiral, in plundering the country, and trespassing upon his authority, adds:—

"I know my own autoritie; and that, by my commission, I am the Quene's sole lieutenant of counties, and the people in them, and not of an army levied in the North (as it pleaseth them to terme me); and I knowe they be lieutenantes of an army levied out of my commission, whereby they cannot prejudice my autoritie. And suerly I wold not have offered to them, or to any other in like case, the dishonour they have offered to me, for all that they and I be worth. But to be plaine with you, Mr. Secretary, it is of all men that look into the matter conceived, that this is mynistered to pike a quarrell, and that it is but an entrie to other matters. And, therefore, if I weighed not the quiet of my good queen more than any other matter, I wolde have stopped them from crowting upon my dunghill, or caringe of one halfpenny owle of my rule. Liberal spech is used that all be rebelles from Doncaster northward; but if the Quene had not had

trewe men here, ther entrie wolde not have ben so easie. And, for my owne parte, I depend upon justice, and deserve thanks for my trewth and service. I do not crave mercie, and seke pardon for my offenses; and, therefore, I have, doe, and will depende wholly and only upon the Quene, and I will nether, God willing, hang upon any other man's sleve, nor seke to such vessels as cannot hold the water than I can. And if, by any evil persuasion, her Majestie shall be induced to thinke worse of me then I have deserved, I shal be redye to trye my trewth, and defend my honor, in any sorte against any person her Majestie shal comand. And if therein dishonour be offered to me, I shall be sory for it, but her Majestie shall have the greatest losse, for in domino confido et non confundar in eternum. And so I ende, and leave all to Him that hath never left me; and pray you to impart as much hereof to her Majestie as you think fitt, for I am not afrayed to have all seen. From Duresme, the first of January, 1569(70)."

#### MISCELLANEOUS.

*The Paradiso of Dante.* Translated by J. C. Wright, M.A., translator of "The Inferno" and "Purgatorio." 8vo. pp. 459. London, 1840. Longman and Co.

DEDICATED to Lord Denman by his son-in-law, we may give our praise to this volume as a refined scholarly pursuit; and the performance of a task, the mere undertaking of which is an honour to one who can contemplate no other object through it but literary fame. The versification is free, and often elegant; and though we cannot say the work is likely to supersede previous translations, yet that it is graceful and spirited is a need which we can most conscientiously accord.

*Flowers and their Associations.* By Anne Pratt, author of "The Field, the Garden, and the Woodland." Pp. 409. London, 1840. Knight.

A SWEET little volume, as fragrant as the many flowers which it describes with their heartfelt associations. To young botanists it will be a charming guide, as far as it goes; but its chief merit will be found in its graceful sentiments and endearing recollections. The sex could not select a more congenial and fitting companion for the hour of leisure in which taste may be beneficially indulged.

*Tudor Library, No. 1.* Illustrated by Acrography. London, 1840. Crouch; Sherwood and Co.; and Cunningham.

A WEEKLY and cheap re-publication of British Classics, commencing with "The Spectator," and embellished with an acrographic portrait of Addison, and other tasteful embellishments. This new style, invented by Louis Schönborg, dispenses with the engraver, and yet produces a neat and well-executed work of art. The design deserves the attention of the public.

*Defensive Exercises, comprising Wrestling, Boxing, &c. &c., with One Hundred Illustrations.* By Donald Walker. Pp. 193. London, 1840. Hurst.

To Mr. Walker, and eke to Mrs. Walker, the public are indebted for many useful and our productions, all which we have duly noticed. It is now our duty to speak of another, in which every branch of defensive art is well explained and illustrated. The author sets to work in earnest, even in his preface, and proceed to furnish such instructions as, without calling upon his readers to be pugnacious or quarrelsome, are well calculated to put them in the way of conducting matters to their best advantage in case they should be personally aggrieved

or brutally assailed. His volume is accordingly one of general utility—we mean to the male sex; for as to ladies, they may as well continue to be ignorant of boxing, fencing, wrestling, and throwing. To all who are advocates for, or practise, gymnastic exercises, we recommend Donald Walker; and they will find the inventions and instruments for measuring various forces at once curious and ingenious.

*A Practical Inquiry into the Laws of Erection and Embankment upon Railways, &c. &c.*, by a Resident Assistant Engineer. 8vo. pp. 173. (London, Saunders and Otley.)—Deserving of its title of "practical," and, with its plates and clear explanations, well calculated to serve the engineer who desires to overcome difficulties, and execute his profession generally in the most economical way.

*The Slave; or, Memoirs of Archy Moore.* (Boston, Whipple and Darnell.)—Disgusting trash.

*The Siege of Lichfield; a Tale of the Great Rebellion*, by the Rev. W. Gresley, M.A. Pp. 412. (London, Burns.)—Founded on the best historians of the time, and in some places improved by local records, the reverend author has here given us a characteristic tale relating to an event of considerable interest in the civil wars. He has taken pains to exhibit the circumstances and manners of the age in an instructive manner.

*Ancient Models, containing some Remarks on Church Buildings.* Addressed to the Laity, by C. Anderson, Esq. Pp. 126. (Same Publisher.)—A different class of work, but equally directed to promote the best interests of the church. After a spirited preface inculcating the duty of building churches for the reception of the population, Mr. Anderson examines the most deserving models to be followed in their construction, and enforces, by strong argument, the propriety of making them fit places for the worship of the Almighty.

*An Outline of the History of the British Church, &c.*, by Philoclesia. Pp. 94. (The Same.)—Maintaining its independence for all periods.

*The Hand-Book to Paris.* (London, Strange.)—A third edition of this very small but useful guide, and a hand-companion thereto, of the same minute dimensions, can be safely recommended to the many who visit France at this season.

We have before us a number of small religious and moral publications, by Mr. James Burns; of which, as indicating one class of works meant to improve education and support the Protestant Church, it is our duty to mention, though unnecessary to criticise, as they all tend to nearly the same objects, and are written with pretty nearly the same talent. *Tales of the Village*, by F. E. Paget, M.A., is a neat and useful little volume of 160 pages; *Fuller's Characters*, a laudable republication, 92 pages; *A God-Parent's Gift*, by the Rev. T. Chamberlain; *Picture of Religion, a Selection from Eminent Divines; Conversations with Cousin Rachel; Dialogues on the Te Deum; James Ford, and other Stories for Children*; and *Richard Morton, a Village Tale*; all for the purposes of inculcating virtuous precepts, and forming the minds of the young to enjoy, in humility and gratitude, the lot in life for which they are cast.

## ORIGINAL CORRESPONDENCE.

To the Editor of the Literary Gazette.

SIR,—In the review of Raumer's "Italy" it states, that false coinage (*falsificazioni delle monete*) seems to be more common than in any other country. Now, during my residence in Brazil, copper coin, in 1830, stood at 47 premium; in 1831, at 9, and even 14, per cent discount! This fluctuation originating through the ingenuity of "Brother Jonathan," introducing, in barrels of flour, beef, oil, and even tar, false coinage to the amount of upwards of 400,000 sterling, and, I guess, reaped a pretty considerable harvest. Thus proving that owing to the introduction of false copper in one year, from 47 premium it was reduced to 14 discount. The lower class and slaves suffered considerably by this love of gain—the characteristic feature of the Yankee. Yours obediently,  
Baton Square, Monday. HENRIQUE DA SILVA.

## ARTS AND SCIENCES.

### PARIS LETTER.

Academy of Sciences, July 21, 1840.

ANNUAL Public Sitting and Distribution of Prizes, July 13.—The following is a list of the awards made on this occasion:—*Experimental Physiology*: A prize to M. Payen, for his experiments on starch.—*Insalubrious Arts*: A prize of 2000 francs to M. Valat, for his *lit de sauvetage*, for the use of miners wounded in mines.—A prize of 1500 francs to M. Laignel, for his system of preventing accidents on railroads (curved).—*Montyon Prizes of Medicine and Surgery*: A prize of 3000 francs to M. Fuster, for his "Medical and Meteorological History of France."—A prize of 3000 francs to M. V. Duval, for his "Prac-

tical Treatise on Club-Feet."—A prize of 2000 francs to M. Fourcault, for his physiological experiments on the influence of the mechanical suppression of cutaneous perspiration on the blood.—A prize of 1000 francs to M. Valleix, for his clinical treatment of infants. Honourable mention was made of M. Thibert's models in relief, and coloured, of anatomical preparations; as well as of Messrs. Serrurier and Rousseau, for their memoir on the special pathology of the respiratory passages.—*Astronomy*: The De Lalande medal to M. Galle, of Berlin, for his discovery of three comets on Dec. 2, 1839; Jan. 25, 1840; and March 6, 1840.—*Mechanics*: A prize of 3000 francs to M. Arnoux, for his system of "articulated wagons."—*Statistics*: A prize to M. Dausse, for his statistical account of the principal rivers of France. Honourable mention was made of M. Gauthier's "Statistics of the Charente Inférieure," and M. Ragut's "Statistics of the Saone et Loire."—The prize founded by De Laplace, for the student of the Ecole Polytechnique standing first at the final examination on leaving the school, was adjudged to M. Delesse.

M. Flourens read a memoir on the scientific life and labours of Frédéric Cuvier, brother of the great naturalist; and M. Becquerel read a paper on the development of electricity for industrial purposes.

The sitting was most numerously attended.

*Academy of Inscriptions and Belles Lettres.* Sitting of July 3.—M. Félix Lajard, provisional Secretary, read a Report of the last six months' labours of the Academy, and of the state in which the numerous publications undertaken by its order were. This Academy is one of the most laborious of any that exist: besides publishing the general series of its memoirs, it is superintending the publication of the grand Collection of the Historians of France, the Historians of the Crusades, the Literary History of France, Notices and Extracts from MSS., &c.—M. Jomard read a communication on the medal proposed to be struck in honour of M. Dannon, as one of the principal founders of the Institute. It was resolved to communicate on this point with the other Academies of the Institute.—M. Berger de Xivrey read a memoir on the discovery of a MS. in the Bibliothèque du Roy, which, according to the learned Hellenist, M. Hase, contains a collection of original letters by Manuel Paleologus, emperor of Constantinople (Byzantium). These are in the handwriting of one of the imperial secretaries, but are corrected by the hand of the emperor.

*Geographical Society.* Sitting of July 3.—M. d'Avezac presented a map of the antarctic discoveries lately made by Capt. Dumont d'Urville. He remarked that the land called *Adelia*, by that officer, was not far to the N.W. of the land discovered last year by Capt. Balleny, and of which the commander of the French expedition could not have any previous notice.—M. Jomard read a letter from M. Antoine d'Abbadie, detailing the result of his brother's (M. Arnaud d'Abbadie) travels in Abyssinia, as far as the Shoa, and nearly to Enaria. The same gentleman also read the report of the Egyptian expedition up the Nile. It appeared from the copy, in French, of the expedition, that they had attained N. lat. 3° 31 min. M. d'Avezac remarked the impossibility of making such an observation in such a latitude, with a common sextant, and conjectured that 3° 31 min. had been substituted by the French translator for 8° 31'. M. Jomard thought that the expedition had really reached the low

latitude mentioned, since it had been out 150 days.

The poet Méry has published the following address to the statuette of Tagliani: what would he say to the divine original?

"A la Statuette de Marie Tagliani.

De l'atelier qui te déroba  
A l'avid regard mondain,  
Sors avec ta flottante robe,  
Nymphe du cileste jardin:  
Paris te promet son hommage,  
O pure et gracieuse image  
Qui palpites sous le ciseau;  
Que d'ovations te sont dues!  
Viens à nous, les mains étendues  
Comme les ailes de l'oiseau.  
Le sculpteur qui te fit si belle  
T'a fermé l'atelier natal;  
Echappe-toi, nymphe rebelle,  
Et laisse-lui le piédestal!  
Sur nos places favorisées,  
Nous t'attendons dans les musées,  
Où sont les merveilles des arts:  
Image brillante de vie,  
La grande cité te convie  
Au panthéon de ces basars!

Ouvre tes ailes prisonnières,  
Aux accords des maîtres des chants;  
Voici les brises printanières,  
Voie avec elles, fleur des champs:  
Sylphide, péri, lutin, ange,  
Fille du Danube et du Gange,  
Tous les chemins te sont ouverts;  
Le monde est un orchestre immense  
Qui pour toi toujours recommence,  
Et ton théâtre est l'univers!  
Près des lacs, aux blondes bergères,  
Rossini dessinant tes pas,  
T'inonda de notes légères,  
Toi que l'oiseau ne suivrait pas,  
Meyerbeer, sévère poète,  
Pour toi fit jaillir l'harmonie  
Du marbre glacé des tombeaux;  
Adam t'ouvrit un nouveau monde,  
Un palais de cristal sous l'onde,  
Sylphide de l'air et des eaux!

Auber, l'harmonieux poète,  
Te guide l'orchestre à la main;  
Pour te voir, l'Asie est en fête:  
Ses fleurs embaument ton chemin.  
Le ciel de l'Inde t'illumine:  
Déjà le bonze et le brahmine  
Suivent ton gracieux élan:  
Secoue, au regard qui t'admire,  
Les écharpes de Cachemire  
Et les parles de Cellan.

On plaçait, aux siècles antiques,  
Sur les autels du corridor,  
Les dieux pénates domestiques,  
Faits de marbre, d'argile, ou d'or.  
En les chassant de son enceinte,  
Rome prit la madone sainte  
Que toute famille adore:  
Aujourd'hui, l'artiste nous donne  
Le dieu pénate ou la madone  
Nés dans le ciel de l'Opéra.

La nuit, gracieuse merveille,  
Quand au soir passé nous rêvons,  
Auprès de la lampe qui veille  
Sous l'autel que nous t'élevons,  
Il semblera que ton argile  
Va briser la vitre fragile  
Avec des ailes de vermeil,  
Et que l'alcôve aux doux mensonges  
Va t'accueillir parmi les songes  
Qui nous consolent du sommeil!—MÉRY."

"General Espartero, Count of Luchana, Duke of Victoria and Morella, and Pacificator of Spain" (so the Barcelona papers style him), was greeted on his late arrival in that city with the following poetical effusion:—

"Al Excmo. Señor D. Baldomero Espartero, Conde de Luchana, Duque de la Victoria y de Morella, y Pacificador de la Espanola.

"Cantad poetas que benigno el cielo  
O yó por fin nuestra plegaria ardiente;  
No o estampo de trovar con vos doliente:  
D la es hoy de gozar en este suelo.  
Entre amargo dolor y desconuelo  
D olorda humillabamos la frente....  
E ra esta humillacion dichosamente  
L a última prueba de quebreto y duelo,  
U n grito se escuchó de paz y vida,  
C on que aliento cobró la gente hispana:  
H ugo por siempre la discordia herida:  
A lzó la Paz sa frente soberana:  
N ada de sangre ya: gloria es debida  
A l bravo, al noble CONDE DE LUCHANA."

La Aurora de Barcelona.

The Royal and Imperial Institution of Sciences, at Milan, has offered a prize of 1700

lire for the best architectural memoir on roofs, to either native or foreign competitors. The memoir is to be accompanied by drawings, and is to contain a systematic account of the various principles on which roofs are constructed, and on the best kinds of materials, &c. suited to Lombardy. The candidates are to send in their memoirs on or before 31st December, 1841; each paper to be marked with a distinctive motto, without the architect's name.

The second edition of the "Transactions" of the Italian Scientific Congress, held at Pisa, in October, 1839, is just out: it contains an engraving of the statue of Galileo, inaugurated on that occasion, and another of the medal distributed to the members.

The number of students in the University of Jena during the first half of 1840 has been 484: out of these, 237 were classed as foreigners; 145 as theology students; 168 law; 72 medicine; and 99 philosophy.

*Scholar.*  
Il primiero ripugna col secondo,  
E il secondo ripugna con primiero.  
Un anima non avvi infida al mondo  
Come infida fu l'alma dell'intero.

Answer to the last:—Gla-cinto.

#### LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, July 11.—The following degrees were conferred:—

*Doctor in Civil Law.*—A. R. Adams, Fellow of St. John's College.

*Bachelor in Civil Law by Commutation.*—J. W. Nicholl, Jesus College.

*Masters of Arts.*—Rev. F. W. Briggs, Magdalen Hall; Rev. O. H. B. Hyman, Fellow, Rev. C. W. Diggle, Scholar, of Wadham College.

*Bachelors of Arts.*—W. Hombertley, Christ Church, Grand Compounder; J. T. Delane, Magdalen Hall; J. Nicholson, Scholar of Brasenose College.

O. Hargrave, Esq. M.A. of Trinity College, Cambridge, was admitted *ad eundem*.

#### SPANISH, ETC. LITERATURE.

DR. H. DE LAZEU, a gentleman of general literary and scientific attainments, has, during the last four months, issued from the press the Nos. (I. to IV.) of a periodical entitled *The Peninsular Historical, Romantic, and Literary Magazine*.\* It occupies itself with the literature and science of the Peninsula, whence for so many years we have heard no sounds but those of demoralising conflict, savage war, and horrible suffering. It is gratifying to humanity to listen to the change; and to indulge in a hope that this noble country may be again joined to civilised Europe in the cultivation of the arts of peace.

The field chosen by Dr. De Lazeu is a wide one, and we should think, covered with a plentiful harvest which only requires reaping. It is astonishing how little intercourse it has been possible to maintain since about the beginning of this century (now aged 40!), with Spain; and, consequently, how ignorant we are of every thing there which the lamentable state of the people has permitted to be done in the paths of learning. To procure a book from Madrid has perplexed us for many months; and, in short, there has been a complete non-intercourse of national intellect, whatever there has been of national munitions. Every effort to remedy this evil deserves encouragement; and it affords us pleasure to invoke English attention to Dr. Lazeu's Spanish labours. In order to do so more effectually, we shall, though hastily, glance over the contents of his four numbers.

\* London, 1840. Ackermann and Co.; Alvarez and Co.; Baillière; Black and Armstrong; Ewins; Nutt; Pritchard; Rolandi; Seguin; Wacey.—We have to thank our brother Editor for making us acquainted with his publication.—Ed. L. G.

No. I. An interesting account of the Fueros of Navarre, Biscay, Guipuscoa, and Alava; with a chronological table of the kings of Navarre; a historical tale of Catalonia; some reviews of two old Valencian works; and varieties. The Valencian language differs little from the Catalanian. It sometimes changes the feminine article *las* into *les*; and there are slight modifications of accent. In noticing the works alluded to, it is observed that "it is a remarkable circumstance, that there exists a greater analogy between the Catalanian and Portuguese languages, though spoken by people separated from each other by nearly the whole breadth of the Peninsula, than between the Catalanian and any of the dialects of the people contiguous to the seven eastern provinces that formed the ancient principality of Catalonia and the kingdom of Valencia, in all of which it is at the present day the popular idiom."

After quoting passages from his authors, the reviewer has, we think, erred in giving us paraphrases instead of literal translations. The peculiarities of languages are not to be learned by such loose versions. The second production reviewed seems to us to be a very curious one, and, if we may so speak of so ancient a concern, very original. We wonder it has not been more directly imitated. The author, Doig, is the most ungallant of Spanish writers.

No. II. commences with an equally good paper (as the "Fueros") on the rise of the Comuneros in Castile in the sixteenth century; and proceeds to Portuguese literature; some historical antiquities; varieties; and the first part of a romance. Upon these we note: that Portuguese literature this century is lamentably deficient, but we are told that the political writings are very forcible and able. [N.B. We leave the romances alone, but may say, *en passant*, that they are all rather characteristic, and some of them, as in this Number, elucidate manners and customs.]

No. III. continues the romance; and in history presents a "State of Religion and of the Clergy in Spain." A paper on the Basque language, and some minor articles, fill the rest of the pages. The philological remarks on the Basque, though offering nothing very new for the learned, are yet interesting enough for the generality of readers, to induce us to transcribe as follows:—

The "few works which constitute the Basque literature are written in the oldest language of the Peninsula, and the least affected by the conquests and invasions which have taken place in that part of Europe. It is the opinion of a great number of antiquarians that the Basque language is the oldest in Spain; we have seen it in no less than nineteen writers, and no doubt there are facts which appear to support them. One of these is the discovery, near the port of Santa Maria, of a plate of copper, seven feet wide and three long, on which were engraved the following abbreviations:—

"GUR: Egnill: And:  
Ber: men: escol: mnast: ol: sen: au: jas:  
D: Gu: erdald: Lemb: sart: z: nean: ond:  
ad: Araz: Bat: eta: ben: Gur: la: ec: es:  
Ars: Bec: amb: jaim: guez: Ta: irr: BRI."

"They were read by a Basque thus:—

"Gure aguille andfari, bere meneco escaldanac menast—ol sendo an jasotzen diogu Erdaldunac lembian sartu zaizcumean; ondooal adiarasteco, bati eta benaz gurtzen gataiz cala, econeaz arrotsoz becala, ambeste jainco guezurreco, ta irvi garrii: which means—  
'To our great Maker, the Escaldunes, with

their hands, and by their own will, erect this plate of solid metal, at the time that strangers of a different language have come to our land, for the purpose of acquainting the future generations, that we adore very truly One only, and not like these new comers, many false and ridiculous gods.'

"As the name of *Escaldunes* is not recorded by any of the Roman writers, the first who made mention of the Basque people, it has been supposed that this inscription refers to times and events of which there is no record, and far more remote than the period of the other settlements in the Peninsula. Another proof, which Larramendi adduces of the antiquity of the Basque language, is that there were in Asiatic Iberia eleven cities, the names of which were purely Basque, such as *Surtia*, a hot place; *Agena*, a tree; *Barruta*, a close place; *Sedala*, contradiction; *Nigas*, with me; *Barasa*, garden; *Baseda*, a long wood; *Matsleta*, a place where grapes are produced; and others which he presumes to have been given to those cities by the Spaniards who frequented Iberia (believing in the early expeditions of the Spaniards to Asia). It would be, perhaps, a subject worthy of an antiquarian's investigation, to ascertain whether the language of the Iberians was not the same with the Basque, and even to analyse and study the analogies of that language, which, notwithstanding its remote origin, has been neglected by philologists, whilst they seek in the dialects of by-gone nations and races of people a clue to historical research, to the discovery of which an acquaintance with the Basque might lead, as well as to many other interesting facts. Garma, another learned Spanish author, supposes that the names of various regions in the north of Europe were given by the ancient Spaniards, because they are Basque words, or at least terms which have a meaning in their language. Such are *Escocia*, which seemed to be formed of *Escu*, hand, and *ocia*, cold; words that would be used even now by a Basque to denote the extremity of a cold country; *Ireland*, fern-field; *Holland*, great wave; *Iceland*, great island; and *Sweden*, kindled fires. Another fact adduced by antiquarians to prove the antiquity of the Basque language in Spain, is the existence of many words, in all the languages of that country, which are formed on Basque roots, or which are wholly Basque. Of these, *España* is one. This name in Basque means lip, and figuratively, extremity, whence it is clear that they employed it to signify the extreme of Europe—*España Europaea*. Larramendi, a Jesuit friar, professor of theology in the university of Salamanca, and author of a Basque grammar and dictionary, has treated with much erudition and profoundness the subject of the antiquity of the Basque language, and shews with great clearness that it was the primitive and once universal language of Spain. He assures us to have found in the Basque no derivative from other languages, either ancient or modern; whilst in the Greek and Latin there are words formed on Basque roots. That the Greeks had received words from other nations appears from the following discourse of Socrates, when, being asked by Hermogenes which was the etymology of *pus* and *hypor*, Socrates answered—'Reor equidem multa Græcos à barbaris eos præsertim qui suo barbaris sunt habuisse.' The philosopher then proceeds to exemplify his assertion, and quotes, in the first instance, the words *cimexis* and *iesis*, as foreign. The former he said, ought to be from *cien tre*, signifying the action of going, in some foreign language. Now the act of running away is expressed in Basque by the words *cim* and *iesi*;

hence it appears that the *cinesis* of the Greek is a Basque term. The word *iesis* is purely Bascuense, and employed whenever the action of going or moving onwards is to be denoted. Larramendi enumerates many other Greek words, which have as clearly a Basque origin; and he then proceeds to examine the Latin, the French, the Spanish, and Italian languages, in all of which he finds words of Basque derivation. In the last-mentioned language he finds about one hundred Basque words, and in Spanish, out of 13,385 primitive words, which the first edition of the dictionary of the Spanish Academy contained, 1951 are Basque. How far the learned author may be correct we do not pretend to say, but if the Basques are the most ancient people of the Peninsula, it is natural that the other nations who settled there and in the neighbouring countries should take from their language. It may also be that they came from some remote stock, common to the other early settlements of ancient Europe, and in this case also, the same participation of language would take place. Like the Greeks, the Basques have no article or preposition, but decline their nouns and express their genders through terminations. They also change the last letters of words and verbs to denote the sex and conditions of the individual whom they address: thus, for example, if they tell a man 'Bring it,' they say *ecarri-ecae*; if to a woman, it is *ecarri-esan*; if the person is of rank, then the word *bessori* is added to the verb; if it is one whom they respect, but treat at the same time with familiarity, such as a father, mother, uncle, &c., the verbs terminate in *su*, *suo*, *seu*, or *seuc*; and if it be an inferior, the termination is *eu* or *euc*. Rich and expressive as the Bascuense is, and from its nature capable of all the beauties of harmony and varieties of style, though not so favourable to the beauties of euphony when spoken, it is confined to the hills and valleys of a small portion of the Pyrenees, little cultivated by learned men, and almost forgotten by native writers; vicissitudes common to all languages that are not used at court, or in the public tribunals of a country. To these general causes must be added the limited taste of the natives for literature, and every mental pursuit, not from want of ability, but from disinclination. Still, if all native authors had written in their own language, it would not have fallen into the neglect and disuse in which it is now; for in 1788, when the population of all the Basque provinces did not exceed 290,150 souls, they had above sixty writers, but out of this number many published their works in Latin or Castilian. They wrote generally on history, philology, and imagination, but mostly on mystical subjects. Amongst these is found a translation of the Bible, published in the beginning of the sixteenth century, and many poetical compositions, some of which are very popular, particularly the poems written by Father Aramburu, in two volumes, admired for the force of their language and pleasing invention. The following lines are a portion of his version of the 'Te Deum Laudamus,' which we find exceedingly well translated, though he has been accused of having deviated from the rules of Basque versification:—

'Jangoicoa zu zaituga  
Bihota ocoz laudatzen,  
Zu, zaitugu gueuré jauntzat  
Ahalaz defendatzen.  
Aita bethleco  
Ceren bastarâ segur  
Andic emaiten darotzu  
Lurrac ohozes agur, &c.'

On philology, the works of Father Larramendi are doubtless the most valuable. His Basque, Spanish, and Latin dictionary, is not

only excellent in itself, but rendered doubly valuable by a preface which contains all that can be said upon that language, and all that has been ascertained of its history. He is also the author of one of the best Spanish grammars. But Larramendi has not the merit of originality, having been preceded by Don Baltasar Exhabé, who, in the beginning of the seventeenth century, published a grammar in Mexico, entirely written in the Basque language. This work is now extremely rare. Of writers on fact, Arnaldo Oihenart, an author of the seventeenth century, stands the first. He wrote in Latin, 'Notitia utriusque Vasconii tum Iberiæ,' which is a sort of Bascuense encyclopedia of history and literature. He is also the author of 'Bascuense Proverbs,' and 'Bascuense Poetry,' which is one of the best productions in that language. They have the 'History of the Old and New Testament'; 'History of the Dances and Music of Guipuscoa'; 'Translations of Pieces of the Catlinarias'; 'Elements of Geography, Astronomy, and Cosmography, and many others of the same kind. In poetry, they have various lyric compositions and pastorals, which breathe the simplicity of their customs and of a primitive mode of expression, though their strains are both harmonious and varied. Besides printed works, there are many manuscripts in Basque, which existed in the library of the Convent of St. Catherine of Barcelona, and which, if printed, would materially enrich the limited amount of Basque literature. The earliest of these are of the fifteenth century."

Among the paragraphs we read:—

"*Stenographic Musical Machine.*—Among the many useful inventions in which our age abounds, there was frequently missed by musical composers some instrument by means of which the conceptions of musicians might, like those of the poet, be committed to paper at the very moment of their dawning on the imagination. Signor Dell' Oro, an accomplished artist, just arrived in this country, after several years of assiduous research, has at length completed a stenographic musical machine which perfectly answers the object of such an invention. By attaching this sort of self-acting writer to a pianoforte or organ, every note that the artist or improvisatore may play on that instrument will be instantly reproduced in a manner equivalent to writing. Signor Dell' Oro is also an excellent vocalist, and has exhibited his talents in some of the fashionable morning concerts."

No. IV. A political sketch of Spain fills nearly four-fifths of this Number: a description of the Passion Week in Portugal, and a few miscellanies, the remainder. It offers us nothing we can extract; and, therefore, we conclude with again recommending the publication to the British public.

#### CAMBRIDGE ANTIQUARIAN SOCIETY.

THE Council have ordered the following Works for publication:—1. A Chronicle of the University from A.D. 1377 to A.D. 1440. Edited by the Rev. J. J. Smith, M.A., Fellow and Tutor of Caius College, and Treasurer of the Society. 2. A Catalogue of Books given to Catherine Hall, by the Founder. Edited by the Rev. G. E. Corrie, B.D., Norrisian Professor of Divinity.

#### FINE ARTS.

##### MR. LOUGH'S SCULPTURE GROUPS.

EVERY instance of decided patronage of the highest order of art gives us pleasure, and the more in proportion because we feel that such instances are far too unfrequent to be considered, *en masse*, an adequate national en-

couragement for its cultivation. Like angel visits they are, indeed, but few and far between; and when the wealth and countenance of our country are bestowed, it is almost invariably upon the purchase of ancient pictures, or of statuary manufactured in Italy, of an inferior kind to what could be produced at home. It is not that we would question the taste which covets the *chefs d'œuvre* of the old masters, even at the enormous sums they fetch in the market; but when we see thousands and tens of thousands of pounds given for their works, we cannot help reflecting on the effect the disbursement of these sums would have upon the genius of England.

These thoughts occurred to us on the view of a group of sculpture executed by Mr. Lough for Sir M. White Ridley; a composition which is not only honourable to the parties concerned—the patron and the artist, but well calculated to elevate the character of our native school. Mr. Lough began his extraordinary career with a work of wonderful promise, and it rejoices us to recognise in his present effort, the first he has made since his return from Rome, another performance, which fully satisfies the high expectations which his early creations excited.

The new model is a group of three figures, of the life size: Bacchus, a Bacchante nymph, and a Youth upheld by the other two, in the pyramidal form, so much admired as a grace and beauty in the art. The pose of the standing statues is exceedingly fine. The Bacchus, with his right shoulder thrown boldly back, displays the humeral and pectoral muscles in full play; whilst the truly female nymph on the other side is thrown into no greater action, or more elevated raising of her arms, than is necessary for the pouring out of wine from a small amphora into a shallow cup. On their shoulders is upborne the human youth, whose age is between boyhood and manhood, and who has been tempted by the jolly god and his sweet companion into an indulgence which has nearly overpowered his reason. The contrasts in the three personages, or rather, we should say, the attributes apposite to their natures and conditions, are admirable. The Bacchus, "ever fair and young," is of the Antinous class, uniting ease with vigour, and gracefulness with strength. The Bacchante is woman, but poetical; the limbs are round and exquisitely turned; and the bust and head of captivating loveliness. The Youth is equally well designed: the frame not yet confirmed, and rendered more lax by the state of incipient inebriation in which he is plunged. The whole are flesh and blood,—not clay, or plaster, or marble,—and the spectator fancies, without a stretch of the imagination, that he could touch and feel the warmth and life of these glorious creations. Of the varied expressions of the countenances, we shall only say that they are worthy of the figures: in the latter, the anatomy is perfect and natural, without exaggeration; and, in the former, the story of the group is told without the utterance of a word of explanation.

Of the classical accessories introduced to give finish and propriety to this splendid performance we shall abstain from speaking, being content that they are in harmony and keeping with the general design, and that that design is one of the very finest we have ever seen executed in England during our conversancy with its living arts.

May we see many such!

When on the subject, we may also note our satisfaction at seeing that Mr. Bailey has been engaged to sculpture a marble statue of Sir

Pulteney Malcolm, as a monument to that excellent and distinguished individual in St. Paul's Cathedral. We only wish that, instead of one thousand, two thousand pounds had been allotted for the work. The latter amount would have enabled a man of great genius to do more justice to a man of whom his country could hardly express too high an approbation by the erection of any tribute to his memory.

#### NEW PUBLICATIONS.

*Evening Sketches.* By Et Cetera. Lithographed by M. Gauci and Sons. For the Society. By P. and D. Colnaghi and Co.

WE have put "Et Cetera" for the names of this Society, because we would rather that they flourished in our text than on their own title-page. For they are names of great promise, nay, of absolute certainty, prefixed to a publication like this. Here they are in alphabetic order:—

A. E. Chalon,  
J. J. Chalon,  
Joshua Cristall,  
C. R. Leslie,  
J. Partridge,  
C. Stanfield,  
S. J. Stump,  
T. Uwins;

and the origin of their work, with much taste and propriety dedicated to the President Sir M. A. Shee, who has well merited every testimony of respect and esteem from the British School of Fine Arts, is stated to have been "Sketches by the Members," who met "for the purpose of combining social intercourse with the cultivation of their art." These most agreeable meetings commence in November and end in May. They are held weekly, and the host of the evening gives the subject, upon which every pencil round the table is immediately employed, no one having intercourse with another. A selection from these productions is to form the present publication; and, for the sake of variety, we are told the subjects in this, the first *livraison*, are taken from the sketches of various evenings. But it has been our good fortune to see together all the sketches of one evening, which remain the property of him who supplies the friendly yet moderate entertainment for the occasion; and we may mention that our gratification seemed to be enhanced by the union. It was curious and delightful to witness the strange differences with which persons of talent treated the same idea. One sporting with human character, another revelling in natural scenery to which human character was subordinate, a third full of humour, and a fourth full of pathos; all charming illustrations of the single theme. As the work goes on the public will, of course, be enabled to make these comparisons, and we can assure the lovers of art that it will afford them no small pleasure to do so. In the instance now before us we have "The Daughters of Minus," a grand classic group by Cristall; "A Halt," worthy of De Louthenburg, by J. J. Chalon; "Happy Moments," a little girl with a pet dog, in the best manner of A. E. Chalon; "The Enchanted Island," a Poussin-looking landscape, by J. Stump; a "Scene from 'Le Bourgeois Gentilhomme,'" by C. R. Leslie, and a piece as replete with character and humour as ever came finished from his popular pencil; "A Perilous Situation," a magnificent shipwreck, by Stanfield; "Expectation," a most graceful female figure and distant landscape, by Uwins; and, lastly, "A Reminiscence of Italy," by Partridge, redolent of that land of delicious models both in nature and art. It

consists of a female and child, and belongs to a very noble class of composition.

The whole number does credit to the names it bears, and needs no higher recommendation from us.

*The Right Rev. J. Bird Sumner, D.D., Lord Bishop of Chester.* By Margaret Carpenter, Mezzotint by S. Cousins, A.R.A. Seacombe, Chester; Ackermann and Co. London. A FINE intelligent head, finely painted by Mrs. Carpenter, and no less finely engraved by Cousins, happily preserves the features of this eminent divine. It is a portrait which must be welcome to his friends and diocese; and, indeed, to the public in general, which appreciates his virtues and piety.

*The Oriental Portfolio. No. II.* Smith, Elder, and Co.

THIS charming representation of Indian scenery consists of five subjects, viz. Kunkhul; the Tomb of Homayoon's Vizir, at Delhi; Mausoleum of Sefdur Jung; Ruins at Deeg; and the Chouk at Delhi. The splendours of Oriental architecture and the magnificence of Oriental scenery are admirably illustrated in these beautiful lithographs; and the figures, elephants, &c. introduced at the Mausoleum, give great life to that place of death. We think the title-page names and those on the prints ought to be spelled alike! "for uniformity's sake."

#### THE DRAMA.

*Haymarket Theatre.*—Only another week of Power remains before he leaves us for America. How shall we laugh after we have seen his really *Last Legs*? Mr. Kean's engagement is finished. His *Macbeth* has filled the theatre; and as we do not like to keep quarrelling with the public taste, we have abstained from expressing our opinion that never was a character so extravagantly melo-dramatised. The very boards of the stage seemed to be slides on ice under his feet. Mr. James Wallack, we hear, is engaged at this house.

*English Opera.*—On Thursday, a new mythological extravaganza was successfully produced here. It is so full of fun and bustle as to remind us of a clever pantomime. The story chiefly rests on the fate of Ixion; but a multitude of heathen gods and goddesses figure in the burlesque scene. On a first representation of a production of this class, it would be premature to speak farther than of its general effect; as when a few nights' practice have brought the parts closer together, made the work move more glibly, and the performers quite at home in their parts, it is sure to tell with much more effect on the audience. But even on this occasion, *Life in the Clouds* appeared to be so merry and facetious, that we have no doubt it will have a long life in its mimic drollery on the boards of the English Opera House. The performers exerted themselves to the utmost, and bore the author through with *éclat*.

*Prince's Theatre.*—The German operas have closed with greater *éclat* than they opened. The last opera produced, Mozart's *Titus*, was, perhaps, the most effective of the series.

THE spur given to the Drama within the last three years, and its partial redemption from the low estate into which it had been degraded by characterless adventure and vicious pandering, though it has not resuscitated the Tragic muse beyond three or four instances of hopeful vitality, and has left the Comic un-

moved in the atrophy into which she had fallen, has, nevertheless, produced signs and indications of life which, under the continuance of favourable and happier circumstances, might have redeemed the stage. It is true that there are Frankensteins and Dolts among the issue of this state of things, but there are also manifestations of genius which seem to indicate that encouragement alone was wanting to produce a harvest of dramatic talent which would adorn the theatre and gratify the public.

As the publications to which we allude have reached us for some time past, we have thought it inexpedient to notice them singly; but now that they are sufficiently numerous on our table to justify a review, we shall beg leave to bring them, their defects and merits, briefly before our readers:—

*The Drama of a Life.* By J. E. Reade, Esq. author of "Italy," &c. Pp. 162. London, 1840. Saunders and Otley.

THIS drama, not being written for the stage, chiefly claims our notice as the production of a gentleman whose poetical works have placed him in a high station among our living authors. In its construction it resembles one of Joanna Baillie's dramas of the Passions; for it is addressed to illustrate the devouring predominance of one master feeling, by which the mind is poisoned, and energy, as regards all the business of life, destroyed. Malefort, a visionary aspirant to an ideal condition, is naturally disappointed in his hopes and embittered in his disposition. He thrusts aside the contentment and happiness on his path, and is miserable,—a hypochondriac and a misanthrope. Every thing stings or mortifies him, and he can enjoy nothing. He loses his once beloved wife, and sinks into that death which alone can relieve such wretchedness as his. A stranger, who turns out to be his elder brother, is introduced, but simply as a contrast, and to draw out and exhibit the morbid qualities of the principal.

There is no human breast but must acknowledge the truth of the sentiment thus developed; but we are of opinion that Mr. Reade has carried it beyond the possible into the imaginative degree; or at least exaggerated it so far, that the moral lesson would be lost on mankind. Every one would say, "I may be very bad, but I am not so bad as that!" And even an unsuccessful author, the most perturbed of all mortal beings, would decline standing for the original of Malefort.

With this remark on the general principle, we shall proceed to offer a specimen of the force and poetry of the language of this finely written play:—

"Malefort. Hast thou faith  
In anything?  
Stranger. In nothing. I demanded  
An infinite of time to know myself:  
I have a moment given me—I am silent.  
What is't we live for?—dare to tell the truth;  
For Life alone; to dream of truth; to die,  
Knowing life was not worth the living for.  
All are delusions; yet we follow them.  
Knowing them such; how else fill up our days?  
Love satiates; Ambition is a shade;  
He that would grasp, Ixion-like (how grand  
That old morality!), is scorched by fire.  
It proves our wish for immortality:  
For it would rule all space and time; if foiled,  
Its self-recoil, Sisyphian-like, doth crush  
The climber; rest it knows not, for calm makes  
The feverish pulses of its heart more heard;  
The fire still preying on itself more felt.  
All passions have their common sympathies:  
Love—hate—remorse—revenge itself grows cold;  
Each may retrace its path—ambition cannot.  
Ingratitude, abandonment, the blights  
To gentler natures, are unfelt by him  
Who scorned them, who but raised himself above  
Mankind, to rule them. 'Tis a savage passion,  
Repelling all, even love, which cannot share  
Its hopes, or wild regrets; its pride prefers

Death to remorse, for it has left the path  
Of human feeling, never to return!  
Practise benevolence, whose root is love:  
The best fruits of religious ceremonies  
Are acts, not words; the healthiest exercise  
To morbid nature. The great end of life  
Is to aid man, thy brother, when he sinks;  
Not to stand idly musing on the bank.  
There is no music man can hear so sweet,  
No, not in all his fancied choirs of heaven,  
As the responsive voice of gratitude!

*Malefort.* And yet how often is it false!—  
*Stranger.* No matter!  
The heart acts from a finer, nobler feeling:  
Its consciousness of raising o'er self-love,  
Which doth degrade or taint our noblest actions!  
Life has two parts: the past is but a dream;  
The future, but a hope; our moments—on  
For ever hastening—are the present. Use,  
Use, then, each moment, ere the last be flown!  
Live, like a man, humanity around thee:  
The harmonies and discords of our nature;  
Which, of themselves, form half our happiness.  
If thou wilt seek for solitude, 'tis there:  
But whilst thou turnest from thy weaknesses,  
Or vices, guard, in cynic pride, alike  
From hating or from imitating: be  
The thing thou dost set up for: practise virtue;  
Prate not denial which thou canst not reach.  
The soul's real grandeur is not shown in mounting  
In feverish, aimless, hopeless aspirations;  
But in the governing and ruling Self:  
Inferior wants, the mean, the low, the little,  
That, weed-like, cling around and clog our natures,  
Sheltering their weaknesses beneath the cloak,  
Threadbare and worn, of poor expediency!

*Malefort.* What art thou? for thou talkest like a  
man—

*Stranger.* Who has had barren thoughts, like thine;  
who crushed them,  
Having well proved as I felt their mockery;  
The heats of youth, the fancies of a child,  
Playing beside the Ocean of great Truth.  
The drops that trickle from the cavern harden,  
And brighten into spars: when thou hast lived  
Life's later stages, thou wilt prove how cold  
And polished can the sarcasm be, when wrung  
From former tears, within the musing mind!

*Malefort.* Thy words oppress me, yet bring not con-  
viction.

*Stranger.* They cannot;—thou art armed with thy  
self-love,  
In panoply of proof. When all thy passions  
Have left thee, thou wilt think as I do.

*Malefort.* Never!

*Stranger.* Hast thou not, even as I, outlived the  
many

That once had thy heart's sacrifice? Love, faith,  
Ambition, hope,—where are they now? They found  
No resting-place; they were too fine to dwell  
With perishable objects, and they died.  
Even so this hope of fame, whose base is sand,  
Shall melt, and join the rest."

We need not repeat that this admirable expo-  
sition of the vanity of his vain desires has no  
effect upon the diseased mind of the sufferer;  
and have only to add that some minor poems  
of considerable beauty fill the closing pages of  
this volume.

*King Henry III.* Part I. London, 1840.  
T. Cadell; Edinburgh, Blackwoods.

AN historical play in five acts, by the author of  
an "Essay on the Oxford Tracts," which may  
reach a plot in Part II.; as for Part I. it is a  
series of plain-sailing dialogues without interest,  
and describes the thraldom of the royal family  
in the power of Simon de Montfort, earl of  
Leicester.

*Tragedies.* By Sir Archibald Edmonstone,  
Bart. 12mo. pp. 300. London, 1840.  
Bryant.

*LEONORA* and *Gaston de Foix* are the plays  
in this volume, in which we find the versi-  
fication but indifferent, and the interest of the  
plots insufficient to sustain the weight of either  
tragedy. The first, we are told, "is founded on  
a domestic occurrence which took place within  
these few years, in a family of high rank in  
France;" and the last on Froissard's relation of  
an event in 1382. One passage will suffice as  
an illustration:—

"*Leonora.* Reality can take no form more fearful  
Than plays before the eyes of horror-struck fancy,  
Anticipant of that she dreads but knows not.  
Legions of beings invisible have charge  
To lead earth's helpless wanderers along  
Their path, protecting from its lesser perils.  
But when impending fate too heavily looms,  
Pitying they watch and mourn, and whispering warn

The coming doom. Oh! now I hear their voice,  
As thunder rolling in the distant sphere  
Portends the storm. My day of bliss is past!  
'T was exquisite, though brief!—but flown, flown by,  
Like a wing'd dream!—Nearer, Bianca,—let not  
The sound o'erpass the precincts of thine ear,  
Lest that its very echo should excite  
And goad my mind beyond restraint.—Alonso,  
My all, my world, whom but to see and hear  
Is life—life being; around whom my feebleness  
Hath twined its fibres; one of which to sever  
Were pain too keen to bear;—such ties are pow'rless  
To bind his heart; it has burst through from all,  
And left me here alone!

*Bianca.* Thy lord's affection  
Estranged!—Impossible!—nay, its fond ardour  
Is in his countenance as strongly stamped,  
As at the hour which gave him thee.

*Leonora.* Alas!  
Thou ne'er hast loved!—Thine eye can but glide o'er  
The surface; and decay may sear the core,  
Though the bloom gild the cheek. There is a pulse  
In actions most unmark'd; the lips slight trembling;  
The palpitation of the lid; the infection  
Of the tuned voice; a word, a look, a motion,  
These can denote affection's ebb and flow,  
Strength or decline, to the experienced  
Impassion'd scrutiny of her who loves;  
As certain as the life-blood's current shows  
The body's health. That gaze which fed upon  
The shiftings of my brow, and strove to catch  
Each half-formed fantasy, is now down-fix'd  
In cold abstraction. Words scarce utter'd seem  
Only to cover thoughts which shun pursuit.  
Nay, does he press my cheek, the tenderness  
Of his embrace is deaden'd to the salute  
Of chill habitual greeting;—for his heart—  
His heart is far away!

*Bianca.* Oh, think not so!  
Weightier matters now engage his thoughts.  
Honours and high advancement will produce  
New cares; and though each glance may not emit  
Its ray of love, and his pre-occupied  
Appear abstracted to thy fond regard;  
Deem not the flame grown cold. When the light clouds  
Pass o'er the sun's bright disk, the dappled sky  
Shows but a varied and more beautiful aspect,  
And Nature still smiles on, nor doubts his face  
Will soon emerge to renovate her joy.

*Leonora.* My sun's eclipse no time will dissipate!  
My too resentful spirit can discover  
Nought in perspective but more deepening shade  
Of cheerless, hopeless, endless gloom!"

*Griselda; a Drama in Five Acts, from the  
German of F. Halm.* By Sir Ralph An-  
struther, Bart. London, 1840. Black  
and Armstrong.

SIR RALPH informs us that he translated this  
popular German play as an exercise in the  
language; and it seems to have been a good  
long lesson. With regard to Halm's treatment  
of the oft-repeated story of the (in our minds)  
far too patient Grizzle, we cannot say that it  
has many charms for us. She is a collier's  
daughter, and married to a lord of Pendennis  
Castle, one Percival, who uses her in the usual  
shocking and inhuman manner. The charac-  
ters are King Arthur and the Knights of the  
Round Table; and it is at least gratifying to  
find, in this version, that poetic justice is done  
on the cruel husband.

*Nina Sforza.* By Richard Zouch S. Troughton.  
Pp. 144. London, 1840. Saunders and Otley.

A FIVE-ACT tragedy, with many points of merit  
to recommend it, either to the closet or the  
stage. The married happiness of Raphael  
Doria, the head of a powerful house in Genoa,  
and his beloved wife, Nina Sforza of Venice, is  
poisoned by a false friend, Ugone Spinola, and  
a fatal catastrophe ensues. Nina, believing her  
husband false, flies from him, armed with the  
means of death in a phial furnished by Spinola.  
A scene (the second in act five) will serve to  
exemplify the whole:—

"*Enter Nina and Gioconda in cloaks.*  
*Nina.* Would that these minds had not the power  
to hide  
Their weakness with such folds of seeming strength!  
Would that their naked, plain deformity  
Could find no clothing! Oh, how many lives  
Would then beat through the common sense of time,  
That now drop early, like frost-bitten bloom!  
No more of this, or mine will 'scape too soon!  
I'd not die here!

*Gioconda.* Oh, madam, madam!

*Nina.*

*Hush!*  
Thou'lt keep my secret; thou hast sworn to do't!

*Gioconda.* I will! I will! But, dearest mistress, pray  
Go not to-night!

*Nina.* Gioconda!

*Gioconda.* Not to-night!

*Nina.* Have I not told thee that my lord is false?

That he has ceased to love me? that—Not go!

Girl, were this palace fairer than it is;

And all without a desert parch'd and bare,

I would go forth and wither; for beneath

This hapless roof I'll rest my limbs no more!

*Gioconda.* Hark how the winds are mutt'ring midst  
the hills!

And see how black and swollen are the clouds!

Their labouring breasts will scarce contain their freight:

If thou shouldst venture forth, in idle grief,

They'll drench the earth with tears, and do thee wrong!

*Nina.* There should be weeping! Will the senseless

clouds,

Those dank and filthy vapours of the air,

Will they drop tears, and Doria's eyes be dry?

No, no! not so: I think he yet will weep,

When he shall learn that I am gone—am dead!

*Gioconda.* You kill me, mistress!

*Nina.* If thou yet repent

That thou hast sworn to follow my sad fate,

I will absolve thee, and will go alone.

*Gioconda.* Madam, your fate, whatever it be, is mine.

I have been yours since I have been alive,

And when I cease to live, I cease to serve;

But not till then.

*Nina.* Why, that's another pang:

What right have I to tear thy kindly breast,

Which yet hath known no sorrow of its own;

Nor e'er, perhaps, had known, except for me?

*Gioconda.* Oh, what am I, that you should waste

on me

A moment's thought?

*Nina.* My fond, my faithful girl!

In Venice I have friends shall care for thee.

*Enter Florio, equipped as for a journey.*

*Florio.* Your highness, with all secrecy and care,

I've brought the horses to the northern gate,

And left them there, as you commanded me,

A little from the walls.

*Nina.* 'Tis well, good boy.

One parting look, and then at once away.

Ye scenes in which I've savour'd many a joy,—

Ye scenes where first I learn'd the taste of wo

Most bitter,—dear remembrancers, adieu!

She goes from ye, to look on ye no more,

Whose e'er'y hope, whose murder'd peace of mind,

Have in your temple found a sepulchre!

Come on, my girl, let's go; time wears:—Alas!

I talk of going, yet I do not stir!

My body's weary, ere the way's begun—

Oh, that life's weary way were pass'd and done!

[*Exeunt.*"]

Some newly coined words and new applica-  
tions of others are blemishes in Mr. Trough-  
ton's composition; for which we cannot ac-  
count. "*Savoured*," for instance, in the  
foregoing, and "*tarr'd*" on for hastened on  
elsewhere, &c. &c.

*Joan of Arc.* By Mrs. J. A. Sargent. Pp. 99.  
London, 1840. Rickerly.

A MODEST preface heralds this play in five  
acts, the production of a lady, and addressed to  
a subject of sufficient interest to have been fre-  
quently dramatised. This preface and the sex  
of the writer would disarm criticism, were it  
provoked by any offence in the work itself.  
But such is not the case. The historical nar-  
rative is closely followed throughout; and the  
following passages will speak for themselves and  
the author.

Joan's description of her youth:—

"'E'en from my childhood I was never like  
Those whom my childhood shared. To be alone  
My joy, thoughts undefined my fancy filling.  
Sometimes my heart would throb, my young eye swims  
With sudden tears; but why I could not tell.  
I seem'd, e'en then, cast from some other sphere,  
Of which sufficient memory was left  
To link me closer to a former state!  
And make me feel an exile."

*Bertha.* Would I'd known thee!

How sweet to mark development of mind

Pregnant as thine!

*Joan.* Thou might'st have been as others.

I was not loved. I was not understood.

Some deemed me void of Nature's kindly gifts,

In intellect deficient, and in heart

Most cold. Oh! how they wrong'd that heart! I

loved

Too keen, alas! yet had but few to love,

And fewer still to answer to my love."

Her final donning of the armour by which  
she seals her doom:—

"*Joan.* What may this mean? Hath pity touch'd  
their breast?

Why has the dungeon's gloom been changed for light

That cheers, for air that wakens life, not chills?  
Oh, beautiful light! Oh, sweet and balmy breeze!  
Thy Maker's smile, thy Maker's breath art thou,  
And I am in His presence. Fear, the dungeon  
Scarce forced one drop, one sigh of sorrow;  
But now for very happiness I weep.  
Surely I never felt till now the luxury  
That conscious being can confer. Oh, death!  
I've look'd upon thee till thy form's familiar;  
E'en till thy ugliness had almost vanish'd,  
So well hath darkness and itself agreed;  
But now this gentle gale, these sunny beams,  
This perfumed scent of flowers, do tell a tale  
Of home—of loved companions, and I sigh  
To be, as I was once, a joyous child;  
Although I would not live my life again  
For all that sight, or smell, or hope, could offer.  
And, hark! the sound of trumpet clanging shrill—  
I hear the tramp of martial feet—of horse!  
My spirit bursts these walls. My country's voice  
Is echoed in that swell, and my full heart  
Heaves with tumultuous force to answer her.  
Hours of past glory, are ye gone for ever?  
Crowd ye upon my mind alone to torture me,  
Or are ye pledge of wonders yet to come?  
Ha!—armour here!—would that—it is my own!  
Welcome, thrice welcome!—But how dimm'd its  
brightness!

And the vile spider's cast her web across it.  
Off, off, and let me wipe this rust away.  
I gaze, and the whole field is now before me—  
Proud steeds, and gallant forms, war's panoply!  
Oh! happy hours, when thus I clasp'd thee on me—  
'Thou kneeling, prayed for thee, my king, my country,  
Thou rising—bade—defiance to the foe!"

And now we should say farewell to this dramatic batch, but that we wish to notice along with it a slight but able pamphlet by George Nash, author of "The Outcast" (pp. 27. Saunders and Otley), in which he feelingly asserts the high claims of the higher drama. We copy a few sentences:—

"The dramatic is universally allowed to be the most difficult style of composition. In reading a good play as much passes before us as in perusing a novel of similar outline. Imagination, fired by a word, lights up her scenery, and more than compensates for the novelist's descriptions, for the very best descriptions of scenery convey but imperfect impressions. Were a dozen artists who had never seen the spot described, each to draw a picture of it from a novelist's description, it would be found that, except in a few general features, no two of their pictures would be alike. There are some paintings that suggest more than they represent. They awaken reflection: the imagination pictures scenery which they merely hint to it, and the mind wanders amid landscapes, of which they give no outline, but which we imagine to exist, beyond the scenes they represent. So, in a drama, every scene must suggest others that are necessarily connected with it."

Through-out the play, the author should take care that, although the event may be surmised, it cannot be predicted. If the circumstances cause the catastrophe to be expected, he must take care to involve it in sufficient doubt to keep the mind balanced between hope and fear. A dramatic author must always appeal to the feelings rather than the reason of his audience! Men do not attend the theatre to reason, but to hear, see, and feel. The characters should be distinguished by broad features, and in those that contain any points of similarity the lines of separation should be clearly defined. In the drama, evil characters should be so drawn as to excite compassion, but a compassion that would shun them—it should be a feeling of mingled pity and aversion. The worst are not wholly vile—those who are born with evil dispositions are often made worse by their intercourse with the world, and through its pollutions, the good sometimes become evil. Mental powers may be put in contrast with passions—a sarcastic wit is a good relief for a man of heedless ambition—the good may want judgment—imagination may lift the depraved, and the evil may

suffer from benevolent feeling; for the possession of benevolence is a severe chastisement to a guilty man. The misanthrope, also, may have been made so from the very activity of his benevolence. In such a character the dramatic author may shew the effect of severe thought and feeling on a disposition too good to behold pain with indifference. He may shew how such a mind, tracing man's woes to his folly and vices, learns at length to despise and hate the being whose lot he at first lamented. On the other hand, men of the most callous nature, the greatest rascals, are often pleasant fellows, possessing knowledge of the world and the art of rendering themselves agreeable. The man of good intentions, but weak resolution, whose passions are so balanced that his actions are good or bad according to the circumstances in which he is placed, affords a fine lesson, exhibiting the effects of the want of that rudder of the character—moral resolution. We are all evil because we are weak."

A multitude of other excellent remarks and rules will be found in this brochure; which is concluded by a touching ballad, "The Poet's Death."

[We had included in our Review the dramatic chronicle of "Thomas à Becket," by Mr. George Darley; but the extracts from it require so much space that we must defer it till next Saturday.]

#### VARIETIES.

**The Royal Academy Exhibition.**—Our readers ought to be aware that this is the last day for seeing the Exhibition of the Royal Academy. Yesterday the number of visitors was so great, that we should imagine many would be disappointed if not made aware of the final close at seven o'clock this evening.

**Hanover Square Rooms.**—On Saturday, the fourth Royal Academy Concert attracted an immense crowd; Prince Albert having expressed a wish to hear Lord Burghersh's military symphony, it was performed with a full orchestra at the conclusion of the first part. It is a very spirited and effective composition, and was warmly *encored*. Several of the young and promising pupils of the Academy were also much and deservedly applauded.

**The Harrowing of Hell.**—Mr. J. O. Halliwell has published this curious old miracle-play, heretofore confined to some rare impressions for private circulation, and has helped it with an "introduction, translation, and notes." The earliest dramatic composition in the English language (and therefore the word "translation," in the title-page, *pro* modernisation, can hardly be deemed correct) is truly worth this compliment; and the greater the change of manners and feelings in a people, the more singular is the contrast of that which was meant for moral and religious instruction among their ancestors. To us these miracle-representations now appear to be strongly impregnated with burlesque and blasphemy: to our forefathers, no doubt, they imparted the opposite ideas. Men are but creatures of the times in which they live.

**Paton's Flowers of Penmanship.**—This work exhibits the principal beauties of penmanship, beautifully engraved by Mr. Beckett. Mr. Paton has long been celebrated for his taste and skill in this ornamental art; and this, his *magnum opus*, will be a lasting memorial of both. Sure we are that it *flourishes* greatly in these specimens; and when we reckon that it could not have done so except at very considerable expense, to illustrate the talent displayed, we trust it will also flourish in public estimation. Indeed, it is always well to see to what degree of perfection any useful practice can be carried, as the example is likely to teach us to avoid

inferiority. Thus, in the present case, after contemplating the artist's admirable performance, we could hardly be satisfied to sit down and scrawl clumsy pot-hooks, or run that miserable, free, boarding-school, and ladies' hand, which looks so smooth and even, but is so impossible to decipher, almost all the letters being ups and downs, pretty much alike; so that *u's*, and *m's*, and *n's*, and *r's*, and *i's* (undotted), and *v's* and *w's*, together with the lower parts of *b's*, *l's*, and middles of *p's* and *y's*, are alike copies of the *wavy* in heraldry.

**Long-armed Gibbon.**—A baboon of this species is now exhibited in London, under the euphonous name of Ungka Puti, or Uncle Putney, or some such name. It is a full-grown female, and as active as a squirrel.

**Grinlin Gibbon.**—A Gibbon, of another kind, the famous carver in wood. One of his fine works, the pulpit in the Temple Church, is announced for sale, preparatory to the improvements of the church. It is to be hoped that so beautiful a specimen of his skill will not be loosely thrown away.

**Escalacion.**—A pair or brace of ortolans have been hatched artificially at the Escalacion; and, we hear, presented to Prince Albert.

There have been recently found in the Casanaleuse library at Rome two unpublished treatises by Thomas Aquinas; one entitled "De Adventu, Statu, et Vita Anti-Christi," and the other "De Judicio Finali," in which the mysteries of the Apocalypse are explained.—*Mys.*

London, July 17, 1840.

## SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

Accumulated fund, nearly £50,000.  
Annual revenue, nearly 170,000l.

**PARTIES** intending to effect Life Assurances at this Office are reminded of the great benefit to be derived by those who take advantage of the current year's regulations of the Society requiring that, before additions can become absolutely invested, the Policies entitled thereto must have been in endurance at least five full and complete years. This condition will of course be satisfied at the next periodical investigation, on the 21st December, 1845, in regard to all policies opened within the year, 1840.

Whilst in this year the advantages thus to be derived are even greater than in any other during the septennial period, it may be confidently asserted that in any year, owing to the careful and economical system of its management, to the judicious selection of lives assured, and to the great facilities afforded in the settlement of claims, there is no office in which greater benefits can with justice be held out to the Public.

By way of illustration of these and of the remarkable rapidity of the growth of this Society, it may be stated,—

That in the event of a party insured under a policy opened in the year 1830, (being at that time the largest sum taken by the office on one life), and being after payment of the premium for the present year, his representatives would be entitled to receive the sum of 4197l. 0s. 6d. Thus,

Original sum assured	£3000 0 0
Veiled additions at 31st Dec., 1831, being at the rate of 14 per cent. per annum on the £3000	£450 0 0
Do. do. at 31st Dec., 1838, being at the rate of 2 per cent. per annum on both the £3000l. and the £450l.	£95 19 0
	1085 19 0
	44035 19 0

Contingent prospective additions applicable to the years 1830 and 1840, being at the rate of 2 per cent. per annum on the accumulated sum of 4035l. 19s. 0d.

Had the policy been for 8000l., which is now the largest sum assured, the amount to be received would have been 6905l. 0s. 10d.

And that during the last ten years the amount of sums insured has increased from 155,000l. to 3,707,000l. (the amount of insurances last year only being no less than £30,000l., and the accumulated fund from 180,000l. to 949,000l.)

Copies of the Report of the Proceedings of last year may be had, on application, at the head office, or at any of the Society's Agencies; and all communications and inquiries addressed to the Manager in Edinburgh, or to any of the Agents, will meet with immediate attention; and blank forms of proposal will be forwarded, with the necessary instructions as to filling them up, &c.

JOHN MACKENZIE, Manager.  
5 St. Andrew Square, Edinburgh, May 29, 1840.  
Agents:—London, Hugh McKean, Office, 7 Pall Mall West Bradford, George Rogers, Horton Road; Huddersfield, Messrs. Marsden and Wykes, of the Huddersfield Banking Company; Leeds, William Ward, Attorney; Liverpool, Arthur Goughson and Co. Exchange Street, East; Manchester, Thomas Boothman, jun.; Newcastle, Charles Bertram, 19 Sandhill.

## ORIGINAL DRAWINGS by MARTIN, PARRIS, and the late W. DANIELL, R.A. to be Sold, at very low Prices. These Drawings being small sizes, are peculiarly well adapted for Cabinets and Scrap-Books.

To be seen at Churton's Library, 26 Holles Street.

## EDUCATION.—The attention of Parents desirous of affording to their Children an Education in accordance with the increased intelligence and wants of the age, is directed to an Establishment situated in one of the most fertile and healthy counties in England, conducted by a Gentleman who is a member of a German university of the highest celebrity, and of several learned bodies. The course of instruction, founded on the most approved systems, comprehends the Greek and Latin Classics, the French, German, and Italian Languages, taught by Native residing in the House, the Elements of Astronomy, the various Branches of pure and mixed Mathematics, Geography, History, &amp;c. Impressed with a conviction that no education can be complete without an adequate knowledge of Modern Languages, the Principle has been adopted of extending a branch of instruction in his school. Having himself resided many years on the Continent, and travelled much, he is intimately acquainted with the chief languages of Europe, and is enabled to superintend instruction in this important department of knowledge with no inconsiderable advantage to his Pupils. Altogether, this Establishment will be found to afford to Pupils possessing average talents the certainty of receiving in it a sound Classical and Mathematical Education, together with the most assiduous instructions in the principal languages of Europe; so that on entering one of our Universities, or some profession, civil, military, or naval, they may be competent to engage in more enlarged studies with unusual advantages. Letters to the Principal of Albion House School, Worcester, will receive immediate attention.

## THE EAST INDIAN STEAM NAVIGATION COMPANY.

By way of the Mediterranean, Egypt, and the Red Sea. To be incorporated by Royal Charter. Capital, 800,000l.

Chairman.—T. A. Curtis, Esq.  
Deputy Chairman.—J. P. Larkins, Esq.

## Directors.

John Bagshaw, Esq.  
Henry Gouger, Esq.  
Benjamin Harding, Esq.  
Captain A. Henderson  
Frederick Hodgson, Esq. M.P.  
Charles Kerr, Esq.  
Captain W. C. Lempriere  
William Little, Esq.

With power to add to their number.  
Auditors.—Sir J. R. Reid, Bart. M.P.: Sir J. H. Pelly, Bart.  
Solicitors.—Messrs. Freshfield and Sons.  
Bankers.—Messrs. Barne, Curtis, and Co.  
Secretary.—R. Macdonald Stephenson, Esq.  
Superintendent of Steam Vessels.—Captain James Barber.  
Temporary Office, 8 Tokenhouse Yard, Bank.  
From detailed calculations which have been made on those data which experience has already furnished, the estimated outlay, charges, and revenue, are exhibited in the following abstract:—

Building and fitting seven steam ships, cost of stations abroad, and incidental expenses	£600,000
Annual Charge.	
Wages, calls, victualling, insurance, sinking fund for wear and tear, and renewal of ships, and charges of all kinds	£30,000
Income.	
Passengers, free victualling and land transport	£281,000
Freight, consisting of light parcels, periodicals, bullion, &c.	94,000
	375,000
Yielding a clear annual surplus of	£28,000
or upwards of 11 per cent upon £200,000.	

The Vessels will be constructed of such tonnage and power as to be applicable to the route by the Cape of Good Hope, in case of any interruption to that through Egypt.  
Full particulars, with Form of Application for Shares, may be obtained at the Temporary Office of the Company, 8 Tokenhouse Yard, Bank.

## Chartism.

3d edition, small 8vo. 5s. cloth.

## IV.

Goethe's Wilhelm Meister.

3d edition, 3 vols. 18mo. 11s. 6s. cloth.

"Few writers of the present time have risen more rapidly into popularity than Mr. Carlyle, after labouring through so long a period of comparative neglect. Whatever judgments critics may be pleased to pass on him, it is certain that his works have attracted of late no common share of attention."—*Edinburgh Review*, No. CXLIV, July 1840.

James Fraser, 215 Regent Street.

In 1 vol. imperial 8vo. price 2l. 12s. 6d. bound in cloth; India proofs, price 3l. 3s.; elegantly bound in morocco, gilt leaves, price 4l. 4s.

## THE PALACE OF ARCHITECTURE; a Romance of Art and History.

By GEORGE WIGHTWICK, Architect.  
Illustrated with a Coloured Map, and Two Hundred and Eleven Plates and Woodcuts. The Plates engraved by Le Keux, Blevens, Cates, Humphreys, Winkles, &c. The Woodcuts by Brooke.  
"This very handsome, in these days we may say unique, volume, is truly a work of genius; original alike in conception and execution. A remarkable publication, which will be one of the best modern ornaments we have seen of every good library, and particularly where a love of the arts and architecture, embellished by genius, may be acceptable to the owner."—*Literary Gazette*.

James Fraser, 215 Regent Street.

Beautifully bound, with a magnificent View of Florence, price 7s.

## THE NUN OF FLORENCE; a Legend, both in English and Italian; and other Poems. Dedicated to G. B. Mathew, Esq. M.P.

By GUIDO NORELLI, and Professor of Italian at the University of Pisa.  
Author of "My Confessions," &c. &c. Translator of Milton, and Professor of Italian at the University of Pisa.  
To be had at the Author's, 4 Church Place, Piccadilly; P. Rolandi, 20 Berners Street, Oxford Street; and all Booksellers.

## OXFORD ILLUSTRATED.

## A PICTORIAL PLAN of the UNIVERSITY and CITY of OXFORD; Illustrated by upwards of seventy Views of all the Colleges, Halls, Churches, Public Buildings, Gardens, Walks, Hotels, Inns, &amp;c. &amp;c. Engraved by J. Fisher, from Drawings by W. A. Delamotte. Size of Engraving, fourteen by thirteen inches, on a demy sheet. Price, India Proof, 7s.; Plain, 6s.

"We have examined a copy of it, and must acknowledge that it is, without exception, the most unique Map we ever saw; it is beautifully illustrated with a small Engraving of each Public Building in Oxford, placed in its proper situation on the Map; and is published by Messrs. Dewe, of Broad Street, at a reasonable price."—*Oxford Herald*, June 30, 1840.

"To strangers visiting Oxford, this publication will be found most interesting, and will enable them, at one view, to have a clear idea of the University and City, as the fronts of the various Colleges, Public Buildings, and Hotels, are all correctly given in Medallion Views, their respective localities being accurately attended to. The idea is quite novel, and we feel convinced it will give general satisfaction."—*Oxford Herald*, June 30, 1840.  
"A new Pictorial Plan of Oxford, in which are introduced, in their appropriate situations, nearly all the Public Buildings of both the University and City; it is beautifully and accurately executed—a perfect novelty in design, and well deserving of patronage. It is engraved by Mr. Fisher, a well-known talented artist of this city."—*Oxford Chronicle*, June 30, 1840.

Published by J. and B. Dewe, Broad Street, Oxford; and C. Tilt, Fleet Street, London; and sold by every Book and Print-seller in Oxford, London, and elsewhere.

## In Limp 8vo. handsomely bound in cloth, lettered, price 6s. 6d.

## SELECTIONS from the WRITINGS of ROBERT HALL, A.M.; with a Preface and brief sketch of his Life, with Notes and Illustrations from various Authors.

By CHARLES BADHAM, B.A. Emmanuel College, Cambridge.  
"Whoever wishes to see the English language in its perfection, must read his writings."—*Dagald Stewart*.

In 12mo. pp. 518, price 7s. 6d. cloth boards,  
**A GREEK LEXICON to the NEW TESTAMENT**, on the Basis of Dr. Robinson's; designed for Junior Students in Divinity, and the Higher Classes in Schools.

By CHARLES ROBSON, *Τροφῆς*.  
"Conductors of seminaries of education, and indeed all to whom a portable Greek Lexicon to the New Testament is a matter of interest, are greatly indebted to Mr. Robson for his excellent volume, which, in point of fitness, comes between the larger work of Dr. Robinson and the little Lexicon prepared for Mr. Bagster by the lamented Mr. Greenfield. . . . But viewed as a specimen of lexicography, the present volume goes far a-head—as far, indeed, as Dr. Robinson the independent lexicographer has gone a-head of Dr. Robinson the remodeller of Wahl—and communicates, in a most convenient manual and pocket form, the last results of lexicographical skill."—*Electric Review*.  
London: Houlston and Stoneman, Paternoster Row.

15th edition, 12mo. 2s. 6d. bound,  
**THE ETON LATIN GRAMMAR**, accented, with the Addition of Notes, and also of the Accents and Quantity; with a New Version of all the Latin Rules and Examples.  
By T. W. C. EDWARDS, M.A.

By the same Author,  
1. The Accidence, with the Stress and Quantities correctly marked. 6th edition, 12mo. 1s. bound.

A List of the latest and most correct Guides to all Parts of the World may be had gratis of Leigh and Co. 421 Strand.

CHEAPEST RELIGIOUS PERIODICAL FOR FAMILY READING.  
With Engravings. Imperial 8vo.  
**THE CHURCH of ENGLAND MAGAZINE**

ZINE for July, 1840, with three elegant views of Canterbury Cathedral, in the most finished style of wood-engraving, accompanied by descriptive letterpress.  
Also, in cloth, Vol. VIII. with the above Cathedral as a Frontispiece, price 5s. as usual. Similar embellishments will occasionally be given. York, Lichfield, and other Cathedrals, are in preparation. The volume commences with Part I.—Intending Subscribers are requested to make application for it as soon as possible to their respective booksellers.  
The Contents of this popular work consist, as usual, of Original Contributions by the Bishops and Clergy of the United Church of England and Ireland, Biography, Narratives, Comments on the Church Services, Extracts from New Works, Anecdotes, Poetry, Church Intelligence, &c. &c. Several Papers of great interest are in preparation for the present volume. It will be observed that each part contains eighty imperial pages of closely printed matter, with wrapper and advertising sheet, price 8d. (and when Engravings are given, 9d.), forming altogether the cheapest work of the kind extant.  
All the previous volumes of the work (several of the numbers having been lately reprinted) may now be had, price 5s. each, in extra stamped cloth.  
To advertise the sale of the Church of England Magazine being nearly four times that of any other periodical in connexion with the Church, it will be found a very valuable vehicle for Advertisements. The terms are very reasonable.  
London: James Burns, 17 Portman Street; W. Edwards, 15 Ave Maria Lane.

Price 5s. bound in cloth,  
**PRESERVATION of the TEETH** indispensable to Comfort and Appearance, Health and Longevity; being a 2d edition of "Dental Practice," containing Engravings of new Dental Instruments, &c.  
By JOHN GRAY,

Consulting Dentist, Member of the Royal College of Surgeons in London, &c.  
"This small volume (which may be transmitted by post for sixpence) will be found interesting and useful to every medical practitioner, the heads of families, and those who have the care of children; while persons who have lost teeth will be made aware of the cause, and enabled to judge for themselves of the rationality of the method pointed out for the restoration and preservation of the remainder. The finer mechanics, particularly those in the clock and watch line, are urged to make the fabrication of artificial teeth a part of their business."  
Sold by Booksellers in London, Edinburgh, Paris; and at the Author's Residence, No. 25 Old Burlington Street.

Printed by HANNAH PAGE MOYES, of Brook Green, Hammer-smith, and GEORGE MARLEY, of Number 3 Pullin's Place, Islington, both in the County of Middlesex, Printers, at their Printing Office, Number 38 Castle Street, Leicester Square, in the said County; and published by WILLIAM ALFRED SCRIPPS, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, July 25th, 1840.

### REVIEWS OF NEW BOOKS.

*Correspondence Relating to the Boundary between the British Possessions in North America and the United States of America, under the Treaty of 1783. Presented to both Houses of Parliament by Command of Her Majesty, July 1840.*

LAST year two Commissioners were appointed by Lord Palmerston to make a fresh survey of the disputed boundary between the British territories of New Brunswick and Lower Canada on the one hand, and of the American states of Maine and New Hampshire on the other.

The papers which have just been laid before Parliament comprise the report of the Commissioners; and we give the principal conclusions of the Report in an order somewhat different from that in which they are presented by the Commissioners; not so much from thinking that our own arrangement is the clearer one, as from a belief that the attainment of truth will be promoted if the main points of the argument are approached from various directions.

The Commissioners consider themselves to have shewn that,

1. In 1603 the King of France granted to the Sieur de Monts the country now called Maine and New Brunswick, to the forty-sixth degree of north latitude, in which grant the word *Acadie* was first used as the name of the country. A line drawn along that parallel connects the head waters of the Chaudière river with a point not more than five miles north of the eastern, and forty-two miles north of the western, source of the St. Croix.

2. The grant of Nova Scotia by the British King James I., when rightly translated from the Latin, designates the boundary as running from the most western waters of the St. Croix to the sources of the Chaudière.

3. It was long posterior to the settlements made by the French that any part of those countries came into the occupation of the English, which occupation, until the peace of Utrecht in 1713, was only during wars.

4. Whilst France held those countries, the Government of Quebec had jurisdiction as far south as the forty-sixth degree of north latitude.

5. The claims, which at different times were made by the colony of Massachusetts Bay, that its territory extended to the St. Lawrence and included Nova Scotia, by virtue of certain British grants of 1664, 1674, and 1694, were groundless, inasmuch as the treaty of Ryswick in 1697 restored to France all she had possessed before the war; and the charter of William and Mary of 1691 never purported to extend the boundary of Massachusetts to the St. Lawrence, but only to give to it the lands between Nova Scotia and the river of Sagadahoc, which is the Kennebec; by which words the extreme northern limit designated would have been a line from the source of the St. Croix to the source of the Kennebec.

6. In 1713, by the treaty of Utrecht, France made her first cession to England in that part of North America, by ceding for ever to the British crown all *Acadie* according to its ancient limits.

7. Mitchell's map is not any authority on

this question, inasmuch as it is not referred to or mentioned in the treaty of 1783, and it is full of errors. But it is material to observe that a line drawn between the western sources of the St. John and the western termination of the Bay of Chaleurs, as they are erroneously placed on his map of 1755, would leave the upper part of the St. John to the south of the line and within the state of Maine, if such line were the boundary; whereas, a line drawn between the same two points on a map, in which their position is correctly fixed, would leave the river on the north and British side of the line.

8. In 1755, Governor Pownall described the "Highlands" as dividing the St. Francis and the Chaudière from the Kennebec and from all the branches of the Penobscot, extending from west to east along the southern front of the country now called the disputed territory. The topographical description of the southern boundary of Quebec contained in the royal proclamation of 1763, and the description of the boundary of Nova Scotia in the royal commissions of some of the governors, were taken from Governor Pownall's paper. The terms, "due north north line," were originally used in the commission of Montague Wilmot, Esq., in 1763, and were inserted because the sources of the St. Croix river being to the south of those of the Penobscot, it was necessary to have a line to connect the source of the St. Croix with the southern boundary of the province of Quebec.

9. The revolted American colonies never expected to obtain a boundary north of the St. John. Congress, in 1782, instructed their negotiators to propose the river St. John from its source to its mouth as the boundary, which Great Britain refused. Congress then determined "to adhere to the charter of Massachusetts Bay, and to the St. Croix river, mentioned in it." They had at first endeavoured to have the north-west angle of Nova Scotia fixed at the westernmost source of the St. John, but acquiescing in the refusal of this by the British government, the north-west angle by the treaty of 1783 was declared to be described by the Highlands, and a line drawn due north to them from the St. Croix.

10. The description of boundary in the secret journals of the Congress, and the language used in the second article of the treaty of 1783, are copied from Governor Pownall's paper; and the Highlands intended by the treaty are those described by him, and which were the true southern boundary of the province of Quebec. In a contract of Messrs. Jackson and Flint in 1792 with the state of Massachusetts, the land granted is bounded on the north by the Highlands heading all the branches of the Penobscot, and these were then understood by the state of Massachusetts to be the highlands intended by the treaty of 1783. That treaty directs a line to be drawn "to" the Highlands: no farther.

11. The Commissioners appointed, under the treaty of 1794, to identify the St. Croix river, drew the north line from a wrong source of the river, and have thus been the cause of much confusion, which would have been

avoided had they established the point of departure at the most western source, agreeably to a just construction of the treaty of 1783.

12. The omissions and inaccuracies in an American translation of the grant of Nova Scotia in 1621, to which reference has frequently been made, have singularly concurred to obscure the nature of the British claim.

13. It has been an error of preceding British agents for investigating this boundary, to suppose that the boundary intended by the treaty of 1783 was a line distinct from the southern boundary of the province of Quebec, established by the proclamation of 1763. The two lines are one and the same.

14. The assumptions of some of the agents of the United States as to the continuity and dividing character of their Highlands, and as to the elevation above the sea of their north-west angle of Nova Scotia, are unfounded in fact, and mere inventions; and the line of Highlands which the United States claim to be the Highlands of the treaty of 1783, even if it were continuous, which it is not, and if it divided the waters flowing in opposite directions, which it does not, passes fifty miles to the north of the "north-westernmost head of Connecticut river," and therefore cannot be the Highlands along which the treaty requires the line to go to that north-westernmost head.

The Commissioners, therefore, report that they have found a line of Highlands agreeing with the second article of the treaty of 1783, extending from the north-westernmost head of the Connecticut river to the sources of the Chaudière, and passing from thence in a north-easterly direction, *south of the Roostuc*, to the Bay of Chaleurs; and that there does not exist any other line which is in accordance with the treaty; and that the line claimed by the United States has no pretensions to be put forward as the line intended by the treaty of 1783.

*The Oration of Demosthenes upon the Crown.* Translated into English, with Notes and the Greek Text, by Henry Lord Brougham, F.R.S. and Member of the National Institute of France. London, 1840. Knight and Co.

*Orations of Demosthenes.* Translated, with Notes and Introduction, by Owen Flintoff, Esq. M.A. Vice-President of the Institut d'Afrique de Paris, and Barrister-at-Law. London, 1840. Richards and Co.

AFTER long delay and many a look, we enter upon the discussion of the former of these volumes with considerable reluctance. The benefits conferred by its noble author upon literature and science have been so numerous and so important, that to speak of one of his productions in any other terms but those of praise seems to shew a feeling almost approaching to ingratitude. Of his lordship it may truly be said, "*Nullum fere scribendi genus non tetigit*;" we wish we could add, with equal truth, "*Nullum, quod tetigit, non ornavit*." Whatever merits, however, we may deny his lordship in the execution of the present performance, we cannot refuse to acknowledge his courage in undertaking it. He must have been well aware of the rest of horns he

was on the point of arousing, and the criticisms and hypercriticisms with which he would so surely and savagely be assailed. His preface, indeed, throughout breathes the sentiment of "*Genam meam dedi vapulatori*;" and, verily, the smiters have not been slow to profit by the occasion. His lordship is probably too well accustomed to give and take hard blows of this kind to feel them much, yet we are afraid that some of those, that on the present occasion have been so "long and well laid on," must, in the classical language of the ring, have punished him awfully. The critics have had great trouble in getting Lord Brougham down, but now that they have done so, they seem determined, like the conqueror under similar circumstances in "Joe Miller," to make the most of it. It is not our intention to assist in this attack upon the sick lion, by shewing the numerous faults of minor importance which may be discovered by a minute examination of the translation. It is clear at first sight that the oration of Lord Brougham is not that of Demosthenes. There is no use in going into particulars when the whole is a failure. Whence this failure has arisen may, we think, be discovered without much trouble. The difficulties attending a perfect translation from any Greek author are many and arduous, and some of them, to his lordship, as might easily be proved, insuperable; but, without commencing an essay upon the principles of translation in general, we can at once condemn Lord Brougham from his own mouth. We all remember the often-quoted story of the poet in "Rasselas," who, previous to his attempt to fly, discussed the ideas of his predecessors in the art, pointed out where they had failed, and finished by falling straight from the promontory from which he started into the lake below. His lordship, after the same fashion in an introduction, explains the deficiencies of former translators, and states concisely as a reason for their want of success, "They were Greek scholars, and not English orators," whereas they should have been both. Now Lord Brougham is an English orator, but not a Greek scholar; and hence, according to his own shewing, his Icarus-like fall. His lordship's want of scholarship we hold as proved beyond doubt by this work, and, which makes this attempt more strange, even if he could have deceived the public on this point, we are sure he could not have deceived himself. We willingly abstain from making any further remarks upon this unfortunate performance, and wish his lordship farewell, with the hope that he has made his appearance in this his new character for the first and last time. A genius like his is wasted in the vain attempt to reclothe the breathing thoughts of another in fresh words that burn. Let him trust to his own inexhaustible powers, and he will speedily make us and all his critics remember that he can rival, though not translate, Demosthenes.

Where the sometime lord-chancellor has not succeeded, the barrister-at-law, as in duty bound, has also failed. If Lord Brougham is rather cold, Mr. Flintoff is frozen; if the former has but little life, the latter is quite dead. The Abbé de Fontaine thought fit once to translate the well-known line "*Apparent rari nantes in gurgite vasto*,"—"A peine un petit nombre de ceux qui montoient le vaisseau purent se sauver à la nage." On which Voltaire remarks, "C'est traduire Virgile en style de gazette." So Mr. Flintoff may be said to have translated Demosthenes in the style of an act of parliament, or a bill in chancery. The whole book breathes of the special pleader; and

perhaps we shall not displease Mr. Flintoff by pronouncing it to be decidedly a most lawyer-like performance.

*Memoirs of the Court of England during the Reign of the Stuarts, including the Protectorate.* By J. Henegau Jesse. 8vo. Vols. III. and IV. London, 1840. Bentley.

THE former two volumes of this work are so deservedly popular that it requires no reviewer's opinion to push these, which complete Mr. Jesse's undertaking, into similar favour. As he has come later into time, there has been no falling off of materials whereon to construct his spirited narrative. On the contrary, the difficulty must have been to disengage his individuals from the masses amid which they moved; and let us have their portraits in the clear and distinct manner which places them in the same relation to historical painting which biography holds to history. In this Mr. Jesse has succeeded to admiration; and, whether he has drawn from Thurloe, Grammont, Evelyn, Pepys, Anthony Wood, Granger, Reresby, the Duke of Buckingham, or any other of the numerous chroniclers, memoir-writers, or from the pamphleteers of the age, he has managed to set both characters and events before us in a manner at once distinguished by great ease and identical expression.

Having paid him this merited tribute, he must excuse us for saying that he ought to have more carefully revised some of the illustrations from Rochester and other profligates of the court of Charles II. There may be as much vice in our day as in that, but there is not so much indecent coarseness; and if not the morals, at any rate the language of dissoluteness has been proscribed by the better tone of society.

The third volume presents us with Cromwell and his family, Charles II., his Queen, Prince Rupert, Monk, Villiers Duke of Buckingham; and the fourth with the Duke of Monmouth, Charles's favourites and mistresses, and James II., his queen, and two or three others connected with his life as a crowned head.

The memoir of Cromwell is extremely well written, and there is one remark in it which reflects great credit on the acuteness and ability of the author. He observes, in effect, that in all we learn of that brave and sagacious man, with all his real or simulated religion, we are never informed of one act in accordance with the mild precepts and humane inculcations of Christianity. Tolerance, forgiveness of injuries, charity, all the meek virtues which the faith he professed inculcated, were not only wanting in him, but their opposites were his prominent qualities. He was, indeed, and truly the Captain of the Ironsides, the merciless leader of a band bathed in the blood of civil war, desperate in fight, and remorseless in the barbarous oppression and cruelty which followed. Animal courage and discipline made them the heroes of the conflict, but in all else that might become them as men, citizens, or Christians, they were not only lamentably deficient, but the worst of the worst.

We experience some difficulty in detaching from the rest such a portion of Mr. Jesse's production as may suffice to shew the pleasant style in which it is executed. We must, in our dilemma, almost at random trust to the dipping of our paper-knife—it points to the Duchess of Albemarle, the vulgar restorer (through the influence she had with her husband) of "the merrie monarch:"—

"A more vulgar, dirty, bolsterous, and disagreeable woman than the Duchess of Albemarle, it would be difficult to conceive. Ac-

cording to her contemporaries, she was seldom without rage in her countenance and a curse on her lips. Her 'volleys of oaths' were notorious. In the excluded passages of Lord Clarendon's History, 'Monk,' he says, 'was cursed, after a long familiarity, to marry a woman of the lowest extraction, the least wit, and less beauty.' And again, adds his lordship,—"*She was a woman nihil muliebris præter corpus gerens*," a woman with nothing feminine about her but her make. Though Lord Clarendon and the turbulent duchess were any thing but friends, the satire is undoubtedly not exaggerated. Burnet calls her, 'a ravenous, mean, and contemptible creature, who thought of nothing but getting and spending.' According to the writer of an intercepted letter, dated 19th September, 1653,—"*Our Admiral, Monk, hath lately declared a common, ugly woman his wife, and legitimated three or four bastards he hath had by her, during his growth in grace and saintship.*" Monk was said to be more in fear of her than of an army, and it has even been asserted that she manually chastised him. She had, however, some merit as being a staunch royalist; and as she maintained an unbounded influence over her husband, had probably no inconsiderable share in the Restoration. Monk, indeed, had a high opinion of her mental powers, and frequently consulted her in times of difficulty. Mr. D'Israeli, in his ingenious '*Curiosities of Literature*,' has quoted a passage from a MS. of Sir Thomas Browne, which places Monk's conduct previous to the Restoration, and his wife's share in effecting it, in rather a curious light. 'Monk,' says the writer, 'gave fair promises to the Rump; but at last agreed with the French ambassador to take the government on himself; by whom he had a promise from Mazarine of assistance from France. This bargain was struck late at night; but not so secretly but that Monk's wife, who had posted herself conveniently behind the hangings, finding what was resolved upon, sent her brother Clarges away immediately with notice of it to Sir A. A.† She had promised to watch her husband, and inform Sir A. how matters stood. Sir A. caused the Council of State, whereof he was a member, to be summoned, and charged Monk that he was playing false. The general insisted that he was true to his principles, and firm to what he had promised, and that he was ready to give them all satisfaction. Sir A. told him if he were sincere he would remove all scruples, and would instantly take away their commissions from such and such men in the army, and appoint others, and that before he left the room. Monk consented: a great part of the commissions of his officers were changed, and Sir Edward Harley, a member of the Council, and then present, was made Governor of Dunkirk, in the room of Sir William Lockhart: the army ceased to be at Monk's devotion: the ambassador was recalled, and broke his heart.' Dr. Price, one of Monk's chaplains, has bequeathed us some curious notices respecting the general's wife. 'His wife had in some degree prepared him to appear, when the first opportunity should be offered. For her custom was (when the general's and her own work, and the day were ended) to come into the dining-room in her treason-gown, as I called it, I telling him that when she had that

\* "Thurloe, vol. i. p. 470."

† "Sir Anthony Ashley Cooper, afterwards first Earl of Shaftesbury. Mr. D'Israeli's story is evidently the same as that related by Locke among other anecdotes of Lord Shaftesbury. The account was given to the philosopher by the Earl himself, who was probably also the informant of Sir Thomas Browne."

gown on, he should allow her to say any thing. And, indeed, her tongue was her own then, and she would not spare it; inasmuch that I, who still chose to give my attendance at those hours, have often shut the dining-room doors, and charged the servants to stand without till they were called in.' The chaplain also relates a remarkable dream of this lady, in which, according to the zealous divine, the approaching Restoration was supernaturally revealed to her. 'She saw,' says Dr. Price, 'a great crown of gold on the top of a dunghill, which a numerous company of brave men encompassed, but for a great while none would break the ring. At last there came a tall black man up to the dunghill, took up the crown, and put it upon his head. Upon the relating of this, she asked what manner of man the king was. I told her, that when I was an Eton scholar, I saw at Windsor, sometimes, the Prince of Wales, at the head of a company of boys; that himself was a very lovely black boy, and that I heard that, since, he was grown very tall.' Great events often owe their birth to trifles; and fantastic, to all appearance, as is the theory, the fact is not impossible that England owes the restoration of royalty to this otherwise trifling circumstance. Nothing appears more natural, than that an ignorant and uneducated woman should have attached an undue degree of importance to a rather remarkable dream. The lady, moreover, is known to have maintained an extraordinary influence over her husband, and to have urged him to follow that line of policy which he afterwards adopted. At the Restoration, the Duchess of Albemarle divested herself of none of the coarseness or vulgarity of Anne Clarges. Pepys speaks of her on different occasions as a 'plain, homely, and ill-looking dowdy,' and even seems to have conceived a personal dislike to her. Speaking of an occasion of his dining at her husband's table—'The duke,' he says, 'has sorry company, dirty dishes, bad meat, and a nasty wife at table.' Monk was once drinking with one Troutbecke, a drunken sot, when he happened to express his surprise that Nan Hyde, as he styled the Chancellor's daughter, should have become Duchess of York. 'If you will give me another bottle,' said Troutbecke, 'I will tell you as great, if not a greater miracle; and that is, that our dirty Bess should come to be Duchess of Albemarle.' To gloss over as much as possible the meanness of her birth, her father, Thomas Clarges, was knighted; and her brother, William Clarges, created a baronet. She probably gave its name to the present Clarges Street, Piccadilly; her husband having a house where the present Albemarle Street now stands, on which street he undoubtedly conferred his name."

After stating the particulars of the position of William Chiffinch with the king, Mr. Jesse says:—

"Another disreputable banger-on of a profligate court, was Edward Progers, the confidant of the royal intrigues, and the pander to the amours of his sovereign. Andrew Marvell says, in his 'Instructions to a Painter,'—

'Then the procurers under Progers filed,  
Gentlest of men, and his lieutenant mild.'

Progers was a gentleman by birth, and appears to have held a confidential situation about the person of Charles the Second, at least as early as 1646, when Charles was Prince of Wales. In that year he was intrusted by Henrietta Maria with a well-known confidential letter to her son's advisers, in which she strongly and sensibly recommended the prince's removal

from Sicily, either into Jersey or France. Probably he was a relative of Henry Progers, one of the assassins of Ascham, the republican ambassador at Madrid. At the Restoration, Progers was appointed a groom of the bed-chamber; he was also nominated by Charles as one of the knights of his projected order of the Royal Oak. According to Horace Walpole he had permission to build a house in the royal park at Bushy, on condition that after his death it should lapse to the crown. This is known to have been what is now called the Upper Lodge, in Bushy Park, at present the residence of Lord Denbigh. We have the authority of Le Neve that Progers died 31st December, or 1st January, 1713, at the patriarchal age of ninety-six. The malady which carried him off is at least an unfrequent one in second childhood. 'He died,' says Le Neve, 'of the anguish of cutting his teeth, he having cut four new teeth, and had several ready to cut, which so inflamed his gums, that he died thereof.' He was buried at Hampton, in Middlesex, where his monument, at the recent demolition of the old church, was accidentally discovered."

The character of James II. is a fair example of the high talent which Mr. Jesse has brought to this work—talent which, we trust, to see employed hereafter on other historical and literary compositions, which will do honour to his name:—

"Whatever may have been his errors, whether in faith or conduct—however the man of the world may laugh at his folly, or the bigot scorn at his tenets,—the true Christian will admire him for his sincerity; the philosopher will envy him his resignation; and the wise man, whatever his creed may be, will pray that in the hour of dissolution his last end may be like his. \* \* \* Such was the reputed piety of King James, and so much credit did he obtain from those of his own religion for having preferred his moral duties before the sovereignty of three kingdoms, that the Church of Rome entertained serious intentions of canonising him as a saint. Among Nairne's papers, indeed, numerous instances are solemnly recorded of miracles having been wrought through his intercession. The character of James appears to have involved greater contradictions than that of most men. He was weak in judgment, bigoted and overbearing in his principles, cold in his nature and feelings, and stern and unrelenting in the dispensation of justice. On the other hand, his conduct was marked by less of duplicity than that of many others of his family, and he was a strict respecter of his word. A careful husbander of his time, he never permitted the enticements of pleasure to interfere with the duties of the day; and though his capacity rather fitted him to work out the details of business than to be the originator of important measures, yet his industry and careful attention to public affairs are undoubtedly redeeming features in his character. He loved and was proud of his country, and probably no one of our monarchs ever had its honour and glory more deeply at heart. He was extremely frugal of the public money; took a deep interest in all maritime concerns; watched personally and vigilantly over the navy of England; and, more than any other prince, gave encouragement to trade, and improved the commercial relations of the empire. If, in private life, the conduct of James was not altogether unexceptionable, it was at least free from those glaring vices which characterised the career of his predecessor. If he was a severe enemy, he was also a warm friend; he was an

affectionate and indulgent father; and, upon the whole, a kind and considerate husband. As regards his overweening bigotry,—his flagrant abuse of power,—and the gross oppression and intolerance for which he forfeited his crown, little can be brought forward in his defence. Still, it cannot be denied that James was a conscientious martyr to what he believed to be the truth. He regarded the Roman Catholic religion as the only true faith. He looked on a crusade against Protestantism as pointing the sure path to heaven;—viewing the latter faith as the source of all sedition, heresy, and rebellion, and tracing to the liberal principles it promulgated the recent misfortunes which had befallen his family, and the death of his father on the scaffold. Many, indeed, and heinous as were his offences, it must at least be admitted that he was arbitrary from principle, unrelenting from policy, and intolerant from conviction. In private life, James was inclined to be as affable as his brother Charles; but he wanted the easy and ingratiating manners of his predecessor, and, like his unhappy father, was afflicted with an imperfection in his speech, which rendered still more ungraceful the natural coldness and reserve of his address. In person he rather exceeded the middle stature; his limbs were strong and well-proportioned; his face somewhat long; his complexion fair; and the expression of his countenance not displeasing. In early youth, the features both of his face and character are said to have borne a strong resemblance to those of his father. In allusion to these circumstances, it was observed by Sir Francis Wortley that the epithet of Jacobissimus Carolus, which had been applied to the latter, might be converted more happily into Carolissimus Jacobus. The remark reminds us of a witty saying of De Foe, that the father had suffered a *wet* martyrdom and the son a *dry* one."

With this we conclude, and are sorry that our review of so lively a book should also have been such a dry one.

We ought not, however, to forget the two frontispieces to these volumes: the first, the execution of Charles I., by Picart; and the last, Charles II. dancing at the Hague in a ball with his cousin. What a contrast!—a lesson to rulers,—and almost a homily upon greatness, and satire upon human life! The monstrous murder of the virtuous king is a subject too sad and horrible for representation: the other is as frivolous, formal, and fantastic as the entertainments of courts have been since courts were invented.

#### *A Summer amongst the Bocages and the Vines.*

By Louisa Stuart Costello, author of "Specimens of the Early Poetry of France." 2 vols. 8vo. London, 1840. Bentley.

It is a sign that autumn approaches when publications of this kind adorn our table. They are the literary produce of the fine weather of the preceding year, and most pleasingly calculated to add variety and charm to the leisure season of which every body now projects the fruition. Country mansion, sea-side, watering-place, retirement, may all be benefited by such a companion; and should a tour in France be contemplated by any bolder adventurers—should they think of visiting Brittany, these volumes, even after Stothard and Gally Knight, will be found at once a useful guide and a delectable nurse to the taste and feeling best suited for the enjoyment of such scenes. Interesting antiquities, historical recollections, a country of much diversity and pastoral beauty, the remains of primitive customs, the fashions of old

dress, and many other attractions, cluster together, and claim their notice; and to all Miss Costello is truly an edifying and accomplished cicerone. And, besides, they will be indebted to her for a store of curious legends belonging to Breton traditions, and to the translation into poetry, not unworthy of the author of "Specimens of the Early Poetry of France," of several ballads and other pieces, which give additional and graceful features to her altogether very agreeable performance.

To instance some of the grounds for our thinking so is now our business; and we shall begin by explaining what the title *Bocage* means:—

"The *Bocage* of Normandy must not be confounded with the sombre district generally recognised by that name in La Vendée. It is usual in France to distinguish a wooded country by the term *pays du bocage*. This particular part is thus described by geographers:—'*Le Bocage*; petit pays de France en Basse Normandie, vers les sources des rivières d'Elle, Drôme, Aure, Odon, Orne, Vire, et Noireau. La première le borne au levant, et la sépare de la campagne de Caen; la seconde le borne au couchant, et le sépare de Coutentin,' &c. Vire is the capital town of the *Bocage*, its hours are Torigni, Evreci, Clecy, Condé, Villers, Aunay, Vassi, Tinchebray, most of them mentioned as the scene of contention during the numerous Norman and English wars."

On approaching this land by Caen, the first notice we find is a melancholy one of the famed Beau Brummell. At the Hotel d'Angleterre, Miss C. tell us:—

"The rooms which were assigned to us formerly boasted of a distinguished occupant, the celebrated Brummell, whose lot, never to be envied, is now one of peculiar misfortune. The favourite of a monarch, and the supreme arbiter of fashion, is at present the denizen of the *maisons des jous* at Caen; and there, most probably, his days will terminate."

Poor fellow, his life must have been like a dream! Let us pass to one of another sort, which has descended to the believing inhabitants of Bayeux:—

"When the Rue St. Quintin, leading to the bridge of Isbert or Trubert, was in its original state, a legend was attached to it which the altered state of the street, now widened and repaved, has probably effaced. Formerly it was narrow, high, crooked, and dark. About midnight, whoever ventured to pass down it was met by a fairy, who was called *La Dame d'Aprigny*. She approached the daring stranger who intruded on her dominions, and presented him her hand with a courteous gesture: if he was bold enough to accept it, she danced gravely along with him for some minutes without speaking, then made him a profound courtesy and disappeared. If he was timid or imprudent enough to refuse her offered civility, the indignant fairy seized and plunged him into the neighbouring moat, where sometimes her victims perished, or with the greatest difficulty scrambled out of the abyss, torn with the thorns and brambles, wet and bruised, and terrified to death."

The legends revived by Miss Costello, of which there are many, possess rather potent spells for us; and as some of them illustrate remarkable superstitions, we shall make no apology for the following:—

"One of the superstitions still current relates to a being called a *Letiche*. It is an animal whose form is scarcely defined, of dazzling whiteness, which is seen only in the night-time, and disappears the moment any one at-

tempts to touch it. They are believed to be the souls of infants dead without baptism: most probably this pretty little spirit was no other than the agile and timid ermine of Normandy and Brittany. Among other imaginations is the belief in a phantom in the form of a wolf, who wanders about at night amongst graves. The chief of the band is a large black one; if they are approached, the leader rises on his hind legs and begins to howl, when the whole party disappear, shrieking out, '*Robert is dead! Robert is dead!*' It would be curious to trace the origin of this fable, which is probably connected with a historical event. \* \*

"It is believed that if a death occur in a house, the only method to secure the safety of the bees is to hang a black rag over the hives, otherwise they will die in nine days. On Christmas night animals are supposed to have the power of speaking together. The toad, so far from being looked upon as a venomous animal, is called '*the friend of man*,' as it is thought to warn people asleep in a wood of the vicinity of snakes; its bitter enemy is the lizard, of a sort considered venomous, with which it has frequently deadly encounters. It is thought that if a person, at a certain period of the moon, stifles a mole in his hand, he will have the power to cure maladies by a touch of this hand; this power is called *la main taupée*. A mole-skin is often hung round a child's neck to assist its teeth. A custom still prevails in the neighbourhood of Bayeux on Twelfth-night:—A child is hidden under the table on which the cake is cut, of whom the guests inquire, '*Whose share is this?*' he replies by naming successively all the company, not omitting the share appropriated to God, which is reserved for the first poor person who appears. If any of the family be absent, his share is carefully put by; if he remains well, the cake continues fresh; if ill, it begins to be moist; if he dies, the cake becomes bad. Not many years since it was a fashion amongst the *bourgeoisie* to go from house to house among their friends asking for '*la part à Dieu*,' to the sound of the violin, singing verses made for the occasion." \*

From the ideal of the past we turn to the real of the present—the inns:—

"However romantic and beautiful the country might be on our approach to Mortain, we could not but feel a chill to our enthusiasm when the vehicle in which we travelled stopped at the only inn in the place. At first we felt disposed to demur, but on observing that immediately opposite was the principal door and façade of the collegiate church, we called to mind that our object in coming was to visit this monument, and that it was our duty to support all trials in such a cause. Arming ourselves, then, with resolution, we entered the black den of a kitchen, which was the only way by which the chamber assigned to us could be gained. We mounted a '*narrow stair*,' and threaded the mazes of a corridor, shuddering at every step. Through the darkness we observed, *enlascé*, beneath the stairs, a bed in which at night something human slept, and where a huge black dog indulged by day: at last we reached our room, and found ourselves in one of good size with two windows, one exactly opposite the church: the floor was boarded, a great misfortune in France, as to scour is a process unknown in these regions, and the consequence of their being left uncleaned for ever may be imagined, not de-

scribed! The cups for our coffee were rinsed, and the water thrown on the floor as if it had been bricked; and as all the other domestic arrangements are carried on with equal delicacy, the state of the apartment was any thing but inviting. The beds, however, presented a singular contrast, though one not unusual in France, of neatness, and even elegance; the crimson and white draperies tastefully hung, and the coverlids of quilted satin! moreover, as is invariably the case in the worst inns, the beds were very good. Our female attendant, the very soul of civility and good-nature, did all she could to satisfy us, even to producing her own goods for our accommodation; for, finding knives had been forgotten in the service, she offered us a clasp knife from her apron pocket with all the *bonhomie* imaginable! To do justice to the establishment, the linen was snow-white, spun and woven at Mortain, and bleached at Avranches; and all the viands were excellent."

It is impossible for us to touch upon the multitude of local remarks and historical souvenirs with which Miss C. embellishes her visit to spots of great interest; and we must leave them, though they are the staple of the work, to the readers, who, we trust, will be induced not to take our word for its deserts. Of the general character and characteristics of the Bretons we are told:—

"The peasant is said to be firm to a degree approaching obstinacy, full of humanity and courage under ordinary circumstances, but vindictive, even to ferocity, in the first movement of anger. He is devout to fanaticism, particularly in the interior of the country. All this sounds very Irish, but the wit and gaiety which would have been added to the picture of an individual of that nation, must be very much sobered down in describing a Breton, in whom gravity is more observable, in general, than light-heartedness. Very few of the common people in Finisterre speak French, although many comprehend it when spoken. In the arrondissement of Brest and Morlaix the food of the labourer is of oats and buck-wheat boiled into a porridge soup, with bacon and barley bread. The better order of peasants make pancakes on a Saturday. It is remarkable that this delicacy, extremely good in the district of Tréguier, is without flavour and as hard as parchment throughout Leon. The masters and servants eat of the same dish; but the master begins first, then his male children, and the servants of the farm; after whom follow the women, at the head of which party is the mistress: this domestic arrangement savours but little of gallantry, but this precedence of the men obtains in every situation amongst the Bretons, and is again observable amongst the class of *vignerons* on the Loire, whose habits are, in some respects, similar: for instance, the *vignerons*, like the Breton labourer, drinks only water with his meals, on every day but Saturday; but here the likeness ends, for the *vignerons* is always sober, and the Breton seldom lets a market-day escape without drinking to excess—the great vice of this people. The style in which the labourers live is much the same every where. Their house, or rather hut, is of the meanest description, and, though often situated amongst charming scenery, and surrounded by a luxuriant growth of shrubs and wild flowers, is so aquid, so wretched, as almost to defy description: men, women, children, pigs, cattle, and poultry, live together; the human party sleeping in layers, one above another, on straw, and with as little attention to cleanliness or decency as

\* We have transported another interesting Fairy Legend entire, with its new traits, to shorten our review, by making it a Sketch of Society.—Ed. L. G.

their animal companions. I have heard their *ménage* described in a manner to be scarcely credited, but in many instances I believe the picture not to be overdrawn. Placed upon the mud floor, which is generally full of holes and water, is a long, black, wooden table, with circular hollows at distances, and into these fixed bowls are put, filled with potatoes and chest-nuts; milk is poured on them, and this mess is partaken of by the family, in the most primitive style which can be conceived, by the help of hands and mouths alone, the pigs and other occupants of the mansion finishing what is left, and acting as scavengers on the occasion. This, of course, is amongst the very lowest class, the farmers and better order have superior houses and more decent habits; some are even remarkably clean and neat in their domestic arrangements, but few can boast of much light or air, and their floors are very seldom well paved or boarded.

The Breton is prone to dwell upon his grievances, and his reflective character leads him to consider them too deeply. When the dress of these peasants is considered, their long matted hair, thick beard, never combed, never washed, their large plaited trousers seldom taken off, even at night, some idea may be formed of the dirty state in which they must necessarily be. It can only be at a distance that their jackets covered with buttons, their large hats, their gaiters and sabots, can form a combination which induce one to forget the disgusting in the picturesque! Their costume is varied extremely, according to the different districts and communes; that of Saint Trégonnec (arrondissement of Brest) presents precisely the period of Louis XIV. with large puffed and plaited trousers, black stockings, shoes with buckles, beaver hats, ornamented with bands of velvet, crossed with a thousand colours, and a wide sash of variegated stuff, generally a bright tint. That of Quimper recalls the costume of the ancient Dukes of Bretagne; they wear red or violet coats, with spotted linings, and trimmed with a tape of a paler colour, trousers less full and less plaited than those mentioned above, and of the same hue as the coat, and similarly trimmed at the seams. Their long hair falls in thick masses on their shoulders. Some of the exquisites have the date when their coat was made embroidered in red worsted on the side! The women at Quimperlé have a costume almost Swiss, and here their beauty is much cited; but in general they must yield the palm to their Norman neighbours, who resemble them in very few instances: the Breton men, however, are certainly handsomer than the Norman. Nothing can exceed the superstition of the natives of Finistère, and indeed throughout Brittany; though, in many parts, it is fortunately wearing away rapidly as instruction advances. All the omens, signs, and wonders, banished from other lands, seem to have found shelter here! the most extravagant belief of the eastern or northern world has a niche amongst them. Every bird that sings or screeches is thought to give out some occult meaning, every meeting of roads is haunted by an evil spirit, every sound is a *charette de la mort* (*carricuel an ancon*), every roaring torrent a howling fiend, every fountain an abode of fairies!

The vice of the Bretons, which has been already alluded to—that of drinking to excess on fête and market-days, though on other occasions they are sober—has been attacked in various ways for a series of years, and, unfortunately, with little result. A few years ago, the frightful consequences of this habit ex-

bited themselves in an appalling manner in the parish in which Loiz Kam resides. He composed a poem on the subject, which had so good an effect, that in his canton the frequenters of the tavern have sensibly diminished. He lets no opportunity escape for inculcating morality and conveying instruction by means of his songs, which are so much more efficacious than any other mode, that it is well known while the cholera raged in Bretagne, no better plan could be devised by the physicians to spread a knowledge of the proper remedies, than by employing these minstrels to repeat them to the people in song. A very recent fact attests the truth of this assertion, and proves in how much respect, amounting to religious veneration, the character of the popular poet is held. At St. Pol de Léon, only a few months ago, on a fair-day, a blind singer had drawn a crowd around him. After the usual introduction and exposition of his subject, which was that of a frightful murder committed in the canton, he paused for a moment; then, addressing himself to the people, he said, 'Christians, before I go further, let us say a *pater* and a *de profundis* for the assassin and his victim.' At these words he took off his hat; every one of his audience followed his example, and, making the sign of the cross, he recited the expiatory prayers, to which the people responded with the deepest devotion, after which he resumed his song! It is at the meetings called Noziou-néza, as well as the fêtes, weddings, and funerals, that the minstrels are most in request. The Noziou-néza is a kind of *soirée* during winter, at which the country people are in the habit of assembling; and there, seated by a blazing hearth in the cottage chosen for their rendezvous, from six o'clock in the evening till late in the night, old men and women, young girls and youths, take their turn to sing and relate stories. Here the poet minstrel with his *rébek* is always a welcome guest, and he frequently arrives in the middle of the night, and knocks at the door: he is hailed with pleasure, hospitality offered him, and his talents immediately put in requisition; this he does from farm to farm, as his ancestors of old went from castle to castle. At these meetings and at fairs, the ballad style is preferred; at wedding-fêtes and agricultural celebrations, songs of love most obtain. At the religious assemblies, known by the name of *pardons*, both historical poems, canticles, legends, and songs, are to be heard. In Wales, the national fêtes, still preserved by the bards, and always kept up in the present day with great spirit, have lost all the religious character which formerly distinguished them, and are now purely poetical; but in Bretagne, where the religion is Catholic, they have not changed, and possess at this moment all the same features which they presented in by-gone years. Every grand *pardon* lasts at least three days. From the eve all the bells are rung, every one is occupied in ornamenting the chapels and altars and in dressing the saints in the national costume: a patron and a patroness of the fête are named, and are distinguished like a bride and bridegroom, the former by ornaments of little mirrors round her white cap, the latter by a large bouquet decorated with ribands. Towards the close of day the church is swept and the dust thrown into the air, as a propitiation for the travellers who are expected next day. In the most conspicuous part of the nave are then exhibited the offerings to the patron saint, consisting of sacks of wheat, banks of flax, a snowy fleece, a new beehive, and other rural productions, as in ancient times. Afterwards the whole

community dance to the sound of instruments, sometimes on the hills near the church, sometimes by the side of a fountain held in esteem in the village, and not unfrequently near a dolmen, the ruins of which serve for seats to the musicians. Nothing can be conceived more unsophisticated and romantic than this: it appears like hearing a page of an old fairy tale; yet such are still the usages to be found in this primitive part of France! It is not a century since it was the custom to dance in the interior of the church in honour of the patron saint, but the bishops having long disapproved of it, at length succeeded in putting it down. There is no doubt it was a remnant of druidical worship, as is, indeed, the whole ceremony. On certain occasions of rejoicing, the people light fires on some height: the pile is formed of heath and fern, and other light materials, at the top of which is placed a garland, and as the flame mounts towards it, the assembly dance round the fire twelve times, reciting prayers. The old men then surround it with a circle of stones, in the midst of which they put a caldron, in which formerly meats for the priests were cooked: at the present day the children fill it with pieces of metal, and, by passing rushes over the edges of the vessel, contrive to draw forth rude sounds, resembling the tones of a harp; while the attendant beggars seated round sing in chorus legends of the holy patron of the place. Thus the ancient bards sang by starlight hymns in honour of their gods, before the magic bowl, exalted in the midst of a circle of stones, where was prepared the repast of the brave. The morning of the fête of the pardon, at daybreak, bands of pilgrims arrive from distant parts. As soon as they hear the bells at a distance they kneel, and take off their hats, and make the sign of the cross. Sometimes whole cantons come, with the banners of their cantons displayed, with their pastors at their head; and these are met by the clergy of the pardon in a similar state. After vespers, the whole procession parades the country or the shore: sometimes it stops in the cemetery of the town, and a religious ceremony takes place, joined by all the country, nobility, and gentry in the neighbourhood. The pilgrims pass the night in tents on the plains: the popular bards go from tent to tent singing canticles almost all night; the whole of this day being consecrated to religion. The next day begins the reign of amusement; games, and lists, and courses, take place, and dances close the evening. The eve and last night belong peculiarly to the minstrels, who come from all parts of Bretagne to the pardon: the last night in particular is appropriated to *les kloer*; they sing their newest songs and best compositions under the large trees at the entrance to the churchyard. Sometimes, at Tréguier and Vannes, they act, in the open air, dramas founded on the life and miracles of the patron saint: these dramas are continued for some days during the fête, like the ancient mysteries of the Frères de la Passion."

[To be continued.]

*Italy and the Italians.* By F. von Raumer.

2 vols. 12mo. London, 1840. Colburn.

WE are glad to see this work in a neat and moderate English translation, to which both its sterling information and entertaining matter entitle it. Our opinion of the merits of the original may be gathered from our having devoted two long papers to it, and had versions made of interesting parts, before it came before us in our own language; and we need only now say that the entire publication is an acceptable public service. In order to conclude our

review, we now select a portion which relates to a very interesting and important subject, viz. the *Public Education in the Kingdom of Lombardy and Venice*. In three letters thereon M. von Raumer writes:—

"I come now to a more pleasing subject, on which the government, the communes, and private individuals, have manifested an equally laudable zeal,—I mean education. The general opinion seems to be that very much has been effected for the elementary schools, but that the gymnasia and universities require many improvements."

The author then proceeds to detail very minutely every particular relative to those institutions, their number, the lessons taught in each, the number of teachers and of pupils, the constitution of the two universities of Padua and Pavia, &c.; with remarks and incidental comparisons with the German system. Those details form a complete whole, from which it would not be easy to select one part. Persons not acquainted with the Austrian journals may be surprised to learn that a complete system of national education has been established, with a regular gradation of elementary, commercial, and classical schools: that, in 1837, there were 4631 elementary schools (including 726 private establishments); and only 66 communes were destitute of elementary boys'-schools. The expenses in 1837 were 507,000 florins; of which 21,000 were their own revenues; 423,000 were contributed by the communes, and 63,000 by the state. The instruction in these schools is entirely gratuitous, the parents having no expense except the purchase of books. It is, therefore, not for want of opportunity if all the children fit to go to school do not profit by these advantages; yet it seems that only three-fifths of the children attend the schools. The number of teachers (including 2226 parish priests, who are directed not to confine themselves to instructions in religion) was 6284. Not only in the elementary schools, but in all the public gymnasia, lyceums, and universities in the kingdom of Lombardy and Venice, instruction of every kind is entirely gratuitous. School-money and fees are things unknown.

The preceding extracts, relative to the present condition of the people in the kingdom of Lombardy and Venice, may, perhaps, tend to correct the opinion which many persons have conceived of the Austrian government in Italy, and enable them more justly to appreciate its endeavours to promote the prosperity of those fine provinces. It may, perhaps, be said, that the polite reception given to our author by Prince Metternich, may have given him a favourable bias, which the persons to whom the prince gave him letters of recommendation and introduction would take care not to impair. But our professor is well known to be a liberal in politics; and facts are, besides, stubborn things; and it cannot well be supposed that the information given him as official was falsified to serve a purpose, even had he been incapable of using his own powers of observation. It may, notwithstanding, be allowed, that those civilities inclined him to take a favourable view; in the same sense as, after the publication of his work on England, a stanch Conservative being asked what he thought of it, replied, "The book is well enough, but the author has fallen into bad company;" meaning that the leaders of the Whig party, the authors of the Reform-bill, were not likely to have given him an impartial view of that great measure and its consequences.

We have now accompanied our author through the kingdom of Lombardy and Ve-

nice, making long extracts from this portion of his work in order to give our readers an idea of the kind of information which he has to expect in the remaining letters of these volumes. Having done Professor Raumer this justice, we shall merely say that similar statistical details are given respecting Sardinia, Tuscany, Rome, Naples, and Sicily; with observations on them, on the government, the people, their manners and customs. The author is, perhaps, rather freer of blame than on the Austrian states; but we will not say that it is without reason, as the Sicilian sulphur question will testify. We shall now make a few miscellaneous extracts from the other parts of this work, wholly passing over all descriptions of scenery, however beautiful, with which all our readers are familiar; and the author's reflections on works of art, however novel and judicious some of them may be.

Turin, 12th May.

Some point of etiquette preventing the author from being formally introduced at court, an arrangement was made by his majesty's desire, that Mr. R. should go to the palace to see the collection of medals and of armour founded by the present king, Charles Albert, when his majesty would drop in as if accidentally. "Accordingly, the king entered the apartment: he is a tall man, with a pleasing, good-natured countenance. He spoke neither with affected stateliness nor with affected condescension, but plainly and sensibly. The chief subject of conversation was Sardinia; where the king has made the greatest and most beneficial changes. I took the liberty to mention some improvements in Prussia, and to observe, that blame in beginning would be followed by great advantages and general satisfaction."

In the 130 pages given to the Sardinian dominions, our author gives various statistical details similar to those for the Austrian states; among which we notice with pleasure the flourishing state of the city of Genoa, whose commerce is extending to the most distant regions, while its increasing prosperity is manifest in the great improvement of the city and environs. We refrain from quoting particulars; but, as the commencement of the political career of the king seemed by no means to augur well for his future reign, we feel that it is but doing an act of justice to direct the reader's attention to some points.

"It is not my business or in my nature," says the author, "to act the part of a flatterer, or to conceal my opinion, which, after all, is but that of an individual; but should any one be led to infer from what I have hitherto said of the Sardinian states, that on the whole there is no real and great improvement, the inference would be false, and the fault must be mine.—I have received, from the most authentic sources, information of what has been done since the accession of the present king, under his active direction, and with the aid of the several ministerial departments, which has filled me with joy and astonishment. \* \* \* The finances of the Sardinian states are among the best regulated in Europe. Annual estimates of the receipts and expenditure are carefully made; the fault so often committed of estimating the receipts too high and the expenditure too low is avoided, so that any excess of expenditure is always more than met by an excess in the receipts. But the most remarkable and extraordinary improvement effected by the king is the total change in the internal administration of the island of Sardinia, by which enormous abuses of the feudal system have been done away, an entirely new legislation intro-

duced, doing equal justice to all, without taking away the well-grounded rights of any. This new legislation has indeed called forth individual complaints against its authors; difficulties are thrown in their way; justice and religion appealed to, in order to cast odium on what has been done or projected. \* \* \* Charles Albert, and his minister, Villa Marini, are decried as revolutionists (as Frederick William III., Stein, and Hardenberg, were, for similar measures), and the good old times extolled when the whole people of Sardinia served but as a footstool for a few haughty nobles, till, being treated like brute beasts, they were excited to brutish rage, and requited evil with evil. But the immediate descendants of the few who now complain will most certainly (if the course entered on is boldly pursued) enjoy the great benefit of this regeneration of their country, and join in the tribute of gratitude which the people already express, and which is confirmed by the testimony of all unprejudiced and well-informed persons."

Here we conclude our notice of Professor Raumer's work, of which we have endeavoured to give our readers such an idea as may induce them to refer to the English translation, the appearance of which we have thus summarily recorded.

#### COUNT A. DE VIGNY'S LIGHTS AND SHADES OF MILITARY LIFE,

TRANSLATED by Sir Charles Napier, the review of which we could not finish in our first attempt (see *Literary Gazette*, No. 1216), has so long claimed from us a conclusion, that we are now glad to discharge the debt. M. De Vigny states that he was accidentally shut up in an apartment, and compelled to be an unwilling listener to a dialogue between Napoleon and Pope Pius VII., at Fontainebleau.

"On this occasion (he says), I heard the sound of his heels at the same moment as that of the drums. I had barely time to slip into the alcove of a great state bed which was not used, fortified by a princely balustrade, and the curtains of which, sprinkled with bees, were luckily more than half drawn. The emperor was violently agitated: he walked alone in the room, like one who is waiting impatiently for somebody, clearing in a second thrice his own length; he then went to the window, and began to drum a march upon it with his nails. A carriage presently rolled into the court; he ceased drumming, stamped twice or thrice, as if vexed at the sight of something that was done too slowly for him, then went hastily to the door, and opened it to the pope. Pius VII. entered alone. Buonaparte shut the door behind him with the despatch of a gaoler. I felt thoroughly frightened, I must confess, on finding myself the third in such company. However, I remained voiceless and motionless, looking and listening with all the powers of my mind. The pope was of lofty stature; his face was long, sallow, care-worn, but full of a holy dignity and unbounded benevolence. His dark eyes were large and brilliant; his mouth was half open with a friendly smile, to which his projecting chin gave a strong expression of shrewdness and intelligence—a smile which had nothing of political insensibility, but every thing of Christian kindness. A white cap covered his long hair, which was black, but marked with broad silvery streaks. He wore a short mantle of red velvet, carelessly thrown over his curved shoulders, and his robe trailed over his feet. He entered slowly, with the calm and discreet step of an aged matron. He went and seated himself, with downcast eyes,

in one of the large Roman arm-chairs, gilt and decorated with eagles, and waited to hear what the other Italian had to say. \* \* \* Napoleon did not desist from pacing the floor after the pope had entered; he began to prowl around the chair like a prudent sportsman; and, stopping all at once facing it, in the stiff and motionless attitude of a corporal, he resumed the thread of a conversation commenced in the carriage, interrupted by their arrival, and which he was impatient to renew. 'I repeat to your holiness, I am no freethinker—not I; and I am not fond of reasoners and metaphysicians. I assure you that, in spite of my old republicanism, I will go to mass.' He flung these last words sharply at the pope, like a censer swung under your nose, and paused to await their effect; thinking that the circumstances, how nearly soever approaching to impiety, which had preceded this interview, must give extraordinary weight to this sudden and positive declaration. The pope cast down his eyes, and placed his hands on the two eagles' heads which formed the arms of his chair. By this attitude of a Roman statue, he seemed plainly to intimate: I must listen with resignation to all the profane things that he shall think to say to me. Buonaparte walked round the room and the arm-chair that was in the midst of it, and I saw, by the sidelong glance which he cast at the aged pontiff, that he was not pleased either with himself or with his adversary, and that he blamed himself for having been too abrupt in this renewal of the conversation. He began, therefore, directly to speak again, still pacing round and round, casting furtive and piercing glances at the mirrors in which the grave figure of his holiness was reflected, and looking at him in profile when he passed near him, but never full in the face, lest he should seem too anxious about the impression of his words. 'There is one thing, holy father,' said he, 'which lies upon my heart: it is this—that you consent to the anointing in the same manner as you formerly did to the Concordant, as if you were forced to it. You put on the air of a martyr before me; there you are, looking as if resigned, as if offering your griefs to Heaven. But, indeed, that is not your situation; you are not a prisoner, by God!—you are free as the air!' Pius VII. gave a sad smile, and looked him in the face. He felt how prodigious were the exactions of that despotic character, who, like all spirits of the same nature, was not content to be obeyed unless you obeyed with a semblance of having ardently desired what he ordered. 'Yes,' resumed Buonaparte, with increased emphasis, 'you are perfectly free; you can return to Rome; the route is open; nobody detains you.' The pope sighed, and raised his right hand and eyes to heaven, without replying. Then, slowly lowering his wrinkled brow, he fixed his eyes on the gold cross suspended from his neck. Buonaparte continued speaking, while taking his rounds more leisurely. His voice became mild and his smile peculiarly gracious. 'If, holy father, the gravity of your character did not prevent me, I should say, indeed, that you are rather ungrateful. You do not seem to be sufficiently mindful of the good services that France has rendered you. The conclave at Venice, which elected you pope, did appear to me to have been somewhat influenced by my campaign in Italy, and by a word that I dropped concerning you. At that time, Austria did not treat you well, and I was very sorry for it. Your holiness was, I believe, obliged to return to Rome by sea, because you were not allowed to pass through the Austrian territories?' He paused to await the answer of his silent and

involuntary visitor; but Pius made only an inclination of the head that was scarcely perceptible, and remained as though overwhelmed with a dejection which prevented him from listening. Buonaparte, with his foot, then pushed a chair close to the great arm-chair on which the pope was seated. I trembled, because, when he came to fetch this chair, his epaulette had brushed the curtain of the alcove in which I was concealed. 'In fact,' he continued, 'it was as a Catholic that I was grieved at this. I never had time to study divinity much—not I; but I put great faith in the power of the Church; it has a prodigious vitality, holy father. Voltaire has done you some mischief; but I like him not, and I am going to slip an old unfrocked Oratorian at him. You shall have no reason to complain, depend upon it. We could, if you will, do many things by and by.' Here he assumed a look of innocence and youth extremely coaxing. 'For my part, I do not know—I cannot discover—I do not see, indeed, why you should have any objection to fix your residence in Paris for good. I would give up the Tuileries to you, faith, if you liked. You will there find your Montecavallo chamber quite ready for you. As for me, I am scarcely ever there. Do you not see, *padre*, that here is the real metropolis of the world? I would do every thing you wished; for, after all, I am a better boy than people take me for. Provided that war and the toil of politics were left to me, you should manage the church just as you pleased. I should be your soldier entirely. Would not that be capital, think you? We would have our councils, like Constantine and Charlemagne; I would open them and close them; I would then put into your hand the real keys of the world, and since, as our Saviour said, 'I came with the sword,' I would keep the sword to my share; only I would bring it to you for your benediction after every success of our arms.' He made a slight inclination while uttering the concluding words. The pope, who had thus far continued motionless, like an Egyptian statue, slowly raised his half-bowed head, gave a melancholy smile, uplifted his eyes, and said, after a gentle sigh, as though confiding his thoughts to his invisible guardian angel: *Commediante!* Buonaparte sprang from his chair, and bounded like a wounded leopard. He was in a real passion, one of his yellow passions. He paced the floor, at first without speaking, biting his lips till they bled again. He no longer turned in a circle round his prey, with gentle look and cautious step, but stalked straight forward, to and fro, stamping and making his spurred heels clatter. The room fairly shook; the curtains trembled like the trees at the approach of a thunder-storm; methought some great and awful event was going to happen; my hair pained me, and I involuntarily clapped my hand on it. I looked at the pope; he stirred not, but merely grasped with both hands the eagles' heads on the arms of the chair. The bomb suddenly burst. 'Comedian!—I a comedian!—Ah! I will give you comedies, such as shall make you all cry like women and children! Comedian!—Ah! you are mistaken if you think to get the better of me by insolent coolness! My theatre is the world; the part I play is that of manager and author; for comedians, I have all of you—pope, kings, people! and the thread by which I move you is—fear! Comedian!—Ah! it would take a better man than you to dare to applaud or to hiss me. Signor Chiaramonti, are you aware that you would be but a poor parish priest if it so pleased me? Why, France

would laugh outright in your face at you and your tiara, if I were not to put on a grave look when saluting you.—It is only four years since nobody durst talk aloud of Christ. Who then would have talked of the pope, if you please?—Comedian! Ah, gentlemen, you are getting on too fast with us! You are out of humour because I have not been silly enough to sign, like Louis XIV., the renunciation of the liberties of the Gallican church? But I am not to be piped to in that manner. It is I who hold you in my fingers; it is I who carry you from south to north like puppets; it is I who make believe to account you something, because you represent an old idea that I want to revive; and you have not sense enough to see this, and to do as though you did not perceive it!—But no; one must tell you every thing; one must put every thing under your noses before you can comprehend it. And you seriously believe that one cannot do without you, and you lift up your heads and muffle yourselves in women's drapery! But know that this has no effect whatever upon me, and that if you persevere—yes, you!—I will serve it as Charles XII. served the grand vizir's—I will tear it in pieces with my spur.' He ceased speaking. I durst not breathe. No longer hearing his thundering voice, I stretched forth my head, to see if the poor old man was dead with fright. There he sat, with the same composure in his attitude, and the same composure on his countenance. A second time he raised his eyes to heaven, and, after heaving a deep sigh, he smiled bitterly, and said: *Tragediante!* At this moment, Buonaparte was at the other end of the room, leaning against the marble chimney-piece as high as himself. He darted like an arrow towards the old man; I thought he was going to kill him. But he stopped short, took up from the table a vase of Sèvres porcelain, on which were painted the Castle of St. Angelo and the Capitol, and, throwing it on the marble hearth, crashed it to atoms with his feet. All at once he sat down, and remained for some time motionless, and maintained a profound and threatening silence. I was relieved. I concluded that he had yielded to cool reflection, and that reason had resumed its empire over the ebullition of passion. He became sad; his voice was low and melancholy, and from the very first accent I knew that he was undisguised, and that this Proteus, quelled by two words, now appeared what he really was. 'Miserable life!' he ejaculated. He then mused, tore the border of his hat, without speaking for a minute or two, and, on rousing, began talking to himself. 'Tis very true!—Tragedian or Comedian!—All is acting, all has been costume with me for a long time, and will be so for ever! What fatigue! what littleness! Sitting! always sitting! in full face for this party, in profile for that, according to their notions. To appear what they like one to be, and to guess aright their idiot dreams!—to place them all between hope and fear!—to dazzle them with dates and bulletins!—to bind them by spells of distance and spells of names!—to be master of them all, and not know what to do with them!—that is all, faith!—And after this all, to be annoyed as I am—it is indeed too bad! For, in truth,' he proceeded, crossing his legs and throwing himself back in the arm-chair, 'I am horribly annoyed.—As soon as I sit down, I am ready to burst with ennui.—I could not hunt three days at Fontainebleau, without dying of sheer languor. For my part, I must be moving and make others move. If I know where to, though, I'll be hanged! You see I am open-hearted with

you. I have plans for the lives of forty emperors; I form one every morning and another every night; I have an indefatigable imagination; but, before I have time to execute two of them, I should be worn out, body and soul; for our poor lamp does not burn long. And frankly, if all my plans were carried into effect, I would not swear that the world would be much happier for them; but it would be more brilliant, and a majestic unity would reign over it. I am no philosopher—not I, and I know not a creature that has common sense but our secretary at Florence. I understand nothing of certain theories. Life is too short to stand still. As soon as I have thought I execute. People will find explanations enough for my actions after I am gone, to exalt me if I succeed, and to abuse me if I fail. Plenty of paradoxes are quite ready; they abound in France. I will silence them while I live, but afterwards—never mind! my business is to succeed, and that I understand. I make my Iliad in action, for my part, and that every day. Here he rose, with cheerful promptness and something lively and brisk in his manner. At that moment he was natural and true; he thought not of giving a picture of himself, as he did afterwards in his dialogues at St. Helena; he thought not of idealising himself, or of composing his person so as to realise the finest philosophical conceptions; he was himself turned inside out. He went up to his holiness and walked before him. There, warming, and laughing half ironically, he spoke nearly as follows, mixing up together the trivial and the grand, according to his custom, and talking with inconceivable volubility—the rapid expression of that prompt and ready genius, which guessed every thing at once without study. ‘Birth is every thing,’ said he; ‘those who come into the world poor and destitute are always desperate. This turns either to action or suicide, according to the character of the individual. When they have courage, like me, to put their hands to any thing, then, faith, they play the devil. And can you blame them? One must live. One must find one’s place and make one’s hole. For my part, I have made mine, like a cannon-ball. So much the worse for those who stood in my way.—Some are satisfied with little, others never have enough. What is to be done? Each eats according to his appetite, and mine was excessively keen.—Look you, holy father: at Toulon I had not wherewithal to buy a pair of epaulettes, and instead of them I had a mother, and I know not how many brothers and sisters, on my shoulders. These are all provided for at present, and decently enough I hope. Josephine married me almost out of pity, and now we are going to crown her, in spite of the beard of Raguideau, her solicitor, who said that I had but little or nothing but my sword. And, faith! he was not far wrong either.—Imperial mantle, crown, what are these? what are they to me? Costume, actor’s costume! I shall put them on for an hour, and I shall have had enough of them. I shall then resume my plain officer’s dress and mount my horse. Always on horseback! all my life on horseback! I should not sit here for a day without running the risk of being thrown under the chair. Is that any thing enviable? I tell you, holy father, there are in the world but two classes of people—those who have, and those who are striving to get. The former go to bed, the latter keep stirring. As I learned this lesson early and seasonably, I shall get pretty forward—that’s all. There have been only two who began at forty that made any

progress—Cromwell and Jean Jacques: if you had given one of them a farm, and the other twelve hundred francs and his maid-servant, they would neither have preached, nor commanded, nor written.—There are makers of houses, of colours, of figures, of phrases; as for me, I am a maker of battles. That is my profession. At thirty-five I have made eighteen, which are called—Victories! It is right that I should be paid for my work; and a throne is not too high a price for it.—Besides, I shall go on working. You will see a good many more. You will see all the dynasties date from mine, upstart and elected though I be. Elected, like you, holy father, and taken from among the crowd. On that point we may shake hands.’ And, stepping close to him, he held out his white, bold hand towards the attenuated and timid hand of the good pope, who, perhaps, softened by the kindly tone of this last movement of the emperor’s, perhaps by an inward recurrence to his own destiny and a sad foreboding of the future lot of Christian societies, gently gave him the ends of his fingers, with the air of a grandmother making it up with a boy, whom she is sorry for having scolded so severely. He nevertheless shook his head with a look of sadness, and I saw a tear start from his fine eyes, and trickle rapidly down his wan and emaciated cheek. To me it seemed like the last farewell of expiring Christianity, leaving the earth to selfishness and chance. Buonaparte cast a furtive glance at this tear wrung from an afflicted heart, and I even detected at one corner of his mouth a rapid movement, resembling a smile of triumph. At this moment, that omnipotent nature appeared to me less elevated and less noble than that of his holy adversary. This made me blush behind my curtains for all my past enthusiasm. A sadness such as I had never felt came over me on discovering how little the highest political greatness may become in its cold artifices of vanity, its miserable snares, and its libertine abominations. I saw that he had not been really angry with his prisoner, that it afforded him a secret gratification not to have shewn any weakness in this *tête-à-tête*, and that he had given way to the gust of passion in order to bend the captive under the effect of fatigue, of fear, and of all those infirmities which moisten the eyes of an old man with inexplicable emotion. He had been determined to have the last word, and, without adding another, he left the room as abruptly as he had entered. I did not see whether he saluted the pope, but I believe he did not.”

Can this be depended upon as authentic? We cannot tell. A story of a flat flat-bottomed boat manoeuvre of the Boulogne flotilla is worthy of Basil Hall.

#### MISCELLANEOUS.

*The Young Prima Donna; a Romance of the Opera.* By Mrs. Grey, author of “The Duke.” 3 vols. London, 1840. Bentley.

This novel belongs to a class of works, all of which, in a great degree, resemble each other. Wiser heads than ours must determine whether or not time is wasted in writing or in reading them. *The Young Prima Donna* is the history of a gifted and beautiful girl compelled to belong to a profession repugnant to her, and sinking beneath the exertion. In such a story there must be something of interest, even although the author may not have been able to clothe it in very striking or powerful language; the more especially as we know that, in reality,

many a young life is wasted in harder toils and trials without meeting the reward of the “*Rosalie*” of this fiction—fame and death.

#### ARTS AND SCIENCES.

##### ROYAL BOTANIC SOCIETY.

TUESDAY, July 28. Benjamin Bond Cabbell, Esq. in the chair.—After the election of several new fellows, there was read by Mr. George Thurtell a highly interesting and important paper ‘Upon the Growth and Pruning of Forest Trees,’ which was clearly illustrated by numerous specimens, brought from Holkham, the seat of the Earl of Leicester, shewing the advantages of natural over artificial pruning. Having given a general account of the growth of trees, both as solitary individuals and as the collective members of forests and plantations, he deprecated the use of close-pruning, instancing, from the specimens he exhibited, that where the excision is made, decay inevitably takes place; and that, while nature conceals the wound by forming fresh wood over it, the unsound portion about to become the nucleus of future dissolution is enclosed within the body of the tree: and thus, that which has the outward appearance of firm and healthy timber may be in such a state of rottenness in the interior as to be incapable of supporting any ordinary weight. This was proved in a communication which he had received from the late Lord Suffield, who mentioned that in some buildings he had erected the rafters had fallen in: here the inside of the wood was rotten, the marks of the saw being distinctly visible within the sound outside, plainly proving that close pruning had been used. By natural pruning, Mr. Thurtell explained that when the lower branches of a tree had performed the duties assigned to them, they died off; the tree thus, it may be said, pruning itself. And, contrary to the effects of close pruning, in this case no decayed wood is imbedded in the new formation of timber, but all is healthy and sound. In conclusion, he begged to call the attention of the proprietors of woods and forests to a subject fraught with so much importance, not only as regards the landed interest, but our national wealth. Among the articles exhibited were noticed some excellent paintings of flowers, by Mad. de Comoléra.

##### PARIS LETTER.

Academy of Sciences, July 28, 1840.

SITTING of July 20.—M. Bonafous communicated to the Academy that the practice adopted by the Chinese of partially feeding their silkworms with rice-flour, sprinkled over the mulberry leaves, had led him to try whether by colouring the flour with madder, indigo, and other innoxious dyes, he could not give a colour to the produce of the worm. The result had been satisfactory, and cocoons, thus tinted, were laid before the Academy.—Dr. Donné presented a new portable apparatus for lighting microscopes used in courses of public lectures, when it might be desirable to pass the microscope round among the audience.

A long report was read by M. Arago on the system adopted by M. Arnoux, for the wheels of railroad carriages moving on curves of comparatively small radii, and for preventing wheels from getting off straight rails. His method involved some considerable improvements in the springs at the ends of the carriages, and a nearly perfect equalisation of friction. The experiments made by M. Arnoux at St. Mandé, near Paris, shewed that trains of vehicles could pass without almost any intermediary, from a line of rails with a radius

of 300 yards, to another with a radius of only 90 yards.

M. Granier addressed to the Academy an explanation of his method of preserving corn for long periods. The corn was well winnowed, and put in a vessel or room perfectly free from damp, the external air excluded, and then sulphuric acid introduced by means of burning sulphur within. If many insects should be found to be destroyed by this method, pulverised charcoal should be mixed with the corn to obviate the effects of any putrefaction. M. Granier had kept corn six years perfectly good by a renewal of this operation once a year.

M. Letronne has just edited a work which will attract the attention of the learned world; being "Fragments of the Geographical Poems of Seymnus of Chio, and of the false Dicæarchus." The text has been re-established from a MS. of the Bibliothèque du Roy, and it is preceded by critical and literary observations upon Scylax, Marcianus of Heraclea, Isidorus, &c., together with an essay on the admeasurement of the Mediterranean.—Dr. Clot Bey, Mehemet Ali's confidential physician, has published a work on the political and social condition of Egypt, in 2 vols. It is illustrated with some good maps, and a striking likeness of the old viceroy. There is some important information in it, on the military strength and internal organisation of Egypt.—An exposition of the principles of the Fourierists has been compiled and published by M. Jules Lechevalier. We leave it for the curious in such matters.—M. Michel Chevalier has been appointed to the vacant Chair of Political Economy at the Collège de France.—M. Magnin, member of the Institute, has succeeded M. Daunou as editor of the "Journal des Savans."—The king has granted a pension of 1000*fr.* to Madame Milbert, widow of the traveller.

The house of Lerebours, the opticians, has published a magnificent series of plates, copied and carefully engraved from daguerreotypic impressions, the sites chosen being at Rome. They are very beautiful productions: some of the most so we have ever seen. The series will include Florence, Naples, and other Italian cities.

The great column of July is uncovered! It is a failure, both architecturally and artistically speaking; being a bastard copy of the Trajan's pillar for size, but with a capital of no order at all (emblematical, we suppose, of the Revolution), with an unnatural kind of a Genius on the acroterium, and the shaft of the column all swaddled up in bands, bearing the names of the immortal heroes. It is by no means creditable to the state of art in this metropolis. Something a great deal better might certainly have been produced.

The autographic MS. of Burlamaqui's "Lectures on the Law of Nature and Law of Nations," has just been discovered. Hitherto the lectures of the learned professor have been known only by the imperfect notes of some of his auditors: the MS. will enable the world to be put in possession of a complete and authentic edition.—A numerous collection of letters and MSS. of Lalande, the great astronomer, has been recently found in the house where he was born, at Bourg in the Ain.

*Sciarada.*

Una donna !..... Fuggi Elpino  
Va, Finvola, che il primiero  
Raro accorda all' uin sincero,  
A quell' un, che fido gli è.  
Ma il contrario del secondo  
Dice a quel, che la disprezza:  
Dura è sol con chi l' apprezza,  
Quanto è duro il mio total.

Answer to the last :—SI-NO.

The following verses have just appeared at Barcelona :—

*"Soneto Acrostico.*

L a guerra tuvo fin gracias al cielo,  
A l caudillo invencible y sus soldados,  
T ipos de valentia, que esforzados  
O stentaneos divinos en el suelo.  
M orella sucumbiendo, de consuelo  
A los buenos llenó, que ya cansados  
E l rigor implacable de los hados,  
E n lograr la paz todo anhelo.  
M uño de los esclavos la esperanza,  
O primidos do quier que alzan la frente,  
R igeos sufren de la libre lanza.  
¡ E spaña! España! quieros, ser potente?  
L i ora tus yeros no habies de venganza :  
A cia ti llama la vencia jente."

#### FINE ARTS.

ETCHINGS. By Mr. D. C. Read.

A GOOD many years ago we had the pleasure of directing public attention to the Etchings produced by Mr. Read (of Salisbury), who, from 1827 to the present day, has illustrated his art by a number of these exquisite performances. The great admiration which they have attracted from all judges and lovers of excellence in this line has confirmed our opinion, and acknowledged the talent of the artist; and it is now with more complete gratification that we have to notice a new series of scenery from the Lakes of Cumberland, which has just emanated from his burin. It may be expedient to remind our readers of the style in which Mr. Read works, and a preface to a catalogue of his Etchings thus explains it :—

"To those persons who are conversant with this species of art, especially if they have had access to the works of Rembrandt, it is almost needless to observe that there is a process (of which, in fact, he was the inventor) denominated dry point, by a judicious use of which an extraordinary effect of colour may be acquired, as well as the advantage of bringing the etching, often crude from the aquafortis alone, into the nicest harmony, in all its parts. It unfortunately happens, however, that very few perfect impressions can be obtained from a plate so finished. Some of Rembrandt's finest prints have been thus brought to perfection; and we may, therefore, cease to wonder that, when in good preservation, they are held in such estimation, are so rarely to be procured, and, consequently, bear so high a price. I think it necessary to state, that many of the etchings here enumerated are produced entirely with the dry point; others, in part with aquafortis; and, from what has been remarked, it will readily be conceived that perfect impressions from any of these can be but few. Although etching may, by some, be considered as inferior to painting in oil (the branch of the art to which I am myself principally devoted), with its charm of actual colour and extent of surface, yet, to the artist and true connoisseur, the mere vehicle employed will be a matter of little importance, and he will be delighted with whatever is excellent of its kind."

Mr. R. goes on to describe his own efforts :—

"In these etchings it has been my earnest endeavour to express the particular effect of the objects before me. Most of them represent effects caught in the open fields; and it has been a matter of great moment with me to give every object its proper light and shadow, regardless of any system of working. There will be found among these etchings, attempts, at least, to portray Nature under various aspects. In twilight, when the feelings are excited by the breadth and power of opposing masses; at the rising and the setting of the sun; and in those solemn intervals of storm, when the Interest is kept alive by the alternation of bright lights with broad and shifting shadows. These effects have seldom been truly embodied, except by Rubens, Titian, and a very few others. I wish, sincerely, that this quality of art were more thoroughly understood; for, to a flat surface, it is a life-giving principle; and to its application is the world indebted for the productions of our great countryman, the accomplished and immortal Reynolds."

From Nature in her varying moods has Mr. Read caught and fixed these delightful pictures. The limpid or the cloud-shadowed water—the calm or the ruffled by the breeze—the abrupt precipice or rounded mountain—the bright in atmospheric splendour or the misty and reeking—the sky all serene, or flickered by light fleeces, or darkened by tempestuous rack—the sleeping moonlight—the reflected forms which invert the outline and double every object—the brilliancy of day and the blackness of night—every fleeting accident or permanent effect, are presented with such force and

truth that we wonder at the possibility of making the transcript by the means employed, and, within the compass of a few inches of copper, giving us the most vivid representations of every aspect of nature. We look again and again at these gems with increasing satisfaction: the more they are studied, the more their beauties grow upon us; and the fine gradations, the perspective, the illusive, constitute altogether a charm nearly akin to the feelings with which the happiest contemplations of the realities which they copy would so deeply impress us.

*Caligraphy.*—In May last (*Lit. Gaz. No. 1218*) we noticed a remarkable specimen of caligraphy by Mr. John Craik, master of the celebrated Academy at Dumfries, which was presented to the Queen by Lord Normanby, and much admired by Her Majesty and the Court. Mr. Craik being now on a visit to London, we have ourselves enjoyed an opportunity of seeing him execute several of his extraordinary performances with the pen, and cannot forbear again mentioning the subject. The rapidity, precision, and geometrical accuracy, with which he flourishes off these beautiful, and often complex productions, would be thought incredible except by eye-witnesses. In less than a minute a half sheet of letter-paper is covered, without a lifting of the hand, with admirably formed letters, the representation of birds, animals, and even portraiture; and surrounded by borders of the most tasteful description and symmetrical correctness, from the widest circle to the slightest touch. We confess that we never saw any thing approaching to this wonderful skill and facility, which, in fact, converts writing into a fine art, not only equal to its customary purposes, but ornamental beyond belief. We are glad to learn that our former mention of Mr. Craik has had the effect of increasing the fame, and augmenting the number of pupils of the Academy over which he presides in this branch of tuition; and we only wish we could communicate to our readers the same sense which we entertain, from ocular demonstration, of the astonishing feats which can be done in this way by the common pen in a human hand.

#### NEW PUBLICATIONS.

*Mademoiselle Cerito.* Painted by Valentini. Lith. Templeton. Mitchell.

THIS is a charming portrait of one of those flying phenomena who, now-o'-nights, astonish and delight us by their aerial measures on [qu. off?] the stage. She is in the "Lac de Fées," and in a position of as absolute fairyism as the small imaginary figures which the artist has scattered round her. Her face is beautiful, and her limbs and apparent motion perfectly graceful.

*The Seven Ages of Shakspeare.* Illustrated. 4to. Van Voorst.

THE popularity which justly attended the illustration of Gray's "Elegy in a Country Churchyard" has led to this publication in a similar style, which we doubt not will experience as high a degree of public favour. A fine and artistical composition, "All the World's a Stage," by Mulready, forms the frontispiece; and a pretty vignette, by Leslie, exhibits the Fates, with the spindle, thread of life, and fatal shears. A short introduction mentions preceding divisions by authors and painters of the life of man into seven periods, especially a Hebrew tale, by Hurwitz, and the floor of the Cathedral at Sienna. The designs themselves are graphic and interest-

ing. "The Mewling Infant" is from the pencil of Wilkie; "The Schoolboy," by Collins; "The Lover," by A. E. Chalon; "The Soldier," by Cooper; "The Justice," by Callcott; "The Slipped Pantaloons," by E. Landseer; and the last sad scene of all, by the late W. Hilton. All are replete with character and expression; and an addition of the "Melancholy Jaques," by Constable, is a most fitting companion to these pictorial illustrations. The wood-cutting, by Messrs. Thompson and Williams, is worthy of the artists upon whose productions it has been employed; and the volume may be laid by the immortal Bard wherever he is found, no matter in what shape, or cheap or highly-priced edition.

*The Tired Chums.* W. Drummond. Engraved by G. Zobel. M'Lean.

A MEZZOTINT of a fine child and dog. The boy is asleep, whilst his companion is more watchful, notwithstanding his fatigue. The group is very natural and pretty.

#### SKETCHES.

##### THE FAIRY OF ARGOGUES.

From Miss Costello's "Dorcas," &c.

"THERE was once a great lord of Argoques, near Bayeux, who was protected by a fairy. Wherever he went, in whatever battle or adventure he engaged, he was sure to be victorious, for she was always at hand to assist him: [he had never seen her, but had only heard her very sweet voice calling to him and warning and directing him. He became so accustomed to this, that at last he would never undertake anything without waiting for her voice, which she never withheld when invoked. He was young, handsome, and very amiable; his only defect was an impatience of temper, which he could not always control. Though many of the neighbouring nobles were desirous of allying themselves with him, and had offered their daughters in marriage, he had always declined, feeling no inclination for any of the fair dames who shewed themselves so anxious to please him. He avoided society, and by degrees shut himself up from all communication with the world; for a secret sadness preyed on his mind, which he would impart to none, and feared might be discovered. He had become enamoured of the ideal beauty of his fairy protectress, and he pined away in hopeless longings to behold her. He did not dare to name his distress to her, in the fear of exciting her anger, and at last he ceased to call upon her name, or to ask her assistance in his projects; or rather, he had no heart to undertake any action whatever, being totally absorbed by his grief and his love. There was a retired spot near his castle in the midst of a wood, beside a bright fountain which gushed from between the rocks, and fell in trickling streams from one descent to another, forming a shower of tears at last, which dropped on the green turf at his feet. Here he would lie for hours, giving himself up to melancholy reflections and regret, and sing the most mournful songs, one of which may be rendered as follows:—

'Thou art to me less than a shade  
By fragile leaves of autumn made,  
Less than the note of some lone bird  
Midst early spring's first whispers heard,  
A weed, a feather on the sea,  
All this, and less, thou art to me.  
Why does my trembling fancy dwell  
On all that shapes thy form too well?  
Why see, where'er I turn, thine eyes  
Haunting the streams, the woods, the skies?  
Although I know that mortal love  
Thy nature must be far above,—  
Less than a kiss in sleep am I,  
Thou canst not to my prayer reply!

I know all hope thy love to gain  
Is idle weakness, fond and vain;  
As vain to look for clouds past by,  
As vain to gaze on vacancy:  
But were it fonder, valner, yet  
I cannot that wild dream forget!"

Sometimes, as his song ceased, he imagined he heard near him a low sobbing and sometimes a plaintive cry, to which he felt a secret pleasure in listening, although it might be only the breeze amongst the branches, or the falling of the waterdrops. One evening, as he approached his accustomed retreat, he was aware that a female was leaning against the projecting rock, and he paused a moment to observe her. She was small and beautifully formed, with eyes so brilliant that it was almost impossible to gaze upon them: her dress was of a texture like that of film, which floats in the air on summer evenings,—it had a shadowy hue like the white clouds that flit along the sky through which the blue of the wide expanse is shining; her shoulders were covered with embroidery of all colours, such as those which appear when the sun is setting, intermixed with gems of different hues; a saff of rainbow tints bound her waist, the fringe of which was of a metal like the appearance of the full moon in the month of harvest—neither gold nor silver, but richer than either. She wore on her feet buskins that glittered like water or dew. On her head was a tiara of jewels, and her fair hair was so fine that the wind waved it about in long wreaths, like the tendrils of the wild vine. She was singing, and these were the words of her song:—

'I am not of thy race,  
But a spirit pure and free,  
Whose changeful dwelling-place  
Is cloud, and air, and sea:  
But I love thee, and I fly,  
To the shades of earth I rove:  
All is endless misery  
But where thou art, and love!'

He was inexpressibly astonished when he beheld this vision, and hurried forward to throw himself at her feet, but in an instant she was gone, and the space was vacant by the fountain where she had been. He was not long, however, in the state of disappointment into which this disappearance had thrown him, for he heard a soft voice close to him address him thus:—'Thou hast heard my confession, and if I am dear to thee, thou hast only to invoke my presence and I shall appear; we will be united, and thou shalt bear me home as thy bride: but I must impose a condition on thee, never by any chance to name in my hearing the word death, for if thou shouldst, I must quit thee immediately.' The Lord of Argoques smiled at the easy way in which he was to retain his bride, and he spared neither protestations nor persuasions to induce her to appear; and much surprised were all his neighbours and vassals when he brought home to them the most beautiful lady that had ever been seen, no one knew from whence. At first they were inclined to treat her with scorn, and jealousy created for her many enemies: but when, after a short time, the bride's dower arrived,—loading teams and caravans, and mules and horses, till the procession reached for several leagues beyond the castle walls, there was not one person who was not altogether awed by the magnificence and riches she displayed, and nothing but praises and civilities were showered upon her. Nothing of this, however, appeared to have any effect on the beautiful fairy's mind; all her attention and devotion was lavished on her husband, who quite adored her, and nothing could pass more happily than their lives, for neither had a wish ungratified. One day they were preparing to attend a grand tournament at

Bayeux, where the bravest knights of Normandy and Brittany were to appear, and where the Lord of Argoques was to tilt in honour of his lady. She had retired into her own chamber, and, contrary to her usual custom, had requested her lord not to disturb her, but that the moment she was ready she would descend. The fact is that she was preparing a magical scarf, which, bound round his bosom, would secure to him the victory over all in the tournament; but it required a particular moment to render the charm complete. The snow-white palfrey which was to carry her was already at the portal; the train was all in attendance, and her lord was standing impatiently beside his pawing steed: but still the lady delayed; he called to her, and as he caught a glimpse of her figure at the turret window, he begged her to descend. She answered not, but appeared to be standing immovable; the impatience of his temper got the better of his discretion, and he exclaimed, 'For the love of the saints, beautiful wife, come down! By heaven! you would be the best messenger one could send in search of death, for you are so long coming!' Hardly had he pronounced the fatal word when he became aware of his imprudence,—a cold horror crept over him, and he raised his eyes with fearful expectation towards the turret. His lovely wife stood there, but it was but for a moment; the casement was flung violently open, a clap of thunder shook the castle, and a sound as of the rushing of innumerable wings passed by him, laughter and shrieks filled the air, the sky suddenly became dark and concealed the fairy from his view. When the clouds cleared away she was there no longer, but on the front of the castle, above the principal entrance, was the mark of a hand imprinted deep in the stone. The impression of that hand remained for ever, but the lady was never seen again as she had been. Every night, however, she wandered round and round the castle shrieking and crying, and the words she constantly uttered were 'La Mort! la Mort!' but no one could meet her, no one could fix her in their sight; when they gazed in one place where she appeared, her shadowy form, through which the stars shone, was beheld in another spot. The Lord of Argoques became now a melancholy man indeed, and all happiness departed from him; he neglected his castle, his vassals, himself, and passed all his time by the side of the fountain where he had first seen his fairy bride, bewailing his rashness and impatience. A neighbouring baron, who was known throughout the country as an oppressor and tyrant, who was an enemy to all good, and a worker of every species of ill, hearing of the unfortunate knight's careless despondency, resolved to make himself master of his castle and estates. Accordingly he armed himself *cap-à-pié*, and proceeded to the wood with an intention of slaying the Lord of Argoques; but the protection of the fairy had not ceased, and she warned her lover, as in old times, of the approaching danger. The baron, who was of prodigious strength and gigantic stature, thought to make so dispirited a foe an easy prey; but was attacked himself with a vigour that amazed him, and after a desperate combat the Lord of Argoques returned to his castle a conqueror, having left his antagonist dead by the fountain side. He lived several years after this event, but never took another wife, and on his decease his castle and estates went to a younger brother. Since then, the only time when the fairy appears wandering near the castle of Argoques is when one of the family is about to die; then in the dead of night her shriek is heard,

and the fatal cry of 'La Mort! la Mort!' echoes from turret to turret and dies away in the distance. The mark of the hand was never effaced from the stone, and if time has cast it among the ruins, and common eyes cannot distinguish it, it is still there, and will be as long as a vestige of the castle remains."

### THE DRAMA.

**English Opera House.**—On Thursday a new farce, called *Lovers' Livery*, was produced here: previous to noticing which, however, we should mention the appearance of Miss Cooper, for the first time, as *Gwynneth Vaughan*, in the drama of that name. This promising young actress, of whom we have always thought well, certainly did more than we anticipated with this part, and was justly rewarded by the tears and plaudits of the audience. There was much, both of nature and passion, in her personation of the village coquette; and in the pathetic scenes in particular, she was eminently successful. The lighter portions were not touched off with the *naïveté* and spirit of Mrs. Stirling, and therefore the contrast was not altogether so strong as it might have been; but the talent and feeling which marked her contrition and aberration of mind were deserving of higher encomia from the critic than the mere passing tribute of applause. Of the novelty, *Lovers' Livery*, the success was as complete as bustle on and laughter off the stage could make it. It is a merry extravaganza, in which two lovers, *Horace Hartley* (Mr. Fitzjames) and *Miss Emma Merton* (Miss M. Glover), who, as *Ovid* hath it in the burlesque, *contiguas habuere domos*—live in contiguous houses—watch each other's motions, and become jealous in consequence of these their Paul Pry observations. The gentleman employs his Irish servant (Brougham) in female disguise and the lady's sister, *Miss Laura Merton* (Miss Fortescue), volunteers in male *toggery* to penetrate the mysteries of the rival residences: and, finally, the lovers themselves appear in similar reversals of their sex's costume, doubts are dissipated, and the end is embracing, &c. The humour of Brougham was the mainstay of the piece; but Miss Fortescue, in her top-boots, was also very amusing; and a drunken boatswain, by Mr. S. Smith, with a capital sea song, helped essentially to increase the general effect and satisfaction. The other characters were performed with spirit, and *Lovers' Livery* will not soon be worn out. Other new productions are announced, which induces us again to recommend the enterprise of this place of entertainment, which we are glad to see, for the sake of the dramatic profession, getting more and more into public favour. On Thursday the house was well filled with genteel company.

**Thomas à Becket: a Dramatic Chronicle.** By G. Darley. Pp. 144. London, 1840. Moxon. "BEING impressed (says Mr. Darley) with an idea that the age of legitimate acting drama has long gone by,—that means to reproduce such a species of literature do not exist in our present cast of mind, manners, and language,—I have under this persuasion spent no vain time upon attempts to fit *Thomas à Becket* for the public scene. Yet a subject more nobly suited thereto could scarce be chosen, if dramatic faculties to grapple with its colossal nature were forthcoming. I feel bound to point the attention of my brother-authors towards it, as some among them may consider my above-mentioned opinion mistaken, and no theme would afford a better chance of refuting it than the one here suggested."

We certainly doubt the soundness of this dictum; and are so far from agreeing with its author, that we almost think his own play, upon the stage, would disprove its truth. At least, with some alterations, we feel assured that it would do so; for, besides its dramatic strength, it is adorned with many great poetical beauties.

Of the story, it is quite unnecessary to say a word; and the characters of Henry II., his queen, Eleanor, the Fair Rosamond, and the proud prelate Becket, are familiar to every reader of chronicles or romances. Dwerga, a monstrous female dwarf belonging to the queen, is the only creation in the drama; and it is certainly stretched to the utmost of this species of creature, now almost a denizen in all works of fancy. She is, indeed, wild beyond measure, and out of all nature, but still extremely poetical, and a powerful instrument for the dramatist's purposes. We quote a part which shews enough of the portraits of the queen and her hideous pet—the former having sworn vengeance against the lovely object of her jealousy—and also the talent of the author of the "Midsummer's Dream"—

"Eleanor. Ho there, Abortion!

*Enter Dwerga.*

Dwerga. Here! here, my grandam!

Eleanor. Thine, prodigious leap?

Dwerga. What, am I not thy grandchild? thou that

bought'st me  
Of my Norse dam, when scarce the size of a crab,  
And fed'st me to my present stature with  
Dainties of all kinds—cock's eggs, and young frogs  
So freshly caught, they whistled as they singed,  
Like moist wood, on the spit, still bubbling out  
Dew from their liquid ribs, to baste themselves,  
As they turn'd slowly!—then rich snails that slip  
My throat down are I well savour them;  
Most luscious mummy; bat's milk cheese; at times  
The sweetbreads of fall'n mooncalves, or the jellies  
Scumm'd after shipwreck floating to the shore:  
Have I not eat live mandrakes, screaming torn  
From their warm churchyard-bed, out of thy hand?  
With other roots and fruits call'd ere their season—  
The yew's green berries, nightshade's livid bugles,  
That poison human chits but nourish me,—  
False mushrooms, toadstools, oak-warts, hemlock  
chop't!

Eleanor. Ay, thou'rt an epicure in such luxuries.

Dwerga. Myfangs still water!—Grandam, thou art good!

Doest thou not give me daily for my draught  
Pure sloe-juice, bitter-sweet! or wormwood wine,  
Syrup of galls, old coffin-snags boil'd down  
Thrice in fat charnel-oose, so strong and hilarious,  
I dance to a tub's sound like the charmer's snake  
We at Aleppo saw? What made me, pray you,  
All that I am, but this fine food? Thou art,  
Then, my creature; and I am thy creature.

Eleanor. My creature, not my offspring.

Dwerga. Oh, thou thought'st!

I meant thy very babe—by the young Saracen

Of my swart favour, whom thou loved'st in Jewry—

Eleanor. Small monster! I will crush thee like a

hornet

If thou darest buzz a word of that—

Dwerga. Sweet grandam!

I would not for the world, save here alone

That we may chuckle at thy husband's honour!

Eleanor. Fetch me my hood,—

The yellow one.

Dwerga. Yes, grandam!

(Sings.) As the browns are for the clowns,

And the blacks are for the quacks,

So the scarlets for the harlots,

And the yellows for the jealous! [Exit.

Eleanor. Venomous spider! I could pierce it through

With a witch's bodkin, but it does me service.

Dwerga (re-entering behind her). Doats on thee too,

dear grandam!—less in gratitude

Than that, as Dwerga does, and all her race,

Thou work'st ill to those gawlish, smooth, soft things,

Call'd mortals.—Shan't I go with thee, my dame?

Eleanor. Thou wouldst be mischievous.

Dwerga. Lovest thou not mischief?

No!—hatest it, worse than the horse-leech hates blood!

Eleanor. In, cockatrice!—that would sting even the

hand

Which feeds thee, and carresses!—In, deformity!

Dwerga. Must I sit purring like a tigress-cub

Over my paws alone? or peer from out

These bars, like a new-caught baboon?

Eleanor. Attend

Thy duty; or I'll pack thee to the chymist,

Who'll drown thee first in vitriol, and then

Bottle thee up as a false birth of Nature,

To draw the passing gaze with. Tend thy duty!

Thou'lt have enough to keep those skittish allies

From whinnying out of bounds, if they should hear  
Even a jackass bray.

Dwerga. I'll fetter them!

They are as fearful of me as a fiend.

If they dare venture forth, I'll spit green fire,

Pinch them about the ankles, fly upon them

As a wild cat, and score their wayward cheeks.

Distract them with such dissonant yells and screams

That they shall think ten furies flicker round them!

Break out!—Let one of them,—with my spongy lips

I'll suck a blood-spot on her neck will spoil

Her beauty for a month! Not the Nile weasel

Falls with such malice on the crocodile's eggs,

As I will on these glossy ones!

Eleanor. Do so!—yet take

Some heed,—for mortals have their malice too.

Dwerga. Ha! ha! ha! ha!

They cannot hurt me, as my skin is thick

And bags about me all in dewlaps—see!

Then I can roll me up into a hedgehog,

And put out prickles that would pierce their feet,

Did they tramp on me! I can slip away

Like a sleek otter when they grasp at me,

And then turn short and bite till my teeth meet.

Let me alone for them!

Eleanor. In, then, and watch—

[Exit Dwerga.]

The Chancellor holds a feast: there my false Harry

Will be, no doubt, by preconcert, to meet

His *bella donna*. None thinks of Eleanor!

Her bloom is down, as are the amorous bees

That once clung to it!—I am left forsooth

With a few manikins and greenick girls,

To lead an old-maid's after-life with apes

In this hell-gloomy palace!—But I'll follow!

I'll be a guest they neither wot nor wish!

I'll be a go-between,—to part, not couple!

Are they assembled yet?—Some half-hour gone!

'T is time!—Ha! ay!—he bows her to the dance.

They smile,—they flap—they make doves' eyes—they

murmur

He leads her now to a dim, curtain'd room—

They rush to the love-vestibule—his,—they kiss!

O serpents in my heart!—methinks my flesh

Turns to a swarm of them! I feel my hair

Tangle, and writhe, and swell like snowy creatures!

I'm Fury's self,—all but her scourge!—Oh, lend it,

Vengeance!—this hand with palsy of eagerness shakes

To use it on these killers!—Kiss! kiss! kiss!

My blood turns poison at the sound!—Kiss! hiss!"

It must be confessed that some of this is

rather plain and coarse; and we must try to

make amends, and trim the scale by selecting a

few examples of the poetry where there can be

no objection. A soliloquy of Becket, in the midst

of an entertainment, comes well:—

"Another guest I've mark'd within the halls,

Unbidden as the queen,—at least by me!

When I brought her name, that frowning usher

With courtesy more haught than baron's, said

Between his teeth,—*Demetrius Diacromus*.

Whom she may be indeed, I but surmise,

For still she flits and flits, fair Spectre, gilding

Speechless along, nor mixing with us mortals,

More than the pale moon with the enamour'd trees

Through which she glances, coldly beaming on them.—

Much time is in the minute. This bright thing,

Like some rich gem, is for a monarch's hand,

I guess, not being unskilful in such jewelry:

Let me do him,—and some one else—a service,

By keeping it from the Gryphon; Eleanor

Must not lay clutch on it, lest she, perhaps,

Like the Egyptian drunkard, dissolve it

In some sharp menstruum,—yes, so devour it,

Through luxury of revenge!

Good king, thou'lt thank me better for this deed,

And faster bind me friend, than had I saved

Rouen or Caen! Our private services seem

Love to the king, public but to the kingdom.

Harry of England!

Albeit thou hast much wisdom for one born,

But to be made a fool of from the cradle,—

Yet so predominates the weaker element

Of that same earth-and-water compost—Man—

That even the fiery spirit Heaven put to it

Cannot drink up the spring of softness in thee,

But leaves thee mouldable by skilful hands—

What's this? I am forgotten!

Most by myself, and worse— [Turning to the guests.]

Drink, gentlemen!

Ye trife with me only!—Fill me there [To a Page.

A horn of hippocras, so amber pure.

The yellow lights shall flame more lustrous through it!

Brim it up, boy! till the fresh dawning foam

Swell o'er its burnish'd lip, like these fair bosoms

Above their bordering gold!—Health, beautiful

dames!

Sweet demotelles! health, noble cavaliers!

Pledge me, I pray you, all!—my wishes are

So personal for the health of each, they ask

Unanimous return!

Guests. Be happy, sir,

As you deserve; we need not wish you more;

Becket. Thanks! thanks!—Now let the flood of joy

roll on,

And bear us with it, so we keep our feet!

Now let the perfumed air with pleasure glow

Till even the hard heart melt, the iciest burn !  
Now, gallants, lead your mistresses a measure  
Where they can prove the Graces are not fled  
With classic times !—Come, ladies !—Sooth, I'll swear  
You've not fine ankles if you fear to shew 'em !  
Minstrels, strike up ! let the gay mandolin  
Mock the grave-voiced theobro ; whilst the harp  
With intricacy sweet of various chimes,  
*Bewilders its own strain ;* and life and shalm,  
Piercing the tabret's solid-booming hum,  
Give a clear edge to music !—*Troisvirent ! Contours !*  
Spread, spread about your free wits and yourselves !  
Hie to the bower'd chamber and alcove,  
Whither Love's chief luxuriasts retire,  
And in the ear of bending beauty pour  
Your amorous songs, and tell soul-mourning tales,  
Or mirthful, to such triumph of your skill,  
That these vast domes re-murmur with sweet sighs,  
Or throbb with echoing laughter. Make all pleased  
To be here, as I am to see them ! *[Passes on.]*

#### A pithy maxim in a foul mouth :—

"Eleanor. Would I could do  
Without thy hateful service !

*Dwerga.* Thou canst not :  
A weak and wicked mind must ever have  
A cunning, evil-loving minister  
To work its ends ; must be the jest at once,  
Hatred, and scorn, and tool, of its own slave."

After which the dwarf sings us an Aristophanes-tic song, in the hu ! hu ! hex ! hex ! way.

#### Other just thoughts finely expressed :—

"Becket ! thou'rt in the clouds ;  
Sublimity makes thy brain swim—thou'rt not fit for it !

He's only great who can despise his greatness.  
Be not the night-fly drawn into the flame  
By thy blind love of splendour, and there burnt !  
True Magnanimity hath no outward measure,  
Nor is reveal'd by that. Is not the emmet  
Sagacious as the elephant ? To our minds  
Alone, we may—by custom of great thoughts,  
By venturous deeds, and versancy with power,  
Ambrosial food of books, august discourse,  
By ever straining towards some height from which  
Our former selves look little—to our minds  
We may add stature, cubit upon cubit,  
Until in them we become Anakim,  
Nobler than earth e'er form'd :—

"Tis reasonable,  
I do confess, to think that this fine essence,  
Grandeur of soul, should breathe itself throughout  
The mien and movements : every word should speak it,  
How'er so calm—like the pleased lion's murmur !  
Each tone, glance, posture, should be great with it.  
All levity of air, too buoyant cheer,  
The o'er familiar smile, salute, and chat  
Which sinks us to the low and common level,  
Should be dismiss'd, and giant-minded things  
Disclaim the pigmy natural to most men—  
No doubt !—that's well !—that's very well."

From John of Oxford we have a sweet poetical speech to the fierce barons :—

"Why seek we not our calm, secluded cells,  
And there in study or dim meditation  
Consume the soul-improving hours ? Let death  
Come when it will, and how it will, what matter ?  
Since it will come at last !—These mad tumults  
Of the outer world, what are they unto us  
But noise of centurs and of savages,  
Fighting ev'n at their feasts ?—For idle courts,  
The mountain-shaded moors where nothing stirs  
Save the wild daffodil, or crisped fern,  
Or long lithe broom that flows with every breeze,  
Or thistlebeard scarce wafted on, less make  
A melancholy desert unto me.  
The murmuring branches, and the flowers that kiss  
Each other's ear in talk, please me far more  
Than whisperers of follies, hearers of them,  
Or those who lay their fond heads on your neck,  
But to void scandalous venom there at ease.  
For blustering camps, I love the liquid brawl  
Of rivulets, the caw of rooks, much better ;  
Yea, than the lip of a Circæan dame,  
Or babble of a living doli, had rather  
Hear the soft winnowing of a pigeon's wing  
As it doth circle round its dove-cote o'er me ;  
And fain this challenge proud of trumps would change  
For sound of shepherd pipe or village bell."

And here is another soliloquy by the same :—

"Enter John of Salisbury, with a book.  
John of S. 'Formosam resonare doces Amaryllyda  
sylvas.'—  
Let me pause here, both tongue and foot. Such  
melody  
Of words doth strike the wild-birds mute to hear it !  
Honey-lipp'd Virgil, 'tis an ignorant truth  
To name thee—Sorcerer ; for thou dost indeed  
Enchant by happiest art !—Here is a place  
To meditate thy sylvan music in,  
Which seems the very echo of these woods,  
As if some Dryad taught thee to resound it.  
O gentle breeze, what lyrist of the air  
Tunes her soft chord with visionary hand

To make thy voice so dulcet ? O ye boughs,  
Whispering with numerous lips your kisses close,  
How sweet ye mingle secret words and sighs !  
Doth not this nook grow warmer with the hum  
Of fervent bees, blithe murmurers at their toil,  
Minstrels most bland ? Here the dim cushat, perch'd  
Within his pendulous arbour, plaintive woos  
With restless love-call his ne'er distant mate ;  
While changing choirs do flit from tree to tree,  
All various in their notes, yet chiming all  
Involuntary, like the songs of cherubim.  
Oh ! how by accident, apt as art, drops in  
Each tone to make the whole harmonical,  
And when need where, thousands of wandering sounds  
Though aimless would, with exquisite terror sure,  
Fill up the diapason !—Pleasant din !  
So fine that even the cricket can be heard  
Soft-fluttering through the grass. Long have I mark'd  
The silver toll of a clear-dropping well  
Peal in its light parishioners, ouphes and elves :  
'Tis nigh me, certes ?—I will peer between  
These honeysuckles, for it—Lo ! in verity  
A sylph, with veil-fall'n hair down to her feet,  
Bending her o'er the waters, and I think  
Giving them purer crystal from her eyes,—  
O learned John, but thou art grown fantastic  
As a romancer ! though art quite bedram'd,  
A sleep-walker even in the breadth of day,  
That err'st with wide eyes !—Hark !—

*[A lute is heard.]*  
Oh me ! Oh me !  
It is the Lady Rosamond herself,  
Nymphlike beside her well !"

#### Short but acute observations :—

"But women are suspicious where they hate,  
As credulous where they love."

"Tis marvellous the kind of intuition,  
And quick invention, even fools will have,  
If mischief 'tis to be done."

#### Portions of a dialogue :—

"De Clifford. No, no, there is no hope, fond child !  
for me :

The sun of my life's day is in the west,  
And shortly will go down !

*Rosamond.* Droop not, my father !  
Let not the heavy spirit sink the flesh  
To earth before its time !—This journey sure  
Hath shaken you over-much ?

*De Clifford.* Not it ! not it !  
I follow'd at full easy pace : the change  
Took me so far from the grave-side at home ;  
That's all !—for here's another at my feet.

*Rosamond.* Think less on Death, and he'll think less  
on thee,  
Dear sir !—There's medicine that the mind may mi-  
nister

To the afflicted clay, its partner frail,—  
A hopeful spirit !—'tis the best restorative !

Most life-giving elixir !

• • • • •  
O dear father ! call me not

Cold-hearted to the cradle of my sires !  
'Twas but in thy health's cause that I dispraised it.  
How oft I've ranged o'er those far-sighted peaks,  
Gazing at full-eyed as the mountain-roe  
On the great prospect, feeding but on its beauty,  
Rude pasture though it be ! How long stood mute,  
Or like a willow whispering to myself,  
Down by the stream who swallows his own roar  
In his deep gorge, dread moat ! which Nature delved  
With course irregular round our fortress-hill

*De Clifford.* My cloud-hung aerie !—blank for every  
storm,  
And baffler of it !—Ocean bursts to spray  
On the firm rock, and so to hurtless showers,  
Heaven's deluge upon thee !—You draw the picture  
Featly, my girl !

*Rosamond.* 'Tis graven trait for trait  
Upon my heart.—I'm a De Clifford too,  
Though last, least, lowest ! Even to girlish me  
Stern Nature hath her terrible charms sublime.

*De Clifford.* Better than these slight bowers !  
*Rosamond.* O far other !

*De Clifford.* It warms my veins like spiced wine to  
see thee

Swell thy young throat as a sweet bird, and praise  
Thy dwelling in the wilderness !—Go on :

Thou'rt full of it.

*Rosamond.* I see it now before me,  
Rearing its bulk precipitous from the strand,  
From crag to steepy crag the eye mounts up,  
Although the foot may not, those giant stairs  
Listed with verdure, fathoms aloft !

*De Clifford.* A bow-shot

Full—at the least !

*Rosamond.* Those air-suspended eaglets  
Soar, far beneath the summit, and like rooks  
'Gainst abbey walls, scream hovering at their nests,  
Within its rifted face : Pines on its ledges  
Waver like plumes ; and yon small patch of briars  
Like blustery mosses, sway in the wild wind  
You cannot hear sing through them.

*De Clifford.* Oh, but they do  
Whistle most shrill !

*Rosamond.* Heightening the cliff's tall front  
Sits our huge castle, like a crown of towers ;  
Their rugged coigns, grey jewels ! in the beam

Smooth glittering ; whilst o'er those battlements  
Darker than thunderclouds the warder's lance  
Peeps like a rising star !

*De Clifford.* Ay, and my pennon  
Upon the keep itself ?—

*Rosamond.* Blazons the sky  
With flickering hues, broad streamer of the north,  
And blends them with the rainbow's !

*De Clifford.* As brief-lived  
Will now be all its bravery !—Yet it brings  
Me back some youth to think of my past days,  
And my loved birth-place !—But I'm better here,  
I am, my child !—Ay, ay, proud Clifford Castle !  
Thou like thy master nodd'st unto thy fall,  
And soon like him wilt moulder down to dust !

*Rosamond.* Alas ! alas ! both may live long !—  
*De Clifford.* Proud fortress !

I have no son, no heir who can uphold  
Thy feudal strength and grandeur with his own.  
Thou'rt but the changeable birthright of the winds  
From henceforth, or their reckless tenancy !  
Foul ravens will thy ruins hoar inherit,  
The wild-cat litter there, the moon alone  
With vacant gleam light up thy roofless hall,  
Or smile, pale Lady ! through thy lattices :  
Along thy festive floors will reptiles creep  
With slimy trails, and make vile sport in corners,  
Sole revellers here ! whilst the more brutish kind  
Grazes thy rank courts, or use thy stalls, which echoed  
The war-horse neighing 'mid his amber corn,  
As mangers bone-betwenn and dens to rot in !

*Rosamond.* Let's home, my father ! let us once more  
home !"

We like to allude to one of the great bul-  
warks of our liberties, and therefore quote a  
scene between the king and Glanville, a juris-  
prudent :—  
"Henry. Glanville !—there is a thing I'd say to you  
Before we enter on this business.—  
What was it ? Pshaw ! my head is in the mists,  
Or they in it !—O !—true !—We must not, Glanville,  
Let these poor squabbles 'tween that priest and us  
Prejudice nobler matters. You can guess  
What's in my mind.  
*Glanville.* I judge, sire, as you speak  
Of noble matters, you must mean the cause  
You've had so much at heart—the restitution,  
Betterment, establishment, and general use  
Of that, long fallen into desuetude,  
That noblest of all noble things which man  
Ever invented for behoof of man,  
Trial of all accused, by their sworn peers  
Called jurors ; and the name of the said practice,—  
Which shall go sounding down to latest times  
Join'd with your own, as its chief advocate,  
Trial by jury.  
*Henry.* Yea, good Ranulph, yea ;  
But you great lawyers, in your deep research,  
And dabbling in a flood of words, oft sink  
Out of the common sight, like birds called divers,  
Than which you're more long-winded. Mend that  
fault !—  
You have been pondering o'er the theme, I see,  
And that was well. Draw up your thoughts upon it  
For my perusal, and in plain short terms ;  
D'ye hear ?  
*Glanville.* They shall be brief, my gracious liege !"

We must add a character of the literati  
of that time—how unlike us of the present  
day !—  
"Cornwall. Were ever dunces like your deep-read men,  
Lunatics like your poets ! There he walks  
Leisurely as an ass, though March-hare mad,  
Away from Fortune, having spurn'd her wheel !  
Scholars, forsooth, and heaven-born bards !—Sheer  
idiots !  
That shade themselves from every shower of gold,  
Thinking it meant to crush them ; or if not,  
Scorn even to pick it up ! 'Tis as good calling  
Sea-gulls to dovescotes, as them to warm cribs ;  
Both feed upon the estrays of the elements,  
Famine's allowance ; when they might grow fat  
Merely by opening mouth at rich men's tables.  
Let them go hang like bats in caves together,  
I'll pet such purblind flitter-mice no more !"

With this we must conclude ; and need  
hardly ask if we have proven the beauties of  
this "dramatic chronicle."

#### VARIETIES.

*Titian.*—We have recently seen in Regent  
Street (No. 209) the painting of Philip the  
Third and his mistress, by Titian, which has  
been brought from Paris for sale in this country.  
It was, we believe, in the collection of Madame  
Mère ; one of the splendid pictures which va-  
rious fortunes gave to the Buonaparte family.  
It is, indeed, a dazzling work—a blaze of colour,  
in which Nature has called forth the noblest  
effort of Art to do her justice, and excel alike in

splendour and truth. Such subjects are, however, better to see than to describe; for though the eye can gaze with pure delight upon the nude form, and no improper idea intrude, it is impossible to convey a description of it in language without risking a breach of chaste decorum. All we shall say, therefore, is that, in our opinion, no lover of the art of painting can have a higher gratification than in the sight of this masterpiece.

**Byzantine Historians.**—We seldom refer to matters which are described in the advertisements that appear in our columns, but we are induced to depart from our usual practice to-day in order to call particular attention to the very great and important literary undertaking under the foregoing head, the announcement of which will be found in another place. The classical and historical library must be nobly enriched by an edition of those writers in whose works our own Gibbon found all his principal materials—an edition designed by such a man as Niebuhr, already carried to thirty-nine large volumes by some of the ablest scholars of the age, and with corrections and additions to the former incomplete series, which render it in every way deserving of public consideration.

**Egypt.**—The Expedition of the White River, which had proceeded to three degrees latitude, had returned to Cartoum. The persons of the expedition had met with very pacific and even hospitable people, who furnished them with provisions, not only willingly and without recompense, but were displeased at a refusal to accept them. Vegetation was strong about, and even in, the river, so that boats were not able to proceed. It was discovered by this expedition, that at a certain point the White River is divided into two branches by a mountain, on the border of a lake which supplies the river with water. The notion of working gold mines in this country seems to have been abandoned by the Pasha.—*The Times*.

**The Niger Expedition.**—The first of the Niger steamers has been launched, and the other two are nearly finished. Indeed all the preparations are going on as auspiciously as could be wished; and we have only abstained from noticing particular steps and details because we knew that all was right, and the expedition likely to start, equipped in every respect as it should be, within three months of the present date.

**Westminster Literary and Scientific Institution.**—A handsome subscription having been entered into to build a theatre for lectures, &c. in the city of Westminster, the foundation stone was laid in Great Smith Street with proper ceremonies on Thursday, by the Rev. H. H. Milman, rector of St. Margaret's. At a dinner which followed, it was stated that since 1837 no fewer than 400 members had enrolled themselves, and 1800 subscribers had supported this useful and beneficial design, which, we trust, will speedily become what such an institution in Westminster ought to be.

**Mr. Vincent Nolle**, whose attempt to defeat Mr. Bates' invention for engraving in the fine style of art now so justly appreciated was defeated by the *Literary Gazette*, has been, as we see from the newspapers, doing a little in the American cotton line.

**Colouring.**—The new method of colouring silk in its earliest stage (for which see page 496), noticed in our Paris letter, following as it does the experiments in colouring wood as it grows, seems to open the way for many curious processes in multiplying, refining, and varying all kinds of dyes in all kinds of products. We

should like to see similar applications made in the culture of flowers—why not try indigo for blue dahlias?

**Trafalgar Square.**—We rejoice to hear that, from the report of the committee the Nelson column is not likely to be erected in Trafalgar Square, where it would be so sadly out of place, both as regards itself and the surrounding buildings. Greenwich has been suggested as a more appropriate site. Five thousand pounds have been voted by parliament to complete the laying out of the area of this square, under the direction of Mr. Barry.

**East India Steam Navigation.**—The national importance of the Company now engaged in this undertaking can hardly be estimated. It is not only the mass of private and family feelings which imparts a deep interest to a plan, to facilitate and expedite our intercourse with the East—though that alone might suffice to engage all our sympathies—but the value of such communications, in a political point of view, is so prodigious, that the destinies of the world may almost be said to depend upon it. Under such circumstances, it is gratifying to see the names of so many of the first merchants in London at the head of it.

**The South London Horticultural Society** had a grand show at the Surrey Zoological Gardens on Tuesday, and many prize medals were awarded. The great improvements in our gardens of late years, by the introduction of an immense number of new plants and varieties, render them very beautiful.

**Eastern Travellers.**—The latest accounts from Mosul state that Mr. Ainsworth and Mr. Rassam remain there, waiting the course of events in order to proceed to the mountains of Kurdistan, whither they purpose going on a visit to the patriarch Mardin.

**Roman Coins.**—A vase, equal in contents to about two quarts, was found last June in Charnwood Forest, near Loughborough, Leicestershire, full of coins from A.D. 40 to 68. It was only a foot under the surface.

#### LITERARY NOVELTIES.

In the Press.

A Discourse on the Pendulous Belly, shewing it to be a Visceral Affection, and attended with many important consequences in the Human Economy; with curious Observations on Diet, Exercise, and the general Management of Health: for the Use of the Dyspeptic. By Richard Frankum, Consulting Surgeon.  
A second edition of Captain D. L. Richardson's Literary Leaves, with additional Essays and Poems, is announced as in the press, at Calcutta.

#### LIST OF NEW BOOKS.

The Maternal Management of Children in Health and Disease, by T. Bull, M.D. f.c.p. 7s.—Taxidermy, with the Biography of Zoologists, by W. Swainson (forming Vol. CXXVI. of the "Cabinet Cyclopædia"), f.c.p. 6s.—Lucy on the Sad Consequences of Diabedies, by C. Chilcott, 18mo. 2s. 6d.—Proceedings of the Zoological Society of London, 1839, 6s.—Selections from Robert Hall, with a Sketch of his Life, by C. Badham, f.c.p. 6s. 6d.—The Table of the Lord, by the Author of "The Listener," 2d edition, f.c.p. 4s. 6d.—Narrative of the Treatment experienced during Mental Derangement, by J. Percival, Vol. II. 8vo. 12s. 6d.—Cassara: History and Description of the Island of Jersey, post 8vo. 6s.—Guide to Railway Masonry, by P. Nicholson, 2d edition, 8vo. 12s. 6d.—Pocket Botanical Dictionary, by J. Paxton and Professor Lindley, post 8vo. 15s.—Hand-Book up the Seine, by J. F. Smith, f.c.p. 3s.—De Porquer's Key to Spanish Treasor, 18mo. 3s. 6d.—Letters from Italy to a Younger Sister, by C. #### UNIVERSITY OF LONDON.

**NOTICE IS HEREBY GIVEN**, That the Examination for Matriculation in this University will commence on Monday, the 5th of October. The only Certificate required from Candidates is that of having attained Sixteen Years of Age. This Certificate must be transmitted to the Registrar fourteen days before the Examination begins.  
By order of the Senate,  
R. W. ROTHMAN, Registrar.  
Somerset House, July 24, 1840.

#### EDUCATION.—The attention of Parents

desirous of affording to their Children an Education in accordance with the increased intelligence and wants of the age, is directed to an Establishment situated in one of the most fertile and healthy counties of England, conducted by a Gentleman who is a member of a German university of the highest celebrity, and of several learned bodies. The course of instruction, founded on the most approved systems, comprehends the Greek and Latin Classics, the French, German, and Italian Languages, taught by Natives residing in the House, the Elements of Astronomy, the various Branches of pure and mixed Mathematics, Geography, History, &c. Impressed with a conviction that no education can be complete without an adequate knowledge of Modern Languages, the Principal has made them an essential branch of instruction in his school. Having himself resided many years on the Continent, he has travelled much, he is intimately acquainted with the chief languages of Europe, and is enabled to superintend instruction in this important department of knowledge with no inconsiderable advantage to his Pupils. Altogether, this Establishment will be found to afford to Pupils possessing average talents the certainty of receiving in it a sound Classical and Mathematical Education, together with the most assiduous instructions in the principal languages of Europe; so that an entering one of our Universities, or some profession, civil, military, or naval, they may be competent to engage in more enlarged studies with unusual advantages. Letters to the Principal of Alibon House School, Worcester, will receive immediate attention.

#### THE NEW ROYAL EXCHANGE.—

### THE ART OF NEEDLEWORK, FROM THE EARLIEST AGES,

WITH NOTICES OF THE ANCIENT HISTORICAL TAPESTRIES.

Dedicated, by permission, to

HER MOST GRACIOUS MAJESTY THE QUEEN DOWAGER,

AND EDITED BY THE RIGHT HONOURABLE

THE COUNTESS OF WILTON.

1 vol. post 8vo.

The chief aim of this volume is that of affording a comprehensive record of the most noticeable facts, and an entertaining and instructive gathering together of the most curious and pleasing associations connected with "The Art of Needlework," from the earliest ages to the present day; avoiding entirely the dry technicalities of the art, yet furnishing an acceptable accessory to every work-table, a fitting tenant of every boudoir.

PRINCIPAL CONTENTS:—

- |                                                     |                                                                                                  |
|-----------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 1. Early Needlework.                                | 14. Tapestry from the Cartoons.                                                                  |
| 2. Needlework of the Tabernacle.                    | 15. The Days of good Queen Bess.                                                                 |
| 3. Needlework of the Egyptians.                     | 16. The Tapestry of the Spanish Armada.                                                          |
| 4. Needlework of the Greeks and Romans.             | 17. On Stitchery.                                                                                |
| 5. The Dark Ages. "Shoe Schools."                   | 18. "Les Anciennes Tapisseries;" Tapestry of St. Mary Hall, Coventry; Tapestry of Hampton Court. |
| 6. Needlework of the Dark Ages.                     | 19. On Embroidery.                                                                               |
| 7. The Bayeux Tapestry.                             | 20. Needlework on Books.                                                                         |

### REVIEWS OF NEW BOOKS.

*An Account of the Recent Persecution of the Jews at Damascus: with Reflections thereon; and an Appendix, containing various Documents connected with the Subject.* By David Salomons, Esq. 8vo. pp. 122. London, 1840. Longman and Co.

**THE JEWS!** After all that has been written about them, any event which brings the consideration of their condition on the face of the earth vividly before us must possess a deep degree of interest. They are a Problem of a People. Scattered every where,—wonderfully tenacious and unchanging—except as moving along to a certain extent with the progress of civilisation in countries where they have been located, a thousand years has been with them as one day. We dwell not on the miracle of their dispersion or the curse; for we presume they do not acknowledge them in the light in which they are viewed by Christians.

It is a strange and pregnant inquiry, however, why they have obtained, during all ages and in all countries, a bad character with the people among whom they have resided? What may have been the cause or causes of this effect? Did degradation and oppression produce the usual results of treachery and hatred, and thus lead to continued injuries and continued malevolence? But whence the original wrong to the Jews? Other strangers have mingled with other nations without provoking such grievous separation and cruelty; and what, then, was inherent in this peculiar race to render them the outcasts of mankind—the abhorred and the persecuted? Will the single word Religion solve the question? Much as it may explain, we hardly think it sufficient for the universal mystery.

The love of money and accumulation seems to belong to the Jewish nature; and, in unsettled times, sordidness and wealth were dangerous provocatives to contempt and plunder. The miserly are despised and detested by all other classes of men, be they of the just, the unjust, the generous, the humane, or the vicious. They set themselves apart from the sympathies of their fellow-creatures, and are treated accordingly. Even in our day we see the Hebrew race in a state of great degradation. Their Paria trading in the lowest abysses of money-making brings an evil name upon the whole; and the proportion of thievish rogues living in and on rags and filth would damage the reputation of the entire twelve tribes of Israel. Their lower classes drag down the higher; and the world is too apt to confound those distinguished by superior attainments and manners with the mass whose pursuits and appearance are marked in a way not to recommend them to favour or affection. Yet even these possess many good qualities. They are temperate, faithful in their domestic circles, and, as citizens, long-suffering, quiet, and peaceable.

The upper ranks are among the most charitable of any order in society, and in other respects little different from the wealthy and prosperous of other denominations. Yet, on the whole, we should be inclined to say, that their religion and thirst of gain were the prominent causes of their remaining in every land a separate and unbeloved people

From having been almost thinking aloud, we turn to the work which set us a pondering. It begins with an account of the tragedy of Damascus, as related by the Rev. Mr. Pieritz, a converted Jew and Christian missionary in Syria. Feeling as we do on the subject, we are sorry to say that this is evidently a very exaggerated story, and apparently from a very weak mind. Such statements are calculated to throw suspicion on the cause, instead of enlightening the public upon its actual circumstances; and we are rather surprised that a gentleman of Mr. Salomons' sense and judgment adopted them without some corrective annotations. For ourselves, we have felt indignant to read the "it is asserted," "it is reported," "it is rumoured," "it is stated," "it is said," &c. of Mr. Pieritz, where the horrible and atrocious facts alone were enough to curdle the blood, and render infamous for ever the miscreants who perpetrated them. We need no high colouring given to tortures under which men died; no doubtful, and, indeed, incredible allegations where real guilt could be proven to an amount that beggars belief. We look upon Mr. Pieritz as a heated, partial, and unwise advocate, more likely to damage than serve the side he has taken.

The chief object of his accusations is M. Ratti Menton, the French consul, whom he makes a monster of depravity, utterly merciless and fiendish. Mahommed Telli, a tool of his, is an equal, though subordinate, demon; and an Arab Christian, called Shiblee Agoob, is another, little removed from them in devilish machinations and thirst for blood. The two latter have, it is true, motives ascribed to them; but, with regard to M. Ratti Menton, the *cul bono* is by no means apparent. No reason whatever is assigned for his hatred of the Jewish race, and his persecuting them with more savage barbarity than is heard of even in their dark-age sufferings. We are no apologists for this person; for, even supposing that his only ground was a settled conviction that the Jews murdered Padre Thomaso and his servant, yet that the representative of a civilised European power should have permitted, far less sanctioned or promoted, the tortures inflicted upon the suspected parties, is an outrage upon the period in which we live, and a disgrace to any one who bears the semblance of an educated human being. But still we do not credit Mr. Pieritz's charges against this individual. He tells us when Thomaso (a monk of the Capuchin order in a convent of Damascus, a Sardinian, and under the French protection) was missing:—

"The following day his cell was examined by the French consul, when every thing was found in proper order, and, amongst other things, a sum of money, now said to have been 10,000 piastres; though another report, more to be credited, states that 150,000 piastres were found, and that the remaining 140,000 piastres have been made away with. . . . A young man, a Jew, Yetschakh Yarah, comes to the Rabbies, and declares, that on the 5th of February, following his trade as usual, selling tobacco, he saw Father Thomaso and his servant at a certain spot, about half an hour's walk from the Jewish quarter, on the road

leading to Salakhina, about half an hour before sunset, and that he then and there had the following conversation with the servant of the monk:—He said to him, 'You have not bought any tobacco of me for some time; buy some now;' but the servant answered him, 'I am not in want of any, for I bought some to-day.' This evidence is in perfect accordance with that of the first-mentioned Farach Katsard who is now in prison, these two statements confirming one another. Yetschakh Yarah was then taken to the French consul, when he repeated what he had deposed before the Rabbies, and the French consul sent him for trial to Sheriff Pasha. His excellency gets enraged with the unhappy man, for presuming to give evidence in favour of the Jews. He inquires, 'Who bribed you to give this false evidence?' The man affirms he speaks nothing but the truth: he is therefore laid down and flogged; and still insisting on the truth of his declaration, the flogging continues till he got upwards of 5000 (!!!) lashes in succession. He is carried away lifeless,—recovers for awhile in the prison to which he was transported, but soon after expires! The Jews had great difficulty in conducting the customary purification of the corpse, which they had to perform previous to his burial, since the flesh fell entirely off from his bones.

Sunday, March 1st.—The two brothers, David and Yetschakh Arari, were again brought up for further trial, when they again deny their last day's confession of guilt, which, they say, was extorted from them by torture, and made in the hope of a speedy execution, instead of an excruciating and lingering death. The remaining five were now also brought up, and now let Humanity slumber, and turn her eyes from the refined bloodshed that was now executed—a bloodshed, however, not by quickly despatching, but by demoniacally extracting the life of innocent men by torments not inflicted on the most guilty,—and more than a brute beast could bear. Yetschakh and David Arari are again reduced to make their former confessions. Mussa Abulafia is now tortured to give up the blood; he then said, 'I have secreted it at home in my house.' The French consul, always alive to cruelty, then accompanies Mussa Abulafia to his house, followed, as usual, by large crowds; and Mussa Abulafia having now undertaken to give up what he never possessed, unlocked a cupboard, and feigned to examine it. He then asked his wife, who was in despair all this while to see her husband so lacerated, and apparently quite beside herself, 'What have you done with the blood?' The poor woman, as in a fit of frenzy, exclaimed, 'What blood had you?' He answered, 'I have blood—only give me a knife, and you can take my life's blood, and then say—this is it.' It is stated, that when the French consul heard this, he, like a madman, attacked both Abulafia and his wife. He then laid a rope round his neck, threatening to strangle him; and in the attempt to pull the rope, he laid his poor victim prostrate at his feet; and not satisfied with this, it is related that he dragged him about in the court-yard with the rope around his neck.

The French consul then ordered both M. Abulafia and his wife to be conducted to the court of the pasha. I ought to mention that this wanton and ungenerous proceeding of the French consul was the means of throwing an additional victim into his hands; for Abulafia, almost as dead, through the infliction of maddening torture, had implicated his wife when he said that he had intrusted the blood to her."

These things may be true; but we cannot credit them; or that any man in the situation of the French consul could have been so desperately lost to himself and to every feeling of humanity. One important occurrence is mentioned which has not attracted our notice before; and, had justice been the object, might have furnished a clue to unravel this mysterious transaction. It is thus told:—

"An individual of the Moslem faith, but of notoriously bad character, called Mahommed Telli, who had been for some time in prison for debt, having heard what was going on, said he knew all the bad characters amongst the Jews, and if he were at liberty he would soon discover the murderers. It is stated that the French consul, hearing this, immediately procured this man's liberation: it is said by paying his debt for him. At the suggestion of this fellow, who became afterwards so useful in the service of the French consulate, as well as of other like characters, who, whether voluntarily or paid, acted as spies from the commencement, joined to the allegations of the above-mentioned sheikhs, many arrests were made, all amongst the Jews, from Friday night until Sunday; some by the French consul in person, others by his or his underlings' order. It is difficult to describe the consternation of the Jews at these proceedings. They were somewhat relieved by the glimmering hope that their innocence would soon be apparent. It was known, that a day or two before the disappearance of Padre Thomaso and his servant, a violent dispute had taken place between them and a certain sheikh, El Mukan, leader of the muleteers, of the name of Iba Trieb, in a much-frequented place, the Khan Astad Bastad, when, while the robust servant seized the man by the throat, and held him till the blood came, his master, Padre Thomaso, cursed him in his faith (he being a Mahomedan). This caused a great sensation amongst the bystanding Mahomedans, and peculiarly called forth some violent language from a respectable Mahomedan merchant of the name of Abyekych el Khaphar; while the muleteer swore that Father Thomaso shall not die but by his hands. This is a very material circumstance! And now it happened, that when the report circulated of the disappearance of the monk and his servant, the last-mentioned merchant also disappeared. At first the suspicion of the murder of this merchant was also thrown on the Jews; but the attention of the public being arrested by the shop of the merchant being and remaining closed, the door was forced open, and the man was found dead, hanging in his shop, the door being carefully secured from within. The Jews at that time expected, as other reasonable men would, that an investigation would take place; and that it might then appear that the merchant, in consequence of the dispute mentioned, was the murderer, either by himself, or together with the ill-used, enraged muleteer, or others; and that he destroyed himself to escape torture and disgrace. But, alas! no investigation took place; the muleteer not even examined, on whom the suspicion rests so heavily, even

independently of the merchant! Only amongst the Jews, investigations, searches, and imprisonment, were incessantly carried on."

Another portion makes confusion worse confounded:—

"For some time, the vilest persons, taking advantage of this state of public feeling, arising out of these occurrences, pressed into Jewish houses for the purpose of extorting money—sometimes large amounts from the more wealthy; of the poorer, smaller sums; and when there was no money to be had, they took effects. Amongst others, there was a certain native Christian, Seed Navee, who violently took away a sack of flour from a poor Algerine Jew. The poor fellow, who used to deal in this article, and had already been robbed of every thing else he had, in desperation went to the pasha and complained. Seed Navee is put in prison; the next day, however, he was liberated, without trial, and without restitution. This is a well-known fact. It is asserted by persons entitled to confidence, that whilst this man was yet in prison, both his mother and his wife ran up and down in the Christian street, calling out, 'If Seed Navee be touched, or if you don't interest yourselves for his immediate liberation, we shall bring misfortunes upon you all—we shall discover the whole plot—shall shew where Father Thomaso is!' The French consul, on hearing this, went to the pasha, and demanded the liberation of Seed Navee, the women never being questioned what they meant by their threats."

The confessions wrung from some of the Jews by the torments they endured, the searching of the sewers, and finding bones and pieces of clothing, which were asserted to belong to the murdered, and other circumstances, have been so much detailed through the press, that we do not deem it necessary to occupy our pages by repeating them. The tortures were of an infernal description—some too vile to be described, and others too dreadful to think of. One instrument had "two screws, which are applied to the head in such a manner that the eyes are pressed out of their sockets."

The miserable barber, who suffered as much as any of the unhappy prisoners, was exposed to this agony; and Mr. Pieritz, as usual, destroys our faith by adding that he endured it "till his beard became quite white, whilst a convulsive movement set every limb of his body in tremulous motion."

We need hardly observe that the extorted confessions are not worth an instant's consideration.\* The racked wretches were glad to say any thing to get even a momentary remission of their intolerable sufferings; and some turned Mussulmans to avoid the protraction of their torments.

At Rhodes it is known that similar charges were brought against the Jews, and the English consul is accused of abetting them:—

"The English consul I could not win for the cause of humanity in favour of the afflicted

Jews, because he believed, as he expressly and implicitly told me, that the Jews are in the habit of killing Christians, in order to secure their blood for superstitious purposes. He also believed the Jews of Damascus actually guilty of the late murders; which is the more surprising, for it could not have escaped his observation, that, from the nature of the brutal proceedings adopted towards the accused, and especially from the character of those witnesses examined in his own office, that the Jews could not be otherwise than innocent of the charge brought against them."

The writer, however, assures us that their innocence has been demonstrated.

The remarks which Mr. Salomons appends to Mr. Pieritz's narrative point to the state of the Jews in England, and, while warmly acknowledging their fortunate destiny in participating in the privileges of our free country, he naturally and forcibly advocates the extension to them of every right enjoyed by their fellow-citizens. We entirely agree with him that they have something to be thankful for, and ought to have more—all. Had England been as Syria, the Burking of Edinburgh and London would have gone hard with the Jewish population; but they were never suspected of having any concern in these odious crimes. In the northern capital, to be sure, there are few or no Jews to murder Scotchmen; and, as for making any thing by or out of them otherwise, the children of Israel are too sagacious to try that. In London, the bad among them might be guilty of assassination as of any other mortal offence; but we really believe they have a horror of shedding blood, and would rather cheat and swindle ten thousand persons than slay one!!!

But we can scarcely raise a smile after perusing this lamentable tale. We shall look anxiously for the issue of Sir M. Montefiore's mission; and trust that it will absolve his people of the murder of Padre Thomaso. That those who have been accused of it are not guilty, is perfectly certain,—that, if done, it was unconnected with any religious rite, is equally clear,—but we do earnestly desire to see it proven that no Jewish hand could have shed his blood.

*Taxidermy; with the Biography of Zoologists, and Notices of their Works.* By William Swainson, A.C.G. F.R.S. &c. 12mo. pp. 392. London, 1840. Longman and Co.; Taylor.

IN appearance, as a volume of Lardner's Cabinet Cyclopædia, Scientific or Natural History Series, the present claims no nominal connexion either in sheets or board with the expatriated editor. Wherefore we must take it as a *vol. sole*, having reference, however, to Mr. Swainson's contributions to the work in question, and to be conjoined with these contributions should they be separated from the rest and published distinctly, as has been advantageously done with Mr. Forster's "Biographies of the Civil Wars."

The contents are, Part I., a chapter on the best means of collecting zoological subjects; another on preserving them; a third on forming and arranging them in museums,—in all about 100 pages: and, Part II., the remaining 300 pages, biographical sketches of the principal writers on zoology, and a brief bibliography of the science. The usefulness of the first part, coming, as the methods recommended do, from a person of Mr. Swainson's great practical experience, must be felt even by zoologists of old standing, but is of essential necessity to those who aspire to the delightful pursuit, without

\* Of one of the sufferers the description is almost too ludicrous to be quoted on such a "bloody business." Aslan Farchi, son of the respected rabbi of that name, was apprehended, and, under the dread of torture, confirmed the testimony of Morad Fatali respecting the murder of the monk's servant, Ibrahim. Of him Mr. Pieritz tells us: "His character should be well borne in mind; he is a young man, of about twenty years old; married, but living with his father. He is weak and sickly in constitution, and the butt and joke of the Jews, on account of his notorious childish timidity; which he carries so far as actually to refuse being alone with his wife, and some of the household are required to sleep in the same room." We are assured by a very pretty and respectable Jewess, whom we consulted on the occasion, for the sake of being correct in our Review, that there are few or no Jews in England so timid.

being conversant with the arts by which alone it can be successfully cultivated.

Of a publication of the kind, it will be obvious that no extracts can do more than show very imperfectly the spirit in which it is written, without conveying a notion of its multifarious features. We shall, nevertheless, endeavour to accomplish the former purpose in the best way we can, consistent with brevity. Of the scientific instructions, the following may serve as a sample:—

"Insects can be relaxed at all times, and placed in their natural attitudes, when their members are sufficiently lax. To accomplish this with specimens that have long remained unset, a deep basin, filled to within two inches of its top with wet sand, is provided; the sand is made perfectly smooth, and then covered by one or two pieces of blotting paper sufficient to absorb any water that may remain on the surface; upon this paper the insects are stuck, and the whole are then covered over with three or more folds of wet linen. If the basin is then put into a damp situation, most of the insects will be relaxed in forty-eight hours; but several will require a longer time before all their parts are perfectly pliable. Many persons merely fix the insects upon a piece of cork placed in a pan of water covered over; but this, on many accounts, is objectionable. Small *Co-leoptera* are easily relaxed by immersion in hot water; but those furnished with hair should not be subjected to this method."

"The duration of preserved insects may be affected very materially by anointing each specimen with a little spirits of wine, in which corrosive sublimate has been mixed in the proportion of two drachms and a half to a pint. This liquor should be applied with a camel-hair pencil, sufficient only to moisten the under parts of the head, thorax, and abdomen; as it may have the effect of relaxing the joints, it had better be applied to old insects before they are relaxed, and to those which are fresh, before they are finally deposited in the cabinet. By proper care, insects may be preserved a great number of years. In our collection are several specimens, captured by Bailey the astronomer, and other naturalists, who accompanied Captain Cook during his last voyage."

Again, of the general information:—

"National museums should not only possess types of all the generic forms in the several departments of zoology, but as many of the individual species as possible. The natural productions of the nation and of its colonies should more particularly engage the attention of its curators. Every object should be correctly named, according to the best and most recent authorities. A zoological library should be attached to this portion of the institution, that nature may be studied both by books and specimens. The whole should be under the direction of professors of acknowledged eminence in their respective departments, and open without reserve to the inquiries of the naturalist and the inspection of the public. In this respect the Jardin des Plantes, or the National Museum of France, is a model of perfection. It is worthy of a great and enlightened nation. During the latter part of the last and the beginning of the present centuries, the establishment of national museums has engaged the attention, not only of the different governments in Europe, but even those of America. The most celebrated in the world is that of France; next may be ranked the museums of Berlin, Vienna, Holland, Bavaria, Denmark, and Florence. Science and the arts, so far as public institutions are concerned, have long been dormant

in Naples, Spain, and Portugal. Yet, under the auspices of the late Emperor of Brazil, a national museum has been founded at Rio de Janeiro, and naturalists engaged to collect the productions of that immense and little-known country. Of late years, zoology has made rapid progress in North America. Universities have been founded in all the provinces; professors of natural history and botany appointed to each; and public museums are now considered a necessary part of these establishments. Of the public museums of Great Britain, in respect to zoology, little need be said. In the British Museum there are, it is true, vast numbers of specimens, but the majority are so old and faded that two-thirds might be cast out with much advantage. In shells, we believe, it is very rich; but the whole zoological establishment, when put into comparison with that of France and the great continental nations, is confessedly inferior. The collection of native animals, however, purchased of Colonel Montagu, is very extensive, and in good preservation. The Edinburgh College Museum excites the admiration of all who have visited it, for the beauty and perfection of the specimens, and the neat manner of their arrangement. It is principally composed of the well-known and valuable collection of M. Dufrene, which was offered for sale in this country a few years ago. Its purchase by the Edinburgh College has evinced both judgment and liberality. It was offered to the trustees of the British Museum, but declined. The museum of the Zoological Society is remarkably rich in birds and quadrupeds, but we believe the insects and shells, comparatively, are but few."

From the biographical division we copy the sketch of Dr. William J. Burchell, the African traveller, whom Mr. S. thus describes:—

"One of the most learned and accomplished travellers of any age or country, whether we regard the extent of his acquirements in every branch of physical science, or the range of the countries he has explored. Science will ever regret that one whose powers of mind are so varied, and so universally acknowledged throughout Europe, should have been so signally neglected by his government,—the most thankless and ungrateful one, to unpatronised talent, under Heaven. Having expended large sums in prosecuting his travels in Southern Africa, and bringing home immense collections, astronomical observations, &c., the Prussian government offered him a handsome pension if he would carry all to Berlin, and settle in that city. This he refused, under the vain hope of publishing his discoveries in his own country. Disappointed in this, he again set off for Tropical America, where he travelled for nearly seven years. The fruits of all these labours, however, lie hid in unopened packages, and may probably never see the light until the death of their possessor. A government which bestows honours upon writers of novels, and pensions for licentious ballads, cannot be expected to regard modest worth or unobtrusive talent."

That our author speaks out, and does not stick at pretty strong personal remarks, we need not observe; but, perhaps, the most amusing and piquant illustration of his character is to be found in the auto-biographical sketch of himself, which he has not only included in this portion of his volume, but introduced his publishers to forward on a separate sheet with the subjoined note:—

"Messrs. Longman, Orme, and Co. will feel particularly obliged if the Editor of the

will per-

mit the above Autobiography to appear in his columns at the first suitable opportunity.

"39 Paternoster Row, July 29, 1840."

It is so rare to find publishers taking any care of or interest in the lives of their authors, lack or other, that we should have been glad, for the sake of the novelty of the thing, to have copied the whole of Mr. Swainson's biography so recommended to our notice. But, in the first place, it is too long; and, in the second place, we observe that he is about to emigrate to the other side of the globe, which may partly account for the foregoing request, instead of the generous sympathy to which we were inclined to attribute it. So, under all the circumstances, we must be content with a few bits. From his childhood Mr. Swainson (born in October 1789, of respectable parents in Liverpool) displayed an irresistible bias for the study of zoology. To this he sacrificed a fine situation at home, and, afterwards, another in the commissariat abroad, whence he returned with a *Flora Sicula*, and says:—

"These duties and relaxations continued until the middle of 1815; when my health gradually getting worse, it was deemed necessary by the medical men that I should return to England. I embarked from Palermo, and had the happiness of landing all my collections of nature and art at Liverpool, in the autumn of 1815. I was now only twenty-six; and through the powerful interest of my family connexions (certainly not from my own merit), I had risen to a rank somewhat unusual for so young a man. I liked the service, but my old passion for travelling in tropical countries returned with its original force: I had now to choose, whether I would give up the latter for some new and higher appointment my friends were ready to procure me, or whether I should go upon half pay, and follow my own course. I hesitated not to choose the latter. After living so long upon the Continent, and accustomed to the unsettled life of a soldier, I was struck by what I thought the artificial habits and the luxury of English society. I sighed for my Sicilian cottage; I longed again to ramble over mountains clothed with luxurious plants—to sketch delightful scenery—to rise with the sun, gallop on the sands, climb precipices, and swim in the sea. In place of this, I had to join dinner-parties, drink wines I detested, ride in carriages, dance at balls, and do a hundred other things for which I had neither health nor inclination. Domestic society I truly enjoyed, but that was not sufficient to keep me at home. I had, therefore, no sooner returned to England, than I began laying plans for quitting it."

Mr. S. proceeds to notice his earlier publications, and his happy marriage to Miss Parkes, the only daughter of John Parkes, Esq. of Warwick, whom he has since had the misfortune to lose. He also relates:—

"A vacancy in the British Museum about this time, caused by the deplorable illness of my friend Leach, induced me to apply for the appointment. I produced the highest testimonials from such men as Cuvier, Roscoe, Dr. Rees, Sir James Smith, Dr. Trail, Sir W. J. Hooker, Dr. Scoresby, and numerous others. But I was refused, and a gentleman (I. J. Children, Esq.), who knew nothing of natural history, was appointed chief of the zoological

"On the retirement of this gentleman a few months ago, I again applied for the situation, not from the remotest idea of retaining it, but that by holding it for six months previous to my final departure from England, I might submit to the trustees a total change in the management of the zoological department, and then resign. I was not, however, so far honoured as to receive any notice to my application."

department. As a faithful historian I am bound to mention this fact, without the least unkindly feeling against that individual."

Family circumstances are detailed, and especially the discontinuance of an allowance of 200*l.* a-year from his father, in consequence of his death; and then comes the misery of relying on literature for subsistence, which is thus glossed over:—

"At length, it occurred to me that no profession was more honourable than that of an author; that many of my friends found it a source of profit, no less than of fame; and that I might justly turn to pecuniary account that knowledge, to gain which I had sacrificed so much. One of my friends, accordingly, took an opportunity of mentioning my views to the house of Longman, Orme, Brown, and Co., the first publishers and booksellers in the kingdom; and this led to a connexion which has continued to the present moment. Hitherto I had written for amusement, I was now to write as a professional author."

Poor fellow! no wonder that, after compiling hosts of dictionaries and cyclopedias, the end should be expatriation. His "Circular System" of arranging animals on the principles of their affinities and analogies, and all the labours of many years, could only bring to this felonious conclusion. The "profit" and "fame" to be exhibited in another quarter of the earth are the results of his theories and toils; a lamentable example to all men to remember, that though literature may be a tolerably pleasant cane, it never can be a satisfactory staff. You may flourish it about, but it will not do to lean upon. And be it remembered farther, that Mr. Swainson's productions were of the most marketable and best-paid description. What, then, must be the fate and ultimate condition of the learned and the imaginative, the sons of deep study and elevated genius? When the manufacturer of the utilitarian school and the illustrator of a popular pursuit cannot, by devotedness almost beyond belief, succeed in securing a provision for his family and his own old age in his native land, what is to become of the scholar, the historian, the poet? They must pine in misery and perish in want, until more propitious times and a better system enable them to glorify the age and country in which they live, without starving whilst they breathe, and being buried by the parish from the workhouse in which they die.

With regard to Mr. Swainson, at the close of fifteen years spent in most undeviating toil—*respicere finem*:—

"The gradual loss of nearly half my fortune by the utter failure of two of the Mexican mining companies, once the most promising, would hardly deserve mention, save to warn others against faith in the names and promises of joint-stock companies; and to record that this loss has been recompensed by more fortunate investments. So true it is that an Almighty Providence makes all things to work for good,—'to those who love God.' Far, very far, greater was that trial, laid upon me in 1835, when I became a widower with five children. No husband could have been happier during twelve years. But He who takes away can console. It is to watch over these living testimonies of our love, to preserve them in those simple habits and affectionate feelings, which alone constitute true enjoyment—to teach them from experience that the paths of virtue, founded upon religion, are alone those of happiness,—it is to accomplish such objects that I am about to transplant myself and them to a new soil, in the southern hemisphere.

Should this be carried into execution, the parent trunk will there fall; yet it will be surrounded by scions who may perpetuate its name and lineage. The greater part of my collections, I trust, will be transported to New Zealand, where they may possibly stimulate others to the study of nature, and form the basis of a Zoological Institution. My career as a professional author will soon close. The motto prefixed to this volume conveys the result of my experience. The measure of talents, whether small or great, with which a man is intrusted, is but 'vanity and vexation of spirit,' unless employed to the honour of that Being who has bestowed the gift. Nor can the highest fame, or the greatest prosperity, counterbalance that internal peace which this conviction will alone produce."

The warning is before every author and would-be author of the age; and they may believe that, let them do what they may,

"To this complexion they must come at last."

Like the labouring classes in other occupations, agricultural and manufacturing, they will find that the toil is endless and the wages low;—that if they can live on, and support nature, they need look for no more; for their coveted fame will be a bubble, and their expected profit engulfed by the master manufacturers who employ them. The lion's share belongs to the capitalist, whose credit stands firm; the production and struggle to the ill-requited labourer in the, to him, barren field of literature.

*A Narrative of the Battle of St. Vincent; with Anecdotes of Nelson before and after that Battle.* By Colonel Drinkwater Bethune, F.S.A. author of the "History of the Siege of Gibraltar," &c. 2d edition, 8vo. pp. 97. London, 1840. Saunders and Otley.

DRINKWATER'S "Siege of Gibraltar" renders it unnecessary for us to speak of the literary character of the author; his enjoying the friendship of Nelson makes it equally unnecessary to refer to his personal character and opportunities; and his devoting the profits of the present publication in aid of the subscription to the Nelson monument, in like manner relieves us from any eulogy upon his motives and patriotism. We have pleasure in expressing our private and public gratification on every account.

Forty-three years have elapsed since the *matériel* of this volume was given to the world in the shape of an anonymous pamphlet, and it then attracted very considerable attention. Its author has, however, thought proper to put it into a more permanent form, and authenticate it with his respected name, whilst yet there are those alive who can confirm or contradict its statements. To one of the most eminent of these, Sir George Cockburn, it is dedicated.

With regard to the narrative and diagrams which illustrate it, all we can say as landmen is, that we never before obtained from description so clear an idea of a sea-fight; and we believe it is the opinion of naval officers that it is one of the best accounts of such a battle that ever was penned. Colonel Drinkwater (now Bethune) was at the time a passenger with Sir Gilbert Elliot (returning from the government of Corsica) in the *Lively* frigate; and, in truth, the name of the vessel seems to have communicated itself in spirit to his performance.

The gist of the whole is to shew that Nelson in the *Captain*, 74, by a dashing exploit, not strictly consistent with the discipline of

the service, led chiefly to the victory of St. Vincent; but we shall not, at this date, revive details so much discussed at the time, or enter upon the question whether Sir John Jervis sufficiently marked with honour the deeds of his officers, or felt, perhaps, aggrieved by their being plunged into a certain line of action without his orders. A few anecdotes of the immortal Nelson and Bronte will serve our purpose better, and, we are sure, be more gratifying to our readers. Derived from such a source they may be relied upon as characteristics of the hero of the Nile.

In the *Minerve* frigate, when reconnoitring the Spanish fleet previous to the encounter, the enemy gave him chase, and we are told:—

"Captain Cockburn, who had been taking a view of the chasing enemy, now joined the commodore, and observed that there was no doubt of the headmost ship gaining on the *Minerve*. At this moment dinner was announced, but before Nelson and his guests left the deck, orders were given to set the studding sails. At table I found myself seated next to Lieutenant Hardy, and was congratulating him on his late exchange from being a prisoner of war, when the sudden cry of a 'man overboard,' threw the dinner-party into some disorder. The officers of the ship ran on deck: I, with others, ran to the stern windows to see if any thing could be observed of the unfortunate man; we had scarcely reached them before we noticed the lowering of the jolly boat, in which was my late neighbour Hardy, with a party of sailors; and before many seconds had elapsed, the current of the Straits (which runs strongly to the eastward) had carried the jolly-boat far astern of the frigate, towards the Spanish ships. Of course the first object was to recover, if possible, the fallen man, but he was never seen again. Hardy soon made a signal to that effect, and the man was given up as lost. The attention of every person was now turned to the safety of Hardy and his boat's crew; their situation was extremely perilous, and their danger was every instant increasing from the fast sailing of the headmost ship of the chase, which by this time had approached nearly within gunshot of the *Minerve*. The jolly-boat's crew pulled 'might and main' to regain the frigate, but apparently made little progress against the current of the Straits. At this crisis, Nelson, casting an anxious look at the hazardous situation of Hardy and his companions, exclaimed, 'By G— I'll not lose Hardy! Back the mizen top-sail.' No sooner said than done; the *Minerve*'s progress was retarded, leaving the current to carry her down towards Hardy and his party, who, seeing this spirited manœuvre to save them from returning to their old quarters on board the *Terrible*, naturally redoubled their exertions to rejoin the frigate. To the landsmen on board the *Minerve* an action now appeared to be inevitable; and so, it would appear, thought the enemy, who, surprised and confounded by this daring manœuvre of the commodore (being ignorant of the accident that led to it), must have construed it into a direct challenge. Not conceiving, however, a Spanish ship of the line to be an equal match for a British frigate, with Nelson on board of her, the captain of the *Terrible* suddenly shortened sail, in order to allow his consort to join him, and thus afforded time for the *Minerve* to drop down to the jolly-boat to take out Hardy and the crew; and the moment they were on board the frigate, orders were given again to make sail."

The frigate pushed on, and at sunset lost sight of the Dons; and the author proceeds:—  
 "What course the *Minerve* pursued after nightfall I did not remark. The interesting incidents of the preceding day had afforded matter to occupy our attention; and we landsmen retired to rest, congratulating ourselves on what we could not but feel to have been a fortunate escape. On the removal of the passengers from the *Romulus* into the *Minerve*, at Gibraltar, the crowded state of the latter frigate would not allow of other arrangements than of my having a cot slung alongside of that of the viceroy, in the after-cabin. So situated, I was awakened in the night by the opening of our cabin door, through which I saw, by the light burning in the fore-cabin, some person enter; and on raising myself, I observed that it was Nelson. Seeing me awake, he inquired if Sir Gilbert was asleep, to which I replied in the affirmative. To my inquiry if any thing new had occurred, the commodore approached my cot, and told me that he had every reason to believe that the *Minerve* was at that very moment in the midst of the Spanish fleet. From their signals, he said that he knew it was not that of Sir John Jervis; that the night was foggy; that the *Minerve* was then between two very large ships within hail of each of them, and others were near on all sides; that he and Captain Cockburn had little doubt of the strangers being Spanish; that Captain Cockburn and his officers were all on the alert; and every cautionary direction given, particularly to watch the movements of the strange ships, and do as they did, &c. &c. When Nelson had finished these details, I could not help observing that this was a verifying of the old adage, 'out of the frying-pan into the fire,' alluding to our escape of the day before. The commodore allowed that we had got into something like a scrape, but added, that it was quite unavoidable, on account of the night and fog; nevertheless, he thought that, with address, we might extricate ourselves. He remained for some time, making various observations on these strange ships, and then continued to the following effect:—  
 "If they did not belong to the Spanish grand fleet, he thought they must be a convoy, or detached squadron, proceeding to the West Indies (of which, it appears, he had received some previous information), and that, if the latter were the fact, they must be destined to strengthen the Spanish naval force in that quarter; in which case, it would be of the first moment that the British commander on the West India station should be early apprised of these movements of the enemy; a duty, he conceived, he was called upon to undertake, instead of joining Sir John Jervis. On hearing Nelson express these opinions, I could not avoid saying, 'But what will you do with Sir Gilbert Elliot? It is of the greatest importance, owing to his recent interviews with the Italian states, that he should not only see Sir John Jervis, but reach England with the least possible delay.'—The commodore admitted the force of these remarks; but the other point, in his judgment, outweighed every other consideration: 'But,' said he, breaking off, 'I'll go on deck, and see how things are going on.'  
 Nelson again appeared, and observed that the strange ships having been seen to tack, or wear, I forget which, the *Minerve* had followed their example; and that after having so done, directions were given for the frigate's edging away insensibly, and that Captain Cockburn and himself were inclined to think the *Minerve* was getting out of the thick

of the fleet, and would soon cease to be embarrassed with them. After this gratifying communication, Nelson repeated his former opinions and intentions, and we were earnestly discussing the subject, when Sir G. Elliot was awakened by our conversation. He was then made acquainted with all that had been passing, with the commodore's suspicions regarding the strange ships, and with his conditional plan to proceed immediately to the West Indies. After some general observations, and repeating his determination, if necessary, of carrying us to the West Indies, the commodore left the cabin again, and soon returned with the agreeable intelligence that the *Minerve* had, he trusted, got quit of the strange fleet. 'We propose,' added Nelson, 'to stand on our present course during the night: at daybreak, we shall take another direction, which will enable us to fall in with the strange ships again, should they be on their way to the westward. I shall then ascertain the force of the convoy, or of the squadron, if it consist only of men-of-war; and should it then appear advisable, I shall start for the West Indies. Should we not fall in with any strange ships in the course which the *Minerve* will steer after daybreak, my conclusion is, that the fleet we have fallen in with must be the grand fleet of Spain; it will be then of the first importance that I join Sir John Jervis as soon as possible, in order that he may be informed of the enemy's fleet not having been yet able to get into Cadiz, and of their state on quitting Carthage, of which Lieutenants Culverhouse and Hardy are able to give the latest and most minute accounts.' The commodore then left Sir Gilbert Elliot and me to our repose, if that were possible.  
 On joining Sir John Jervis's fleet, the commodore, accompanied by the viceroy, repaired on board the flag-ship, the *Victory*,—the latter to confer with the admiral on political matters, the former to report in what manner he had executed his last orders, and to communicate all the naval intelligence he had gleaned in his late cruise, particularly of his being chased by the enemy on leaving Gibraltar, and of his very recent nightly rencontre with the Spanish grand fleet."

After the battle, Sir G. Elliot proceeded on board Sir J. Jervis's ship to congratulate him; and, meanwhile, Nelson boarded the *Lively*, where Colonel Drinkwater was, who says:—

"In compliance with my request, he gave me the details of his boarding the *St. Nicholas*, and afterwards the *St. Josef*, which are given in the original Narrative, adding the following particulars:—'I saw (and then he spoke with increased animation) that from the disabled state of the Captain, and the effective attack of the approaching British ships, I was likely to have my beaten opponent taken from me; I therefore decided to board the *St. Nicholas*, which I had chiefly fought, and considered to be my prize. Orders were given to lay the Captain aboard of her: the spritsail-yard passed into her mizen rigging. Lieutenant Berry with the ship's boarders, and Captain Pearson with the 69th regiment (acting as marines on board the Captain), soon got possession of the enemy's ship. Assisted by one of the sailors, I got from the fore-chains into the quarter-gallery through the window, and thence through the cabin to the quarter-deck, where I found my gallant friends already triumphant.' He then gave me the details of the extraordinary circumstances attending his afterwards getting possession of the *St. Josef*.\* Of course,

my high admiration of his conduct was often expressed, as he proceeded, in giving me these very interesting particulars, of which I made pencil notes on a scrap of paper I found at hand; and these communications from my gallant friend were the more valuable, from their being made before he had seen any other officer of the fleet, except Captain G. Martin of the *Irresistible*, to which ship he had repaired for refreshment and repose, until the Captain, his own ship, almost a wreck in her rigging, &c., could be put into manageable order. Towards the conclusion of this interesting interview I repeated my cordial felicitations at his personal safety, after such very perilous achievements. I then adverted to the honours that must attend such distinguished services. 'The admiral,' I observed, 'of course will be made a peer, and his seconds in command noticed accordingly. As for you, commodore,' I continued, 'they will make you a baronet.' The word was scarcely uttered, when placing his hand on my arm, and looking me most expressively in the face, he said, 'No, no; if they want to mark my services, it must not be in that manner.'—'Oh!' said I, interrupting him, 'you wish to be made a Knight of the Bath;' for I could not imagine that his ambition, at that time, led him to expect a peerage. My supposition proved to be correct, for he instantly answered me, 'Yes; if my services have been of any value, let them be noticed in a way that the public may know me—or them.' I cannot distinctly remember which of these terms was used, but, from his manner, I could have no doubt of his meaning, that he wished to bear about his person some honorary distinction, to attract the public eye, and mark his professional services. This casual discovery of Nelson's peculiar feelings on this subject was not forgotten, or without consequences. As was expected, his majesty, in reward for Nelson's distinguished conduct, had intended to create him a baronet. Sir Gilbert Elliot, who took a warm interest in Nelson's welfare, called on me in London to impart this news; when I made known to him the purport of my conversation on board the *Lively*, and suggested that it was advisable to make this circumstance known to the government. Sir Gilbert saw the matter in the same light. He lost no time in communicating what had passed on this subject to some member of the cabinet—Lord Spencer, I believe, who was then at the head of the Admiralty Board; and his lordship took steps to meet Nelson's wishes in the manner most likely to gratify his feelings, by obtaining for him, instead of a baronetcy, the order of the Bath, although, for that purpose, it was necessary to make him an extra knight.

circumstances of the Captain and the *San Josef*. About thirty years since both vessels were in Plymouth Harbour; the Captain laid up in ordinary as a receiving hulk, and the *San Josef* alongside of her fitting for sea. About midnight the inhabitants of the town were alarmed by the ringing of the dockyard bell and the cry of "Fire! fire!" from the watchmen; and, in a very short time, every avenue leading to a view of that part of Harbourside was crowded with spectators. The sight presented to them, upon the whole, was truly awful, and one which, when once seen, it is not easy to forget; yet it was very grand to see the immense body of flame rushing through the portholes, and illuminating the counties of Devon and Cornwall for miles round. As there appeared to be considerable danger of the Captain drifting among the other vessels in the harbour, many of which had their powder on board, the order was given to the *San Josef* to fire into; and sink, her former antagonist; which she did with such right good will, that in less than an hour from the cannonading the Captain sunk, sending up in her descent, as if in revenge, such a volume of thick, black smoke, that the signal lights of the vessels near her were completely obscured. This was the end of the Captain, 74; the *San Josef* (now of 110 guns) is a guard-ship in Plymouth Harbour, and looks like a terrific monster over-awing the natives of Cornubia.—Ed. L. G.

\* An eye-witness communicates a sad change in the

What I had noticed in the above interview with Nelson, agreed perfectly with the opinion I formed from all I observed during our subsequent acquaintance. The attainment of public honours, and an ambition to be distinguished above his fellows, were his master-passions. His conduct was constantly actuated by these predominant feelings. It will account for the personal gratification he invariably evinced at receiving the many decorative honours presented to him by almost every power in Europe in amity with Great Britain; but, in reference to such distinctions, it may be observed, that if such pre-eminent talents as those of this most extraordinary man could be so cheaply purchased, the English nation, and indeed Europe, situated as she then was, had only to approve and applaud his moderation.†

"I cannot (thus the interesting narrative ends) better conclude these anecdotes than by recording a conversation which I had with Nelson on the very next occasion of my seeing him. After the battle of St. Vincent, it is well known that he was actively employed in the bombardment of Cadiz, and subsequently detached on a special service to Santa Cruz, in the island of Teneriffe, where he met with the injury which caused him the loss of his right arm. He had returned to England, and was still suffering severely from the effects of the amputation when I was allowed to see him. This was just before the victory of Camperdown, and intelligence of interest was hourly expected to arrive from Admiral Duncan's fleet. One of the first questions which Nelson put to me was whether I had been at the Admiralty. I told him there was a rumour that the British fleet had been seen engaged with that of Holland. He started up in his peculiar, energetic manner, notwithstanding Lady Nelson's attempts to quiet him, and, stretching out his unwounded arm—'Drinkwater,' said he, 'I would give this other arm to be with Duncan at this moment:' so unconquerable was the spirit of the man, and so intense his eagerness to give every instant of his life to the service of his country."

*Turkey and the Turks: being the Present State of the Ottoman Empire.* By John Reid, author of "Bibliotheca Scotæ-Celticæ," "Sketches of Turkey," &c. 8vo. pp. 310. London, 1840. Tyas.

The present state of Turkey is of so much public interest that we take up every publication upon it with alacrity, and from all we are pretty sure to gather some information. Mr. Reid having been some time in the country, we have looked to him for notices of manners rather than for broad national views; from

which, indeed, we were repelled by the character of his own introductory remarks. On this ground we shall be content with his general opinion, which is thus expressed:—

"During the time this volume has been in the press, several changes have taken place in the Turkish government, all of them tending to confirm me in the opinion that Russia is the only one that is playing her game in the East without having her plans and calculations upset. Turkey is tottering, Austria is trembling, Egypt is between two fires, France is insincere, and England is humbugged."

And with regard to his work and its style, he adds in a way sufficiently illustrative:—

"If my book is abused, I shall have the consolation of knowing that it is abused for its pure, unvarnished truth; and if my style is condemned for being Scotch, I reply, the critic has no more right to call Scotticisms vulgarisms, when compared with Anglicisms, than he has to place the broad-shouldered and well-proportioned Highlander beside the effeminate and padded metropolitan exquisite, and then call the hardy child of the mountain vulgarly made."

There is only one step that can save Turkey from the fate of Poland, and that is one that Sultan Mahmoud would have taken long ago if he had been sure of the support promised, but not furnished, by England—the entire emancipation of the Christians, and placing the subjects of the Porte, of whatever creed, on the same footing as regarded their civil rights; at the same time allowing the paths in the army, navy, and civil service, to be equally open to all. The late sultan was well aware of the importance of such a step, as also of the opposition it would meet with from the conservative class of Turks; but he did not on that account abandon the idea, and if any one studies closely the character of that prince, and his local administration at Constantinople, he will be convinced that it was his intention, at no distant period, to carry it into effect: nay, it was even said by some of the Armenians employed under the government, and who knew pretty well what was going on, that instructions were given to Reschid Pasha, on starting for Western Europe, to ascertain how far the cabinets of France and England would, by an armed intervention, support the sultan in the event of his emancipating the Christians."

A retrospect of the ancient history of Turkey, accounts of its provinces, pashaliks, &c. &c., need not detain us from such a volume; and even the personal observations of the writer may have due justice done them, and be summarily dismissed, with the following extracts. The first two shew Mr. Reid's predilections for phrenology:—

"For several years the Turks do not seem to have inherited any of the ancient roving, active, and warlike spirit of their fathers. It is remarked by phrenologists, that, as a family or nation becomes higher educated and more civilised, the brain of the younger generation is brought into the world in a higher state of natural capability than where education and civilisation does not exist to the same degree; and, that this is a good doctrine, I think I have seen enough of human nature to believe. The Turks, after they conquered a rich and fertile country, abandoned in a great measure their predatory habits; preferring ease and idleness in the enjoyment of their conquests, they sat quietly down and smoked their pipes; and, after their arms began to experience reverses, the abandonment to habits of ease and idleness became more general, until it had

seized upon every one, of whatever rank, professing the creed of Mahomet. This idle feeling of quietly sitting down and allowing the events of the world to pass along, believing that all that takes place was predestinated, and could not have been changed by any act of the believer, is in exact consonance with the faith of the Prophet; and with sloth, consequently, the Turks increased in apathy and indolence every generation, until, at the present day, they are farther sunk in the scale of humanity than the Hottentots of Africa or the aborigines of New Zealand."

The number of Armenians in Turkey has been variously estimated; but from the report of a very intelligent Armenian merchant, corroborated by several Jews and Greeks, I think it may be fairly stated at one million five hundred thousand: of which number at least two hundred thousand Heretics, and four thousand Catholics, reside in Constantinople. There is, probably, not in the world any other instance of a nation so fierce, so proud, and so warlike, becoming so subdued and peaceable as the Armenians. The Jews in the East are looked upon, and look upon themselves, as strangers; the Greeks are treated as slaves, and feared on account of their unbroken spirit, which is continually breaking forth in acts of retaliation; while the Armenian seems to have lost all feeling of political independence, and appears satisfied to remain a contented subject of the last power that conquered him. The study of the Armenian character is well worthy the attention of the physiognomist and phrenologist, as there is a remarkable form to be observed in their head and face; and there must be an equally remarkable conformation of the brain in a people who, from being the most warlike of the ancient Asiatics, have become the most persevering, industrious, and respected merchants scattered over the East."

Upon the Armenians Mr. Reid dilates; and they seem to be his favourites, in opposition to Turks and Greeks, of whom he speaks most disparagingly, thus:—

"During my residence with the Armenians I was present at births, baptisms, marriages, and deaths. The birth is a mere matter of moonshine: the Armenian female never gives up her household duties, nor alters her usual merry, laughing behaviour, even on the eve of her confinement; and it is usual for her to appear in the family-circle the third day after child-bearing. The baptism is a much more serious affair than the birth, for the priest then attends with his church attendants, crosses, and other emblems of office. The room is illuminated with wax tapers; rosolio and other comforts are handed round the company; a long exordium is pronounced in Armenian if in a Heretic family, or Latin if in a Catholic family; the back of the child's neck, the forehead, and behind the ears, are anointed with some sacred unguent; a few drops of holy water are sprinkled upon it; the priest says another prayer, drinks another glass of comfort, grasps the money bag, which is laid out in an embroidered basket awaiting his seizure, and runs away. The young Armenian girls now fill the mouths and pockets of the men with sweetmeats, and the affair is considered settled satisfactorily and respectably. The marriage ceremony is tedious and ridiculous—too tedious for my pages, and too ridiculous for belief. Suffice it to say that, although the Armenian youth may freely mix in the society of Armenian girls, yet it would be considered the height of indelicacy for him to have seen his wife previous to marriage: this part of the arrange-

† "But how short-sighted we mortals are! These decorative honours, of which Commodore Nelson was so proud as even not to lay them aside in moments of active hostility, were, no doubt, the cause of his death. Lord Nelson was covered with decorations on the day of the battle of Trafalgar, and thus became an object for an humble sharp-shooter to mark out, and, by a fatal rifle-ball, to deprive his country of one of its most distinguished and fortunate commanders. Relating, not long ago, the above anecdote to an acquaintance, he told me that his family, whilst residing in the neighbourhood of Paris, after the general peace of 1815, employed a French artificer who was on board the French ship, the *Rédoubtable*, in the battle of Trafalgar. This man professed himself to be an intimate friend of the man who, from that ship, killed Lord Nelson, and who was then living in Paris. According to his account, the attention of his shipmate had been attracted, during the battle, to an officer in the Victory, whom, from the decorations he wore, he suspected to be the British admiral. Under this impression, the man obtained four bull-cartridges, with which, and his rifle, he went aloft, saying to his companions—'Si je ne le tue pas de ces trois, je me brûle la cervelle avec la quatrième.' If this man's story is to be believed, the report of some officer on board the Victory having killed the man who shot Nelson, must be unfounded."

ment being entirely managed by the parents or guardians. I recollect once asking my friend Gabriel when he was going to get married; he spoke a little English, and replied, 'Mother is looking out a wife for me, and when she finds one that pleases her and my aunts, then the young lady's father will wait upon my father, and satisfactorily arrange it.'"

Of the 18,000 Europeans in Turkey, or rather those in Constantinople, Mr. Reid draws a not very flattering picture; for he tells us:—

"Commendatory remarks only apply to a very small portion of them; for the mass of the Franks at Constantinople, and other parts of Turkey, are the most out-and-out rogues, thieves, assassins, gamblers, blacklegs, and villains, that ever existed. Pera has been known for centuries to be the head-quarters of intrigue and villany, and worthily is it entitled to the distinction; for neither London nor Paris is able to produce the same comparative number of unhung ruffians that it can do. It received a very correct designation from one of the British ambassadors, who, writing home to the court of St. James, called it 'the refuge of the outcasts of Bedlam and Newgate, making ready for a residence below;' and I know that it is common enough, on the arrival of any stranger, to hear remarked 'that he must have killed his father, or done some other crime of equal magnitude, or he would not have thought of coming to Constantinople.' After residing in Pera for a short time, any person who has common observation will not fail to notice the immense number of idlers that are continually lounging along the street, or standing in the doors of the various wine shops and cafés; and he will wonder what profession these men follow, as they are too well dressed to be tradesmen, and many of them rather shabby to be called gentlemen. His curiosity will, however, likely remain ungratified until he has become better acquainted with the place and its doings, when he will learn that these worthies are *chevaliers d'industrie*, of which there are more than one thousand in Pera. These men are principally Italians and Greeks from the islands, towns, and cities of the Mediterranean, who are forced from home by the force of circumstances or inclinations to pick up a living as they best can, and fly to Constantinople with the same instinct as the vultures fly to the battle-field, well knowing that where there is so much malversation and oppression there will be plenty of plunder. The *chevaliers d'industrie* of Pera are a set whose faces are continually changing; yet, as a class, they never lose their identity. The period of the year when they most abound is previous to the commencement of the carnival. At this time they have, generally speaking, a very seedy and disreputable appearance; but, after the carnival has advanced a few days, they seem, like the caterpillar, suddenly to change their skin, for their faces become cleaner, their beards better shaved, their moustachios more daintily trimmed, and their toggery of a more slap-up kind: these changes are the effects of their success at the carnival; indeed, it is looked forward to every year by these swindlers as a sure means of renovating their fortune and costume. The great source of revenue to these men at this time is gambling, to which the Christians of all nations in Constantinople are notoriously addicted during the carnival; and it is astonishing how, night after night, men will suffer themselves to be deprived of their money, when the chances are so obviously against them as they are at the faro, played by these sharpers

in the different gambling-houses. During the carnival I made the round of these houses almost every night, and always found the gambling-room filled to suffocation, with about equal proportions of sharps and flats, while I knew of only one bank during the six weeks that was put *hors de combat*; and this was said to have been effected, not by the ordinary run of the game, but through a conspiracy planned and executed by some brother chevaliers. After the carnival many of these worthies depart, but where they go to no one knows. I have been told, however, by a person who had lived many years in Pera; that as certain as the carnival came, there appeared many a well-known face that had been absent for ten months. The ordinary members of this migratory class may be seen every day in the week, from sunrise to sunset, lounging about the street and in doorways, looking out for whom they can devour, or cheating (if they can) at dominoes or billiards in the cafés; but sunset is the best time to meet the pure, unmitigated members; and if any person will (without his purse) walk into one after another of the four cafés at the north end of Strada Franca, and the two in Chamal bashi, I will promise him that he will find a collection of unhung ruffians, able to stand comparison with any number of villains and assassins in the world; men to whom the knife is familiar, and who have obtained a scientific proficiency in the art of appropriation, perfectly unknown to those amiable creatures in this country vulgarly called thieves. The Maltese, who occupy Galeta at night, but perambulate Pera during the day, have there, as they have every where else, a notoriously bad character; and there is scarcely a robbery or riot in which they have not an active share. The Maltese are easily known by their swarthy features and sailor-looking appearance, but they are rarely able to dress so as to become gentlemen swindlers; consequently their robberies are of a different sort from those of the chevaliers, so honourably mentioned in a former paragraph. The chevalier would scorn to take any thing save money, but the Maltese considers all fish that comes to his net, and will take any thing he can pounce upon, from a paving-stone to a cigar; and as sure as you see two Maltese hawking hams, potatoes, herrings, cheese, or any thing else about the street, you may be as certain the articles never voluntarily parted from their former owner. The Maltese and Ionian, or British Greeks, have, in Constantinople, by their conduct, so depreciated the British name, that if a man, in talking with a native, calls himself a Briton, he is immediately asked if he is from the British country, or from the Mediterranean; and I am certain the British consul has his time more occupied, and his patience more tried, by these good-for-nothing Maltese and Ionians, than it would be by ten times the number of real British subjects."

The Turkish funerals afford a fair specimen of national customs. They are rarely witnessed, but Mr. R. says:—

"I was coming with a friend from the theatre, at sunset, when we were met by four men carrying a long chest of white wood, having a bevelled top, without any cloth covering. The coffin was supported by two bars of wood, which appeared fixed to the bottom of it, by means of which it was borne on the shoulders of the four men, who trotted along (they did not walk) at a very smart pace, in the direction of the large burial-ground; there were apparently no friends nor mourners to perform the last sad duty; the body had been intrusted

to four common porters, who seemed determined to get through their job with all possible despatch. A few weeks after this time, chancing to be at Stamboul about sunrise, I saw what was apparently a coffin of the same structure as the former, but having a green turban on the top of it, borne along on the shoulders of four men at a brisk trot; there were, besides, one or two assistants trudging behind; but ever and anon, as the coffin passed the doors of the various houses and shops, a Turk would sally out and relieve one of the bearers, who in his turn would be relieved by the next pious Mussulman. These changes of bearers were made so frequently, that I do not imagine any man had to run one hundred yards, as the whole four were certain to be changed once, if not oftener, during that distance; for the Turks believe that to carry a dead body forty paces expiates one sin; the changes, too, were always made without impeding the onward course of the body, which continued to move forward even in the act of changing. I wished much to have followed the corpse, and seen the last act, but the speed at which the bearers were going, and the uncertainty as to the distance, deterred me. It was not until some months after this time that I had an opportunity of seeing another burial. In the beginning of winter, crossing the little burial-ground in Pera, I saw the usual complement of four men, trudging on towards where were a crowd of Turks in the burial-ground; I directed my course thither, and arrived just as the cortège reached the group. The coffin, which appeared about four feet long, contained, I knew, on account of its having no turban on it, a female. The crowd of Turks seemed to be the relations and friends, who had come there to look out for a grave; they had just found a suitable place, and the gravedigger, having measured the coffin with his wooden shovel, prepared to dig a trench of about three feet deep at the one end, and two and a half feet at the other: this being done, a cut was made with a saw in the foot of the coffin, and it was lifted into the grave; it did not rest horizontally, however, as the head was considerably higher than the feet, which caused the body to recline with its face looking towards the east. There appeared no priests, no ceremony, no grief; in fact, it was one of the most ordinarily treated affairs I ever saw. I was told two or three times to go away, as I was not a Mussulman; but I professed not to understand what was said to me, and remained. After the body had been deposited, strong short wooden planks were fixed crossways over the coffin, and the remainder, of from twelve to eighteen inches, was filled up with the earth, when the company walked away, with as little apparent concern as if they had been burying a dog. The fourth funeral that I saw was conducted exactly in the same manner, only there was a scarlet cloth, fringed with gold lace, thrown over the coffin, which was not taken off until it was about to be consigned to the grave. When the grave was dug, the coffin was laid across it, and a cut made with a saw on the lid at the bottom, and then lowered down; it was then battened over with short strong boards, and filled up with earth, the parties manifesting the utmost unconcern all the time. The making a cut with a saw across the lid of the coffin, a Turk told me, was to allow the angel or good spirit to visit the dead; and the battening the coffin down with strong boards, to prevent the dogs getting at the body, and devouring it. Of the certainty of the efficacy of the first, every one may form his own judgment;

but, as regards the second, it is often useless, as the dogs frequently manage to get at the body."

And here an end.

*Standard Novels, No. LXXX.: Tynney Hall.*  
By Thomas Hood. Revised and Corrected by the Author. 12mo. pp. 440. 1840.  
London, Bentley; Edinburgh, Bell and Bradfute; Dublin, Cumming.

Who can introduce Thomas Hood so well as he can introduce himself? We will not try; but let him make his bow in the Preface to this republication, which adds a new attraction to Bentley's *Standard Novels*.

"It is now above six years since the present work was first issued—a lapse of time often sufficient to make a novelty of a modern novel. Indeed, during the interval *Tynney Hall* has been as much retired from the stage as Mr. Charles Kemble, although destined, like that gentleman, to make an unexpected reappearance. *Tynney Hall* was the first attempt of the author in what some military writer has called the 'three-volley line,' from the number of tomes assigned to such performances. There was no popular predecessor, therefore, to bespeak for it a public welcome; but in the absence of any particular expectations elsewhere, a certain degree of local interest was excited in favour of the book in the county of Essex,—an interest curiously illustrative of the common relish for a condiment which is often looked for, and is sometimes found in a novel. It pleased some of those ingenious persons who pique themselves on 'putting this and that together,' to discover a wonderful resemblance in *Tynney Hall* to *Tynney Long*; and to associate the author's then residence, Lake House, with a celebrated mansion formerly standing in the vicinity. From these premises it was inferred that, as sundry structures had been indebted for their building materials to the wreck of Wanstead House, even so the private histories of the Wellesley and Long families had furnished matter for the novel. Some domestic secrets, whether overheard by the rooks in their nests, or underheard by the rabbits in their burrows, or repeated by the echo in the Park, were supposed to be in the possession of the author, who was conceived to be equally incapable of retaining them in his own bosom. Accordingly, not a few copies travelled eastward, through Stratford-le-Bow, but, of course, to the signal discomfiture of the speculators, who must have been infinitely puzzled to identify the fictitious characters with the real personages. One of the conjectures which transpired was quite as wild as the coney in Wanstead Park, or the heron on its island. The truth is, the figures were not drawn, after the Royal Academy fashion, from living models. My friends and acquaintance will forgive me for saying that none of them had character enough—in the artistic sense of the word—to make good pen-and-ink portraits. Indeed, it has been my bad fortune through life (for a novelist) to know intimately but one original; and his originality consisted in having stockings made for him, expressly, with a separate stall for each of the toes. Of the reception of my first essay in the 'three-volley line,' there was no reason to complain. The reviewers were, generally, kind and indulgent enough to have induced another attempt. Their strictures were mostly judicious, and were properly received with more patience than Sir Fretful Plagiarism exhibited towards his critic, and with far greater respect than Squire Western shewed to the lectures of his she-

couns. There was, however, one accusation made by a monthly censor too serious to be passed over, being no less than a charge of wilfully and wickedly misrepresenting the laws and their administration in my native country. To aggravate this grave offence, it was boldly declared, in defiance of the 'Law List,' that 'Hood was an attorney,' and therefore guilty, at least, of gross ignorance in matters 'strictly appertaining to his own profession.' So far from this being the case, Hood never had even 'a fool for his client;' and is so little of an attorney, that, for all he knows from any practical acquaintance with them, the Chancery Rolls, hot and buttered, may be as good to eat, and as bad to digest, as those of any other batch. His judicial errors, therefore, were venial, and would have lain lightly on his conscience without any other quietus, especially remembering Shakspeare's Master Shallow, and the pictures that Fielding—himself a magistrate, and Sir Walter Scott—a barrister, have drawn of the profession and its professors, and particularly of country gentlemen of the quorum. But the fact really is, that through a natural misgiving on the part of the author, the MS. was actually submitted to a legal friend, who deliberately pronounced that the law of the book was quite bad enough to be good enough for a rural justice. 'Besides,' he said, 'it had not yet been ruled that the Laws of Fiction were subject to the Fictions of the Law.' Since that time, it has been my lot to become more intimate with the civil practice of the blind woman with the sword and scales: and with much the same success as Bunyan's Pilgrim, who was recommended to Mr. Legality, and discovered him to be a cheat, and of little help to a Christian in trouble. In spite, then, of my censor, I have refrained from correcting any legal discrepancies in the present impression, being persuaded by experience that the laws are as liable to breakage as the frailest china—as often broken as the commonest crockery—and as frequently chipped, cracked, and shattered, as our jugs and mugs, by the very persons appointed to take charge of the brittle commodities. To mention a more desirable alteration in the course of the history, it would have given me great pleasure if there were any precedent for such revivals, to have revoked the miserable fate of one of the characters—in deference to the opinion of one of the best and kindest of critics, C. Lamb—viz. that 'Luckless Joe should not have been killed—his Fates were teazers, not absolute inexorable Clotho's'—the justice of which sentence is fully acknowledged. But alas! even the agents of the Royal Humane Society have failed hitherto in recalling a spirit crushed out of its body by a heavy wagon: a decided catastrophe, which leaves nothing to be done but to reprimand Peter Bell the wagoner, and levy a dead-end on the wheel. Finally, an objection of a serious nature has been urged against the book by critics of the fairer sex. A certain naval officer of a bad figure was once pointed out in company to a lady, as a lieutenant just made—'And not well made either,' was the feminine remark. The same fault has been made with the love-making in this novel, and it has even been hinted, that in his next work of the kind the author ought to introduce none but married people. But in reality, the sentimental part of the passion was purposely shirked; not that I was exactly in the predicament of the innocent Adonis,

'Quoth he, I know not Love,  
Unless it be a boar, and then I chase it.'

but because that, to my taste, with very rare exceptions, Love reads as badly in prose as Piety in verse. To be candid, the perusal of what is termed religious poetry always exercises a deadening influence, rather than otherwise, on my devotional feelings; and we all know the effect of reading even genuine love-letters in a court of justice—that the tenderest effusions of the tenderest of passions, written in the softest of hours with the softest of pens, seldom fail to elicit a roar of laughter, from the bar to the bench. In short, rather than risk that my lovers should say too much, I have made them say too little—but it was erring on the safe side; and, moreover, a great deal of love may be made in one word: for example, when Charlotte laid her hand upon Werter's arm, and said 'Klopstock!' And now, in the very words of the hero of the novel just alluded to, 'Adieu! I am going to put an end to all this.' Should fortune be propitious, the reader may some day be troubled with a work of a like class from the same hand. And it is to be hoped a better one, or six years of life and its vicissitudes—with food and leisure for reflection—have been passed in vain. The name and nature of the future novel must remain for the present a mystery. All that can be promised is, that it shall not be in three volumes, unless the story should require it—a forbearance of some merit from an author who has been sojourning in a land where literary men are prone to write libraries. In the meantime, may *Tynney Hall* obtain many fresh readers, and may the old ones find the text quite as new to them as it was to myself in going again through the proofs. T. H."

"London, July 1840."

*Low's Illustrations of the Breeds of our Domestic Animals.* Part IV. London, 1840.  
Longman and Co.

AFTER our notices of the three preceding parts of this work, it would be an error to say that the present part has exceeded our expectations: to say that it has fulfilled them is as high a praise as could be bestowed on a publication of the kind, combining beauty and interest of illustration with utility and importance in matter. There is no class of the community unconcerned in such a production; but to the landowner, agriculturist, breeder, grazier, and butcher, it is particularly valuable. The increase of wholesome animal food and the reduction of expense are great elements of national prosperity, and when we see the investigation of these topics united to improvements at once ornamental and practical, and accompanied by admirable pictures of art, as in the case of Mr. Low's Series, we cannot too much approve of the design and execution.

The part before us is devoted to the Ox (the wild or white forest breed having been described in the first part), which is divided into three groups, viz. the Blountine, the Bubaline, and the Taurine; otherwise the bisons, buffaloes, and the different races of the ox which form the great family of the bovidæ. Into the accounts of these, their history and habitats, it is unnecessary for us to follow our author; suffice it to say, that the varieties of the former two afford curious particulars in several portions of the earth where they range, or have been subdued by man.

The domestic ox Mr. Low seems inclined to derive from the urus, and that the large fossil bones now and then discovered in Britain and Ireland might belong to the progenitors of our modern breed, degenerated and reduced in

bulk by a change of food and habits. On behalf of the animal he writes feelingly, and contends that it is not the dull and apathetic creature so generally supposed. Its mode of life and treatment do not tend to develop its qualities, but a remarkable instance is quoted from Latrobe to shew that it can be keenly sensible of distinction and reward. No wonder that, in the same page, their friend raises his voice against the barbarous practice of bull-baiting.

In this country we possess two general classes of breeds—those adapted to mountainous and less fertile districts, and those proper for plains and more luxuriant pastures. The Galloway, Angus, and North Devon, are considered as intermediate breeds. There are other peculiar and artificial breeds, but we must leave their specification to Mr. Low's volume, and conclude by stating that the coloured specimens are as perfect and picturesque as can be fancied. They consist of a cow of the Zetland breed (originally Norwegian); a red cow of the Kerry breed (belonging to the Earl of Clare), a most productive milker, and invaluable for the Irish peasantry; a polled Angus bull, quite black; and a heifer and bull of the Galloway breed, in which neither male nor female are gifted with horns. About 20,000 of these are annually sent to England and sold in Smithfield; so that when we in Town are eating beef, we are often subsisting upon Galloways, like Mr. Ducrow!

*The Works of Henry Fielding, Complete in One Volume.* With Memoir of the Author by Thomas Roscoe. 8vo. double cols. pp. 1116. 1840. London: Washbourne; Bohn; Scott, Webster, and Geary; Lewis; Chidley; and Gilling. Glasgow: Griffin and Co.

THERE are phases in every sort of literature: the olden folios of romantic fiction were followed by the voluminous, rather metaphysical, developments of sentiment, and these succeeded by pictures of life and manners; in the which line who can be compared with Henry Fielding, the author of "Tom Jones," "Amelia," and "Joseph Andrews?" But since his age and the age of Smollett (a coarser, but hardly less potent expositor in the same field), other schools arose; the supernatural romance, the scenic and descriptive, the fashionable and personal, till at length the wizard Scott appeared with the national and historical. His success obscured all the rest; and it is, therefore, a gratification to us to see a preceding great master and painter of human nature reproduced in a manner which is calculated to renovate the public acquaintance with his admirable delineations. Of his "Jonathan Wild" we are almost afraid to say any thing, for we live in a period when to be guilty of painting guilt is held to be much worse than being guilty of guilt itself. Fielding, to be sure, drew a moral from the crimes he portrayed; but has not the author of "Paul Clifford" done the same? and yet has not he been abused without stint for his low and flash characters? As for poor Ainsworth, with

\* The volume of Sir E. L. Bulwer's works just published; of which he truly says, in a brief preface:—"Without pausing to inquire what realm of manners, or what order of crime and sorrow, are open to art, and capable of administering to the proper ends of fiction, I may be permitted to observe, that the present subject was selected, and the Novel written, with a twofold object: First, to draw attention to two errors in our penal institutions, viz. a vicious Prison-discipline and a sanguinary Criminal Code,—the habit of first corrupting the boy by the very punishment that ought to redeem him, and then hanging the man, at the first occasion, as the easiest way of getting rid of our own blunders. Between the example of crime which the tyro learns from the felons in the

his pal Jack Sheppard, there is no apology for him. Sheriff Evans will hang him without trial on the confessions of the truthful Courvoisier; and his associates in crime, George Cruikshank, *alias* Copper-George, *alias* Gallowoodcut, an offender of the most designing character, and Mrs. Keeley, *alias* Genuine Jack of the Adelphi, *alias* the Type of Tyburn, *alias* The Actress, must suffer along with him for their manifest transgressions. Nothing less will satisfy the laws of criticism and the justice of cant.

But, nevertheless, though he did set a sort of example in this way, we would graciously recommend the works of Fielding, thus brought together, to readers of every class. If they read with discretion, they may profit greatly thereby; if they read with discrimination, they may gather much insight into humanity therefrom; and if they read any how, they must be exceedingly entertained with the delectable pages—novels, essays, dramas, and many-featured miscellanies, which are here presented to them.

#### COSTELLO'S SUMMER AMONGST THE BOCAGES AND THE VINES. [Second notice.]

OUR readers must suppose that our foregoing extracts pertain to a tour which has embraced Bayeux, St. Lo, St. Croix, Granville, Avranches, Mont St. Michel, La Luzerne, Mortain, Pontorson, Mont Dol, Dinan, Lehou, St. Malo, Nantes, &c. &c., and that their cathedrals, scenery, public buildings, ruins, abodes of royal and famous persons, have all been explored and described; and now, before bidding adieu to the Bretons, and swiftly descending the Loire, we must copy the legend of Cornouaille, which gives an account of the loves of Hëlôise and Abelard very dissimilar to that to which we have been accustomed.

"There is (observes the writer) a curious confusion in the poet's mind of ancient and comparatively modern tradition: he attributes to Hëlôise the superhuman power of the Druidesses, well known on the banks of the Loire by their fearful songs, which could raise storms, and drive the waters before them—who could predict the future, and were mistresses of the present. Poor Hëlôise has not only their attributes, and those of an alchemist, but is degraded to a mere ordinary witch, and made to change her human form into the semblance of the vilest animals. Like Merlin,\* she knows the power of simples; she boasts, in the poem, of the same wisdom as that vaunted as his by the Druid bard Taliesin, in the sixth century: in fact she seems, in her own person, to unite all the dangerous and fearful love that ever existed in any age. She, whose beauty and whose learning were her only spells, more fatal to herself than to the world!

prison-yard, and the horrible levity with which the mob gather round the drop at Newgate, there is a connexion which a writer may be pardoned for quitting loftier regions of imagination to trace and to detect. So far this book is less a picture of the king's highway than the law's royal road to the gallows,—a satire on the short cut established between the House of Correction and the Condemned Cell. A second and a lighter object in the novel of 'Paul Clifford' (and hence the introduction of a semi-burlesque or travesty in the earlier chapters), was to shew that there is nothing essentially different between vulgar vice and fashionable vice,—and that the slang of the one circle is but an easy paraphrase of the cant of the other.

\* "Merlin the enchanter is the great hero of the Bretons, as he is of the Welsh: the same legends being common to both people. Among other lays respecting him is the following, popular in Cornouaille:—

*Merlin the Enchanter.*

'Merlin! Merlin! whither bound,  
With your black dog by your side?'—  
'I seek until the prize be found,  
Where the red egg loves to hide.

"*Hëlôise et Abaylard: Legend of Cornouaille.*—When I left the house of my father I was only twelve years old—when I followed my beloved student, my dear Abaylard. When I went to Nantes with my dear student, Heaven can tell I knew no language but Breton. All I knew, O my God! was to say my prayers when I was at home, little, in my father's house. But now I am learned—very learned in all lore. The language of the Franks, and Latin, I know; and I can read and write well. Yes, I can read in the book of the Gospels, and write, and speak, and consecrate the host as well as the priests. And when the priest says mass I know what will circumvent him; and I can tie the mystic knot in the middle, and at the two ends. I can find pure gold in the midst of ashes, and silver in sand—if the means are in my power. I can change my form into that of a black bitch or a raven, when I will, or into the wild fire of the marsh, or into a dragon. I know a song will rive the heavens asunder, make the deep sea howl, and the earth tremble. Yes, I know all that can be known on earth—all that has been—all that shall be. My beloved and I made a compound together—it was the first I learnt to make; the eye of a raven and the heart of a toad were part of it. And we added the seed of the green fern gathered a hundred feet down in the bottom of a well, and we found the root of the golden herb and tore it up in the meadow where it grew. At sunrise we tore it from the ground, our heads uncovered and our feet bare. The first time I proved the power of my compound was in the field of rye which belonged to the lord abbot. The abbot had sown eighteen measures—he reaped but two handfuls! I have at my father's house at home a coffer of silver: who-soever opens it, let him beware! There are in it three vipers, who are hatching a dragon's egg. If my dragon sees the light, great will be the desolation that follows! With what do

The red egg of the sea-snake's nest,\*  
Where the ocean caves are seen,  
And the crescent that grows the best  
In the valley fresh and green.

'I must find the golden herb,  
And the oak's high bough must have,  
Where no sound the trees disturb  
Near the fountain as they wave.'

'Merlin! Merlin! turn again!  
Leave the oak-branch where it grew,  
Seek no more the crescent to gain,  
Nor the herb of gold pursue.  
Nor the red egg of the snake,  
Where amid the foam it lies,  
In the cave where billows break;  
Leave those fearful mysteries.  
Merlin, turn! to God alone  
Are such fatal secrets known!"

§ "At the foot of Mont St. Michel, in Cornouaille, extends a wide marsh. If the mountaineer sees in the dusk of the evening a tall man, thin and pale, followed by a black bitch, whose steps are directed towards the marsh, he hurries home, shuts and locks the door of his cottage, and throws himself on his knees to pray, for he knows that the tempest is approaching. Soon after the winds begin to howl, the thunder bursts forth in tremendous peals, the mountain trembles to its base,—that is the moment when the magician evokes the souls of the dead."—VILLENARQUE: *Berzas Breiz.*

\* "The red egg of the sea-snake was a powerful talisman, whose virtue nothing could equal: it was to be worn round the neck. The golden herb is a medicinal plant; the peasants of Bretagne hold it in great esteem, and say that it shines at a distance like gold. If any one tread it under foot, he falls asleep, and can understand the language of dogs, wolves, and birds. This simple is supposed to be rarely met with, and only at daybreak. In order to gather it, a privilege only granted to the devout, it is necessary to be on chemise, and with bare feet. It must be torn up, not cut. Another way is to go with naked feet, in a white robe, fasting, and, without using a knife, gather the herb by alighting the right hand under the left arm, and letting it fall into a cloth, which can only be used once."

† "The high oak bough is, perhaps, the mistletoe. The voice which warns Merlin may be intended for that of Saint Colomban, who is said to have converted the Bretons. The poem is of high antiquity."

I nourish them? 'Tis not with the flesh of partridges—'tis not with the flesh of woodcocks—oh, no! 'tis with the blood of innocents I feed them. The first I killed was in the churchyard—it was about to receive baptism—the priest was standing ready in his robes. They took the babe to its grave. I took off my shoes and, softly, softly I unburi'd it—quietly—none heard my footstep. If I remain on earth—my Light and I together; if we stay in this world one year or two. Two years, if we stay, or three—my dear student and I—the world shall be no longer in its place! Beware! beware! Loïza—beware of thy soul: if this world be thine own, the next belongs to God!"

On the banks of the Loire our fair author saw many places, her descriptions of which are replete with interesting matter;—Fontevraud, Tintamarre, Chinon, Tours, Loches, Blois, Chambord;—and having gone by Orleans and Fontainebleau to Paris, the waters of the Seine transported her, by Rouen, home. From this portion we have left ourselves little room to quote, and must, therefore, be content with a very few selections. The Château of Chenonceau still bears singular remains of many a royal tenant:—

"Chambers succeed each other all filled with furniture, tapestry, decorations, marbles, pictures, each called by the name of the particular person who occupied the suite. Francis I. has several dedicated to him, and most interesting: his devices and crowned F, being embroidered on the rich satin chairs, sofas, and hangings; the tables round covered with antiques and delicate works of art, collected by himself, and arranged in these identical places. The enamels of Léonard de Limoges, a favourite enameller of Francis, who gave him the direction of the fabrique at Limoges, appear in profusion; together with the exquisite works of that original genius, Bernard Palizzi, to whom the invention of enamelling on china, in France, is generally allowed: at least, a particular sort, which occurs frequently among the treasures of Chenonceau, many of which are to be found in the museums of Paris, and more particularly at that emporium of all that is curious and interesting in art, connected with the middle ages, the valuable musée of the Hôtel Cluny. The peculiar style to which I allude is the representation in high relief of reptiles, swimming or crawling, in vases and plateaux, which, filled with water, appear, on the slightest motion, to be endowed with life. The brilliant colours of this china, its foliage, the scales of its fish, snakes, and lizards, and the flowers and weeds round them, are all admirable; though not particularly pleasing, perhaps, on a dinner-table. Venice glasses, painted and enamelled, are also seen, and the carved cabinets are of the finest order. There are several pieces of tapestry, and some pictures, which, from the costume, must be as early as the time of Charles VI.; indeed, it would be almost endless to enumerate the treasures contained in this delightful place. The bed, undisturbed, of Catherine; a splendid marble chimney-piece, worthy of a Medici; her bath, and the fine furniture of her room, remain, with her initials worked on all the satin, as in other apartments. The most conspicuous initials, however, are the D and H, interlaced in every possible manner, and covering the walls and filling the panels: the picture, full-length, of Diana, said to be by Primaticci, holds a conspicuous place in one chamber. It is extremely lovely, and represents her as the goddess Diana setting out for the chase: there is a happy

mixture, in the dress, of the classical and the costume of the period, which marks the time, and yet does not shock the imagination. She is stepping along with graceful swiftness, her head rather turned, as if listening; she holds a hound and her bow; her head is, as usual, crowned with a crescent; the hair flies lightly on the air; her bodice is tight to the shape and laced, the waist rather long and pointed; her full petticoat is of rich stuff, with gold embroidery, but it hangs in fine folds, and her springing foot is advanced. The landscape is spirited and good, the colouring well preserved, and the whole picture admirable. This is the most remarkable portrait of Diana, though there are others. In one room is a medallion of the head of Agnès Sorel, copied from her tomb; and, in the library, a most extraordinary enamel, representing her seated behind the king, Charles VII., on a clumsy horse, Darby and Joan fashion: she is there hideous, and her royal lover looks like an old monk with a cowl on. Near it is a fine and, evidently, correct mask, in plaster, of Henry IV., taken from his face after death; it has an expression of pain, and is so real as to be very distressing. There is also an autograph letter of his. A singular portrait, characteristic, but not handsome, of Isabeau de Bavière, and of Charles V., VI., and VII.; Charles V. of Spain, Titian's Francis I., and a portrait of Marguerite de Valois, remarkably like her brother. The collection of portraits, so numerous and so singular, reminded me of the treasures which cover the walls of Knole. The fine gallery, built on piles and arches over the Cher, is full of pictures, of all dates and ages, and medallions of celebrated persons: amongst others is a Ninon, the most beautiful I ever saw, and giving a better idea than we usually have of her fascinations; a Madame de Sévigné, holding Madame de Grignan's picture; and a host of others, some copies, some, probably, originals. A very curious pair, which I think and hope are genuine, of Petrarch and Laura, as both are worthy of their reputation. The view from this fine gallery is exquisite."

[Conclusion in our next.]

#### MISCELLANEOUS.

*The Table-Talker; or, Brief Sketches on Society and Literature.* 2 vols. 12mo. London, 1840. Pickering.

THESE sketches have appeared (with others not included in the present publication) in "The Morning Post," since 1836; and are now collected in a neat form, and indexed for convenient reference. They are of a very miscellaneous character, and do great credit to the popular periodical writing of our day. The author displays talent, observation, information, and sound principles; and the result is, that his book is both entertaining and instructive. Two volumes of more pleasing light literature could not be taken up to enliven the vacant hour.

*The Maternal Management of Children in Health and Disease.* By T. Bull, M.D., author of "Hints to Mothers," &c. Pp. 310. London, 1840. Longman and Co.

It is a great question whether the multitude of books of this kind, even by the most skilful and experienced hands, do most good or harm. They do good by the quantity of wholesome advice they give,—general precepts respecting which there can be no doubt under any circumstances, and particular instructions in cases of emergency, where ignorance prevails and no other help is near; but they do harm in teaching persons to act on insufficient or erroneous

grounds; to tamper with what they do not understand; often to run to remedies when none are needed; and get into habits of apprehension and alarm, which induce constant, injurious, and fatal quackery. Dr. Bull is one of the simplest and best of maternal counsellors; but we are not sure that we would not rather trust a child to a mother who had never read a word from him or any other medical assistant, than to one who had studied every page with natural anxiety. Food and the treatment of disease depend on so many slight variations and symptoms, that it is quite impossible to lay down rules beneficially applicable to them all. We shall only add that mistakes are dangerous. *A Treatise on the Popular Progress of English History; being an Introduction to the Study of the Great Civil War in the Seventeenth Century.* By John Forster, Esq., of the Inner Temple. Pp. 79. London, 1840. Longman and Co.

WE have elsewhere alluded to this publication. The treatise is written as an introduction to Mr. Forster's "Memoirs of the Statesmen of the Commonwealth of England," which volumes, detached from the "Cabinet Cyclopædia," form a whole distinct historical work. It is a résumé of English history, from the Norman conquest to the accession of the house of Stuart; and exhibits Mr. Forster's views in an able manner, consonantly with those which animate his "Life of Cromwell," and his great associates in the revolution. Those who possess the author's "Memoirs" ought to place this "Introduction" beside them.

*Mrs. Loudon's Ladies' Flower Garden of Ornamental and Bulbous Plants.* No. V. London, 1840. Smith.

GAY Gladioli are continued in this part, and some very interesting hybrids described; *Sphaerospora* and *Synnotia* scarcely less brilliant fill the next plate; and charming *Spaxares* the last. These South African dwarfs vie with the more profuse *Iridaceæ* in variety and beauty of colour.

*Papers on Iron and Steel, Practical and Experimental.* By David Mushet. 8vo. pp. 952. London, 1840. Weale.

THE vast mass of information contained in this volume appeared originally in a series of communications to the "Philosophical Magazine;" to which the writer has added copious notes. The character of Mr. Mushet, and of the publication in which his papers were inserted, are sufficient guarantee for their value; and when we reflect on the prodigious increase in the uses of iron, and the multitude of new purposes to which it is put, we must feel a still further obligation to the author for having thus collected his labours into a distinct work. It seems to embrace all that can be said on the subject; and every manufacturer of iron must be deeply indebted for such a *vade mecum*. All we need say is, that for reference on matters connected with the iron trade, experiments and conclusions of extreme utility, and, in short, practical instruction and advice, this is a most meritorious work.

*Journal of the Proceedings of the late Embassy to China, &c.* By the Right Hon. H. Ellis. London, 1840. Moxon.

MR. MOXON has added this work to his list of wonderfully cheap editions, the price four shillings; and at this moment he could not have revived any publication of more popular interest. Mr. Ellis's narrative, full of spirit and intelligence, threw much light upon the Chinese character; and all our future intercourse and relations with that people or government must be shaped on this sort of know-

ledge, if we mean to do any good. But, independently of this, Mr. Ellis's *Journal* is exceedingly entertaining; and were we only reading for amusement, his facts and descriptions would be more than a sufficient recommendation.

*Letters from Italy to a Younger Sister.* By Catharine Taylor. Pp. 303. London, 1840. Murray.

Not intended to compete with the numerous larger works on Italy, Miss Taylor has, in this volume, run over many of the subjects connected with that classic country in a way to stimulate, rather than gratify, the curiosity of youth, and lead it to explore them more carefully where they wish for instruction. In this point of view we can warmly recommend it; and, though its pretensions are modest, we can truly say that its execution is fully adequate to its purpose.

*A Narrative of the Treatment experienced by a Gentleman during a State of Mental Derangement, &c.* By John Perceval, Esq. 8vo. pp. 430. London, 1840. Wilson.

SOME useful lessons may be got from this volume; but, certes, there is a large quantity of madness in it. A man's opinions of his own treatment while under restraint for insanity is, at any rate, a novelty in publication, and a psychological curiosity.

*The Poetry of the Passions, selected chiefly from British Authors.* Pp. 350. (London, Tilt.)—A tasteful and judicious selection arranged under the heads of anger, ambition, despair, hate, fear, envy, joy, &c. &c. and illustrative of these passions. The little volume is neatly "got up."

*The Lover's Grave; or, the Tragedy of Marshend. A Domestic Tale, founded on Facts,* by R. Rowlatt. 2 vols. 12mo. (London, Berger and Odell.)—A tale, which has been published in the prevailing monthly fashion, of crime and its consequences, of no particular interest, but pointing so good a moral that we cannot do less than give it our passing good word.

*An Introduction to Heraldry,* by Hugh Clark. 12mo. pp. 267. (London, Washbourne.)—This is a thirteenth edition of a very useful manual, and embellished with nearly a thousand examples of heraldry. For some seventy years Mr. Hugh Clark has justly preserved his place in this line of publication; and now that he has got a new and handsome face, he is still more worthy of admiration for his looks, and not less worthy of regard for his instructions.

*Two Lectures on Heraldry,* by B. S. Claxson, D.D. Pp. circ. 60. (Gloucester, Bryant; Gloucester, Longman and Co.)—Dr. Claxson, as V.P. of the Gloucester Literary and Scientific Association, delivered these two lectures, in which he takes an interesting view of the earliest symbols which are recorded, and traces the progress of heraldry from the most ancient times and among many nations. We have seldom read any thing more to the purpose, nor, as far as the essay goes, more replete with curious information.

*Scripture Biography, &c.,* by a Friend to Youth. Pp. 238. (London, Churton.)—The principal events in the New Testament arranged in chronological order, with the lives of the apostles, adapted for youthful reading. Woodcuts after Westall, previously published.

*The Magazine of Domestic Economy.* Vol. V. (London, Orr and Co.; Edinburgh, Fraser and Crawford.)—A continued mass of useful information, with a good index to guide the seeker thereof.

*Historia Antiqua Epistome,* by the Rev. T. Arnold, Rector of Lyndon, and late Fellow of Trinity College, Cambridge. (London, Rivington.)—This is another of the useful publications which are produced so rapidly in these days for the benefit of the rising generation. It consists of extracts from Eutropius, Justin, Cornelius Nepos, Velleius Paterculus, and Turmelle. Some alterations have been made in the text to adapt it to the purpose for which this little book is designed. It is founded upon the "Lateinisches Elementarbuch" of Jacobs and Döring. *The Traveller's Hand-Book up the Rhine.* Pp. 94. (London, Leigh and Co.)—One of those convenient little books which save a great deal of trouble and question-asking, and give the necessary information to taciturn tourists.

*Despotism in America.* Pp. 186. (Boston, Whipple and Parnell.)—A volume against slavery, and holding out a hope that it may be abolished in the southern states.

*Italia Latina,* by the Rev. J. Edwards, M.A., and W. Cross, Trinity College, Cambridge. Pp. 164. (London, Madden and Co.)—A very excellent guide to Incipiens in the Latin tongue.

*The British Mechanic and Labourer's Hand-Book, and True Guide to the United States; with Ample Notices respecting various Trades and Professions.* Pp. 288. (London, Knight.)—An individual who has been four years resident in the United States, and practically engaged in business, presents these pages as entirely to be relied upon

by the classes to whom they are addressed; and we are bound to say that they appear to us to deserve very implicit credit. They are plainly and sensibly written, contain the results of good sense and considerable experience, and treat of many subjects overlooked, or slightly investigated, by all previous travellers.

*Chemistry of Science and Art; or, Elements of Chemistry adapted for Reading along with Lectures, &c.,* by Hugo Reid. 12mo. pp. 312. (Edinburgh, Maclellan and Co.; Glasgow, Robertson; London, Simpkin, Marshall, and Co.; Dublin, Fannin and Co.)—As an elementary guide-book this is one of great accuracy, and sufficiently ample for useful information. Mr. Reid has been long devoted to science, the fruits of which are seen in productions like this.

## ARTS AND SCIENCES.

### PRESERVING THE DEAD.

IN our *Journal*, three weeks ago (July 18th), we devoted a page to an account of the Gannal Antiseptic Process for preserving dead bodies, as introduced to and practised in this country by Mr. Smith. The subject, as was to be expected from its nature, has excited considerable attention; and we are again called on to bring it under public notice. Dr. B. G. Babington and Dr. G. O. Rees have, it appears, been for some time engaged in experiments on the subject; and their statement respecting it is given in "The Guy's Hospital Reports," from which we extract the following particulars:—

"The difficulty which has existed in supplying the medical schools of London with subjects for dissection, has made it an object of much importance to discover a method by which human bodies may be preserved from putrefaction. This matter was more particularly brought to our notice last winter, when great inconvenience was felt by the students, not only of Guy's Hospital, but of every school in London, from the insufficient supply of subjects for dissection. There are many methods now in use of preserving animal matter, and the processes of tanning, salting, pickling, drying, smoking, freezing, are so many familiar examples of those methods; but they are all more or less inapplicable to the purposes of anatomical science: thus, tanning, smoking, and salting, wholly alter the appearance and texture of parts; the corrosive action of acids is injurious to the instruments employed in dissection; and immersion in ice, which might possibly be practised, under favourable circumstances, in preserving whole subjects, would, independently of its expense and inconvenience, fail of its effect, when once the student had begun his work. The only antiseptic which is free from the foregoing objections is a solution of alcohol. This, it must be admitted, answers well for museum preparations; but its powers are limited, and its injection into the blood-vessels, even in its most concentrated form, will not materially retard decomposition: moreover, it destroys colour; and when employed in sufficient quantity to admit of the immersion of parts, is too costly for common use. Some simple experiments of a purely practical nature, which we were induced to institute in consequence of the foregoing considerations, have led to a discovery, the application of which promises to remove one great obstacle to the study of a most important branch of medical education. Our attention was first directed to those chemical substances which were known to coagulate the blood; and we accordingly prepared strong solutions of the following metallic salts, viz. sulphate of zinc, sulphate of iron, and disacetate of lead. We purposely stopped short of the point of saturation, from a belief that the great density of the fluid, in the case of salts so soluble, would impede its flow on injection. Infusion of galls was also adopted, from its powerful action in precipitating animal matters; and sugar, in the form of syrup, being well known to possess preservative qualities, we thought it worth while to make trial of its capabilities. With each of these fluids a rabbit was injected from the aorta; and another rabbit, killed at the same time as those which were made the subject of experiment, was kept, for the sake of comparison. They were all exposed to the air, in an open court; being merely protected from the weather by enclosure in a wicker-basket, loosely covered with oil-cloth. At the end of three weeks, they had become putrid; and we could not perceive that, in any one instance, decomposition had been materially arrested. We were aware that arsenic and the bichloride of mercury both possessed considerable antiseptic powers. A solution of the former had indeed been tried with success at Guy's Hospital in the previous year; but the poisonous qualities of these substances rendered them, in our opinion, as well as in that of others more nearly interested in their employment, decidedly objectionable. The total failure of our attempts had nearly discouraged us from proceeding farther, when it occurred to us that the preservative powers which exist in certain hydrocarbonous fluids offered some probability that they might be turned to account in the prosecution of our object. Creosote and pyroxylic spirit more especially attracted our attention; and, as the former was too expensive to admit of its being advantageously used alone, we combined it with three times its bulk of solution of gum arabic. Two rabbits

were injected; the one with pyroxylic spirit, the other with this mixture; and exposed to air, with protection from the weather, precisely in the same manner as was practised in the former experiments. At the end of two months, from the 30th of November, when the injection was performed, these rabbits were examined at Guy's Hospital, and declared, by all who saw them opened, to be as perfectly free from putridity and as fit for all the purposes of dissection as on the day when they were killed. It should be stated that in these instances, as well as in the experiment with infusion of galls, a portion of fluid was injected *per anum*. Having thus far perfectly succeeded, we resolved to obtain permission from the hospital authorities to make a direct experiment on the human subject, as soon as the weather became warm enough to test our method with sufficient severity. In the course of the spring, we were permitted to avail ourselves of the following opportunity:—On the 15th of May last, a convict at Woolwich, twenty-three years of age, died of inflammation of the bowels; and, on the 18th, his body was sent, by order of the Inspector of Anatomy, to Guy's Hospital, for dissection. It was neither oedematous nor in a state of decomposition; and although the integument was somewhat flat, it was, upon the whole, in a fair condition for anatomical purposes. On the 21st, a gallon of pyroxylic spirit was ejected into the aorta; and the body was placed in a water-tight shell, or trough, made of slate, and loosely covered with a wooden lid. This trough was deposited in a cellar, the stone floor of which was about two feet below the surface of the ground. On the 29th, the lid was removed for the first time, and the body was found to be perfectly fresh. On this occasion, the flesh of the extremities was remarked to have become somewhat firmer than when the injection was first made. From the 29th of May to the 12th of June, the subject was examined, by removing the lid of the trough every two or three days; and no change was perceptible until the latter date. At that time, the only sign of alteration was the appearance of two or three brown streaks—evidently veins—on the inside of the thighs; and a separation of the cuticle of the hands from the true skin, which began to assume a greenish hue. Every other part of the body was perfectly preserved, and of natural colour. There was no putrid odour, and on opening the lid of the trough, but the characteristic smell of the pyroxylic spirit was in some measure passing off. An incision into the middle of the right thigh, such as would be made in operating for popliteal aneurism, shewed that the fat, muscles, blood-vessels, and nerves, were in a complete state of preservation. It should be observed, that ever since the injection of the subject the weather had been that of established summer; and that a second body, received from Woolwich, was so decomposed in three days after its arrival as to be totally unfit for dissection. On the last examination, as well as on two or three previous occasions, fluid was observed to occupy the bottom of the trough, and this it was thought advisable to remove: it was likewise determined to throw another quart of pyroxylic spirit into the aorta. On the 15th of June, the body was removed to the dissecting-room, and placed on the table, for the purpose of being thoroughly dissected. With the exception of a greenish appearance on the outer part of the left thigh, and the brown streaks already mentioned, it appeared, when brought into the light, perfectly preserved. The skin on the back of the hands, instead of putrifying, had dried, and become transparent; while the greenness of the left thigh proved, on incision, to be quite superficial. The dissection was undertaken by eight gentlemen, and completed by the 13th of July; and it is testified by them all, that every anatomical purpose was as fully answered as if the subject had been quite recent. The various parts, on being laid open, were of natural colour and of firm texture. The tendons and ligaments were silvery and white, and the nerves had lost none of their tenacity. The pectoral muscles alone formed an exception to the natural colour which was elsewhere maintained: this appeared to be attributable to the macerating effects of a wetted cloth that had been laid upon the breast, to prevent evaporation through the aperture by which the injection had been accomplished. The parts which were exposed by dissection gradually dried; changing, in the course of a day or two, to a dark colour, and, instead of putrifying, becoming hard. The brain, although it had retained its form, was soft, semi-putrid, and unfit for demonstration: it must be borne in mind, however, that had the head been opened six days after death—at which period the subject was injected—this probably would have been the case. With the above exception, the viscera were all perfectly preserved: in proof of which one of the kidneys, appearing, in colour and consistency, quite recent, was removed in the beginning of July, and, after maceration in warm water in the usual manner, was injected with wax. This experiment was made in order to ascertain whether the spirit produced thickening, or any other alteration, in the inner coat of the blood-vessels; which was found not to be the case, as the wax had fully penetrated the tissues of the organ. Of the gentlemen engaged in the dissection of this subject, one complained that he at first suffered headache from the odour which it exhaled; and some, who were not so engaged, considered this to be more disagreeable than that of putridity. The same opinion is sometimes expressed with respect to the odour of parts that have been macerated in spirit of wine. Some allowance in favour of the pyroxylic spirit should be made on the score of novelty; and since its vapour is not poisonous nor injurious, any more than that of spirit of wine, it is to be presumed that the student would soon become

accustomed and reconciled to it. In a first trial upon the human subject of the antiseptic powers of this fluid, a natural desire existed on our parts of watching its progress, and of noting such changes as might gradually occur. This led to the necessity of opening frequently the lid of the trough; and it has already been remarked, that this by no means accurately fitted the trough itself. The pyroxylic spirit being of a very volatile nature, it is obvious that its preservative qualities were much diminished by this proceeding. It is, therefore, not too much to expect that in an air-tight vessel a subject thus prepared would not exhibit even those superficial changes which took place in this instance, and would be preserved for an indefinite period. The advantages of employing pyroxylic spirit are, 1st, its extreme fluidity, in consequence of which it may be thrown into the minutest vessels. 2dly, its freedom from colour. 3dly, its cheapness; for a gallon is sufficient to inject a full-sized subject; and even with the present limited manufacture of it, it is only half the price of alcohol; while it possesses infinitely greater antiseptic powers, and is, in common with that fluid, miscible with water, in all proportions. 4thly, its innocuous nature, and its freedom from any corrosive action upon steel instruments. We are not aware that there is any material disadvantage in its employment: the odour, it must be admitted, is more or less disagreeable to different individuals, but not so much so to the generality of persons as that of the putridity which it serves to prevent. Of this fluid, which must not be confounded with pyrolygneous acid, or with pyroacetic spirit, a full account may be found in the 'Annals of Philosophy,' N.S. viii. 69. That which we employed was procured from Morson's, in Southampton Row; and it may be had from any operative chemist."

To this interesting paper we have only to add, that at the present moment Drs. Babington and Rees possess a fœtal subject which remains perfectly sound, and in every respect fit for the purposes of dissection, notwithstanding that eight months have elapsed since it was submitted to the preservative process.

It is, we think, greatly to be regretted that the present state of the law prevents the application of some effectual method for the advantage of our students of anatomy; inasmuch as the burial of every body, for dissection, is enforced to take place within six weeks after death, and the only plan by which students (who dissect almost universally during the winter season) can be guaranteed from a want of subjects, is by a reserve of bodies which have been collected and embalmed during the summer months, and which, in the present state of the law, are lost to the anatomist. As it is, embalmed or not embalmed, they must be buried in six weeks. This, surely, requires revision, for the sake of a science so important to humanity.

#### ENTOMOLOGICAL SOCIETY.

APRIL 6th. The Rev. F. W. Hope, President, in the chair.—Numerous entomological works from various individuals, together with a fine collection of lepidopterous insects from the Neilgherries mountains, were presented by Mr. Robertson.—Professor Owen exhibited a dipterous larva discharged from the urinary bladder of a patient, stating that, although larvæ had been repeatedly discharged from the intestines of the human subject, none had hitherto been noticed in such a situation as the present must have occupied; nor was it easy to account for its presence there, as it could not be supposed to have made its way from the intestinal to the urinary canals.—Mr. Newport also stated that Dr. Carter has communicated to him the case of the larvæ of an æstrus, having been discharged from the frontal sinus of a female; and he had obtained a geophilus, which had been vomited by a female.—Mr. Westwood exhibited a considerable number of insect monstrosities and distortions, and stated his intention of illustrating the physiology of these productions.—Mr. Waterhouse also exhibited a monstrous *Prionus* from Brazil; and Mr. Saunders, the nest of *Pelopatus spirifer* from Albania.

May 4th. The President in the chair.—Mr. Newport exhibited his specimen of *Geophilus*,

mentioned above; and likewise a specimen of the pupa of *Sphinx ligustri*, which he had purposely rendered monstrous by preventing the development of the tongue-case.—Mr. Yarrell exhibited larvæ of *Tipula oleracea*, which at that time were destroying the grass in the squares of London; and Mr. Hope stated that lime-water, and water from gas manufactories, were serviceable in the destruction of the insects.—Mr. Hope also exhibited a new species of walking-leaf insect from the Neilgherries, brought home by Mr. Robertson, with whose name he proposed that it should be designated.—Mr. Shuckard read some extracts from his monograph on the *Doryleæ*, and Mr. Westwood some notes on the peculiarities of the entomological productions of Africa; after which Mr. Hope entered into a detail of his views relative to the geographical distribution of insects.

June 1st. The Rev. Mr. Kirby in the chair.—Numerous entomological works were presented by the Royal Society of Brussels, Professor Audouin, M. Dufour, Dr. Erichson, M. Schomburgk, and others.—Sir Livingston Mitchell and Mr. Fortnum were elected corresponding members.—Various new and interesting insects were exhibited, particularly a new and very distinct British genus of *Carabidæ*, by Mr. S. Stevens; the nest of an *Oiketicus*, from the East Indies, by Mr. Saunders; and a mass of the cocoons of a small *Ichnumon*, by Mr. Ingpen.—Mr. F. Smith exhibited a series of species of the difficult genus *Andrena*, of several of which he had discovered the sexes, which were very distinct, and had led to mistakes in the works upon the bees.—Mr. Westwood also exhibited a specimen of *Myrmecocystus Mexicanus*, a Mexican ant, three of the neuters of which have the body immensely swollen, and are stated never to leave the nest, but there secrete a kind of honey; whilst the common neuters were of the ordinary form: accompanying this exhibition with observations on the diversity in the development of the females and neuters amongst hymenopterous insects; such as the different kinds of neuter hive-bees described by Huber, &c., which led to an extended discussion amongst the members.

July 6th. The President in the chair.—Various additions to the library, presented by the Zoological Society and different individuals, were announced.—Mr. Hope exhibited a collection of splendid *Coleoptera* from Mexico; and Mr. Raddon some fine insects from the African Gold Coast, as well as two new British species of moths.—Mr. Marshall mentioned a remarkable peculiarity observed by Mr. Doubleday in the *Sesia bombyliiformes*, which, on first emerging from the pupa, has the transparent part of its wings entirely clothed with scales.—A paper was read by Mr. Westwood, containing suggestions for making collections of insects abroad, with reference to their physiological and historical peculiarities, which led to a long discussion on the best practical methods of making and securing collections in foreign countries.

#### ZOOLOGICAL SOCIETY.

B. B. CABELL, Esq. in the chair.—At the usual monthly meeting, held on Thursday afternoon, thirteen fellows were elected: amongst them were the Prince of Capua, Lord Sondes, the Earl of Kilmorey, &c. Balance carried to account on 1st of August, 1851. 11s. 6d.; visitors to gardens and museum during the last month, 24,790. Among the donations were two agoutis, rare specimens from South America, presented by Lieutenant C. Smith, R.N. of Her Majesty's brig the Star.

#### PARIS LETTER.

Academy of Sciences, August 4, 1840.

SITTING of July 27.—M. Andral read, in his own name, and in that of M. Gavarret, an interesting memoir on the variations of the elements of blood in connexion with various maladies of the human body. The results were founded on the examination of 200 patients and 360 extractions of blood, and the method of testing the blood was the same as that of Messrs. Prévost and Dumas. They had found, that out of 1000 parts of blood the proportion of fibrine varied from 1 to 10; of globules, from 185 to 21; of the solid matter of the serum, from 104 to 57; and of water, from 915 to 725. It was rare that in all maladies the proportions should increase or diminish simultaneously; on the contrary, they generally varied in an inverse ratio. It resulted from this that maladies might be divided into four classes, according as there was a tendency shewn in the patient's blood to have any one of these four elements of blood unduly augmented. Several instances were given of this, as well as of the complication of phenomena, resulting from compound maladies. In acute articular rheumatism it was ascertained that the mean quantity of fibrine varied from 7 to 8; its minimum varied from 4 to 5; its maximum was 10. In pneumonia, the same results as in rheumatism were observed. In acute capillary bronchitis, the mean quantity of fibrine was less than in the two former maladies, varying from 6 to 7; and its maximum being under 9. In acute pleurisy the mean quantity of fibrine varied from 5 to 6; and the maximum did not exceed 6. In no cases did fibrine descend lower than 4, and rarely lower than 5. In all phlegmatic maladies the proportions of the globules became much diminished, but the solid matter of the serum varied scarcely at all. The water varied from 771 to 840 out of the 1000 parts. In all periods of phthisis there was a constant tendency to increase of fibrine and diminution of the globules; the former getting up to 6 in the worst stages of the disorder, but then suddenly diminishing as the patient sank; the highest point being when a continuous febrile motion was established. The globules diminished from 100 to 81 in the worst stages, but never fell below the latter number. The solid materials of the serum varied in phthisical complaints from 64 to 98; the former cipher in one peculiar case being accompanied by the extremely low proportion of 2 for fibrine. Water, on the contrary, increased in phthisical patients' blood, and varied from 784 to 845.—M. Magendie mentioned to the Academy that he had been occupied in similar researches, and would communicate them to the members.—M. Becquerel read a memoir on the auriferous sands found in the lead (galena) mines of St. Sautin, in the Cantal. The precious metal existed in a very small proportion, being only 1/1000th part of the silver, which was 1/100 per metrical quintal (221½ lbs. English) of the total weight of the lead. After the sand had been properly treated for contracting the particles of gold, it was found that the materials of the sand were nearly the same as those of the auriferous sands of Brazil and of Asia.—M. Melloni addressed some remarks to the Academy on Sir J. Herschel's experiments on the dark radiation of solar rays. Sir John, he observed, inferred that there were cold zones in the calorific spectrum, just as there were dark zones in the luminous spectrum; but his own experiments had led him to conclude that the results of the experiments of Sir J. Herschel

depended not merely on the nature of the solar rays, but also on that of the bodies through which they passed. M. Melloni recommended that the experiments should be made with a prism of rock salt, which substance afforded few or no obstacles to the passage of calorific rays.

At the last sitting of the Société de l'Histoire de France, M. Teulet informed the members that the new edition of Eginhard was nearly terminated; all "The Life of Charlemagne" was printed, and the "Annals" were going on rapidly, so that the first volume might be expected before the end of the year.—M. Yanoski, who had been sent to Amiens by the Minister of Public Instruction to examine the archives of that town, and had been forced to suspend his edition of the historical works of Suger, abbot of St. Denys, sent word to the Society that he had discovered several inedited letters of Suger's in a MS. of the twelfth century, and among them one written by the abbot from the East, during one of the first crusades.—The second volume of "Ordericus Vitalis" is about to issue from the press at the expense of the Society.—The Society before deciding as to whether they should accede to Mr. Halliwell's proposals for printing a collection of letters and documents in the British Museum, relative to the history of France, resolved that further inquiry should be made into the nature of the documents.—The Society has declined, for the present, Mr. Wright's proposal for publishing the "Otia Imperialia" of Gervase of Tilbury.

**Academy of Medicine.**—Sitting of July 21. M. A. Chevallier communicated to the Academy the substance of a report which M. Grimaud, chemist of Poitiers, had been commissioned to draw up by the Minister of Public Instruction on the advisability of colouring poisonous matters sold in commerce, and imparting to them some strong taste, in the cases of their being without these qualities, in order to hinder accidental poisonings of human beings. The report stated that arsenic was the most colourless and insipid of poisons commonly sold in commerce, and occasioned the greatest number of poisonings; thus, out of 212 cases selected in France, 132 had been effected by arsenic acid; and out of 462 in England, 181 cases. The total quantity of arsenic annually imported into France is 121,743 kilogrammes; and the report strongly recommended that the minister should be requested to name a committee to examine into the best way of colouring this quantity of important poison. Out of 221 persons who had taken arsenic within one year, 100 had died, the rest having been recovered by various antidotes.

M. Ingres, President of the French Academy at Rome, having held that office nearly six years, the time stipulated by the regulations, the Académie des Beaux Arts has drawn up a list of three candidates, one of whom, the Minister of the Interior, is to select one to succeed him. Their names have been given in the following order:—MM. Blondel, Paul Delaroche, and Schnetz. There can be no doubt from this arrangement what will be, though at the same time there can be but one opinion as to what ought to be, the result.—M. Huyot, the eminent architect and member of the Académie des Beaux Arts, to whom the important works of the completion and restoration of the Palais de Justice were intrusted, died the day before yesterday.

Alexander Dumas has just published an historical novel, which he calls "Les Stuarts."

The following fable, by M. Jauffret, was

read at a recent sitting of the Academy of Arts and Sciences at Marseilles:—

"La Femme qui avait été chatte.

Dès que Plutus a fait une métamorphose,  
Et qu'un homme est de rien devenu quelque chose,  
Monsieur le parvenu se donne de grands airs.  
N'attendez rien de lui, vous qui lui fûtes chers,  
Son cœur vous est fermé, sa porte vous est close.  
Dans les temps recules, une vieille mourut.

Sa chatte qui lui survécut,  
Ne pouvant l'évoquer de la nuit éternelle,  
Après un mois de jeûne, à la fin disparut  
Cherchant secrètement condition nouvelle.

Instruite, par tradition,  
Qu'il existait dans le canton  
Une Dame qui, disait-on,  
Autrefois avait été chatte,

D'intéresser son cœur la pauvrette se flatte,  
Fait l'œil doux, le gros dos, se lustre avec sa patte,  
Et vient gratter au seuil de l'antique maison,  
Où résidait cette Don don.

—De grâce, permettez que je parle à Madame.  
Sur sa protection je crois pouvoir compter.  
Je sais qu'elle fut chatte avant que d'être femme,  
Je viens, quoiqu'un peu tard, pour la complimenter.

—Halte-là, s'il vous plaît! Vous êtes bien osée.  
Apprenez, si vous l'ignorez,  
Que depuis que Madame est métamorphosée,  
Jamais chattes ni chats: ici ne sont entrés.  
—Je suis ce qu'elle fut. J'appartiens à sa race.  
—Tant pis! C'est just ément ce qui fait... qu'on vous  
chasse."

Sciarada.

Del mio primier ti vendica  
Offeso genitor;  
E l'altro rincrescevole  
A Lilla per l'odor.  
L'intero al collo vedesi  
D'antico schermidor.

Answer to the last:—Cor-nice.

#### FINE ARTS.

##### GRAND FESTIVAL IN HONOUR OF RUBENS AT ANTWERP.

ON Saturday next, the 15th of August, will be erected, on the pedestal of blue stone in St. Peter's Place, opposite the Schelt, Antwerp, with great pomp and splendour, (*pro tempore*) till the bronze figure may be completed, the Statue of Rubens; which model is executed by Geefs, who ranks as the first sculptor in Belgium. He sculptured the figure of Count de Merode, in the Place Martyr, Bruxelles. The bronze is intrusted to Mr. Bukens, a young man of very superior merit, and is to be cast at Liege. Both these gentlemen are natives of Antwerp.

The 15th of August being the anniversary of Rubens' birthday, and Antwerp his birth-place, there will be constructed a triumphal arch, supported by colossal pillars, bearing the portrait of his master, Hodevenus; that of his son-in-law, Quintin Matsys; and several of his most distinguished pupils—Vandyk, Janssens, &c. &c. &c. By the side of Rubens' statue will appear that of Applemans, who constructed the fine Gothic tower of such exquisite proportions.

Nothing can better prove the estimation in which the memory of the great painter is held at Antwerp, or demonstrate the admiration of his works, than the spontaneous feeling manifested by every resident burgher contributing, according to his pecuniary means, from one franc to one hundred each, to meet the expenses of this festival. The regency of the city furnish, towards the expenditure, five thousand francs.

The curious and extraordinary pump in the Wind Street, the work of that renowned and highly gifted artist, Quintin Matsys, who possessed such combined powers, will be transformed into a fountain of red wine, free of access to all votaries.

In the neighbourhood of the breweries, in honouring the memory of Gilbert van Schoonbeek, the Belgian giant in hydraulics, of such acknowledged merit, a fountain of beer is to be formed.

The great ball-rooms will be thrown open to the followers of Terpsichore, as well as the theatres and all public places of amusement; and every thing bespeaks that this feast will be celebrated with unsparing liberality, and will, no doubt, attract a number of visitors. Prizes will be distributed to the respective candidates in various branches of the arts. The duration of the festival will be ten days and ten nights unintermittingly; houses of all descriptions being privileged and unrestricted as to hours for that period.

The artists will move in procession, preceded by the municipal officers: upon their approaching the Statue, and the veil which covers it dropping, they will begin to sing the songs and chant the anthems composed for the occasion.  
—Private Letter.

#### NEW PUBLICATIONS.

*Illustrations and Descriptions of Kilpeck Church, Herefordshire. With an Essay on Ecclesiastical Design.* By G. R. Lewis. [Author of many works of art, &c.] Part I. London, 1840. Smith, Elder, and Co.

ANY publication from a person so ingenious, so versatile, and so able as Mr. Lewis, deserves our immediate attention; and we accordingly bestow it upon this the first part of a design to be completed in four parts, though it would, perhaps, have been more to the purpose had we waited for the completion of the whole. The zinc illustrations, eight in number, give two views of Kilpeck Church, and six of series of its ornamental accessories. Six pages of letterpress contain the *Essay on Ecclesiastical Design*; though we are not sure whether it is finished, or will run along with the subsequent parts, and the application of the figures represented in the plates to Mr. Lewis's argument.

That argument may be concisely stated to be, that till within the last four centuries the builders of Christian churches intended, by those apparently *bizarre* and ludicrous figures and combinations which we witness upon their external architecture, to give symbols, emblems, and hieroglyphics of portions of Holy Writ, for the edification of the beholders, and not, as has been thoughtlessly supposed, mere unmeaning whims, caprices, and incongruities for their embellishment. We shall look with curiosity for the proofs of this opinion; as we confess that we belong to the ignorant crowd, and have often laughed, unconscious of their religious character, at the drolleries which Mr. L. would exalt into Scriptural lessons.\* Even many of those he has copied from Kilpeck Church seem to us to be burlesque contortions of the human face divine, or human form, or animal and reptile features; and we shall be glad to see how he expounds them all with reference to sacred things. In Plates V. and VII. it occurs to us that some of them might be more readily connected with zodiacal signs and ancient astronomy. They very much resemble Pisces, Gemini, Aries, Canis, Serpentiarius, Aquila; and are only more grotesque than the oldest remains of similar things as pictured in Egypt, Etruria, or India. There is another source of the absurd, and occasionally the filthy, and even obscene, in ancient church sculpture, which Mr. Lewis will do well to refer to in working out his theory. We allude to the feuds among different religious orders, when Capuchin caricatured Augustin, and Black Friars carved White Friars into every shape of contempt and obloquy.

\* We are aware, however, that these ornaments frequently represent Scriptural subjects, much in the manner of the descriptions in "The Pilgrim's Progress."—Ed. L. G.

On another point we are more in unison with our author. We agree with him that many of the forms of pagan temples superseding the appropriate forms of Christian churches, in places erected for Christian worship, are indefensible in spirit and ridiculous in their component parts. When we study the Greeks, and forget what the Greeks studied.—Nature, there is no matter for what the building is intended,—townhall, museum, or clubhouse,—the architect must fail, and his performance be an abortion. But if the building be a church, the error is still more notorious and pitiable. Either to follow Greek models slavishly, to attempt the mixture of their classic creations with dissonant ideas, or to adopt barbarous nakedness of structure, is alike inconsistent with beauty, fitness, and propriety.

At all events, now that so many new churches are springing up in every quarter, the subject is one of general interest; and whether we continue to imitate the pagans, follow the early cross, revive the style recommended by Mr. Lewis, or invent some appropriate novelty, it will be well to examine which course is the best. If St. Paul's, and St. Martin's, &c., be mistakes as Christian edifices, and Marylebone, St. Pancras, the Regent Street churches, mere abominations; it is, indeed, time that we should return entirely to the cathedral, the old parish church, like this picturesque Kilpeck; and the Gothic: for a sample of which last, see the fine church in the King's Road, Chelsea.

#### *The Monumental Effigies of Great Britain.*

Drawn and Etched by Thomas and George Hollis. Part I. Nichols and Son; Hollis.

WITHIN the present year (see *Literary Gazette*, p. 396) we were called on to notice the commencement of a publication of monumental brasses from Edward I. to Elizabeth, and have now to call attention to a yet more comprehensive publication of a similar description, with regard to the illustration of our personal antiquities. The present part is very interesting, and well executed. Ten effigies are given:—Henry I. and his Queen, from the west front of Rochester Cathedral; a Knight Templar, from the Temple Church; and another from Walkerne, Herts; a Septvans brass, Chatham Church, Kent; a Lady of the Ryther family, in Ryther Church, Yorkshire; Robert de Marmon and his Wife, Tanfield Church, same county; and Richard II. and his Queen, Anne of Bohemia, in Westminster Abbey. The minute accuracy of the Messrs. Hollis is particularly meritorious; and its value may be appreciated when we remark that, in consequence of it, the curious devices upon the royal robes of Richard and Anne have been resuscitated after centuries of concealment. The entire work will be a great accession to the antiquarian library. It is on the same plan with the late Mr. Stothard's, and is to consist of fifteen parts, 145 plates, with descriptive letterpress in the last.

#### *Heath's Waverley Gallery of Female Characters.* Part V. Tilt.

MISS WARDOUR, from "The Antiquary," being hoisted up from her dangerous situation to the top of the precipice, is an original subject, and well treated by J. R. Herbert; Jacqueline, from "Quentin Durward," is very impressive; and Janet Foster, from "Kenilworth," an exceedingly pretty portrait by J. W. Wright. It is in shadow, and very simple and characteristic.

#### THE DRAMA.

*Drury Lane.*—The admirable harmony of

this theatre has been momentarily interrupted (on Wednesday evening) by a drunken fool, whose boisterous interruptions rendered it necessary to call in the police to remove him. He resisted, leaped into the pit, and some congenial spirits joined his cause against the constables doing their duty, and rescuing a whole theatre full of respectable people from the vulgar annoyance. The police magistrates settled the business next morning by fining the offenders.

Mr. Eliason, it is reported, has become lessee of Drury Lane for next season; when operas will be produced in force. Some fine novelties have been introduced into the *Concerts d'Été*.

*Haymarket.*—*The Beggar's Opera*, as an afterpiece, with Mr. Harrison, Miss Rainforth, and P. Horton, as *Macbeath*, *Polly*, and *Lucy*, has been got forward to compensate for the late losses. Strickland, O. Smith, and Mrs. F. Matthews, add to this strength of cast; and the costume, as at Covent Garden, improves the scenic effect.

*The Shaksperians.*—This Amateur Dramatic Society held another acting night on Monday last at Her Majesty's Theatre. *The Jew of Capua* was announced as the play, but, from some unexplained cause, the farce of *The Unfinished Gentleman* was substituted for it. Mr. Lionel Goldamid was exceedingly amusing as *Bill Downey*, and kept the audience in excellent humour, though his task was a difficult one, for the *Charles Danvers* of the evening was very inefficient, and apparently unacquainted with the stage. The performances wound up with a scene from *Katherine and Petruchio*, and the farce of *The Wandering Minstrel*, in which a gentleman amateur sang a song in a charming manner, his voice being of considerable power and of great richness.

#### ORIGINAL POETRY.

##### DANCE, THEN, MERRLY DANCE AWAY.

Tune.—"Nix my dolly, pala."

Oh! I'm not a lover to die for love  
Of a lady's fan or a lady's glove. Dance away!  
The girl in her teens says boldly "Nay!"  
But the time will come when she'll whisper "Ay!"  
Dance, then, merrlly dance away!  
I lost my heart on a summer day—  
The smile was sweet and the song was gay. Dance away!  
And music's passion, where song and smile,  
In bow'net of beauty, are true the while!  
Dance, then, merrlly dance away!

But the blithest of music none shall say,  
Or the sweetest of smiles, will last for aye. Dance away!  
And so, ere summer's sun had set,  
A fairy went off with my gay coquette.  
Dance, then, merrlly dance away!

But the gay coquette, like the bee in May,  
Will have, and can only have, her day. Dance away.  
That day gone by, and her lovers fed,  
She'll sigh for the day when she might have wed.  
Dance, then, merrlly dance away!

August 6. HENRY BRANDRETH.

##### 'TIS PAST, AND FOR EVER.

'Tis past, and for ever, the love I have borne thee;  
The light of the altar but gleams to decay;  
Yet still my last words—though despairing—would warn thee

To shun the deep sorrow and guilt of thy way!  
Oh! how can thy soul its ingratitude view,  
Whilst the true heart that loves thee it coldly deceives;  
Like the hemlock which poisons the innocent dew,  
That seeks but to cherish its treacherous leaves!

'Tis not in the goblet's delirium to drown  
The remorse which must rise to embitter thy hours;  
For madness the mirth of the banquet must crown,  
When thou think'st of thy Home and its desolate flowers.

Yes, past, and for ever, the love I once knew:  
'Tis not for myself—but for thee—my soul grieves;  
From the hemlock's deep poison if 'scapest but the dew,  
'Tis too happy to heed the slight fall from its leaves.  
C. SWAIN.

#### VARIETIES.

*Chess.*—Among all the minor publications which it has been our lot to notice, we never

remember our task to have been more agreeable than in the present instance.\* Chess has, of late years, been making rapid and sure progress in this country, as is witnessed by the establishment of chess-clubs and divans in most of the principal towns in the United Kingdom. Among those of more recent formation we beg to call the attention of our readers to that of Mr. Huttman, the selector of the games under notice, and the original projector of the Westminster Chess Club. His devotion to the game, and the sacrifices he has made in fostering and promoting its interests, demand our warmest admiration, and we are glad to have the opportunity of calling public attention to his praiseworthy efforts. We understand that Mr. Huttman has been in correspondence with many of the leading men of the day, upon the practicability of introducing this noble game more generally into our schools as a branch of scientific recreation. If this design could be carried into effect, it would tend to habituate the youthful mind to thinking for itself; and in this respect, if in this only, might be of very great benefit. We are glad to promote the idea in any way in our power, and have only to remark, in conclusion, that the games and problems selected by Mr. Huttman are extremely ingenious, and have afforded us great amusement.

*New Clock.*—A very ingenious and newly invented clock, representing a railroad, with several trains of passengers and luggage travelling on and returning through tunnels, may be seen at Messrs. Lister and Sons, of this town, who are gratifying the public by exhibiting it. The clock-strikes resembling the tone of a cathedral bell.—*Newcastle Journal*.

*Guide Cards to the British Museum.* (C. Knight).—Packing off to the British Museum, a handful of these cards will be found serviceable. On one side of each is an engraving, and on the other a description of the objects to be seen in the Townley Gallery, Elgin Saloons, Egyptian Saloon, Phigaleian Saloon, Etruscan Room, and miscellaneous collections of antiquities, art, and *verré*. The information is correct, and the pictures well executed. On the table, at home, they will point out what is to be, or remind us of what has been, seen in this interesting receptacle of rare and curious things. The cuts and descriptions are, we presume, from the "Library of Entertaining Knowledge," and put into this novel shape.

*Imprisoned Frog.*—The "Yorkshire Gazette" states that a workman of Messrs. Campions lately found a frog in the centre of a solid log of oak, about twelve feet from the root. It was in a hollow, towards which not the vestige of a crack could be discovered, and lived for eighteen hours after extraction from its long abode, calculated at about 200 years' duration.

*New Tapestry.*—The "Sherborne Mercury" describes a new fabric of tissue invented by a Mr. E. Parry, and consisting of the fibres of the banana, aloe, and other similar plants common to the West Indies and tropic climes. It is said to be stronger than hemp, and equal to silk in appearance; so that, either for cordage or furniture, the manufacture is excellent.

#### LITERARY NOVELTIES.

*Egypt.*—The Prospectus of an interesting work upon Egypt has been issued, viz. of "Illustrations of the City of Cairo," and embracing the architecture, scenery, and costumes of Egypt, by Robert Hay, Esq. of Linlithgow.

\* *Games of Chess*, Nos. I. to XVIII., and *Curious Chess Problems*, Nos. I. to XV., selected by J. H. Huttman, London, 1840.

**A BOTANICAL POCKET DICTIONARY.**  
Edited by J. Paxton, F.L.S. H.S. &c.  
Professors LINDELEY, Ph. D. F.R.S. &c. &c.  
This Work is intended as a Companion for the lover of horticulture in all its branches; but particularly for the admirer of flowers. It combines all the most prominent advantages of a botanical catalogue, with the usefulness of a floricultural directory, and the convenience of a pocket dictionary. It will be found especially valuable to the gardener and gardening amateur, as well as to all who desire an accurate knowledge of botanical nomenclature, or a more extensive acquaintance with the history and peculiarities of plants than is to be gathered from a mere remembrance of their names.  
London: Published by J. Andrews, 167 New Bond Street; and W. S. Orr and Co. Paternoster Row.

In 1 vol. demy 8vo. a new edition of  
**DEBRET'S COMPLETE PEERAGE of GREAT BRITAIN and IRELAND, corrected to the present Time**  
By GEORGE WILLIAM COLLEN, Esq.  
\* \* \* In this new edition the Work is arranged alphabetically, and the Arms incorporated with the Text. It is printed with entirely new Type, cast expressly for the purpose.  
William Pickering, Chancery Lane; J. G. F., and J. Rivingtons; Cadell and Co.; Longman and Co.; and the other Proprietors.

**MR. COLBURN'S NEW PUBLICATIONS now ready.**

I.  
**Memoirs, Letters, and Comic Miscellanies of the late James Smith, Esq.**  
One of the Authors of "Rejected Addresses."  
Edited by his Brother, Horace Smith, Esq.  
9 vols. post 8vo. with Portraits, 21s. bound.

II.  
**Von Raumer's Italy and the Italians.**  
3 vols. post 8vo. 21s. bound.

III.  
**Sandron Hall; or, the Days of Queen Anne.**  
By the Hon. Granville Berkeley, M.P.  
3 vols.

"One of the best and most amusing novels we have read for a long time."—*Morning Post*.

IV.  
**Queen Victoria, from her Birth to her Bridal.**  
3 vols. post 8vo. with Portraits, 21s. bound.

Also, just ready,  
**The History of the British Turf,**  
From the earliest Period to the present Day; comprising every particular to which the lover of horse-racing may desire to refer, either as a matter of business or amusement.  
By J. C. Whyte, Esq.  
3 vols. 8vo. with Portraits, &c.  
Henry Colburn, Publisher, 13 Great Marlborough Street.

**DE FOE'S HISTORY OF THE DEVIL.**  
In 1 vol. duodecimo, price 3s. bound in cloth.

**THE POLITICAL HISTORY of the DEVIL, as well Ancient as Modern, in Two Parts.**  
Part I.—Containing a State of the Devil's Circumstances, and the various Turns of his Affairs, from his Expulsion out of Heaven to the Creation of Man; with Remarks on the several Mistakes concerning the Reason and Manner of his Fall. Also his Proceedings with Mankind ever since Adam, to the first planting of the Christian Religion in the World.  
Part II.—Containing his more private Conduct, down to the Present Times—his Government, his Appearance, his Manner of Working, and the Tools he Works with.  
Bad as he is, the Devil may be abused, He falsely charg'd, and causlessly accus'd, When Men, unwilling to be blam'd alone, Shift off those Crimes on him which are their Own.  
Forming Vol. X. of the Works of Daniel De Foe. N.B. Published Monthly, until the whole is completed in 18 volumes.  
London: Printed for Thomas Tegg, 73 Chesapeake.

**AFRICA AND THE SLAVE TRADE.**  
In 8vo. price 18s.

**A GEOGRAPHICAL SURVEY of AFRICA, its Rivers, Lakes, Mountains, Productions, States, Population, &c.** with a Map on an entirely new Construction; to which is prefixed, a Letter to Lord John Russell, regarding the Slave Trade and the Improvement of Africa.  
By JAMES M'QUEEN, Esq.  
\* \* \* The Map, constructed especially for the present Work, is upon a large scale, and has been engraved under the superintendence of Mr. John Arrowsmith. It comprehends all Africa, from its northern extremity to 10° S. lat. delineating the courses of the Niger, the other great rivers, and their numerous tributaries.  
B. Fellowes, Ludgate Street.

**PAUL PERIWINKLE; OR, THE PRESH-GANG.**  
Embellished with Two fine spirited Enchirons by Phil, Price 1s.

**THE ADVENTURES of PAUL PERIWINKLE; or, The Presh-Gang.**  
This popular Work will be regularly published every Month, until fully completed in Twenty Numbers.  
London: Printed for Thomas Tegg, 73 Chesapeake; and sold by all Booksellers; also lent to read at all Circulating Libraries in Town and Country.

**TREASURES FOR PHILOLOGISTS.**  
**DE PORQUET'S LE TRÉSOR, for Turning English into French at Sight.** 20th edition, 3s. 6d.

De Porquet's German Trésor. 3s. 6d.  
De Porquet's Spanish Trésor. 4s. 6d.  
De Porquet's Portuguese Trésor. 4s. 6d.  
De Porquet's Latin Trésor. 3s. 6d.  
De Porquet's Italian Trésor. 3s. 6d.  
De Porquet's Keys to all Trésors. 3s. 6d.  
11 Tavistock Street, Covent Garden.

**ENGLAND, SCOTLAND, AND IRELAND.**  
A 3d and cheaper edition, 2 vols. post 8vo. 12s.  
**A HOME TOUR through the MANUFACTURING DISTRICTS, and various Parts of England, Scotland, and Ireland, including the Channel Islands and the Isle of Man.**  
By SIR GEORGE HEAD.  
John Murray, Albemarle Street.

Printed by HANNAH PAGE MOYES, of Brook Green, Hammer-smith, and GEORGE BACCLAY, of Number 2 Filling's Place, in the County of Middlesex, Printers, at their Printing Office, Number 22 Castle Street, Leicester Square, in the said County; and published by WILLIAM ARMIGER SCRIPPS, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, August 9th, 1840.

## REVIEWS OF NEW BOOKS.

*Seville and its Vicinity.* By Frank Hall Standish, Esq., author of "The Shores of the Mediterranean," "The Northern Capitals of Europe," &c. &c. 8vo. pp. 407. London, 1840. Black and Armstrong.

OUR author, by this as well as his preceding publications, has shewn himself to belong to a class of English gentlemen which we heartily wish was more numerous amongst us. Not that we are disposed to undervalue the general body; on the contrary, we are inclined to believe that no country on the face of the earth can boast of such a mass of honour, intelligence, and cultivation, as is displayed, in various forms, by the Gentlemen of England: but there are only a few of them who really and truly give themselves up to elegant and learned pursuits, even so far as to make themselves competent judges of the arts, or judicious friends to literature. They naturally partake of the vice of the age, which seems to exist on the adage that "*many a little makes a mickle*;" and accordingly substitute a sort of omnivorous smattering in the room of more complete accomplishment directed to a more limited range. No matter what the object, the division into a mouthful of each and a bellyful of none is the prevalent feature of our cyclopaedical time.

Not so with such as Mr. Standish. Founded on liberal education, and enlightened by travel, with a mind devoted to studies which refine and instruct, the experience and knowledge which may be crammed even into a few years where means of comparison have been extensively sought and found; and, perhaps, above all, an innate taste for the beautiful and elevated, this section of our gentry are indeed ornaments to their native land, and benefactors to its nobler ends.

It is always delightful to us, from the nature of our occupation, observant of such things, and of the vast benefits which they confer on society,—it is always delightful to us to offer our sincere though humble applause to characters of this description; and it is equally pleasurable to follow them in any of the productions it may suit their habits to offer to the public. Of Mr. Standish's former works, mentioned above, we have spoken in the terms of praise their merits demanded; and though the present volume is more local in its application, yet, as it displays the same information and talent, and does treat of a site of great European interest, we are gratified in having it in our power to bestow a similar tribute upon its historical, antiquarian, and topographical merits. One thing we note is the want of plates to illustrate some of the subjects; and a want of an acquaintance with the Spanish language is another which many readers will feel where passages are quoted in that tongue. Taken altogether, the title of *Seville and its Vicinity* is fully justified; for the account is minute, and leaves nothing further to be wished, either by English or Spanish inquirers. We will now endeavour to exemplify this, copying first an explanatory portion of the author's preface:—

"The register of Sevillian worthies is very extensive; but the abodes of some, and the

works of others, have disappeared, and are daily perishing; so that the present work even now almost belongs to the narrative of another age, and the next generation will soon probably see what little yet remains dispersed or destroyed by politics and war. Spain has been long enslaved by aristocratic and religious despotism; from the latter she has emancipated herself, devastating the temples, and dispersing their inmates. With military coercion she will probably now become familiar. Such a nation, poor, and in arrear of the march of intellect all over the rest of Europe, is incapable of understanding or enjoying liberty,—a blessing, indeed, when properly administered by an enlightened government, but applied rashly or ignorantly, ruinous to a state. Ignorant masses must of necessity be kept in subjection, until education has rendered them capable of reasoning with judgment. The ignorant and 'profligate vulgar' are rank weeds every where,—a devouring cancer in society,—equally ready to go the greatest lengths at the call either of unprincipled agitators or of corrupt princes. The only moment when they can be regarded with pleasure is, when with a blind but generous devotion they are rushing upon the bayonets of foreign enemies. The work now presented to the public contains an enumeration of almost all the convents and public buildings which existed in Seville during the last century, with their most remarkable contents in the present; some notice being taken of the troglodyte habitations of the Arabs. The miracles of Catholic images are recorded, to shew the gross superstition of the faithful in former times; indeed, not long since, the hands of Saint Anthony were filled with letters to the Americas, which were answered on the following morning by the priests: his holiness was the great courier of the Havannah, and the parent or the lover blessed his miraculous power of conveying speedy and secret intelligence. Dates have been carefully observed; so that, on referring to more detailed historical accounts, more minute particulars may be obtained on most parts of the work. No concise account of Seville has yet been written, and those who desire information concerning the town are obliged to seek it among rambling, diffuse, and sometimes contradictory authorities. It was easy to have expanded the details of the work to thrice its present bulk; but diffuseness has been purposely avoided where nothing particularly interesting occurred for narration."

This so clearly points out the principal matters to which Mr. Standish has directed his attention, that we may conveniently forego analysis, and content ourselves with a selection of such parts as appear to us most likely to entertain our readers:—

"The following is the panegyric passed upon Seville by an ancient chronicler, Morgado, in 1587:—"It is called by excellence the town of the kingdoms of Spain, for its most ancient Christian faith and glorious patrons, Justa and Rufina, Laureanus, Saint Hermenegildus, martyrs in Christ and confessors in him, besides Leandrus and Isidorus, who have sanctified this fortunate country with their blood, their sepulchres, and their ashes; for its supreme fel-

city in possessing the cathedral, and holy office of the holy Inquisition; for its most illustrious and just senate and holy government, its ministers of justice, and divine ordinances; for its university and colleges of polite letters; for its agreeable position, its most level streets, its fine houses and sumptuous temples, and superb edifices of the Alcazars, towers, and walls; for its distinguished persons in all branches of polite literature; for its many principal and great lords and generals, admirals, captains, pilots, merchants, masters, and all classes of soldiers and sailors; for its ancient distinguished pedigrees of knights and wealthy men, its infinite number of ladies, no less chaste and modest than handsome and graceful; for the great abundance, dainty, and good flavour of its fruits and viands; for the eternal spring which reigns, the luxurious and fresh verdure of its trees and green banks: for the soft manners and natures of its natives; for its perpetual and constant loyalty, fidelity, and attachment to its king; for its commerce and intercourse with all the world—if the expression be allowed; for its pompous and continuous show of war, which threatens and alarms the most powerful foe; for its famous port, so continually full of all sorts of ships, which go and come to and from all regions in continual commerce with its most valuable products, and which render it populous, rich, and magnificent,—and this without counting the ordinary navigation of all the Indies, whose fleets offer in its opulent and noble port the immense wealth, which is notorious to all the world; for the tribute to its king of one million and a half of dollars every year, being to him in this way no less advantageous than honourable. From hence with reason it has passed to a proverb, that he cannot be called king who is not king of Seville.' The circumference of Seville, which is all walled with battlements, is from five to six English miles, being 80,750 Spanish yards. The barbicans, or embraasures, are almost as strong as the walls. It has twelve gates, and three 'postigos,' or by-gates. The suburb of Triana, which derives its name, some say from the three antique arches of entrance which its gate once had, and others from Trajan, and the bridge, which, shame to the ayuntamiento, or civil authorities, is still formed of boats, and rude as in the time of Ferdinand, are famous as the first seat of the Inquisition, placed there by that king, and for the tower which caused so much damage to his army at the siege. At the commencement of the seventeenth century Seville and its suburbs contained in householders 100,000 persons, and in strangers as many more; but of both denominations there do not now exist more than half the number. The commerce of the Indies, which it then enjoyed, has been transferred to Cadiz, and though still opulent, it has now to subsist almost entirely from its own resources."

Between 80 and 90,000 is now, perhaps, the amount of the population. Among the promenades Mr. S. tells us:—

"Down the river you reach the Delicias by a charming walk, having the shade of trees above, and on one side the river and view of Triana, with the garden of the convent of the

Remedios; on the other, the orange-groves of the convent of Saint Diego, now used as a tanning establishment, and what has been formed of a botanic garden, under direction of the intendant Arjona, who planned the three places I am attempting to describe in the year 1828;—until you arrive at a large plantation which has three centre drives, besides walks which skirt the river, and intersect the others. The whole of this ground was planted by Claudio Botelleu, an able botanist; and his care has been well repaid by the success and beauty of the plants. I have sometimes in a warm spring day tarried beneath the shade of these trees at noon, and could fancy myself in a wilderness of some new world. The venerable elms, which existed ages before this ground was planned for its present use, rose gnarled, knotted, and covered with dark green foliage, over my head; between them appeared the tender pomegranates, over which the sun threw its rays like the sparkling of the sea wave; gigantic heads of Spanish broom, with its yellow flowers, spotted each opening, and the compact orange here and there shewed forth its fragrant white flower. The citron trees, of almost a palish yellow, afforded another contrast; and below were violets, snapdragons, and an endless variety of wild plants, mingled with calmsias, oleanders, and beds of fragrant red poppies. The thrushes, nightingales, blackbirds, and wrens, were sometimes heard alternately, as if each waited for its associates, and occasionally warbled and chirped in chorus. The whole air seemed impregnated with the insect tribe, and beetles, ladybirds, flies of all sizes, buzzed about in the gleams of sunshine between the branches of the trees. The tongue of man alone was mute; his form was not seen, nor was his presence missed: for nature was all instinct with life, and creation so busied in its own projects, that I could not help contrasting the little world before me with the great one in which we live. All were occupied in the same cares as ourselves; even the flowers and the leaves of the trees seemed to have tongues, and to say, We are all looking for and expecting something—we all belong to, and are dependent on, an overruling Power. The speculations of man seemed to be transferred and to have descended to these inferior beings. What, indeed, are we more than these—bustling through their little day of life and pleasure—only creatures of a larger growth, and somewhat more prolonged and more disturbed existence!"

What a land to be wasted by civil wars and withered by bad governments!"

"The population of Seville in the year 1823 amounted to 81,875 souls: of these 43,007 were single persons, the males being less in number than the females by about 500; of married couples there were 30,389, and of widowers and widows 8479, the latter bearing to the former an excess of 4859. The number of religious persons of both sexes was about 2000, and there were 387 public beggars. After this period (which was that of the Constitution) the population increased greatly, when the friars came back under Ferdinand: and we may at present presume that between the inhabitants of the town and suburbs, and the strangers resident in Seville, the population may reach 100,000 in number. Indeed, many are now migrating hither from Cadiz, as the colonial commerce is entirely destroyed in the latter place, and it is found more easy to smuggle goods into this town than the other. Owing to a bad government, and excessive duties, scarcely any trade

is carried on in Spain, except as a contraband one. Fair and unfortunate country, the curse of fallen opulence weighs it down,—who can tell when to rise again? It is the present intention of the government to collect all the pictures for a museum, and the books of convents for a public library, sorting the latter, and keeping a copy of each work, while the duplicates are to be sold by public auction. This presents a fine field for bibliomaniacs to luxuriate in, and the trouble of a voyage from England or France would be amply repaid, were it possible to count with certainty on such an intention: but the money paid by students, which was to have defrayed the expenses of the library-shelves, has all been seized by the government to defray the extraordinary expenses of the war, and it is not impossible that we may see both pictures and books hidden away in obscurity, or pilfered and dispersed clandestinely. Seville contains forty convents for men, and twenty-nine for women, besides four 'Beaterios,' which are public charities—a species of foundling-hospitals, for the education of children who are poor and friendless. The buildings exist, indeed, but most of the communities of these places have been dispersed. It is impossible to stray amongst these abandoned cloisters without feeling regret at their desolation; to see thistles and weeds grow between the joints of a pavement which was once neat and polished, and the wild fig-tree forcing its insidious roots into architraves and mouldings, formerly brilliant in beauty, and inviting to the pencil of the painter, the mind of the poet, and the fervour of the devotee. In neglected aisles, an occasional statue dark with age, and once sanctified by daily prayer, is seen, whose calling and influence are past; a tomb is robbed of its tenant, and the glory transferred to it by the recollection of his life spent in devotion or in arms exists no more. The dark ages would indeed have been altogether obscure, had not religion preserved what was denied to the arts, handing us down the infant conceptions of the uncultivated mind, and the deeds of those for whom there were no chroniclers or historians. We regard, indeed, such samples with a degree of tenderness, not granted in general to contemporary exertions of genius, like parents who watch the infantine movements of a child, the first dawnings of his tender mind, and the simplicity of speech and action which delight then, but would be unbecoming in those of more advanced years. We judge them not as they are, but as what they promise to be, and look forward in the hope and expectation of their arrival at future excellence. Of ancient Arab libraries in Seville we find scarcely more than one tradition, in relation to the study of Miriam, which has been noticed at the commencement of the present work. According to the author of an article in the 'Edinburgh Review,' on the 'Life of Ferdinand and Isabel,' by Mr. Prescott, the account of Casiri, in his 'Bibliotheca Escorialensis,' of the existence of seventy Arab libraries during the occupation of the country by the Arabs, is a mistake, that writer having mistaken the list of books read by the author for that of libraries. Thus this piece of information, although copied by others and myself, leaves their number as obscure as before Casiri wrote. As, however, Jews mixed with Arabs, Persians, and Africans, as well as Christians, composed the population of towns subject to the Mahomedan domination in Spain, more collections of books were naturally made in this country than in the East, where the people were always migratory, and did not

come so much into contact with Europeans. It is matter of doubt whether the production to-day of the Arab manuscripts in the Escorial would afford the information which has been anticipated from them. It was then, and is now, customary for every Mahomedan prince to have an historiographer, who exaggerated the actions of his reign, being salaried expressly to praise him. The historical accounts of the Arabs might therefore be more correctly gathered from Jewish or Christian chroniclers than their own writers; indeed, the researches hitherto made have by no means been so satisfactory as we could wish. Of curiosities in literature and science we should certainly find many, for the Arabs have always been lovers of story-telling—a taste which they have handed down to the Spanish, who, when they collect in conversation, generally find some one to beguile the time and amuse the company by relating a 'cuento,' or fable. 'Cuentame un cuento,' is the request generally made when conversation flags. And in science, the discoveries the Arabs made, and their machinery, however rude, are interesting as specimens of art in its infancy. The question of the number of libraries remains therefore undetermined, but we may conclude that they were more numerous in the towns of Spain than those of the East."

Here is another picture:—

"To enjoy the romance of Seville, it must be visited by night. A walk through the streets, when the burning sun has set, and the moon risen, presents a scene of luxurious novelty peculiar to this extraordinary city. Then the guitar sends forth its tender and tremulous notes, and the fragrance of the rose and jessamine is on the gale. Through the green-grated iron doors of the houses, all the varied lights of the courts are seen, and each is filled with a diversified group. The sky above appears clear as in broad day, while numberless convent towers cut upon its pale blue surface, and in the tortuous streets the long dark shadows of a passenger, or an immovable lover waiting for the object of his passion, are cast on the white walls of the irregular habitations. Here an abutment throws a line of shade on a building, there a tower darkens all below, while the broad flash of light glares upon half a street. In the deep stillness of all around the mind enters within itself, no longer disturbed by the business of the day; it has leisure for reflection, and the venerable antiquities around recalling the many years that have passed over them, the imagination depicts another and an earlier age, when the treasures of America floated to these shores, and the Spanish name caused terror to all Europe. In a still more extended range, it may figure to itself the iron visages of the Goths, and the turbaned Arabs, amongst whom a glance from the jet black eye of beauty to a lover, was a fatal luxury, often purchased by his blood. Boiling and impetuous, but kind and docile, the veins of the Andalusians are still filled with the life-drops of their African ancestors; wild and untamed, their every movement betrays the freedom of the roving camp, when amidst the fire of battle, or the whirlwind of the desert, all are equal, and rage and sympathy alone have place in the heart, where existence is too uncertain to tutor conduct to prudence, and pleasure too rare to be resisted, or accepted without greediness and passion. Clanship still exists in Spain; a point of honour in the great is to support the weak, even in conduct contrary to law; while an intrusive swain, prowling for conquests, is chased by the whole neighbourhood from the

quarter to which he is unknown, as the birds unite to drive away the stranger from their flocks. The houses of this town are perhaps the most picturesque in the world. You enter them from a porch, or 'zaguan,' to a court, round which are marble columns, and these are found not only in the principal but even in ordinary habitations. The arches between the columns support galleries or rooms above. It is usual to inhabit the ground-floor in summer time, and the upper story in winter: in the former season a canvass veil is placed over the whole court during the heat of the day, and removed at night, when the family collect together to receive friends under the galleries or in the courts, whilst flowers are placed round a fountain which generally plays in the centre, the courts being often paved with marble. The lamps which hang around the walls in symmetrical arrangement, the bubbling of the water, the fragrance of the flowers, the mystical green branches which spring up in every direction from large earthen pots, give an appearance of romance, which, added to the broken lights, the irregular architecture of the buildings, and the white Ionic columns of marble, present in every house a varying subject for the draughtsman or painter. To the sides of the walls are attached mirrors, which reflect all around, and pictures, amongst which were once found works of art that would delight the connoisseur. Now, indeed, from the all-invading gold of foreigners, and the want of taste of the natives, the places of the best have been supplied by coloured lithographs of the French and English schools. It has been calculated that 80,000 marble columns exist in Seville, but there assuredly must be a much larger number, for many are buried in the walls, others covered with plaster, and on an average every house possesses six."

[To be continued.]

*Old Ballads, from Early Printed Copies of the Utmost Rarity. Now for the first time Collected.* Edited by J. Payne Collier, Esq. F.S.A. 12mo. pp. 131. London, 1840. Printed for the Percy Society.

WE have more than once mentioned the formation of the Society whose first publication we have now the pleasure to introduce to the world. It is curious in itself, and full of promise for the Literary Association from which it emanates. Like the Camden Society, but limited to a less numerous circle, so that its productions may still retain a considerable portion of their ancient value of *rarity*, the Percy proposes to publish "ancient ballads, songs, plays, minor pieces of poetry, and popular literature," all of them scarce, some of them unique, and others for the first time collected and classed together. The design is excellent, and there are abundant stores from which to execute it in the most interesting manner. Nor let the uninformed run away with the notion that such objects are merely trifling, or simply specimens of poetry justly fallen into oblivion, or knick-knacks of minute antiquarian research. Amongst them are found the most genuine traits and pictures of the age to which they belong; often striking illustrations of history and historical character; lively descriptions of the costume, and manners, and modes of life, of our ancestors; and, in fact, notices of every topic that can engage the human mind, either for entertainment or philosophical study. Give us the songs, and we will give all the rest, including even the sermons: they do indeed reflect the people, and in their day have had a powerful influence in forming them. The works already suggested or an-

nounced for publication by the Percy Society embody a number of such pieces; and, from the names of some of its contributors, we may safely anticipate many more. But to Mr. Collier and its *début* :—

"The following ballads (he states) are reprinted from the original broadsides, which were published at various dates between the middle of the sixteenth and the beginning of the seventeenth centuries. Nearly all of them are from the only existing copies; and of the few which are not absolutely unique, not more than two or three impressions are known. It was thought that they would be a curious and valuable addition to the published specimens of our early popular literature, and therefore an appropriate commencement to the labours of the Percy Society. The reader who has devoted attention to relics of this description will not be surprised to observe among the contributors to the present volume such popular ballad-writers as William Elderton, Thomas Churchyard, and Thomas Deloney; but he will peruse with great interest the compositions of men like John Skelton, Richard Tarlton, William Fulwood, and Thomas Preston, now for the first time included among authors of this class; while the names of Stephen Peele, Ralph Norris, and Robert Seall, will be new to our most learned antiquaries. The ballads are reprinted precisely as they stand in the old copies (including the titles and the imprints), with the exception of corrected punctuation. Such illustrative matter as was considered necessary will be found to precede each separate production."

Twenty-five poems are contained in a neat volume of 131 pages; and the first to which we shall advert is

"*The Pangs and Fits of Love.*"

"Herbert (as quoted in Dibdin's 'Typ. Ant.' iil. 583) mentions the license of a ballad to Richard Lant, under the title of 'The Pangs of Love,' but until very recently it was not known to have been published. It is precisely in the same measure, and with the same burden, as a song in the interlude of 'The Trial of Treasure' ('Hist. of Dramatic Poetry and the Stage,' ii. 331), which was printed in 1567, while what follows came from the press of Lant in 1539, eleven years later than any dated performance by him yet discovered. The initials, W. F., at the end, are doubtless those of the celebrated William Elderton; and, making allowances for misprints and clerical errors (such as Priamus for Piramus, in the fifth stanza, &c.), it is a very favourable specimen of his skill as a poet."

"*The Panges of Love and Lovers Fittes.*"

Was not good kyng Salamon  
Ravished in sondry wyse,  
With every livelie Paragon  
That glistered before his eyes?  
If this be true, as trowe it was,  
Lady! lady!

Why should not I serve you, alas,  
My deare lady?  
When Paris was enamoured  
With Helena, dame bewties peare,  
Whom Venus first him promised  
To ventor on, and not to feare,  
What sturdy stormes endured he,  
Lady! lady!

To winne her love, or it would be,  
My deare lady.  
Knowe ye not, how Troylus  
Languished and lost his joye,  
With fittes and fevers mervallous  
For Cresseda that dwelt in Troye;  
Tyll pytle planted in her brest,  
Lady! lady!

To slepe with him, and graunt him rest,  
My deare lady.  
I read sometime howe venterous  
Leander was in love to please,  
Who swomme the waters perillous  
Of Abidon, those surginge seas,  
To come to her where as she lay,  
Lady! lady!

Tyll he was drowned by the waye,  
My deare lady.  
What say you then to Priamus,  
That promised his love to mete,  
And founde by fortune mervallous  
A bloudie clothe before his feet?

For Tysbies sake hym selfe he slewe,  
Lady! lady!  
To prove that he was a lover trowe,  
My deare lady.

When Hercules for Eronie  
Murdered a monster fell,  
He put him selfe in jeopardy  
Perillous, as the stories tell,  
Reskewinge her upon the shore,  
Lady! lady!

Which els by lot had died therefore,  
My deare lady!

Anaxeretes bewtifull,  
When Iphis did beholde and see,  
With siges and sobbinges pitifull,  
That Paragon longe wooed he;  
And when he could not wynne her so,  
Lady! lady!

He went and honge him selfe for woo,  
My deare lady.  
Besides these matters mervellous,  
Good lady, yet I can tell the more;  
The Gods have ben full amorous,  
As Jupiter by learned lore,  
Who changed his shape, as fame hath spred,  
Lady! lady!

To come to Alcumenas bed,  
My deare lady.  
And if bewtie bred such bilisfullnesse,  
Enamouing both God and man,  
Good lady, let us wilfullnesse,  
Exuperate your bewtie, then,  
To slaye the hertes, that yeld and crave,  
Lady! lady!

The graunt of your good wil to have,  
My deare lady.

Printed at London in Smithfield in the Parish of Saynt Bartholomewes Hospitall by Richard Lant.

An. Dni. M.D. lxx. xxi. Mar."

The following stanzas from "The Lamentation of Folie," by William Elderton, affords a favourable idea of his talents :—

"What surety is in man,  
What truth or trust at all,  
Which frameth what he can  
To worke unworthy thrall?  
Oppression hath bene free,  
The poore alas be spoyled,  
Maides and wives be ravished,  
The simple are beguiled.

Lawe is made a libertie,  
And right is overthrowne;  
Faith is but a foolish thing,  
Falsehood is alone.  
Pride is counted clemencie,  
And theft is but a slight,  
Whoredome is but wantonnesse,  
And waste is but delight.

Spoiling is but pleasure,  
Riot is but youth,  
Slaunder is a laughing game,  
And lying counted truth.  
Mariage is but mockage,  
The children counted base:  
Thus right is wronged every way  
In our accursed case.

Flatterie is the forte of fame,  
And truth is troden downe;  
The innocent do beare the blame,  
The wicked wyne renowne.  
Thus Sathan hath prevailed long,  
And we for want of grace  
Have troden vertue under foote,  
And vice hath taken place."

Thomas Brice, "against filthy writing," might be read with great advantage in our day. Many of the ballads are bitterly anti-Romish. Here is part of one :—

"A letter to Rome to declare to the pope  
John Felton his freend is hangd in a rope:  
And farther, a right his grace to enforce  
He dyed a papist and seemd not to turne.

To the tune of Row well ye Mariners.

Ryng all the belles in Rome,  
To doe his sinful soule some good:  
Let that be doen right soone,  
Because that he hath shed his blood.  
His quarters stand not all together,  
But ye mai hap to ring them thether  
In place where you wold have them be:  
Then might you doe as pleaseth ye.  
For whye? they hang  
Unshryned each one upon a stang:  
Thus standes the case,  
On London gates they have a place.  
His head upon a pole  
Stands wavering in the whirling wynd,  
But where should be his soule  
To you belongeth for to fynd:

I wish you Purgatorie looke,  
And search each corner with your hooke,  
Lest it might chance, or you be ware,  
The Devils to catch him in a snare.

Yf ye him see,  
From Purgatorie set him free:  
Let not, trudge than,  
Fetch Felton out, and yf ye can.

I wish you now, sir Pope,  
To loke unto your faithful freendes,  
That in your Bulles have hope  
To have your pardon for their sinnes:  
For here, I tell you, every lad  
Doth scoff and scorne your bulles to bad,  
And thinke they shall the better fare,  
For hatyng of your cursed ware.

Now doe I end;  
I came to show you as a frend:  
Whether blasse or curse,  
You send to me, I am not the worse."

"The Pope's Lamentation," by Thomas Preston, on the defeat of the rebels in Northumberland, is more humorous, but equally sarcastic. We particularly commend it to notice.

"A Warning to London by the Fall of Antwerp," by Rafe Norris, is a poem full of matter, and remarkable for its versification. Thus:—

"Let Antwerp warning be,  
Thou stately London, to beware,  
Lest, resting in thy glee,  
Thou wrapt thy self in wretched care.  
Be vigilant, sleepe not in sin,  
Lest that thy foe doo enter in:  
Keep sure thy trench, prepare thy shot;  
Watch wel, so shall no foill be got.  
Stand fast, play thy parte;  
Quail not, but shew an English hart.  
Dout, dread, still fear,  
For Antwerps plague approacheth neer."

The fable of "The Lark and her Family," so often repeated in after-times, is here in its earliest form; but one of the most descriptive and curious of the collection is "Queen Elizabeth at Tilbury." Mr. Collier says:—

"It would be idle to conjecture to whom the initials 'T. J.' at the end of this spirited ballad belong: had it been some half century later, it would have been confidently assigned to Thomas Jordan, who was a prolific penman of pieces of this class. The production itself is nowhere mentioned, and the only known writer of about that period whose name corresponds is Thomas Jeney, who, in 1568, printed 'A Discours of the present Troubles in France,' translated from Ronsard. It is improbable, both from the date and style, that the ballad should have been by him. It gives a few particulars respecting the queen's visit to the camp at Tilbury not found in contemporary histories." The date when the ballad was printed was, of course, shortly anterior to the destruction of the Spanish Armada.

"A Joyful Song of the Royall Receiving of the Queene Most Excellent Majestie into her Highnesse Camps at Tilburie, in Essex: on Thursday and Fryday the Eight and Ninth of August 1588.

To the tune of Triumph and Joy.

Good English men, whose valiant harts,  
With courage great and many partes,  
Doe minde to daunt the overthwarts  
Of any foe to England.

Attend a while, and you shall heare  
What love and kindnesse doth appeare  
From the princely mind of our love deare

Elizabeth Queene of England,  
To cheare her souldiers one and all,  
Of honour great or title small,  
And by what name you will them call:

Elizabeth Queene of England.  
The time being dangerous now, ye know,  
That forraigne enemies to and fro  
For to invade us make a show.

And our good Queene of England,  
Her Majestie by grave advise,  
Considering how the danger lyes,  
By all good meanes she can devise

For the safetie of all England,  
Hath pointed men of honour right,  
With all the speede they could or might,  
A campe of men there should be pight

On Tilburie hill in England.

Her grace being given to understand  
The mightie power of this her land,  
And the willing harts thereon she fand

From every shire in England;  
The mightie troupes have shewed the same,  
That day by day to London came,  
From shires and towne too long to name,

To serve the Queene of England,  
Her grace, to glad their harts againe,  
In princely person tooke the paine  
To honour the troupes and martiall traine  
In Tilburie campe in England.

On Thursday the eighth of August last  
Her Majestie by water past,  
When stormes of winde did blow so fast,  
Would feare some folke in England;  
And at her forte she went on land,  
That neare to Tilburie (strong) doth stand,  
Where all things furnisht there she fand  
For the safe defence of England.  
The great shot then did rage and roare,  
Replied by a forte on the other shore,  
Whose poudred pellets, what would ye have more,  
Would feare any foe in England.

Her highnesse then to the campe did goe,  
The order there to see and know,  
Which her Lord Generall did dutifull shoue  
In Tilburie campe in England:  
And everie capitaine to her came,  
And every officer of fame,  
To show their duetie and their name  
To their sovereign Queene of England.  
Of tents and cabins thousands three,  
Some built with bowes and many a tree,  
And many of canvasse she might see  
In Tilburie campe in England."

We are sorry we have not room for the whole, but we must leave the remainder, and the "Execution of Luke Hutton," a celebrated highwayman and housebreaker, whose memoirs would vie with Turpin's or Sheppard's, to those who are fortunate enough to procure the little volume of the *Percy* which has furnished us with so much various matter. We cannot, however, bring ourselves not to give a taste of our friend Luke (who, after one pardon in London, was hanged at York). The dying swain carols thus:—

"Not twentie yeeres old, alas was I,  
Ah woe is me, woe is me, for my great folly!  
When I begun this felonie.  
He warned young wantons, hemp passeth green holly,  
With me went still twelve yeomen tall,  
Which I did my twelve Apostles call.  
Lord Jesu forgive me, with mercy releve me,  
Receive, O sweet Saviour, my spirit unto thee.  
There was no squire nor barron bold,  
Ah woe is me, woe is me, for my great folly!  
That rode the way with silver or gold,  
Be warned young wantons, &c.  
But I and my twelve Apostles gale  
Would lighten their load ere they went away.  
Lord, &c.  
This newes procured my kins-folkes grieve,  
Ah woe is me, woe is me!  
They hearing I was a famous theefe,  
Be warned young wantons.  
They wept, they walde, they wrong their hands,  
That thus I should hazard life and lands.  
Lord, &c.

Before the judges when I was brought,  
Ah woe is me, &c.  
Be sure I had a carefull thought,  
Be, &c.  
Nine score inditements and seaventeene  
Against me there was read and scene.  
Lord, &c.

Aduce my loving friends each one:  
Ah woe is me, woe is me, for my great folly!  
Thinke on my words when I am gone.  
Be warned young wantons, &c.  
When on the ladder you shall me view,  
Think I am neerer heaven then you.  
Lord, &c.

*Queen Victoria, from her Birth to her Bridal.*

2 vols. 12mo. London, 1840. Colburn.

THERE is a class of dramas which our neighbours t'other side the water call *pièces des circonstances*; and this is a publication, not dramatic, which might be located with that class.

From "her birth to her bridal" is nicely alliterative, otherwise it might have been wished to postpone the biography till somewhere about the middle of November, when, as court gossips tell us, another event might be commemorated, and of so much importance as to give another title to the book. Perhaps it may create a demand for a new edition with *additions*!

As it is, the volumes before us are chiefly a selection, or rather collection, of reports, anecdotes, &c. &c., from the newspapers; though sometimes the compiler treats us to an original

passage. For example, after their union in 1818, the Duke and Duchess of Kent resided at the Castle of Amorbach (just the name for a honeymoon), and we are told:—

"When, however, it appeared that the duchess was likely to add a scion to the royal line of Great Britain, the Duke of Kent felt a patriotic wish that the heir of his house should be English-born. It was no light sacrifice, as may be supposed, when the Duchess of Kent, in compliance with this wish, consented to bid adieu to Amorbach, the palace where she had resided with the husband of her youth, the late Prince of Leiningen, and which had been left to her by him as her residence, together with the guardianship of their children. But she acted on this occasion as became the wife of an English prince, and the mother of the future sovereign of Great Britain."

We hope the writer will forgive us for thinking that this is representing and expressing but a poor compliment to the duchess, who must have thought one living prince, whom she had preferred and married, worth any recollections of a dead one.

Of the anecdotes, and the way in which they are told, the following may serve as a sample:—

"An agonising accident happened during the royal visit to Torquay, which occasioned much mental suffering to the princess. A shoemaker of the town made a very elegant pair of shoes, of which he intended to solicit the Princess Victoria's acceptance; and in his eagerness to present them, he pressed through the crowd to approach the royal carriage; when, unfortunately, the bayonet of one of the yeomanry belonging to the guard of honour ran accidentally into his eye, and completely forced it from its socket. The duchess and the youthful princess, who both witnessed the accident, were exceedingly distressed by it: they immediately ordered that the poor man should be placed under the care of a skilful surgeon, and that the greatest care should be taken of him, at their expense. The duchess afterwards settled a pension upon him for life, intimating at the same time that, in case he should lose the sight of his other eye, which it was feared would happen, the pension should be doubled."

At the coronation:—

"The appearance of the youthful sovereign was indeed touchingly interesting. Her fair hair was simply parted, and folded in what are called Madonna bands, and arranged at the back of her head in a Grecian knot. She wore the picturesque garland-shaped diadem of the Plantagenet sovereigns, only in a much lighter form, composed of very fine brilliants set transparently, which, from their perfect absence of colour and pellucid brightness, resembled a wreath of hawthorn-blossoms covered with tremulous dewdrops. Surely never did any British sovereign receive inauguration under circumstances so truly splendid and imposing! It was enough to overpower the faculties of proud, stern man, accustomed to command in councils and in camps. What, then, must have been its effect on the mind of a young and sensitive female, with all the ardour and romance of the morning of life about her? Yet she appeared serene and self-possessed when she arose from her private devotion, and with quiet dignity seated herself in the recognition-chair. Behind this chair stood, in varied graceful attitudes, like attendant nymphs round their tutelary goddess, her lovely trainbearers. Nothing could be more elegant and appropriate than the costume of those young ladies. They were as nearly as possible matched in height and contour, and dressed

precisely alike, in white satin, with garlands of maiden-blush roses in their hair. This whole group, with their sovereign lady in the centre, have since formed subjects for our first historical painters. The noble trainbearers of the queen were rivalled, if not excelled, by the charms of some of the maids of honour, who, in their wreaths of white roses, and robes of the same virgin hue, looked like a bevy of angels hovering round their maiden queen."

The Archbishop of Canterbury might have lost his heart among them: he certainly looked pale, whatever it was owing to.

"At the conclusion of the year 1839, it was found that the queen, though not in debt, had expended every shilling of her income: a fact that led to the knowledge of proceedings on her part with which, even now, the public are not generally acquainted. The painful circumstances of pecuniary difficulty in which her royal highness the Duchess of Kent was left a widow are no secret. These circumstances had naturally led to involvement of debt on her own account, which gave that excellent princess great pain. It was the firm and honourable resolve of the royal Victoria, that the name of neither of her beloved parents should be discussed in the senate of her country, with requisitions for the payment of debts. After paying her father's debts, with interest, out of the savings of her maiden reign, she resolved that her living parent's heart should no longer be loaded with the worst of anxieties. But she kept her intentions secret, and invited herself to breakfast with her illustrious mother on the last birthday of the duchess, who saw a packet directed to her on the breakfast-table by the side of her plate. On opening it, the Duchess of Kent found it contained receipts for every outstanding debt she had in the world. The wisdom of this action, preceding as it did the premeditated change in her majesty's life, was great; for expenses, she foresaw, would inevitably increase upon her after her marriage, which might leave her in the painful predicament of unfulfilled good intentions. Such a position by no means suits the sterling, though unpretending character of our queen. She could encounter personal privation, but not the relinquishment of the good she had from childhood bent all the energies of her character on doing. Yes—nothing less than personal privation; for she had set her mind, about this time, on possessing a pair of bracelets of a new pattern, which had been sent to her for her approval. Their price amounted but to the humble sum of 25*l*. Just as she was fitting them on, one of her ladies entered with a petition from the widow of a veteran officer who had served under the Duke of Kent. The widow and her family were in great and undeserved distress. The queen listened to the narrative, took off the bracelets, replaced them silently in their case, and handed over the 25*l*. with which she meant to have purchased them, to the relief of the widow. Her honourable and dutiful feelings towards her parents had first made 25*l*. an object to her, and she then sacrificed that small sum, which might have procured her a personal indulgence, to charity!"

It is melancholy to reflect on the privations to which our dear young queen has been, or may, be exposed—'tis nonsense in the extreme to talk of them. Would to Heaven we could avert from her other real ills which all flesh is heir to! Our author (?) dresses up matters in the most ornate style. For instance, an anecdote which she derived from *The Literary Gazette*, and which the "Morning Post,"

proving itself, as the lawyers say, "out of court," ignorantly questioned. We trust the *Glass of Fashion* will reflect upon this, and be more circumspect in future, now that it catches the story in an actual printed and published book:—

"The following anecdote of Prince Albert's courtship proves him an accomplished wooer. At one of the palace balls, just before the queen declared her engagement with her royal cousin to her council, she presented his serene highness with her bouquet. This flattering indication of her favour might have involved a less quick-witted lover in an awkward dilemma, for his uniform jacket was fastened up to the chin, after the Prussian fashion, and offered no button-hole wherein to place the precious gift. But the prince, in the very spirit of Sir Walter Raleigh, seized a penknife, and immediately slit an aperture in his dress next his heart, and there triumphantly deposited the royal flowers. The common report is, that the prince made a declaration of his love the same evening; but the truth is, that every arrangement of that nature had been made many months before, under the sanction of her royal highness the Duchess of Kent. Nevertheless, it was necessary for the queen to speak as queen; for such of our readers as are little versed in courtly etiquettes may not be aware that, whether regarding the selection of a partner for life, or a partner for a dance, it devolves upon a queen regnant to declare her choice, and select her own."

And no fear of privations, eh?

*God Save the Queen.*

*Narrative of the Campaign of the Army of the Indus, in Sind and Kaubool, in 1838-9.* By R. H. Kennedy, M.D., late Chief of the Medical Staff of the Bombay Division, &c. 2 vols. 12mo. London, 1840. Bentley.

WE have so recently gone over this ground with Major Outram, Dr. Kennedy's associate on the expedition from Bombay, that we have only from this second narrative of the same course, and, generally, of the same events, to pick out what novelties occurred to, and what observations were made by, the later writer as illustrative of the volumes now before us. Two gentlemen walking down the same street see so many different things, or things in different lights, that their respective accounts of them may be listened to with satisfaction; and should it happen that instead of a street their route should extend over a large tract of interesting country, and they should be engaged in very important transactions, the likelihood is that their narratives should both be agreeable, and tend to fill up a more complete history of the circumstances, than any single relation could do. Such is the case with Dr. Kennedy's supplement to Major Outram; and we have to add, that it is the work of a man evidently of high abilities, and considerable experience in Indian affairs.

With regard to the great question involved in the late extension of the British frontier beyond the Indus, Dr. Kennedy seems to fear future evil; but at any rate he declares that "come weal, come wo," the fruits must be immediate, and that the oldest persons engaged in the war will live to see them. On several occasions he censures the conduct of the expedition, and describes many of its operations as dilatory, hazardous, and ill-organised. Lord Keane seems to be no favourite with him; and others also come in for comments neither flattering to their capacities nor conduct. But with these matters we shall not intermeddle

farther than our extracts may touch upon them.

For instance:—

"His Excellency the Commander-in-Chief soon found that he had left Bombay ten days sooner than he had any occasion for. Had he sent the steamer with troops, and the agent for transports, and allowed her to return for himself and personal staff, he would have found on his arrival that he had something to do beyond being a spectator of the disembarkation: as it was, he detained the steamer merely for his personal accommodation, he remaining on board, and she at anchor, from November 27th to December 3d; whereas, had he waited a fortnight in Bombay, it might have brought and landed a regiment, and been sent to Mandavie to bring up the 23d Bombay native infantry and foot artillery during that period, and then have returned to Bombay and brought up his excellency again, before the camp on shore could have been formed and prepared for any forward movement."

At Tatta:—

"On this ground it was decided that the British force to be stationed in Sind should be cantoned; the lines for one European and two native regiments, and a company of artillery, were measured and fixed on. My professional opinion was never asked; but I did not fail to enter my earnest and unqualified protest against any location of troops on this ground: this protest was disregarded, and the most disastrous results followed: but of this hereafter."

At Kandahar, Dr. Kennedy strongly blames a delay of two months, and says:—

"The object to be gained by this halt, or the necessity that enforced it, should be most minutely entered into; for it was the delay at Kandahar that nullified the advantages gained by the unexpected success of the advance so far; the inexplicable folly of Miraub, khan of Khelaut, who could compromise himself beyond any possibility of retreat, and yet dared not proceed to active measures; the defection of Haji Khan Kaukur, and the flight of the Sirdars of Kandahar; and though last, not least, the non-appearance of Russia and Persia on the stage. This must unquestionably be considered the chief marvel; a very few thousands of Russian money, judiciously advanced, would have held together enough of Dost Mahomed's army to have employed us at least another campaign: and this forbearance either proves that the declarations of the Russian government are to the letter honest, and that the movement of their agent on Kaubool was unauthorised; or, as is most probably the case, that the real aim of Russia is on Constantinople, and the feint on Kaubool was either to distract our attention, or to prepare an equivalent to be conceded to us by a far-sighted diplomacy whenever our interference in the Bosporus required to be averted. The natives with whom I conversed had but one opinion; and their surprise knew no bound that Brigadier Sale's party did not advance on Kelaut-i-Ghiljy and Ghinzi, instead of Ghirisk. There was no force in the country which could have attacked or put a weak brigade in jeopardy; and we found more provisions on that route than anywhere else in the country. Had the worst occurred that could possibly befall, Brigadier Sale could have defended himself until reinforced from the rear. Our subsequent advance seems to prove that these opinions were correct: that a small force advancing could have obtained supplies; and that all the contingency and hazards of Ghizni might, as far as we have the means of judging, have been averted by

less dilatory measures. To compare our proceedings with the energy that won India, would be paying a poor compliment to the master-spirits of the past generation.

"We were at once apprised that our halt at Kandahar depended on the harvest, and would exceed a month, to enable the standing crops to be reaped, in order to provide our commissariat with the means of advance. In the meanwhile flour was purchased by government at the rate of two and a half, or even one and a half seer, or three pounds, per rupee, and issued to the troops and followers to the amount of half-rations of a pound to fighting-men, and half a pound to followers, at the rate of fifteen seers, or thirty pounds per rupee. The number thus fed at such a price was roughly estimated at eighty thousand. The baggage-train of even the Bombay column was oppressively burdensome; the Bengal followers were quadruple. As a specimen, poor Brigadier Arnold was said to have had upwards of sixty servants. My tail of sixteen, including four camel-men, was considered equal to my rank, and a liberal allowance in the Bombay column. In the Bengal lines I should have been held to be very economical, and very ill provided for: but the wages of my sixteen would exceed the amount paid in the Bengal camp to double that number; and I was certainly a gainer to have fewer to feed, as I had hands enough for all I had for them to do. The original draft of the campaign is said to have been that Shah Soojah was to be acknowledged the sovereign of Kaubool, and that the arrears of tribute due from Sind should form the golden sword that should win him his kingdom; whilst the British name was to be his shield and tower of strength, to enable him to wrest those arrears from Sind, and take the first tottering steps he required to make in the uncertainty and fears of the infant feebleness of his pretension. The Sind tribute, which would have been required to be paid, had Kaubool been competent to enforce it, would have been nine lakhs of rupees per annum, since 1805; that is to say, two hundred and ninety-six lakhs, without interest, or nearly three millions sterling. One-sixth of this, or even one-third, could not be considered an unrighteous demand, provided we can dismiss the minor question of previous acquisition of right, how justified? and present ground of demand, how asserted? Pass that, and the rest presents no difficulty. The Bombay column could have settled Sind unopposed; and in the days of Governor Duncan a single brigade would have taken Hyderabad as easily as Sir Frederick Maitland and Brigadier Valiant took Kurachy; Sind and the Indus would have been British; and Shah Soojah would have been restored, without a single demand on the British treasury, in less time than it cost us to land in the Hujamry, and advance unresisted to Kandahar. The assistance of British officers and the British arsenals, to equip and discipline Shah Soojah's levies, would have given him an army of his own in six months superior to any thing that Dost Mahomed could possibly have opposed to him; and England needed not to have spent the three millions, which would have been better bestowed elsewhere; nor yet to have appeared in the front rank, risking that fearful collision with Russia, which might have set Europe in the blaze of a general war, had the energy of Lord Auckland's secretariat been met by a similar energy in the cabinet of St. Petersburg. Autocracy has its advantages as well as its evils, or it could not last. An autocrat, if insane, is strangled; and, if not, he will not

commence a war without first providing the means to pay for it. Russia had not the means for war, and therefore there was no war; and the eye of Russia has been hitherto on Constantinople: but Austria, France, and Russia, hedge the way to the Hellespont; and we are liberally providing the means for an advance eastward. Our expenditure in Kandahar and Kaubool surpasses all that those districts have seen or dreamed of in the past century, and has filled the country with money. The enriching, the fertilising process of the next ten years, which must result from wealth and peace, will convert the bare valleys of Afghanistan into a garden; the districts we found deserts will become populous clusters of villages, and we are not to compare the future with the past. We are smoothening the way, and providing the resources, for the advance of an enemy from the West. For thirty years we have shuddered and trembled at this bugbear; and every step we have taken, in Persia first, and last, and most fatally, in Afghanistan, has been to facilitate the very result we opposed: we appear, like a moth, to have flown round and round the flame, and at last to have run headlong into it."

Up the river, we are told:—

"At these places we first saw the pulla fishery on the Indus; a piscatory pursuit which more nearly reduces the human form divine into an aquatic beast of prey than Izaak Walton, or any disciple of the 'gentle craft,' could have contemplated by the silver Thames. A large, light, and thin earthen vessel, of the strong and unequalled pottery of the Indus' clay so thoroughly baked, forms the fisherman's float: it is fully four feet in diameter, and about thirty inches high; of a very flattened form, and exceedingly buoyant. On this the fisherman balances himself on his stomach: covering the short neck and small aperture at top, and launching himself forth on the current, paddles with his legs behind to steer his course, drifting with the stream, and holding his pouch-net open to receive the prey; which, when caught, he deposits in his reservoir, the vessel he floats on. The pulla is an oily fish of a very strong potted-lobster flavour, and greatly admired by our gourmards; but it is unfortunately most detestably bony, and that to a degree which renders it scarcely safe for an unwarned and hungry traveller to venture on it. We were divided in our opinion of the flavour: some pronounced it a resemblance to salmon, others to mackerel or potted-lobster: my recollection of Edinburgh caller herrings was revived, and the well-experienced in fresh herrings agreed with me; but the pulla is intensely stronger. The fish we saw averaged twenty inches in length, and might weigh a pound and a half, or nearly two pounds: the shoals are migratory, and ascend the river as far as Bukka, betwixt January and April. The natives imagine that they travel thither on a religious pilgrimage to the shrine of Kajuu Kizir; and gravely assure us that, on attaining and swimming round the holy islet and shrine of the saint, they followed our St. James's court etiquette, where no courtier's back can possibly be turned upon sacred royalty, and that the poor pilgrim fishes never presented their tails towards the hallowed Kuddum zah (footstep-place) of the saint till fairly round, and back again past the islet."

Dr. Kennedy's details of the severe marches through the Bolan pass agree with those of Major Outram; and we deplore to add that they also agree in the account of the native robber attacks and punishments:—

"At Soony," says Dr. K., "was first exercised the final summary proceeding of martial law on offenders detected, *flagrante delicto*, in the very act of carrying off camels and baggage: two Beloochies, so arrested, were hung here by order of Sir John Keane. The village authorities being warned of the displeasure of the British government if the bodies were touched, 'You must hang them very high then, and cut away the lower branches,' replied the local potentate; 'for the whole population of these borders are such arrant thieves, that they will dislodge the dead from their airy swinging-place for the sake of the ropes you have bestowed to hang them.'"

"Every day was now destined to have its catastrophe: ten Beloochies had been summarily executed on this ground by Colonel Sandwith of the 1st regiment of Native Cavalry, under written orders from Sir John Keane, as his excellency passed with the Bengal column. The first order was a verbal one; but Colonel Sandwith, not liking it, required a written one, and received it on half a sheet of note paper. He has had the wisdom to preserve it. The poor wretches had their elbows secured, and were made to sit on the ground; when each had a bullet sent through his brain from a carbine. Lieutenant Loch, the officer who superintended the execution, spoke very feelingly of what he had been no willing agent in. Some of them, he said, sat quietly down and submitted to their fate; some resisted, and, to keep them quiet, the execution-party fastened their heads together by their long luxuriant hair, which served to secure them for their destruction. Two young lads seemed horrified to bewilderment by their fears, and implored for mercy, seizing the feet and knees of the superintending officer; but they were made to sit down. Ere the fatal volley exploded, they were endeavouring to embrace, leaning their heads against each other, weeping bitterly their last farewell. This was sad work, and did no good: we were robbed, and our camels stolen at every stage."

We conclude for this week, endeavouring to forget the image of this carnage.

*Memoirs, Letters, and Comic Miscellanies in Prose and Verse, of the late James Smith, Esq., one of the Authors of "The Rejected Addresses."* Edited by his Brother, Horace Smith, Esq. 2 vols. 12mo. London, 1840. Colburn.

RECEIVED on Thursday, we can only notice, and cannot review, this grateful memorial of a brother's affections for one whom all who knew him liked and esteemed. The gentle and pleasing, and invariably good-humoured Yorick of modern society, it is with melancholy pleasure we trace the recollections of James Smith. Of him his biographer truly says:—

"To those anonymous writers who have formed, during a course of many years, the delight and ornament of our periodical literature, evincing the talents without achieving the renown of recognised and successful authorship, it is no more than a bare act of justice to collect, after their decease, the scattered products of their fancy, and to consolidate them, in each case, into a monument which may record the name, appropriate the writings, and prolong the memory, of him to whom it is dedicated. It would be difficult to select an individual better entitled to this posthumous honour than the late James Smith, whose prolific muse cared not upon what shrine she deposited her offerings, and whose good-humour prompted

the plant assumes its perfect form differs still more." Most of the British, and some foreign ferns, may be cultivated in the open air. The situation, however, should be well shaded; for the sun's rays are more destructive to ferns than cold winds or wet. A light heath soil, with broken stones about the roots, will serve for most species: some, as *Asp. cristatum*, *Asp. thelypteris*, and *Osmunda regalis*, require considerable moisture. Stagnant water is prejudicial to most ferns, and manure mixed with the soil is also injurious; shade and moderate moisture seem the chief requisites. The beautiful *Adiantum pedatum*, a native of France, the *Aspidium bulbiferum*, *Struthiopteris Germanica*, *Dicksonia pilosiuscula*, *Aspidium acrosticoides*, and many other exotic (especially North American) plants, will grow with the British species in equal luxuriance; indeed, better and more freely than some of our indigenous ferns.—The series of papers communicated by Mrs. Riley to the Botanical Society form a valuable guide to the study and cultivation of ferns,—a tribe replete with interest.

## ROYAL BOTANIC SOCIETY.

TUESDAY. Thomas Wyse, Esq. V.P. in the chair.—The Society, on this occasion, had the honour of electing H.R.H. the Duchess of Kent a fellow of their body, after which Dr. Brewer was also elected a fellow.—Dr. Arnold, of Kingston, Jamaica, then read a valuable paper upon a new property discovered by him in the *Datura fastuosa*; that its application to the eye was followed by an almost immediate dilatation of the pupil; and he thought that the extraordinary powers of this plant evinced its adaptation as a substitute for the belladonna, which is very rarely of uniform strength, particularly such as is imported into Jamaica.—Dr. Sigmond afterwards read a short, though interesting, account, by Dr. Arnold, of the surprising knowledge of the poisonous properties of plants possessed by the coloured inhabitants of the West Indies.—The chairman then addressed a few remarks upon the design for the gardens, as executed by the architect and curator, Messrs. Decimus Burton and Marnoch; and observed that the laying out of the grounds was already commenced under the able superintendence of Mr. Marnoch, the curator; and that the Council anticipated the major portion would be speedily prepared for the reception of the subscribers and the public.

## PARIS LETTER.

Academy of Sciences, August 11, 1840.

SITTING OF August 3. *Analysis of the Blood*.—The second part of the memoir of Messrs. Andral and Gavarret, on the composition and changes of the blood, was read. It related, principally, to that class of maladies in which the fibrine remained in its normal state in the blood, or was diminished at the same time that the globules were the contrary. This class included all fevers, and certain congestions and hemorrhages. In continuous fevers, the fibrine often descended as low as 1: in typhoid fevers, the fibrine was never found above its normal state, and often below it. The globules were often augmented, being up at 140 to 150 at the end of the eighth day of the fever. In eruptive fevers, small-pox, scarlet fever, measles, &c., the fibrine often descended to 1, and never rose above 4; that maximum had been observed only once: the globules, on the contrary, rose, and sometimes got up to 146. In congestions and hemorrhages, the fibrine was commonly found below its normal proportion, and the globules above it.—The third class of

maladies comprehended the cases wherein the globules were greatly augmented, and included dropsies, chlorosis, &c.—The fourth class consisted of maladies in which the albuminous matter of the serum was much diminished, and included renic secretions, &c. The following are some of the tabularised results of the examinations of the blood of various patients.

## 1. Normal state of the blood, 1000 parts:—

Fibrine.....	3	
Globules.....	127	
Albumine.....	68	
Salts.....	12	
Water.....	790	
1000		

## 2. Case of pneumonia:—

1st bleeding.		4th bleeding.
Fibrine.....	5-799	8-348
Globules.....	124-760	91-685
Solid materials of serum.....	88-406	87-833
Water.....	784-033	812-144

## 3. Case of typhoid fever:—

1st bleeding.		5th bleeding.
Fibrine.....	2-308	1-803
Globules.....	145-246	91-678
Solid materials of serum.....	96-139	95-638
Water.....	756-314	837-413

## 4. Case of cerebral congestion producing death:—

Fibrine.....	1-608
Globules.....	132-865
Solid materials of serum.....	95-636
Water.....	778-644

## 5. Case of intense cerebral hemorrhage:—

Fibrine.....	1-803
Globules.....	175-638
Solid materials of serum.....	31-290
Water.....	792-289

*Botany of India*.—M. Richard read a report on the labours of M. Perrotet in examining the botany of India, and especially of Nilgherry Hills. This chain of mountains, much cut by ravines and marshy valleys, with deep precipices, presents a series of plateaux, or tablelands, covered with small monticules, or rounded hillocks, most of which are deprived of any arborescent vegetation; while, in the gorges of the hills and the valleys, trees and plants of all kinds flourished. The vegetation of these plateaux was found to be very similar in general character to that of the Alps or the Jura, but the species of plants differed: thus the *Rhododendron arboreum* flourished on the Nilgherry Hills, instead of the *Rhododendron hirsutum*, or *Rhododendron ferrugineum* of Europe. The *Orchis orphrys* of Europe are replaced by the *habermaria*, *salsyrium*, and *peristylus* species. M. Perrotet had spent two years in specially studying the flora of these mountains. This gentleman, during his labours as a naturalist for twenty-two years, has introduced a great number of useful plants into the French colonies of Senegal, Bourbon, the West Indies, Guyana, &c.: he also introduced into France the *Morus multicaulis*, so valuable for silk-worm breeders. The first regular silk-worm establishment made in the island of Bourbon was due to him: and he also introduced the cultivation of poplar and cochineal into Senegal.

M. Cauchy read a memoir on general methods of determining the movements of planets and their satellites.

*Academy of Moral and Political Sciences*.—Sitting of July 25. M. Bencalon de Chateaufort read a memoir on the duration of life among men of science and letters, founded on the lives of 1100 members of the various Academies, the Institute, &c. from 1635 to 1839. Some of the most distinguished men had entered the academies young, such as Camini, D'Alembert, Lalande, and Lavoisier, who were not twenty-five at the time of their admission; others, including Antoine and Bernard de Jussieu, Condorcet, Bailly, and Cuvier, were un-

der thirty: on the contrary, several were admitted late in life, such as Benserade, Th. Cornille, and Malebranche, who were upwards of sixty; the Abbé Raynal and Lajou were more than eighty at the time of their election. Out of 907 members, concerning whose admission precise data remained, there were admitted as fellows from 1635 to 1839:—

From 20 to 30 years of age	140
..... 30 .. 40 .....	242
..... 40 .. 50 .....	265
..... 50 .. 60 .....	145
..... 60 .. 70 .....	90
..... 70 .. 80 .....	21
..... 80 .. 90 .....	2

907

Of these there had been 147 academicians born in the southern provinces; 187 in those of the east and north; 127 in those of the centre; 284 in Paris, and 39 abroad, or in the colonies; and 158 of the whole number are still living: the joint ages of all the academicians at the time of their admission came up to 39,976 years, giving an average of forty-four years, one month, for each. The total ages of the 748 academicians deceased amounted to 51,542 years, which gave an average of sixty-eight years, ten months. It further appeared that the mean duration of life among the academicians, after election, was, in the Academy of Inscriptions, twenty-three years, ten months; in the Académie Française, twenty-two years, eleven months; in the Academy of Sciences, twenty-six years, seven months.

Fable by M. Jeaufré of Marseilles:—

"Le Chat et le Chien.  
Sur l'avance d'un toit, perché dès le matin,  
Et fier comme un danseur sur la corde tendue,  
Un chat ayant nom Grimackin,  
Regardait en pitié Morco, chien carlin,  
Qui se promenait dans la rue.  
Hola! lui cria-t-il, traînant sa voix aigue,  
Petit carlin à courte queue,  
M'aperçois-tu d'en bas?... Regarde, me voici  
Haut perché, voisin de la nue.  
Ayant pour unique souci  
De contempler le ciel et sa vaste étendue.  
—Tu guettes les moineaux aussi,  
Lui répond le carlin... vieux pêcheur endurci  
Sur les toits tu cherches fortune.  
Et lorsque tu t'y rends par des détours secrets,  
C'est plutôt pour y voir les moineaux de plus près  
Que pour y contempler le soleil et la lune.  
Sois moins fier de tes yeux. Tu parles mal des miens  
Que je crois pour le moins aussi bons que les tiens.  
Mais pour éclaircir cette affaire,  
Pour la juger d'un esprit sain,  
Descends d'abord de ta gouttière,  
Et plaçons-nous tous deux sur le même terrain.  
On ne doit jamais être dupe  
Du prestige qui suit l'homme parlant de haut.  
Ce prestige si vain dont un grand se prévaut  
Tient moins à sa vertu qu'à son poste qu'il occupe."

Sciarada.  
Col mio primo si fan le calze;   
Mangio l'altro tagliandolo a fette:   
E l'intero, prole già d'un regnante,   
Erra intorno alle siepi e alle piante.  
Answer to the last:—Cam-aglio.

## FINE ARTS.

TRAFALGAR SQUARE.

Public Improvements.

WE are afraid that we, like the late Committee of the House of Commons, are too late with any opinion upon the final appropriation of Trafalgar Square; and that nothing we can say or do will save that, the finest site in the capital of the British Empire, from being made a laughing-stock to all men of taste and judgment in the fine arts, "hereabouts or far awa."

"'Tis true, 'tis pity; 'tis, 'tis true."

We had been carefully considering the Report made by the Committee to the House, and digesting some remarks on its salient points, when we learned that at a meeting of the Nelson Committee, a few days ago, attended by persons whose names attest the expediency of their decision, it was resolved that, after

what had been done, they must go on, and erect the Nelson Column near the spot originally proposed. The Duke of Northumberland, Mr. Croker, Mr. Herries, Sir G. Cockburn, Sir P. Laurie, &c., were (we are informed) present on the occasion; and whatever they might think of the valid objections to this design, they felt convinced that, the subscription having been raised, and the works having proceeded so far, it was better to finish a bad job, and, what is worse, a job to last for centuries, than to retrace their footsteps, where

"Returning were as tedious as go o'er."

We cannot tell how this may be. We have great respect for the good sense of the Nelson Committee, as thus represented; but we cannot help feeling that, as far as their voice goes, if such be the conclusion to which they have finally come, they have set the seal to the consummation of an enduring disgrace to the arts and age in which we live.

We are far, we hope, from assuming the language of dogmatism, which does not become the highest members of the press, and is but the bullying and imposing pretence of its lower limbs. But we are earnest in this matter. The *Literary Gazette* strove hard, and in vain, to save the metropolis from the infliction of the National Gallery. Dropping the *We*, its Editor suffered painfully from his efforts to avert the erection of this great mistake. Valued friends thought him too peremptory; and the public, resting on official authority, or influenced by partisanship on the other side, was satisfied that, when completed, the building would be well enough! It was completed; and it is now our melancholy satisfaction to know that there is only one opinion of the grossness of the failure, externally ludicrous, and internally unfit for all its objects, and the loss of the finest opportunity ever offered in London for the execution of a grand national architectural structure.

Well! since the days of King Charles I., we have had a succession of such excrescences. Poor Wilkins's National Gallery is but the latest (would we could say the last!) of the crop; and the misery is, that it seems to have entailed itself, against more enlightened views, and will now, in spite of all past experience, cause the noble area it degrades to be farther deformed with an accumulation of heterogeneous objects at which we may smile, but a polished people ought seriously to grieve.

Is it yet possible that by a remonstrance on behalf of all that is consistent with character in art—all that is required to adorn and not to disfigure a great city—we might prevail on those who have the power in their hands not to destroy the finest and most conspicuous space in London, and fix on the nineteenth century of England's boasted civilisation the stain of another error as foolish and contemptible as the first?

With the exception of a church and clubhouse or two, in all our quasi national, public, civic, corporate, and ecclesiastical designs, and we speak from experience, there are several ingredients which contribute to make them what they have been and are;—not one excellent, a few tolerable, and the majority miserable abortions!

First, we have the jobbing; in a commercial and money-loving country, inseparable from any purpose where money is to be made. "Claw me and I'll claw you," is not confined to Scotland.

Secondly, we have humbugging; charlatanism pushing itself forward for the sake of notoriety, and either encouraged by superior rank

and intelligence, or suffered to take its way; whilst good sense, ability, and modesty, are thrown into the shade.

And thirdly, and perhaps the chief evil of all,—we have in the seat of the judges who determine such things, men who are not themselves educated to give even a tolerable decision upon the questions of art, architecture, sculpture, painting, &c., which are submitted to them. Artists often differ enough; but there are data and reasoning in their differences. We can perceive what their grounds are, and what they are aiming at. But when the case comes to a parliamentary, or still more anomalous public committee, to whom is relegated the determination of monument, group, statue, or other production of genius, all we can say is, "The Lord help Genius!" And this brings us, without meaning any disrespect, to the "Report from the Select Committee on Trafalgar Square, together with the Minutes of Evidence taken before them, and Appendix, ordered to be printed, 27th July, 1840."

This Committee was appointed by motion in the House (3d July), "to inquire into the plan sanctioned by the Commissioners of the Woods and Forests for laying out the vacant space in Trafalgar Square, in front of the National Gallery;" and we presume we need not tell any body that a plan "sanctioned" by a great public board, and "approved" by "the Lords of the Treasury," has very little chance of being much qualified or corrected, were Phidias, Apelles, Zeuxis, Lysippus, Praxiteles, Scopas, Parrhasius, Michael Angelo, Piranesi, Palladio, Sir Christopher Wren, Inigo Jones, Stewart, and all to constitute the majority of the referees. As it was in this instance, it was nominated, and consisted of,

"Mr. Gally Knight, Sir James Graham, Mr. Loch, Mr. Greene, Mr. Pendarves, Sir Hussey Vivian, Sir Robert Inglis, Mr. Tufnell, Mr. H. T. Hope, Mr. Stanley, Mr. Protheroe, Sir C. Lemon, Sir S. Canning, Mr. Redington, Sir C. Douglas."

All these are, in the language of the House, and deservedly in the estimation of society, "honourable" persons; but, really, it is beyond imagination to believe that the pursuits and habits of life of the greater number of them could have entitled them to be appointed arbiters in any matter where a long study of the arts, and a practical acquaintance with its scientific rules and relations, were indispensable to an adequate comprehension of the subject before them. Some of them we do not know—others we do; and we will be bold to say, that out of the fifteen not more than five went so far as to know a hawk from a handsaw in the business submitted to them. And this we say not in disparagement of perhaps higher, but altogether different qualifications. County members have too much of country affairs; soldiers, lawyers, and officials, have too much of other and important occupations to allow them to cultivate their minds, and acquire the necessary knowledge for an honourable and satisfactory discharge of such a trust.

It is evident, from the composition of this Committee, that it had even worse elements to mar its efficacy. Some were members of the Government, and some of the Nelson Committee. The former were biased in favour of what Government had "sanctioned," and the latter were sturdy partisans of their own Nelsonian proceedings. Yet, prejudiced as they were, they hardly excused the plan; all they could do they did, and it was to contend that they, or the public, had got into a sad scrape, and though large sums of money must be sacrificed to continue it and revolt good taste; yet we should make the best of a bad bargain, and to

a wretched National Gallery conjoin an object which should make it more ridiculous than ever, besides being altogether unsuited to the position.

The Report, mutilated and garbled as it is, proves all this, and more. Nelson, who shed a glory on the empire, must, it seems, shed a farce on its metropolis. The triumphs of the British navy must be wrecked on the Strand. Such is the Report:—

"1. Your Committee must begin by observing, that the nature of the projected works in Trafalgar Square not having come under their consideration till after those works were begun, they found themselves in a position less advantageous for the performance of the task which was placed in their hands, than had the field of inquiry been completely disembarrassed. They endeavoured, however, to free their minds from all extraneous circumstances, and only to consider what would most contribute to the embellishment of that part of the town."

"2. They felt that, under the terms of their appointment, all that was to be done within the area of Trafalgar Square came within the limits of their inquiry, and that they should have ill discharged their duty to the House and to the public, had they not adverted to whatever works were designed for that situation,—a situation which is indisputably one of the noblest in the metropolis,—an area which has been obtained at a great cost, and the final decoration of which must have so large a share in determining the character of that conspicuous part of the capital."

"3. Your Committee will begin with adverting to the plan for laying out the area itself. They find that, so long as 1837, a plan for laying out Trafalgar Square was submitted to and approved by the Lords of the Treasury; but, for reasons which do not appear, was never begun. In the course of April 1840, the plans supplied by Mr. Barry, for the same object, were approved by the Woods and Forests, and are now in progress. The estimate for these works amounts to 11,000*l.*, independent of the pavement of the square, and of certain ornaments of bronze, which, in the judgment of Mr. Barry, are desirable. The chief features of Mr. Barry's plan are, the levelling of the area from front to back, and the construction of a terrace fifteen feet high, on the south side of the street, in front of the National Gallery. The effect of this terrace will be greatly to improve the appearance of the National Gallery, by giving it the elevation, for the want of which it has been chiefly censured.\* Mr. Barry, on being questioned by your Committee, gave it as his opinion that the appearance of the National Gallery might be further improved by continuing the order of pilasters through the whole length of the front, and relieving the baldness of the cupola, by encircling it with pillars, and giving it a bolder cornice; which additions, he is of opinion, the existing walls would be capable of supporting."

"4. Your Committee having satisfied themselves that Mr. Barry's plan for laying out the ground in front of the National Gallery was, under all the circumstances of the case, well adapted to reconcile the various difficulties of the spot, and attain the desired end, proceeded to inquire what effect the column, which is about to be raised by the Nelson Committee in the centre of the south side of the Square, would have upon the National Gallery; how far a column of such dimensions would be seen to advantage in such a position; and how far it would contribute to the embellishment of that

\* Burning it down is the only remedy.—*Ed. L. G.*

part of the metropolis. In order to assist their judgment on this important point, they called before them several architects of acknowledged merit, and availed themselves of the opinions of eminent sculptors and men of taste. These gentlemen were allowed an interval of two or three days to consider the subject; at the end of which they all sent in their opinions in writing. In the opinions of these gentlemen, as might be expected in a matter of taste, there is not perfect unanimity; but your Committee feel to have derived great advantage from having consulted them, and by carefully weighing their opinions, and examining the principles upon which those opinions are based, have arrived at conclusions of their own.

"5. Your Committee are of opinion that such a column so situated would have an injurious effect upon the National Gallery, by depressing its apparent altitude, and interrupting that point of view which should be least interfered with.

"6. They are of opinion that a column of such dimensions will render the surrounding buildings less important, and, so situated, will not group well with any thing in its neighbourhood.

"7. They are of opinion that, as approached from Whitehall, as seen at the termination of this grand avenue, which forms one of the principal entrances of the metropolis, the appearance of the National Gallery will be much injured by the column. In this point of view the column will cut the National Gallery through the centre, and the pedestal of the column alone will nearly conceal both the portico and the cupola.

"8. They are of opinion that the site selected is not a favourable position for the column itself.

"9. There is another point to which your Committee will advert, which is, that the statue of King Charles is not in a line with the column; nor could this defect, from the proximity of the two objects, fail to catch the eye. So long as there is no column in the proposed situation, the statue of King Charles, where it now stands, is a fortunate circumstance, offering a subordinate object, in front of the National Gallery, which serves as a scale, without obstructing the view.

"10. Your Committee, entertaining these opinions, are unable to avoid arriving at the conclusion, that it is undesirable that the Nelson Column should be placed in the situation which is at present selected. If it is desirable in a great city to suggest the idea of space, and, having once obtained space, not to block it up again; if the general architectural effect of Trafalgar Square, or of the buildings around it, is to be at all considered; or if, at any time, an equally conspicuous position should be desired for any other monument, the situation at present selected for the Nelson Column is most unfortunate.

"11. Your Committee having arrived at this decision, proceeded to inquire at what cost a change of plan in the position of Nelson's Column could now be effected, and how far it would be consistent with good faith now to interdict the Nelson Committee from prosecuting their work in the situation in which it is commenced.

"12. What has actually been done towards the erection of the Nelson Column is no more than the excavation for the foundation, and pouring in the concrete which is to form a bed for the masonry, the expense of which, in Mr. Barry's opinion, would be more than covered by 1000*l*. Contracts, however, have been en-

tered into by the Nelson Committee, a failure to complete which would subject them to actions at law. It is not, however, probable that, if the same work were intrusted to the same persons, in another situation, such actions would be instituted. The pecuniary loss, therefore, would not of itself entail so great a sacrifice as to preclude the idea of even now adopting a preferable course.

"13. But it appears by the Treasury letter, bearing date 27th January, 1840, that the Lords of the Treasury have authorised the Commissioners of the Woods and Forests to deliver over the site appropriated for the Nelson Monument to the Committee for carrying that object into effect; and according to the evidence of Mr. Scott, it appears that the architect has taken possession of the site, and has commenced the concrete and brickwork of the foundation, in which considerable progress has been made, and on the completion of which the Nelson Committee are bound to pay the contractors the sum of 2000*l*.

"14. Your Committee cannot doubt that the Lords of the Treasury, in authorising the Commissioners of Woods and Forests to give that site to the Nelson Committee for the erection of the proposed column, entertained the fullest confidence that funds would be provided for carrying out the work in conformity to the plans and drawings which had been seen and approved; and they feel they should be wanting in their duty if they failed to direct the attention of the House to the fact that, according to the evidence, the subscription is at present deficient for the purpose, to the amount of some thousand pounds. Mr. Railton informed the Committee that his estimate of the column amounts to 28,000*l*., whilst the sum subscribed does not exceed 18,000*l*.; nor does it appear that any well-grounded hope exists of any considerable addition.

"15. It is true that contractors have engaged to complete the pedestal and the column for 15,000*l*., and the metal for the capital is expected to be supplied by the Ordnance; but your Committee submit that a perishable statue of Portland stone is most objectionable; and, supposing the terms of the contract to be fulfilled to the letter (which in works of such a magnitude is seldom the case), the remaining 3000*l*. is wholly inadequate to meet the expense of casting the capital, of obtaining such a statue as ought to crown the summit, and of providing the bronze bas-reliefs for the sides of the pedestal, and the lions at the corners of the base. Even if the fund should prove sufficient to complete the masonry, no statue can be raised but one of Portland stone, and the column without its bas-reliefs will remain a denuded mass; which, however gigantic, will have a mean effect."

In our next we propose to discuss some of the proceedings and evidence. The parliamentary tactics of Sir R. Inglis, as a Nelson Committee man, to defeat suggested alterations; the party demi-political divisions; the singular want of comprehension of the subject in Mr. Railton, the Columnar architect; the unwilling, extorted, and reserved testimony of Mr. C. D. Scott, Secretary to the Nelson Subscription,\* and other queer and characteristic hallucinations of artists examined, appear to us to be well worth a chapter in *The Literary Gazette*.

\* This gentleman's extreme slowness in answering the questions put to him, contrasts wonderfully with the rapidity of his motions when ordering the works for the Column to proceed as fast as possible, as soon as it was known that a parliamentary committee was appointed to inquire into the expediency of placing the design in Trafalgar Square! Let us get so much done that nobody

And *à propos* of public undertakings. We have seen the plan for the ROYAL EXCHANGE of London, and if it be not a City Job, it ought to be one; for of all the designs we ever saw for such a purpose, it is the oddest to be chosen from a competition in which we have heard it affirmed much talent was shewn. Let them make Trafalgar Square as absurd as they please, there will be more absurdity in the City. The East against the West, for blundering in architecture, sculpture, or painting, Lombard Street to a China orange!!!

#### NEW PUBLICATION.

*Illustrations of Master Humphrey's Clock.* By T. Sibson. Nos. I. II. III. London, T. & Co. Edinburgh, Menzies; Dublin, Machen and Co.

WHEN a kite rises in the air there is always a number of bits of paper, and other light or heavy matters, tied to its tail; and in like manner literary success is sure of having many pendants. The present monthly publication deals with characters and circumstances in Boz's new periodical; borrows some from the woodcut illustrations of that work, and invents others to incorporate therewith. Four prints grace every No., and, for the moderate price, are well enough executed. But there is one disagreeable thing which attends all such productions — they are not fair to the author or to the public, which desires to go along with his ideas, and must dislike having them disturbed by other images suggested from other fancies.

#### SKETCHES.

##### HISTORY OF BARTHOLOMEW FAIR.

THE Markets' Committee of the city of London having referred it to Mr. Solicitor (Mr. Charles Pearson) to consider the power of the corporation in relation to the nuisance of Bartholomew Fair, and the power of the corporation to abate it, Mr. Pearson made a Report on the subject, which they adopted, and recommended that its suggestions should be carried into effect. As it is a curious *résumé* in itself, and alludes to several ancient customs, we have copied it into our page as a Sketch (though of bygone) Society, and trust that our readers will enjoy as much as we have the spirit and talent displayed by Mr. Pearson in this brief but interesting document.

"To the Worshipful the Committee for the Management and Control of the several Markets of the City of London.

"Gentlemen,—I have, in obedience to your order, the honour to report to your worshipful committee my opinion as to the right of the Corporation of London to suppress Bartholomew Fair, or otherwise to remove the nuisances and obstructions to trade to which it gives rise. Finding, from the documents in my office, that conflicting opinions had at various times been given upon the subject, I felt it my duty to examine the repertoires in the Town Clerk's Office, as well as the books in the City Library, and in the British Museum, for the purpose of tracing from the earliest period the history, not only of Bartholomew Fair, but of other fairs which formerly existed in the metropolis, the right to hold which was likewise founded upon charter or prescription, and which have been

can undo it, seems to have been the rule of action; and, no doubt, in a few weeks, we shall see the lumpy pedestal of this big pillar high in air, above the boarding of the hoard. Nelson, we believe, in death, lay in the arms of Mr. Scott's father, the purser of the Victory; and his monumental statue did not deserve so ill an office from the sea.

abolished or fallen into disuse. Applying the received rules of law to the facts and circumstances with which those sources of information furnished me, I should be disposed (were I unfettered by authority) to report that the corporation might suppress the fair without danger to the other chartered rights of the city; but inasmuch as gentlemen of great eminence in their profession have expressed doubts upon this point, and upon a case submitted to them by the then city solicitor, they recommended an application to parliament to effect the object, I feel myself so far governed by their authority as to refrain from recommending the immediate and entire abolition of the fair. If, however, the committee deem it a matter of paramount importance to proceed at once to suppress it, I should like to receive instructions to hold a conference with those gentlemen, as I think there might be introduced in the case certain facts and arguments (not before brought under their consideration), which would be calculated to induce them materially to qualify their opinion. I am, however, clearly of opinion that the corporation may lawfully circumscribe the limits and duration of the fair, and may make rules and regulations for its government, which will remove the nuisances and obstructions to trade, without attempting suddenly and entirely to suppress it,—a proceeding which would doubtless be ascribed to an attempt on the part of the corporation improperly to interfere with the recreations of the humbler classes of the community. At the earliest periods in which history makes mention of this subject, I find there were two fairs, or markets, held on the spot where Bartholomew Fair is now held, or in its immediate vicinity. These two fairs were originally held for two entire days only, the fairs being proclaimed on the eve of St. Bartholomew, and continued during the day of St. Bartholomew and the next morrow. Both these fairs, or markets, were instituted for the purposes of trade. One of them was granted to the prior of the convent of St. Bartholomew, and was kept for the clothiers of England and drapers of London, who had their booths and standings within the churchyard of the priory, closed in with walls and gates, and locked every night, and watched for the safety of their goods and wares. The other was granted to the city of London, and consisted of 'the standing of cattle, and stands and booths for goods, with pickage and stallage, and tolls and profits appertaining to fairs and markets in the field of West Smithfield.' At the dissolution of the monasteries in the reign of Henry VIII., the right in the first-mentioned fair was sold to Sir John Rich, the then attorney-general; and was enjoyed by his descendants till the year 1830, when it was purchased of Lord Kensington by the corporation; and it is now held by the chamberlain of London and town-clerk as trustees: so that, in fact, all the rights and interests in both fairs may now be said to be vested in the corporation. The right to hold both these fairs having been granted for the purpose of promoting the interests of trade, it is quite clear that no prescriptive right can be set up to commit any nuisance incompatible with the purposes for which they were established. If, therefore, the corporation should be satisfied that the interests of the public can be no otherwise protected than by confining the fair to its original objects and purposes, they may undoubtedly do so; and this would, in fact, be equivalent to its entire suppression. Perhaps the committee will not think it requisite, in the first instance, to proceed to such extremities. The corporation, however, by abridging the

duration to two clear days, and by refusing to let standings for show-booths, &c., may materially diminish the inconvenience at present created, and thus prepare the way for its natural death, of the approach of which it has, I understand, already exhibited certain marked symptoms. The committee are probably aware that the license for many years granted by the corporation for mountebanks, conjurers, &c. to exercise their amusing vagabondism at the fair, extended to fourteen days, during which period it was for several years allowed to be held. In those times the fair was frequently presented by grand juries as a nuisance; and the complaints of the sober-minded citizens were loud and long-continued against the riotings and debaucheries to which it gave rise. The depressed state of the corporation revenues at that time compelled them, however, to supply their wants by tolerating the continuance of those irregularities; and the swordbearer and other city officers were partly paid out of emoluments derived from that discreditable source. In consequence of these complaints, various orders were at different times made by the corporation for the purpose of limiting and regulating the fair; and in the year 1735, in particular, the Court of Aldermen resolved, 'That Bartholomew Fair shall not exceed Bartholomew Eve, Bartholomew Day, and the next morrow; and shall be restricted to the sale of goods, wares, and merchandises, usually sold in fairs; and no acting shall be permitted therein.' It is at all times difficult by law to put down the ancient customs and practices of the multitude; hence we find that great resistance was offered to the enforcement of these regulations. In 1760, Mr. Birch, the deputy city-marshal, lost his life in the attempt; and the practices which those regulations were intended to prevent have prevailed, more or less, to the present time. I feel it due to the working classes of the present day to say, that a perusal of the histories of London at the period I have adverted to, as well as 'Malcolm's Anecdotes,' 'Sir Robert Southwell's Letters to his Son,' and other pamphlets and ephemeral publications of those times, conclusively proves that a vast progressive improvement has taken place in the exhibitions of the fair, as well as in the conduct of the multitude that resorted to it. Gambling houses of every class were formerly freely licensed, disgusting scenes of all descriptions were publicly exhibited, and the most profligate vices of every kind were openly practised; while the violence of Lady Holland's mob, as it is termed, often broke out in frightful excesses, and spread consternation and terror around. It may be usefully observed here that May Fair, formerly held near Hyde Park, under the authority of a grant to the Abbot of Westminster, and the Lady Fair, Southwark, held by a grant to the Corporation of London (both of which had been the scenes of practices as disgraceful as those that prevailed in Smithfield), were suppressed without the aid of parliament. And when we consider the improved condition and conduct of the working classes in the metropolis, and reflect upon the irrefragable proofs continually before us that the humbler orders are fast changing their habits, and substituting country excursions by railroads and steamboats, and other innocent recreations, for vicious amusements of the description which prevailed in Bartholomew Fair, it is perhaps not too much to conclude that it is unnecessary for the corporation to apply to parliament to abate the nuisance; but that if they proceed to lay down and enforce the observance of judicious regulations in the fair, and to limit its

duration and extent, it may be permitted to continue, in the confident belief that many years will not elapse ere the corporation may omit to proclaim the fair, and thus suppress it altogether, without exciting any of those feelings of discontent and disapprobation with which its compulsory abolition would probably be now attended.—I have the honour to be, gentlemen, your most obedient servant,

"CHARLES PEARSON."

"Guildhall, June 19, 1840."

#### THE DRAMA.

*Drury Lane.*—The last of the *Concerts d'Été* is given this evening, and with a charming selection of music. Mr. Eliason has done every thing for these most agreeable treats; and, we trust, will feel encouraged to go on hereafter. His performances are admirably calculated to cultivate and improve our national tastes.

*Haymarket.*—The first appearance of a comic actor should not be severely criticised—the nervousness he must feel, even if he does not shew it much, is a dead weight upon his efforts; and, till he is sure of the audience being with him, he dreads to shew the extent of his powers. On Tuesday, Mr. David Rees made his *début* on this stage as a broad comedian; he possesses a face which may be his fortune, and his acting seemed to us to depend rather too much on its constant distortion and occasional grimace. He is one of the Liston school—slow and pausing; lingering over every intended hit with an expression of face that calls forth the laughter of the audience, rather than the point itself. This was, perhaps, more observable in the *King's Gardener* than in the *Turnpike Gate*, in which he played *Crack*; a part poor Munden and Mathews—but let us not remember them. Mr. Rees was much applauded during the evening, and met with a double encore in one song, and a single ditto in another. We confess we should like to see him again, and in other parts, before we decide upon the extent of his power over our risible faculties.

*English Opera.*—On Monday a new domestic drama, called *Ernestine*, met with doubtful success. It is of slight interest and abrupt termination. The characters were fairly supported: the grave, by Miss Fortescue, Mr. Maynard, and Mr. Fitzjames; and the gay by Madame Simon, Miss Fitzjames, Miss Bartlett, and Mr. Granby. We do not think the piece likely to attract; and with so many novelties, our deserving republic here may dispense with an occasional miss. On Thursday, another merry novelty was produced with success. It is built upon *Love, Law, and Physic*, and Compton, as a son and heir to *Lubin Log*, has the principal part.

*Strand Theatre.*—At this little theatre, which has recently opened with light and lively dramas, an adaptation from "Master Humphrey's Clock," called *Weller's Watch*, is rather too slow. A translation from the French, by Mr. C. Selby, called *One Fault*, a domestic drama, is cleverly played by Mrs. and Mr. Selby, Miss Pelham, Mrs. Howard, and Mr. Sanders: and *Behind the Scenes*, one of the smartest pieces of drollery on the stage, affords a good evening's amusement. The latter piece, though not new, is well worth seeing.

#### VARIETIES.

*H.B.'s.*—Parliament is up, and not only with a speech from the throne, but a splash of caricatures from H.B., Nos. 647, 8, 9, and 50. "Chess," a drawn game between Lords John Russell and Stanley (the latter giving perpetual

check but unable to win the game), is the first, and a good parody on the Irish Registration measure. The next is "The Derby favourite a little amiss," in which Brougham, Wellington, Peel, Graham, and Lord Stanley, figure, the last as a horse with the above bill fastened round his leg as a splint. The various expression of the countenances is full of character. The third is the most novel in idea and ingenious in execution. Peel and O'Connell are playing battledore with the shuttlecock ministry, the feathers in the flying shuttlecock being headed by likenesses of the cabinet. The game is well kept up, though Peel is getting tired, and O'Connell says, "I think the harder I hit the stronger I become." The last is appropriate to the prorogation—"Breaking up for the vacation," and a numerous and humorous group. The Great Western, driven by O'Connell, is starting with the ministry, a pack of shouting boys, inside and out. The Queen is giving them the *vale*, "Good-by—take care you don't get into any mischief." Wellington, as the older governess of the Victoria establishment, is exclaiming, "Giddy, thoughtless creatures;" and Brougham, as a street-sweeper, holding out his hat for a donation. This is one of the most complete and laughable of all the 650 which it so drolly concludes.

*Sir David Wilkie.*—This eminent painter leaves us to-morrow for Munich, whence he purposes to descend the Danube, and, *Deo volente*, proceeding into Syria, and visiting Jerusalem and other sacred places. Mr. Woodburn of St. Martin's Lane, we understand, accompanies him.

*Fine Arts.*—A large picture of Charles V., by Vandyck, in the Gallery at Florence, having been thrown down, seems to have broken into pieces, so as nearly to destroy the beautiful statue called the Apollino. The newspapers, in the first instance, mistook it for the Apollo Belvidere; but great as the misfortune is, it is not so great as that would have been, and the larger statue is not in this gallery.

*French Expedition in the Antarctic Seas.*—The "Toulonnais" publishes the following letter from Captain Dumont d'Urville, of the *Astrolabe*, dated Harbour of Oka-Roa, New Zealand, April 8:—"Since our departure from Hobart Town our voyage has been prosperous. I have had nothing but light breezes in seas where I expected violent gales. We have visited the Auckland Islands and Port Otago, and have surveyed 100 leagues of the south-east coast of New Zealand. Our expedition is daily increasing its valuable collection of objects of natural history. I propose remaining here three days, and then sailing to the Bay of Islands, after which my course homeward will be more rapid. We have not lost a single man since our departure from Hobart Town."

*Nil Abiadi.*—Letters from Malta contain intelligence from Alexandria to the 17th ult., which is not so late, by six days, as that published on Friday. They contain, however, some particulars not yet known relative to the inhabitants about the White River, who have been discovered by the late expedition. Though animals and men were in great abundance, there was not a sign of a habitation. The people were divided into *kabyles*, or tribes, every one of which spoke a different language, was completely independent of the rest, and was governed by a sort of king, who was distinguished by wearing a shirt, all his subjects being entirely naked. That they may sleep warm, they are described as in the habit of lying on hot ashes. They at first refused to supply the expedition with provisions, but when a fire was commenced from the boats,

which killed some of them, they thought that the people in the boats were all sons of God; accordingly, they began to pray to them, and to carry to them most respectfully whatever they possessed.

Letters have been received from the United States Exploring Expedition, dated at Sydney, New South Wales, March 12, 1840, announcing the discovery of a vast continent in the antarctic regions, far more extensive than the discovery lately announced by the French Exploring Expedition. The discovery of the continent was made on the 19th of January, 1840, by both the French and American squadrons. The part of the ocean included between the degrees of 97 and 154 degrees east, and south of 64, was not traversed by Cook, or any other of the great navigators that we remember; though west of 60 degrees east longitude, he went to nearly 70 degrees of south latitude. But the discoveries now mentioned seem to be all east of this. Captain Briscoe, at about 45 degrees east longitude, took a north-eastern course from nearly 70 degrees south latitude. In 1823 Captain Waddell was considerably south of 70 degrees, as indeed Captain Cook was in 1774, but no report is made of any thing but islands of ice. We do not now recollect the cause, if there was any, why the southern navigators all avoided (as they seem to have done) the part of the great Southern Ocean lying in the latitude and longitude recently visited by the American and French squadrons.—*United States Gazette.*

*Animal Magnetism.*—The congregation of the Holy Office at Rome, having applied to the Pope to know if animal magnetism was lawful, and if penitents might be permitted to be operated upon, his holiness has replied, that the application of principles and means purely physical to things and effects which are supernatural, for the purpose of explaining them physically, is nothing but an unlawful and heretical deception.

#### LITERARY NOVELTIES.

In the Press.

"Pathological Anatomy, General and Special." In 3 large vols. By Carl Rokkafsky, M.D. Professor of Pathological Anatomy in the University of Vienna; and Rowland Hill Mackenzie, M.D. late Assistant in the Pathological Dissection Rooms of the Imperial Hospital of Vienna.

**Henry's First Latin Book.** 12mo. 3s.  
\* \* \* The object of this work (which is founded on the principles  
of imitation and frequent repetition) is to enable the pupil  
to do Exercises from the first day of his beginning his Accidence.

IV.  
**The Essentials of Greek Accidence, with**  
Examples for Practice. 8vo. 1s. 6d.

V.  
**The 4th edition of Eclogæ Ovidianæ, with**  
English Notes, &c. 12mo. 2s. 6d.  
\* \* \* This Work is from the Fifth Part of the "Lateinisches  
Elementarbuch" of Professors Jacobs and Döring, which has an  
immense circulation on the Continent and in America.

VI.  
**The Little Boy's Companion to the Latin**  
Accidence, and Help to a Copia Verborum; so arranged as to  
form also a Companion to the Latin Accidence. 12mo. 2s. 6d.

VII.  
**An English Grammar for Classical Schools.**  
12mo. 3s. 6d.  
\* \* \* The object of this Work is to save boys from the mistakes  
which are universally made by them from ignorance of the Eng-  
lish verb.

VIII.  
**The Eton Syntax in English and Latin, with**  
additional Rules, and copious Examples from Bröder and others.  
2d edition, 12mo. 3s. 6d.

IX.  
**Historiæ Antiquæ Epitome. Founded on**  
the First Two Portions of "Lateinisches Elementarbuch," by  
Jacobs and Döring. 12mo. 4s.  
By the Rev. THOMAS KERCHER ARNOUD, M.A.,  
Rector of Lyndon, and late Fellow of Trinity College,  
Cambridge.  
Rivingtons, St. Paul's Churchyard, and Waterloo Place,  
Pall Mall.

## WORKS OF INSTRUCTION FOR YOUNG PERSONS.

Author of "England in 1835," "Illustrations of History," &c.  
2 vols. post 8vo. 21s. bound.  
Henry Colburn, Publisher, 15 Great Marlborough Street.

Now ready, at all the Libraries, in 3 vols. post 8vo.  
**SANDRON HALL; or, the Days of**  
Queen Anne.  
By the Hon. GRANTLEY BERKELEY, M.P.  
"One of the best and most amusing novels which we have  
read for a long time, and one which we feel convinced will work  
its way up to a very high place in public estimation. 'Sandron  
Hall' gives a very lively and graphic description of that eventful  
period of English history—the days of Queen Anne, when Sarah  
Duchess of Marlborough flourished, and Mrs. Masham intrigued;  
when Jonathan Wild was on the road, and Dr. Sacheverel in the  
pulpit; when Pope sung, and Marlborough fought; when Swift  
and Hogarth—those kindred geniuses—placed their grotesque  
ideas, the one on canvas the other on paper. All of those persons  
are successively brought upon the stage, and we think that the  
author has been very happy in his conception and delineation of  
their respective characters, and their sayings and doings are  
woven into a tale of great beauty and interest."—*Post*.  
Henry Colburn, Publisher, 15 Great Marlborough Street.

IMPORTANT WORK ON CIRCASSIA.  
In 2 vols. post 8vo. with Illustrations, 21s. bound.  
**A YEAR AMONG THE CIRCASSIANS.**  
By J. A. LONGWORTH, Esq.  
Henry Colburn, Publisher, 15 Great Marlborough Street.  
\* \* \* To be had of all Booksellers.

3d edition, 8vo. 1s. 6d.  
**A REPORT ON DEAFNESS when result-**  
ing from Diseases of the Eustachian Passages, with the  
modern Methods of Cure; being a Paper read to the Liverpool  
Medical Association, on the 19th December, 1880.  
By HUGH NEILL,  
Surgeon to the Institution for Curing Diseases of the Ear,  
and Surgeon to the Ophthalmic Infirmary.  
London: Longman, Orme, and Co.

In imperial folio, with Six coloured Plates, price 12 11s. 6d.; or  
large paper, in colomblet folio, with Tail-pieces, 32 2s. Part I. of  
**PORTRAITS OF THE GAME AND WILD**  
**ANIMALS OF SOUTHERN AFRICA.**  
By Capt. W. CORNWALLIS HARRIS,  
Of the Hon. E. I. Company's Engineers, Bombay Establishment.

coloured Geological Map of England. Price 4s. 6d.  
London: Scott, Webster, and Geary, Charterhouse Square.

In 3 vols. post 8vo.  
**THE POPE: a Novel.**  
By an Old Author in a New Walk.  
"I speak not of men's creeds, they rest between man and his  
Maker."—*Byron*.  
Saunders and Otley, Publishers, Conduit Street.  
Of whom may be had, just published,  
**Social Life in Germany.**  
By Mrs. Jameson.

8 New Burlington Street, August 15.  
**MR. BENTLEY'S NEW PUBLICA-**  
TIONS, now ready.

I.  
**Narrative of the Campaign of the Army of the**  
Indus, in Sind and Kanbool, in 1838, 1839,  
By Richard Hartley Kennedy, M.D.  
Late Chief of the Medical Staff of the Bombay Division of the  
Army of the Indus.  
2 vols. post 8vo. with numerous Illustrations.

II.  
**A Summer amongst the Bocages and**  
the Vines.  
By Miss Louisa Stuart Costello,  
Author of "Specimens of the Early Poetry of France."  
2 vols. 8vo. with numerous Illustrations.  
"We must acknowledge the gratification we have received  
from Miss Costello's charming volumes. If we mistake not they  
will tempt many an English traveller to the 'Bocages and the  
Vines,' and will become an indispensable companion for the  
journey."—*Morning Herald*.

III.  
The concluding Volumes of  
**Memoirs of the Court of England under the**  
Stuarts.  
By J. Henneage Jesse, Esq.  
(Vols. III. and IV.) with Engravings.  
"This work increases in interest to the close. In drawing out  
those pleasant traits that escape notice in more elaborate memoirs,  
and in shewing us the interiors, so to speak, of courts and cabals,  
Mr. Jesse has made a valuable contribution to the subsidiary de-  
partments of historical literature."—*Atlas*.

IV.  
**The Young Prima Donna;**  
A Romance of the Opera.  
By Mrs. Grey.  
Author of "The Duke." 3 vols.  
"This novel has for its foundation a powerful story. The lan-  
guage is always good, and the choice and management of the  
incidents unexceptionable."—*The Times*.  
New Works just read:—

I.  
**The Thames and its Tributaries.**  
By Charles Mackay, Esq.  
2 vols. 8vo. with upwards of Forty Illustrations.

II.

editions of most of the previous volumes of this popular series  
may now be had.  
James Burns, 17 Portman Street.

Printed by HANNAH PAGE MOYER, of Brook Green, Ham-  
mersmith, and GEORGE BARCLAY, of Number 3 Pollin's  
Place, Islington, both in the County of Middlesex, Printers,  
at their Printing Office, Number 28 Castle Street, Leicester  
Square, in the said County; and published by WILLIAM  
ARMIGER SCRIPPS, of Number 13 South Molton Street,  
in the Parish of Saint George, Hanover Square, in the County  
aforesaid, at the LETTERARY GAZETTE OFFICE, Number  
7 Wellington Street, Waterloo Bridge, Strand, in the said  
County, on Saturday, August 10th, 1890.

## REVIEWS OF NEW BOOKS.

*New General Biographical Dictionary.* Projected and partly Arranged by the late Rev. H. J. Rose, B.D. Edited by the Rev. H. J. Rose, B.D. Parts I. to VII. London, 1840. Fellowes (and a host of other Publishers). 8vo. double column. Vol. I. pp. 500, and of Vol. II. pp. 384.

WE have allowed this work to proceed to the extent of nearly four hundred pages of its second volume before we ventured to offer any remark upon it to the public. This course seemed to us to be due to the importance of the undertaking "*a General Biographical Dictionary*;" and we may further state that we were repelled from even a brief notice from observing some objectionable anomalies, errors, and imperfections in the two earlier parts. These require careful revision, and, it is to be expected, will meet the correction they need before the *Dictionary* reaches a finished form; and, in the meantime, it is gratifying to us to observe that the later parts which have appeared display great and manifest improvement, inasmuch as to entitle the publication to a much higher award than we could, with justice, have previously bestowed upon it.

An epic poem is somewhat of a literary difficulty; so is a tragedy; so the history of a nation; and so the perfect illustration of a great science. The best of any of them will be obnoxious to question and criticism. But Biography is, of all kinds of literary labour, the most difficult; and must, of necessity, inherit more faults, mistakes, misrepresentations, misdatings, misquotations, mistatements, and blunders, against which the critic may set his battery, than all the rest put together. Even in a single Life or Memoir, let the writer use all the diligence, resort to all the research, and take all the pains he can, there will occur statements which others may controvert, opinions which others may hold to be unfounded, and facts which others (having access to different or later sources of informations) may contradict. And if this be the case in a limited sense, what must the circumstances be in a universal plan? The wit and wisdom of man cannot go beyond an approximation to truth. No inquiry can furnish all that might be sought out; no sifting can secure certainty of result; no expense can command the quality or quantity of work which, for one of such Parts as these alone, would suffice to procure unquestionable data.

The writers and compilers of such works must rely for the mass of their information on preceding authors. Thousands of the names are far beyond the reach of further elucidation; and thousands are subject to such disputed points, that no art can unravel the mystery which shrouds them. Discretion seems to be the grand desideratum in an editor,—discretion in rejecting pseudo improvements in nearly as great a degree as in adopting judicious corrections and more comprehensive particulars.

If we look at a public man of any condition in literature, in science, in arts, in politics, living and moving before our eyes, we will find that there is no agreement, by common consent, either as to their motives, their actions, or

their characters. How, then, are we to expect unanimity concerning individuals of by-gone times and long past ages? If we look at any event which took place only yesterday within the view of five or five hundred persons, we will find it impossible to get any two or twenty of them to coincide in their description. How, then, are we to expect perfect accuracy and incontestability in the accounts of events which happened at a distance and many years ago? We repeat that approximation is all that can be aimed at or expected; and that, in every instance, great allowances ought to be made for what appears wrong in productions of this kind.

We are partly led to these observations from having perused a very clever pamphlet by Mr. B. Corney, in which he dissects some portions of this *Dictionary* with a keen and trenchant knife. He does point out errors which ought not to have escaped detection; and, in other biographies, he delves with such industry into research as to render some of their relations extremely doubtful if not altogether unfounded. But, with all his acuteness and talent, he only proves this,—that if any individual, like himself, of considerable literary abilities (see his controversies with Mr. D'Israeli), of sufficient leisure, and more than sufficient inclination for the sport, will devote himself to the trouble of narrowly investigating any one article in a Biographical Dictionary, he is likely to be rewarded by the discovery of mistakes both small and great. If Mr. B. Corney, for example, or any antiquary of similar intelligence and tastes, gave only a week to the British Museum, or the State Paper Office, to ascertain the correctness or incorrectness of a life of Alaric the Goth, or Saint Columbanus, or Joe Miller, we would wager a groat that he would pick out enough to shew up any contributor of any of these lives to any Biographical Dictionary that ever could be published. For nobody can suppose that contributors could allot so much time to every life; if they did, five hundred of the hardest working scribes in existence could not produce a General Biographical Dictionary in five hundred years.

Still this is no excuse for such stupid errors as the following in Part I. of that before us. In the sketch of the late Lord Colchester it is recorded:—"In 1805, he gave a casting vote in favour of Lord Melville, when his lordship's conduct was brought before the House in consequence of the inquiries of the Finance Committee."\* It was, on the contrary, the Speaker's vote which decided the division against Lord Melville, and brought on his trial. Under other heads singular omissions are censurable, and under others a due proportion does not seem to have been observed, as regards the importance of the subjects, after the first two parts.

But, as we have said, in the succeeding five a marked improvement has taken place, which we should be inclined to attribute to a new and

\* We are pleased to notice since writing, that this and other slips have been corrected by cancels and otherwise; which bodes fair for like pains being bestowed on the rest.—*Ed. L. G.*

more diligent editorship, and to the employment of fresh and competent hands to assist it. The third and fourth merit approbation, and the ensuing three are still superior. It so happens that in No. V. Latin and Greek names are most conspicuous; and it strikes us (as we have dipped) that the memoirs of Apollonius of Tyana, of Marcus Antonius the triumvir, of Antoninus, and some others we need not particularise, are capitally done. The Oriental personages, such as Anvari, Antar, Arabshah, Ardasheer, &c., also appear to us to be excellent, and written by a first-rate scholar. The notice of D'Anville is another admirable example of biography; and we would say, generally, that the medical and naval portions are of a high character. We should also point attention to the middle-age names, Arculf, Arena, &c., which are full of information, and shew much reading and acquaintance with those dark times. We copy but one, a curious memoir as a brick of this edifice:—

"Arakitchew (Count Alexis Andreevitch), a Russian general, who rose from the ranks, and who essentially benefited the military system of his countrymen by the very great improvements he introduced into the artillery service, was born in the province of Novogorod, 1767. He was educated in the corps of cadets, but as, although belonging to the class of nobles, his parents were poor, he was entirely dependent upon his own exertions for his future advancement. In his other studies he made very little progress, nor did he ever become acquainted with any other language than his own; but his application to every thing connected with military pursuits was most assiduous. After passing through several other grades, he was appointed by the grand duke (afterwards Paul I.), in 1792, commander of the artillery forces in the garrison of Gatchina, where, by his unremitting attention to discipline, he obtained the personal favour of the prince, who, among other distinctions, conferred upon him the rank of major-general, the order of St. Anne, and an estate of 2000 peasants. After a short retirement from the service, in 1798, he took an active share the following year in the military preparations Russia was then making, but in consequence of some tumults and acts of insubordination in the artillery companies, fell under the emperor's displeasure, and withdrew from the service till 1803, when Alexander appointed him inspector of all the artillery forces throughout the empire. He now commenced those reforms and improvements in that department of the military establishment which have since brought it to its present degree of perfection. To his prudent counsels and measures, among which was that of organising numerous *corps de reserve*, may be partly attributed the success of the Russian arms in 1813-14. When peace was established, he still continued his active services to the state in various ways, and had considerable share in the formation of military colonies or settlements. In 1826, after the death of Alexander, he retired altogether from public affairs, and resided upon his estate, where he died in 1834. Having no heirs, he left the disposal of his landed property to the

emperor, who assigned it to the Cadet Institute of Novogorod, which has, in consequence, now taken the title of the Araktcheev C. I. During his lifetime he had bestowed upon it 300,000 rubles. One very singular disposal of money made by him is the following:—In 1833 he lodged in the Imperial Bank the sum of 50,000 rubles, on the express condition of its being left to accumulate, untouched, for the term of ninety-three years; when it is computed that it will amount 1,918,960 roubles, three-fourths of which is to be bestowed (in 1925) on the author of the best history of the Emperor Alexander) to be written in the Russian language, and the remainder appropriated to defraying the expense of printing 10,000 copies of the work!"

And now, in taking our leave of this work, we may acknowledge that it is of a kind even more difficult to review than to write accurately and properly: for there are many writers, but, in spite of the plural *We*, only one reviewer. And were he all the reviewers in England rolled into one, how short must be his knowledge of the sufficiency for such a task! We throw ourselves at the public feet; and if we have provoked correction by any errors of opinion, we can only say that we will receive it without a murmur, and indulge in the hope that, whoever sets us or others right may be quite right themselves.

*A Year among the Circassians.* By J. A. Longworth, Esq. 2 vols. 12mo. London, 1840. Colburn.

THIS publication does not set out in a very explicit or candid manner. There is no leading date; and it is only far on, by the insertion of a document, we gather that the author's visit to Circassia was in 1837. In his preface he enumerates preceding writers on the subject—Klaproth and Pallas; Stewart, Bell, and Marigny; but he omits all notice of Mr. Spencer, whose volumes have, within the last few years, been so largely quoted in the *Literary Gazette*. We like authors to act fairly by their precursors: it shews that they do not shun comparison, and bodes well of their own performances.

Mr. Longworth was correspondent of "The Times" newspaper whilst in the East, but has not reprinted his letters in this work. He describes the secret and cunning operations which were necessary in chartering a merchant vessel at Constantinople to avoid the notice of Russian espionage, and enable the adventurers to proceed to the coast of Circassia. To accomplish this, by violating the Russian blockade, great circumspection was required. It was, however, managed after a chase at sea, and Mr. Longworth landed at Pchat. Having previously, at Sinope, met a Turkish merchant, he says "he was a round, fat, little man, full of fun, and not wanting in shrewdness, and sat doubled up before me, in the Turkish style, smoking and talking at a prodigious rate, evidently for the hundredth time, a good deal excited at the example he had before him, and declaring stoutly, as he had done to a hundred others, that he would accompany me. There was, however, a ludicrous expression of terror in the little man's flushed face and twinkling eyes, that augured badly for the stability of his resolution; and accordingly, when it came to the push, his heart failed him as usual. In allusion to my own expedition, he slyly remarked that it was all very well for England and the Porte, who were doing nothing for the Circassians, to endeavour to keep up their courage, and to prevent them submitting to the

Russians, till they had made up their own minds on the subject. 'Yes, yes,' he added, laughing and shaking his head; 'I understand it all; first comes Daoud Bey, then Kutchuk Bey, then Yakoub Bey, and, lastly, yourself; all to keep the pot boiling over the way; but whether its contents will turn out ditch-water, porridge, or good mutton soup, Allah alone can tell.' Which we verily believe to be a correct view of the affair.

Near Pchat there are some vast tombs; and Mr. L. states concerning them:—

"There are two descriptions of tombs to be seen here; one, the tumulus or cairn, a heap of rude stones, in some instances of great height and circumference; and the other, a cenotaph, for no remains have been found near it, composed of fine ponderous flat stones, four in a quadrangle of five or six feet, and one at the top. Through one of the upright stones is a hole, about a foot in diameter, made in a well-described circle, with a smooth orifice: the inside is empty. These edifices, kept together by the very solidity of their truly Cyclopean materials, have suggested to the natives, who have lost every clue to the real purpose for which they were constructed, the story that they were built by the giants as houses for pigmies,—not that 'small infantry warred on by cranes,' but a nation of light horsemen, mounted on hares instead of chargers. These, they say, were the aboriginal inhabitants of the Caucasus. With respect to any other ruins or remains, fortresses, monuments, or chapels, they have one answer to all inquiries—that is, 'they are Genyvis' (Genoese), and they will not trouble themselves, or expect you should trouble yourself, further on the matter. Genoa has much to answer for in the way of ruins (whatever hand she may have had in building) here as well as in Turkey: 'lone mother of dead empires,' she is responsible for them all."

Elsewhere he notices some Circassian superstitions thus:—

"Continuing for some miles to ascend the stream as before, we at length diverged from it by a path to the left, which wound along the sides of the hills. Those to the right now assumed a bolder and more rugged outline, and to one of them, of more grotesque appearance than the others, my attention was drawn by the Hadji. 'That hill,' he said,—'that strange-looking hill, elbowing the sky yonder to the left, is possessed by the devil. Yes,' continued he, gravely, seeing that I treated his assertion as a joke, 'the devil possesses every foot of it; and I would fain see the man that will venture to fetch a stick from the wood at the top, or sow pasta in the fields on its side.' As he proceeded to unfold to me this popular superstition, I naturally took a closer survey of the peak, or promontory, that had given rise to it. Its most remarkable feature was, that it was superadded to the main ridge like a hunch on a camel's back, or rather flung from it, as it were, and suspended, with its waving crest of foliage, like some enormous billow on the curl. Issuing from this wood occasionally strange noises had been heard. Groans, shrieks, and clanking of chains, now and then diversified by diabolical peals of laughter, had distinctly announced that the very peculiar festivities, vulgarly called 'devils' delights,' were kept up in its precincts with great spirit; in short, neither man, woman, nor child, had a doubt on the matter—it was the haunt of demons! Those who had ventured—for some had been fool-hardy enough to intrude on their revels—had either never returned to give a description of them, or, like Bully Bottom, had been 'strangely translated,'

their chins having been brought into juxtaposition with the napes of their necks, and their faces, in that untoward predicament, making on all who met them grimaces at once horrible and ridiculous. Among other marvels, no less religiously believed, there was reported to be in the circle of this enchanted wood an immense brazen caldron, and that a pretty 'hell-broth,' as may easily be supposed, was concocted in it; the greensward where it was placed was also said to be fireproof, and the grass to have resisted every attempt that had been made to burn it. Nor was this all; a white horse, without a rider, was at stated intervals seen amusing itself by galloping backwards and forwards over the ridge of the hill in a very awful manner; indeed, not that white horses were scarce in the country, or that they were not accustomed to indulge in similar pastimes, but a courser like this, in size a perfect monster, could be of no earthly, certainly (a rather small one, by-the-by) of no Caucasian, breed."

For ourselves, we dislike the facetious on subjects of this sort. The superstitions and legends of countries are both curious and interesting, and deserve to be gravely treated, both on account of their philosophical, philological, and historical value. They are about the best guides to the origin, descent, and connexion of nations.

Soon after landing, Mr. Longworth joined Mr. Bell; and he tells us a good deal about the Russian war, and something of the Circassian leaders and manners of the people. Of their consideration of their English visitors, the following is a sample:—

"It is true, we were escorted every where by a guard of honour, composed of the most distinguished persons of the two belligerent provinces, but whether intended for the protection and safe custody of our persons and property appeared rather doubtful; certain it is, they kindly relieved us from all concern as to our whereabouts, and the disposition of our time, regulating these things exactly as they thought proper. Then, although we were invariably consulted in the most unreserved manner as to their domestic and foreign policy, they took just as much of the advice we gave as proved palatable to them, and no more. In return, moreover, for all the pomp and circumstance with which they had surrounded us, they naturally expected that we should duly play our part in the pageant, by an appropriate display of regal munificence. By some of the most impatient, who conceived we had been rather backward in this respect, pretty strong hints were given on the subject. Of what use, it was asked, was a government, unless to make presents? But before we ridicule this ingenious statement of their views, we should reflect whether the same do not also prevail in more civilised states; with this slight difference, however, that while one portion of the community build expectations on the bounty of the government, the remainder are expected to contribute the means for its exercise. But the Circassians, having never yet enforced the distinction existing between the classes of contributors and receivers, were all naturally desirous, on its adoption, of being included in the latter. It is also, perhaps, to facilitate a consummation so desirable, that, in seeking to place themselves under the authority of a chief, they prefer one whose resources shall be, equally with himself, of foreign derivation. It should not be forgotten, at the same time, that such crude notions of government are natural to a gallant and independent race of warriors, who have hitherto bowed to no earthly authority, and among whom

it may be justly considered that a great step has been made for its establishment, in the feeling that prevails of its necessity,—proved as that necessity has been beyond a doubt by their voluntarily placing at their head any Englishman who makes his appearance on their coast."

Their councils, or parliaments, are very primitive. After an account of one, Mr. L. says:—

"It rarely happens that any under the age of forty ever interfere in these debates; and only with a tolerable sprinkling of grey hairs in the beard, announcing the matured wisdom of the tamatas, or elders, can the orator command attention. Should there be any individual fonder than others of hearing himself talk, they have a way of silencing him peculiar to themselves; they neither crow like cocks, nor bray like certain other animals in more civilised assemblies, but adopt a method for which the form and the roomy nature of their house of meeting, *al fresco*, are most peculiarly adapted. The unfortunate orator in such cases is apt to find himself with no other audience than the neighbouring trees and bushes, the circle he had been addressing having rapidly dissolved and re-adjusted itself out of earshot, where it might be seen listening to somebody with better claims on its attention. Except in cases like these, the patience, temper, and moderation of these assemblies are most exemplary; and on occasions when they have been sitting on some matter of local interest, I have, on returning in an evening from an excursion, found the council-ring unbroken, on the same spot, and canopied by the same tree, as when I had left it in the morning. Day after day will they resume their deliberations, while persons, whose opinions they respect, will speak for hours together; but what, no doubt, tends to prolong their sittings, is the necessity of their being unanimous—a majority on a question will not suffice to decide it; unless all are agreed, they separate without coming to any decision at all, since none will be swayed by opinions he disapproves of."

The system is feudal, and very like our old Highland clans. There are pshees, or princes, the chiefs of all.\* There are ouzdens, or nobles of much authority. There are tocavs, hakoth-fles, or freemen; and there are cerfs, or slaves. The whole are divided into tokums, or tribes.

Every traveller is adopted by a konag, or host, whose name is his protection and a passport to hospitality throughout the land. It is, nevertheless, inhabited by independent communities; and among them are jealousies, treacheries, feuds, and bloodshed to be found as among all warlike and barbarous people.

We have not been so much enlightened by these pages as we could have wished; and shall, therefore, only select another extract or two for their illustration. Our first is a character:—

"Tchurook Oglu Tongouse, or 'the Wolf,' was a good model of the Circassian *preux chevalier*, altogether *sans peur* if not *sans reproche*. Whatever enterprise was in hand, were it foray, onslaught, or ambuscade, he for one might be depended upon; if wrongs were to be redressed—individual, provincial, or national—Tongouse was invariably the champion. When certain of the Caucasian provinces had made separate terms with Russia, he was the first, by his successful inroads, to make them repent of their apostasy. His name had spread even as far as the Ingouches, whose children 'the Wolf' had more than once carried off from them. Such cele-

\* Mr. L. supposes that these may be originally Cabardians, or Teutonic knights.

brity in a man yet scarcely in his prime had produced its natural effects on the ladies of the Caucasus, and he had more claims on his heart than even the Mahomedan dispensation, indulgent as it is, could allow him to do justice to. The consequence was, that his decided disposition to please led him into many scrapes, and the fines he had drawn on himself and his tribe would, if they had all been duly paid, have stocked half the estates in Natukvitch with horned cattle. The only remedy for these disorders was, that he should take to himself a wife or two; and as the ample patrimony he inherited no longer sufficed for it, the purchase-money was cheerfully, and from motives of economy, contributed by his tribe. He accordingly married two wives. The first, the most beautiful, and the second, the most accomplished woman in Circassia. His success in the courtship of the former created no surprise. Beauty and bravery have mutual attractions all the world over; the one being held to be the legitimate meed of the other. But that Guavcha, the discreet and stately daughter of Indar Oglu, should throw herself away on such a scapegrace as Tongouse did excite the special wonder and the no small indignation of her tribe and family. The hand of a princess possessing the manual dexterity of Guavcha—unrivalled in the works of the loom and needle—had been eagerly sought by the wisest and the wealthiest nobles of the land. But wealth and wisdom seemed to make little impression on her; and the fastidious princess, conscious, perhaps, that her charms were of a durable nature, was in no haste to make a selection. But her mind was at length made up, and that somewhat suddenly, being one fine morning nowhere to be found in the paternal domains of Pchat, having been transferred by moonlight on the crupper of his steed to the harem of Tongouse, at Tedjaguz. To portray the person and equipment of this barbarous Lovelace, (a very appropriate name, by the way, for a Circassian gallant, who is garnished all over with silver trimmings,) would entirely baffle my feeble powers of description. As far as the habiliments are concerned, it would be impossible to convey any definite idea, for the simple reason that they were never for two days together the same—in casque, mail, and gloves of steel, gallantly armed, at one time—at another, he was undefended, not only against the enemy, but even against the weather, by a threadbare tunic; now, girt with bow and quiver, and now bristling with rifle, dagger, and pistol. At one moment clad in a gay silk antri, and a coat resplendent with the silver lace aforesaid—the next he was covered with rags. To-day he would meet you on a superb white charger richly caparisoned—to-morrow you would see him worse mounted than the Knight of the Rueful Countenance himself. Now all these transmutations, which a stranger might unjustly charge to caprice, were in the eyes of the admiring Dely Canss but so many proofs of a brave and liberal spirit. Accoutrements, arms, horses, and slaves themselves, are things which such a hero is proud to part with—for it is presumed to be a proof that his valour can easily replace them. But though in his outward man the Proteus I have attempted to delineate, there were qualities about Tongouse which he could not change with his coat. For example—however he might be dressed, I never knew him to stand less than six feet three inches in his shoes; and whether in shirt of steel or of Bez, the formidable play of his muscles was the same. Indeed, with regard to the latter, being much addicted to frolics and practical jokes, such as flooring, unhorsing, and

riding down his companions, the vigour they exhibited was by many of them deemed even superfluous; whence it was said that the only fit playfellow for Tongouse was his horse; a saying, in a great measure, justified by the terms on which they lived, taking liberties with each other which none but the most intimate friends would venture upon."

Our countryman got a female slave as the price of some of his cargo, and gives us a longish chapter in apology or justification of this species of traffic; but we can only refer to it, and conclude with another passage speaking of the Russians and Armenians:—

"The Circassians, in the meantime, have not been deceived as to her object. The fortitude they have displayed in resisting the temptations of her commerce, is even greater than that with which they have braved the horrors of her warfare. The chief article of importation, and one, as I have already observed, of first necessity to them, is salt, and for this they actually pay to the Turkish merchant ten times the price at which they could obtain it from the Russians. To enforce the prohibition of the Russian trade, they have neither revenue officers nor customs establishment of any sort. Its execution depends entirely on the feeling which prevails of its necessity, and thus every man finds a check in his neighbour, if not in his own conscience. This remark applies to the community at large: exceptions are of course to be found, and among the Armenians, an avaricious race, whom the instinct of gain has scattered all over the Caucasus, patriotic feelings are altogether out of the question. The only principle by which they are governed in their commerce is, that which our political economists declare to be the only legitimate one—*superior cheapness*. *Alish Verish*, buying and selling, with them absorbs every other sentiment; indeed, they scarcely appear to have an idea beyond it. Their very tombstones are decorated with the emblems of their respective crafts, and in the paintings which I have seen in their churches at Constantinople, the rewards and punishments which await them in the next world are invariably borrowed from the trades they have followed in this. Profit and loss are the only heaven and hell that Armenians can picture to themselves. Their history is very instructive, particularly so to the nation of 'shopkeepers,'—an epithet which, however undeserved at the period it was applied, is becoming every day more appropriate. Destitute of the elevated sentiments, the higher social virtues, by which alone a people can become great and powerful, the Armenians have not only ceased to rank among nations themselves, but are the bane of all those who admit them to their bosom. It is they who have so long furnished in Turkey the class of saraffs, or usurers, the parasites of power, and the jackalls of oppression. By similar arts do they thrive in Circassia. In the pacified or neutral provinces of the Kaban, in Zadoog, Hatnkoï, Kerkenai, and Demegoie, they live apart in their own village, and carry on an active trade with Russia, the profits of which are no doubt considerably augmented by the political intelligence they convey to her. But in the belligerent provinces of Stratuikoitch, Shapsook, and the Abhosahks, the game they have to play is more difficult and dangerous. In the midst of a fine and vigilant population, whose suspicions are easily roused and as promptly acted upon, their only chance of safety is to attach themselves to the influential chieftains, whose protection they repay with a liberality which is a sufficient evidence of its corruptness. Through their agency,

Russia is informed of every thing that takes place in the country, and they are the instruments on which she chiefly depends for carrying into effect her commercial projects. The prohibition of the Russian trade by the national council was a severe blow to them, but though prevented from pursuing it directly, the Armenians still found a door open in the neutral provinces, and through these indirect channels the reasonable traffic still continued to circulate."

At page 131, vol. ii., an error of the press makes the Circassian population ten millions instead of one million.

*A Summer's Day at Greenwich, being a Guide to the Hospital and Park; with a Select Catalogue of the Pictures in the Painted Hall: to which is added, a History of the Ancient Palace from its Foundation.* By William Shoberl, Esq. 12mo. pp. 137. London, 1840. Colburn.

THIS volume should have appeared early in May, when the white bait are first met with "warm and young," and the Crown and Sceptre cannot contain its numerous visitors. Not that Greenwich is not still very pleasant; but it is the autumn of the year, and London is a desert, exhibiting (see statistical reports) not much above a million and a quarter of population. To the few inhabitants that remain, Mr. Shoberl's book may be a guide through the Hospital and Park, and point out the sights most worthy of being seen. It is very neatly got up, with frontispiece and woodcuts of the most striking objects; and we could only have wished that in some parts it had been less ambitious of literary character.

As Mr. S. courts corrective suggestions, we may state (p. 20) that Dyers' Hall and Old Swan Stairs are below, not above, Southwark Bridge; that the humorous sketches (p. 18) of steam-boat fellow-passengers, though pleasant, are out of place in a work of the kind; that the National Gallery is not "an elegant and extensive range of buildings" (p. 12); that the remarks upon the adage, "the king can do no wrong" (p. 38), are ill-founded in taking it in a literal sense; and that we deny the truth of the following observations:—

"It is no less strange than true, that there is an inherent propensity in the lower classes of the English to destroy objects of art, &c., which they are permitted to view, although without charge. The same class in France, in this respect, conduct themselves with the utmost propriety. In England, a statue may, perhaps, sustain a blow by which it loses its nose, and the deer in Greenwich Park be disturbed or pelted, while both would be sacred from molestation on the other side of the Channel:—witness the fine statues in the gardens of the Tuileries, where the confident little sparrows are so tame as to come within reach of the stranger."

The recent opening of public places to the people have altogether disproved this reproach.

We must, however, give a specimen of the author's best style:—

"Having partaken of an early repast, let us now bend our steps towards the Park, whose bright green foliage and verdant greensward at once refresh the sight, weary of streets, and lanes, and smoke, and chimney-pots, and afford a soft and luxurious carpet to the foot of the pedestrian. Nature seems to have put on her best attire. She laughs aloud in the broad green leaves and blossoms of the horse-chestnut,—in the verdant mantle, interspersed with the red daisy and the yellow buttercup, that clothes

the earth,—in the noble river that winds its course through a rich tract of country, and bears on its surface a hundred gallant vessels, laden with the products and luxuries of other climes,—in the sweet odour of the rich foliage, and the fragrance of plants and flowers,—in the joyous notes of the little feathered minstrels, and in the merry laughing countenances of the youth of both sexes, who cross our path in all directions. In Greenwich Park may the stranger enjoy in perfection the varied beauties of a summer's day. The 'Pleasures of Hope,' immortalised in the poem of the same name by our delightful bard Thomas Campbell, are here seen to light up the youthful heart, and to impart an unwonted gaiety to the spirits. The eyes of that young damsel, as she reclines upon her lover's arm, beam with more than usual animation and brilliancy. Gentle reader, have you ever, in the spring-time of youth, wandered forth alone in the green fields, at that period of the year when Nature holds her carnival, and one universal sound of rejoicing seems to extend throughout creation? Have you ever inhaled the pure breath of morning, without tasting of its sweetness? Have you ever heard with indifference the notes of the skylark high soaring in the air? Have you ever looked upon the sunny landscape outstretched before you, interspersed with trees, with fruits, and flowers, and have heeded not its beauties? Have you ever experienced a lonely and undefined sensation, under such circumstances, steal over your senses, that has impressed your heart with a feeling of its own loneliness and desolation? You are in easy circumstances, have kind relations, fostering friends, and naturally inquire whence arise these mysterious sensations, now experienced for the first time? Your heart tells you, to use the words of Byron, that

'Happiness was born a twin.'

You wish for some gentle being of the better sex, in whom you can confide, to share the joys or the sorrows that beset you in your journey through life. These are the symptoms of first love. You next ask yourself if you know any young female whom you think you could love, and receive a reply in the affirmative. Such is the case with the young couple just alluded to. To all appearance, she is pretty familiar with the young gentleman with whom she is in company, if we may judge from her joyous looks and conversation free from restraint. The fact is, he has unbosomed his sentiments towards her, and she has promised to become his. Alas, little does she think of the incessant cares and anxieties that await her in her new characters of wife and mother! If youth could properly estimate all the responsibility which marriage entails, they would not so lightly contract an engagement which must go far to render them happy or miserable for the rest of their days. And yet how many, even in this great metropolis, never calculate upon the consequences of such a step, but thoughtlessly picture every thing *couleur de rose*! Experience, which comes too late, often sadly undeceives them. I mean not by these remarks to declaim against matrimony, but to warn the inconsiderate from rashly entering upon so solemn and lasting a compact."

Let us beware of Greenwich Park in the company of the opposite sexes, or what the Puritans call promiscuous intercourse. It seems more dangerous than quadrilles, more fatal than waltzing. However, there is one tree on One Tree Hill to hang upon, if the worst come to the worst.

Mr. S. does not guide us to this; but to

other sights (as we have stated) the visitors to Greenwich will do well to pocket his *Summer's Day*.

*The Principal Baths of Germany, considered with Reference to their Remedial Efficacy in Chronic Disease.* By Edwin Lee, Esq. M.R.C.S. &c. Vol. I. *Nassau Baden and the adjacent Districts.* 1840. 12mo. pp. 172. London: Whittaker and Co. Paris: Galignani and Co. Frankfurt and Wisbaden: Jügel.

"THE want (says Mr. Lee) of a good practical work on mineral waters in the English language has been too generally experienced to require that I should make any apology for the appearance of the present publication, which may be considered as a pendant to my 'Account of the Watering Places and Mineral Springs of the Continent,' inasmuch as it contains more detailed information respecting the medicinal application of the principal baths of Rhenish Germany and its neighbourhood; without repeating what I have already said on mineral springs in general, or on the individual ones in that work, where will be found the analysis of most of them. Some account is also given, with the analysis, of two or three important springs which have recently come into more general use, and which I had not previously mentioned."

Mr. Lee rather depreciates our friend Dr. Granville's "Spas of Germany," as incomplete in regard to these places of resort, and the properties of their waters; to explain which, with scientific and professional accuracy, he sets himself in this, certainly very satisfactory, volume. As we see in the newspapers this week the account of a fête given to the Doctor, now at Wildbad, in attendance on Joseph Buonaparte, we may drop for our illustration of Mr. Lee's book upon his account of that sojourn:—

"Though the baths of Wildbad have been used for upwards of three centuries by the inhabitants of the neighbouring countries, they were, till lately, very little resorted to by foreigners, and had never, perhaps, been mentioned in any English work, till the brief account which I gave of them in my former publication. From the high encomiums which have been subsequently lavished on them by the author of the 'Spas of Germany,' the name has become familiar to English ears, and the place, during the last three seasons, overflowing with English visitors, several having been doomed to disappointment in not finding the relief they sought, from their expectations having been too highly raised, or the water not being adapted to their case. Wildbad offers no inducement for persons not requiring its baths to select it as a temporary residence, being for the most part a poor-looking little town, or rather village, placed in one of the most sombre valleys of the Black Forest, enclosed by steep pine-covered mountains, and at a considerable distance from any town of importance; Carlsruhe being nine leagues off, and Baden-Baden seven, across the mountains. At one extremity of the street of which the town consists is an open space, or square, containing the two hotels, the bath buildings, and public room, supported by a colonnade. The place, however, is greatly improved since my visit two years ago; new houses have been built, and the accommodations improved;—a new *curseal* has also arisen, with a dining-room capable of receiving 150 persons at the *table d'hôte*, which forms the frontispiece of a rather voluminous work, translated into Eng-

lish, in which, no doubt, the great advantages of Wildbad, and the miraculous powers of its waters, are detailed at length, and duly insisted upon. The rapidly rolling rivulet Ens flows behind the town; the only carriage-road through the valley being constructed on its banks, which, beyond the baths, are planted with trees for near a mile, forming the public promenade. A principal excursion is up the valley to the village of Kalmbach. There are also some shaded paths in the mountains for pedestrians or donkey-riders; and though I admit having said in my former work that the environs abound in delightful walks and rides, had I then seen the place, this statement would have been very much qualified, there being few watering places that do not surpass Wildbad in this respect, or in objects of interest in the environs; and Dr. Granville must indeed have seen the place with a favourable eye, when he considers its sombre and *triste* position superior to the beautiful and *riant* valley of Schlangenbad, and the fruitful country in its neighbourhood. Wetzlar states, that during the greater part of the year the climate is raw and cold; snow not unfrequently remaining on the neighbouring mountains till the middle of May: whilst from the deficiency of free ventilation, to which narrow valleys between wood-covered mountains are subject, the atmosphere must be considerably charged with moisture for some time after the falling of rain or heavy dew. The water rises through a layer of sand, to a height of from two to three feet, into basins or piscinæ, in which several persons bathe at the same time. The Herrenbad, contained in a vaulted Gothic-like chamber, is the largest and warmest of the springs. At one extremity is a niche of a semicircular form, above the water, which is termed *hölle*, the temperature being higher here than elsewhere. A part of the piscina is boarded off, so as to form isolated baths. The other baths, the Fürstenbad, the Frauenbad, and the Gemeine-Männerbad, for different classes of bathers, are considerably smaller. A spring has also been used for drinking, within the last two or three years. The temperature of the different springs ranges from 27° to 30° R., being that best adapted for bathing. Their chemical composition is the same, the amount of saline and gaseous substance being exceedingly small; the solid residuum after an analysis of a pint of the water scarcely exceeding three grains: so that the medicinal properties of the water may be considered as principally depending upon its temperature, in which it differs from most of the other German waters, which require to be either warmed or cooled down to the proper degree of heat for bathing. At several of the French baths, however, where the water has great analogy with that of Wildbad, as Luxeuil, Plombières, Neris, &c., it is also used at the natural temperature; though as the springs are more numerous at these places, and the range of temperature more extensive, they can be better made to fulfil the different indications of diseased states. Thus, at the two first mentioned places, cases which are unrelieved by baths at from 27° to 29°, are not unfrequently greatly benefited by the use of one of the hotter springs, or by the vapour, which is in great abundance in *étuves*; whereas at Wildbad these patients would have to return no better than they came. There can be no doubt that several natural warm springs, which, like those of Wildbad, contain but a small proportion of saline and gaseous constituents, as Gastein, Luxeuil, Pfieffers, &c., are yet very efficacious in the

removal of some chronic diseases which have resisted other means; and though some have endeavoured to account for their mode of action, by ascribing it to the peculiar vital principle possessed by mineral waters, and to other causes, no satisfactory explanation has been offered. In some of these instances, as at the baths of Leuk in the Valais, there is little doubt that the prolonged immersion of the body in the water, for a considerable portion of the day, is a principal cause of the benefit obtained by many patients. This, however, cannot be said of some others, as Gastein, which, though not richer in mineralising ingredients, have naturally a much higher temperature, where a prolonged bath, reduced to the same degree of heat as Leuk or Wildbad, could not be supported by many persons, and which is very often exciting, rather than sedative, in its operation. We must, therefore, rest contented with our experience of the fact, that effects sometimes follow the use of waters of this class which could not be procured by others, or by waters artificially prepared so as to resemble them. Waters of this kind are tasteless, feel soft and unctuous to the touch, are exceedingly agreeable and refreshing in baths, producing, generally, a tranquillising and sedative effect upon the nervous system; hence they are highly serviceable in most of those cases where a high degree of irritability exists, which would render the employment of more exciting springs unsuitable. Of this kind are some gouty, and particularly rheumatic and paralytic cases, occurring in young or middle-aged persons, or those of a nervous temperament, and unable to bear the action of a powerfully stimulating water. In local paralysis arising from accidents, or from diminished nervous energy of the spinal marrow, or of particular nerves, they are also calculated to be of service; though, in the majority of instances, a more strongly mineralised spring would be more likely to be productive of benefit, and in a shorter space of time. Certain cases, however, now and then occur which appear to indicate the use of a strong saline, or sulphurous water, but which are not benefited by it, and are relieved by the employment of one of the simple thermal springs. The same may be said of neuralgic pains, or tic, in various parts, without our being able to offer any other explanation of the circumstance in the present state of our knowledge than that of the peculiar idiosyncrasies of individuals, as are frequently seen in the practice of medicine, that remedies which are generally efficacious in certain diseases are occasionally powerless, though the patient be, to all appearance, under similar circumstances as others who have been benefited by these remedies."

*The Tea-Totallers; or, Humbug Detected, and Hypocrisy Unmasked.* 8vo. pp. 32. London, 1840. T. and W. Boone.

THE Tea-totallers are here attacked in prose and verse, the former being the stronger battle of the two.

"The gullibility (quoth the author) of John Bull is notorious; and, taking advantage of this national characteristic, a few designing individuals have formed associations in all parts of England, Ireland, and Scotland, under the apparently virtuous and modest titles of 'Temperance Societies'; the ostensible objects of which are highly injurious to morality and to commerce, inasmuch as moderation, the most essential of all the qualities of the mind, as well as of all the actions of life, the prince of virtues, is altogether disregarded: injurious to agriculture and trade, because the doctrines taught are those of total abstinence from the accustomed beverage of the country, manufactured from native grain, and in providing which so much capital has been embarked: injurious to truth, because the solemn pledge, when broken (which it is every day), though a moral perjury, must remain unpunished: injurious to reason, because that pledge is inconsistent with the intentions of the parties, and therefore impossible of execution: injurious to health, because the human frame cannot support, on water, the fatigue

necessary to the proper exertion of a labouring man who does justice to his employer: injurious to society in general, as tending to effect a serious change in the manners and customs of the people, without knowing how that change may better their condition, or operate upon their passions for political purposes, or permit them to be operated upon by wicked and designing persons presiding over large bodies of men, assembled for an apparently innocent purpose: and, finally, fraught with great suspicion, headed as they are in these new-fangled, un-English, hypocritical, absurd, canting, catch-penny doctrines (impossible to be realised,) by a priest of Rome, who may be a very good man after his calling, but who, if he be sincere, must have a sinister motive when pretending so much anxiety for Protestant welfare."

After this denunciation we should almost be afraid to drink a single cup of tea; and, indeed, except at particular times and seasons, we confess that we are not inordinately addicted to that beverage, though so highly prized by many great and literary men. But our author adds:—

"He is morally sure that most of the temperance agitators are hired agents, and satisfactory evidence has proved many to be very drunken dogs. The same testimony, as to their addiction to strong waters, applies to a great portion of the Society, particularly the paid members and preachers of this solemn league and covenant. The writer entertains a strong opinion upon the great exertions of Father Mathew in the cause of temperance, &c.: and whilst many desire that he may be amply rewarded for his labours, he thinks the reverend father's object will in some measure be attained, where he finds so much weakness upon which to work and exercise his sacred functions. His reward then is assured,—one far exceeding, to his mind, all pecuniary gratification. The writer was once told by one of that reverend priest's colleagues, that moral force was theoretical—physical force was power: this was in allusion to the great conversion to Catholicism amongst the lower orders of society. He (the writer) feels astonished that England (once the Isle of Saints, as the reverend and honourable priest Spencer designated her) ever raised the cry of No Popery. Is there a reaction, or is it only boast? It is true, that every Thursday in the year there is a high mass performed throughout France for the restoration of England to the true Catholic faith:—Father Mathew, who acts under orders, is quite aware of this fact, and that it was brought about by English priests—perhaps he was one of them! The writer feels that much harm has been effected by the silly interference of the legislature with the amusements of the people. In conclusion, he begs to state that he is an Anti-Humbug."

We should think an Anti-Humbug could hardly contrive to live in this humbugging world of ours; and we rather fancy, that unless our author happen to be also a man of independent means he will never make a fortune, or get a livelihood, by his poetry. It is, indeed, very queer, and far less to his purpose than the prose we have quoted; but as the subject is of much popular interest at the present time, we take the liberty to add a sample:—

"O, sad times, indeed, are these we live in,  
When the little to the poor that's given  
Is mulct'd from them as a subscription,  
To too denial's dereliction,  
Ne'er to be pardon'd in this troubled sea,  
By those who advocate the dear Bohes—  
Best, and purest temperate of liquors,  
Though at home, to gin uncommon stickers.  
Think ye, the love of man doth here prevail  
In thus forbidding us to drink good ale?  
No, for 'tis plain to all with eyes to see,  
These preachers make a profit of the tea;  
A secret understanding with the trade  
Enables them, by dint of some parade  
Of humbug temperance, to play the stake,  
Which both their own and tea-men's fortunes make.

Preachers of temperance! wicked sinners!  
Unlike your dupes you gorge turtle dinners!  
If malt you drop, why you need not bewail,  
You'll substitute old port for Burton ale:  
Then to the meeting, with uplifted eye,  
The beer you'll damn with meek hypocrisy.  
Such doctrines, sure, must in our nostrils stink—  
Good wholesome beer's the people's nat'l drink.  
Leave them alone, and let them drink and eat  
All which their tastes and pockets will permit;  
They their own pleasures surely best can carve—  
All are not gluttons 'cause they do not starve.  
As for your temperance, and tea, and toast,  
On such poor fare, what'er may be your boast,  
The working man would soon give up the ghost.  
Out on this nonsense! this insane parade!  
Which robs the comforts from the lower grade;  
Let them enjoy the blessings of their state,  
They're not too many, nor acquire'd till late:  
Earn'd by their labour and continual sweat,  
They know what's best their strength to invigorate.  
Let Father Mathew to the saw-plug go,  
He'll first of all, cry, 'Pots! here, beer below!'  
Of Father Mathew let me say a word:  
I like him not, nor any of his herd;  
However humble he may now appear,  
He has an object unto me quite clear,  
Which far exceeds his emity to beer.  
This Romish priest works with a higher aim,  
And of tea temperance he but plays a game.

If Father Mathew to the people say,  
 'Abstain from beer!' and almost all obey,  
 What doubt exists that if not all, still some,  
 Will kiss the foot of the holy Pope of Rome?  
 None that I foresee: Britons, then beware,  
 Stick to your parsons and your pot of beer."  
*Amen, says the Clerk!*

*Wanderings in Germany; with Moonlight Walks on the Banks of the Elbe, the Danube, the Neckar, and the Rhine.* By Edward Wilkey. 8vo. pp. 357. 1839. London: Ball, Arnold, and Co. Exeter: Roberts.

MR. WILKEY appears to be one of our national characters—a simple individual who likes to wander away season after season, and perambulate the Continent, without any definite object, just to see what like the places are and what the people are about. Having done so for some six or eight years, he has at last turned author; and the wonder is how, under his circumstances, he could have escaped the contagion so long. Having, however, screwed up his courage (we fear) to the *sticking place*, he sets out with a tremendous flourish to induce us to follow him whithersoever he has pleased to conduct us. Sailing from the Thames for Hamburg, in July 1837, he tells us:—

"The weather was remarkably boisterous for the season, and the captain assured us he had not experienced a stronger wind during the three years he had commanded the vessel. The waves, convulsed and infuriated by the impetuous blast, actually dashed over the railing of our elevated quarter-deck, and made our noble ship creak and groan as if its mazy timbers were coming asunder:—

\* High dash'd the spray, the bows dipp'd in the sea,  
 And sea-sick passengers turn'd somewhat pale!"

However, the brave 'John Bull' weathered the storm to admiration, and rode triumphant over all the buffetings of angry winds and raging waters. The voyage was for me (with a little exception) wholly without any incident of interest, as I was, like many others, a victim to the unutterable agonies of sea-sickness. On the first intimation of the malady I repaired to my berth, which was situated in the deepest, innermost, and closest recess of the sleeping apartment; and from this I did not stir for about forty hours, during which time I neither ate nor drank. Long before the expiration of this period I might truly be said, from maintaining one posture, and from inanimation, to ache from head to foot; but still I lay motionless and powerless, sometimes meditating on my forlorn condition, at others obtaining dreamy glimpses of more cheering scenes. In my troubled dreams 'sweet home' was not forgotten."

Of this sea-sickness, of which almost every tourist sets out by complaining, the most delicate description we have met with was that of an elegant fellow-passenger in one of our own trips. He appeared on deck at the close of the transit, and exclaimed, "I have suffered greatly, 'pon my soul!" and being asked of what disorder, he wofully replied, "Of the reverse of swallowing!" But this has nothing to do with Master Wilkey, who, getting quite well, went to Berlin, and Leipsic, and Dresden, and Prague, and Vienna, and Presburg, and Linz, and Salzburg, and Munich, and Stuttgart, and Heidelberg, and Mannheim, and Mentz, and Wiesbaden, and down the Rhine to "Old England again."

It so happens, either that we have been to all these places in the *Literary Gazette* with so very many travellers that we are too familiar with them, or that Mr. Wilkey is not the man to observe or unfold any matters particularly

new: but so it is; his diary does not induce us to indulge in extracts. The following is a sample of his style and fashion of treating subjects:—

"In writing of Germany, I must not omit to mention smoking. To give an idea of how general it is I may mention that, in the interior of the diligence on our way from Prague, all smoked except the ladies, one of whom employed herself in knitting, and looked both happy and industrious. Two or three of the gentlemen (one of them a medical man) were on very good terms with this lady (who, I afterwards learned, was *fenme-de-chambre* to a princess!), and amused themselves by tickling her arm, and in finding her elbow which was lost beneath the folds of her large sleeve, whilst she defended herself with a pin. This, 'tis true, is a trivial thing to record; but it may, nevertheless, serve to illustrate the easy familiarity of Austrian manners. To return to the subject of tobacco: the waiters at the cafés and inns, when they are not otherwise occupied, may be seen sitting and smoking their pipes. And, again to digress, there is, at one of the coffee-houses near the Graben, a large self-acting organ, which plays at short intervals throughout the day. The hand-organs one hears in the streets of Vienna are really excellent, and altogether different from the instruments we hear in the public thoroughfares of England, which are often more remarkable for discord than harmony."

With this single quotation to enlarge the ideas of our readers, as ours have been, we finish; and are happy to announce that, after another severe storm, Mr. Wilkey happily reached the Custom House Stairs on the 9th of November, in time to witness the pageant of the Queen's visit to the City.

#### MISCELLANEOUS.

*Extracts from Holy Writ, and various Authors; intended as Helps to Meditation and Prayer, principally for Soldiers and Seamen.* By Captain Sir Nesbit J. Willoughby, R.N. C.B. K.C.H. 12mo. pp. 198. London, 1840. Printed for the Author, or Compiler, for Gratuitous Circulation.

THE excellence of motive to which we owe this volume partakes of so sacred a character as to be almost above human praise. Where sincerity and piety are combined in a manner to exalt both virtues, we cannot too highly commend the actions which emanate from their union. In this instance the result has been the book before us, compiled by Sir Nesbit Willoughby, chiefly with the benevolent purpose of distributing among our soldiers and sailors, but not withheld from other classes who may benefit by its perusal. The gallant officer's statement of what prompted him to this course is, to us, very simple and affecting:—

"My hour-glass," he says feelingly, "had already run out its greatest portion; and I knew not how soon it might stop altogether. In the retrospect of my past days I found, in reference to the companions of my youth and comrades of my riper years, that I was almost left alone—I had to look back on whole societies, and on ship's crews, and on military battalions which once existed and were known to me, but which had all been swept away; and I felt that in the very nature of things I must soon follow:—nay, that the place which saw me to-day might probably see me no more a week hence."

And upon these grave reflections on the uncertainty of life, he urges others to follow his

example in reading the Scriptures and yielding the soul to prayer daily. From this he had reaped great comfort, and his earnest desire was to encourage his fellow-creatures to seek the same means of earthly peace and everlasting hope. The work itself is a collection of miscellaneous passages from the Bible and religious authors; and we rejoice to learn that there are many military societies where the soldiery are enabled to read not only such productions as this, but all of a little library formed by their subscriptions, and chosen by themselves and non-commissioned officers, their comrades.

*A Pocket Botanical Dictionary, comprising the Names, History, and Culture of all Plants known in Britain; with a full Explanation of Technical Terms.* By Joseph Paxton, F.L.S. H.S. &c. Assisted by Professor Lindley. Pp. 354. London, 1840. Andrews; Orr and Co.

It is so seldom Mr. Andrews appears before our august tribunal in the doubtful garb of a publisher, and especially of a scientific publisher, that we were rather surprised to see his name upon this title-page. At last it struck us that he who had done so much for COVENT GARDEN, and had superintended, and watched, and cultivated the whole of last season with so much intelligence, must have occurred to any clever botanical writer to be the best person in London to get well through with a work like this. However that may be, it does great credit both to author and publisher. We read the title-page, and said, "Well, if this handsome little volume really perform what is here set down, it must be a most acceptable production: for in referring for information we may want, though we only possess five yards square of garden, an account of some of the rarest and latest introductions into our flora is a desideratum; and of all things in or on the earth, the vocabulary of plants has become so confoundingly nominal-personal, learned, and jaw-breaking, that we would be unutterably obliged to the guide who would teach us what these Greco-Latino-nomini-locali-scientifico-complimentario compounds mean." And we looked to this *Dictionary* to see if the terms of its promise were fulfilled; and we are happy to say that we found it a perfect treasure of its kind. With it in our pocket, we shall no longer fear the gardener's sesquipedalian answers to our simple inquiries What is this, and What is that? We shall peep into Paxton, and learn that *Diplopeltes* is from *diploos*, double, and *pelte*, a buckler; that *Macrasporium* is *makros*, long, and *sporos*, a seed; that *Pentandia* is in honour of Mr. Pentland; and so of the rest of the hard names. Seriously, this is the best, and most complete, and useful book of its genus that has come from that hotbed—the press.

*The Story of the Three Bears.* Pp. 29. *An Hour at Bearwood: The Wolf and the Seven Kids.* Pp. 34. *The Great Bear's Story: The Vixen and the Woodman.* Pp. 44. London, 1840. Wright.

THE *Three Bears*, a clever and playful versification of a story in "The Doctor," seems to have stolen into such popularity as not only to reach a second edition without our notice, but to have encouraged the writer to extend his good-humoured talent to the other two productions at the top hereof. And the success has been deserved, both by the amusing naïveté of the poet for little people, and by the drollery of the illustrations, which do honour to Mr. C. Josi's bearish invention, and to the expressive art of woodcutting employed upon these grotesque animals: indeed, they

are most bearishly human, and shew great talent in the artist. The second and third performances are not so laughable as the first; but still they are so good of their kind, that we are sure every possessor of them will hope for a lengthening of the line. The cover of the last is a gem of art and fancy. We would kindly recommend the series to our juvenile friends, whose papas and mammas will join in their mirth when they are looking at the pictures and reading the text of these little lively tomes.

*The Poetical Works of Thomas Campbell.*

*Illustrated by Thirty-seven Woodcuts, from Designs by Harvey.* 12mo. pp. 343. Moxon. A SWEET little edition of the bard of Hope, and quite in keeping with his tender and graceful muse. The embellishments are charming; and nothing Mr. Moxon has done, with all his taste and liberality in this style of publication, has seemed to us more appropriate and pleasing than this small single volume of Campbell's *Poetical Works*.

*The Literary World.* 2 vols. 8vo.

London, 1840. Berger.

WE are bound to notice, in the collected form of two handsome and copiously illustrated volumes, with more of praise than we have bestowed upon it in periodical appearance, this very agreeable and instructive miscellany. It is of a character which does credit to the cheap class of publications, and must do good wherever it is read by the young, the inquisitive, and the less wealthy orders in society. Mr. Timbs is a worthy and intelligent provider of this weekly fare; and, with so much merit, will, we trust, proceed on his course with increased popularity and patronage.

*British Insects and their Transformations:*

*Butterflies.* No. 1. 4to. Arranged and Illustrated in a Series of Plates by H. N. Humphreys, Esq. With Characters and Descriptions by J. O. Westwood, Esq. F.L.S., Secretary of the Entomological Society. London, 1840. Smith.

THIS seems to be the commencement of a handsome work. The beautiful creatures of a day to which the first number is devoted are represented with great accuracy, and described in a manner that conveys instruction in a very pleasant form. The letter-text and the plates are worthy of each other, and both of the lovers of entomology and natural history.

## ARTS AND SCIENCES.

### ANTARCTIC SEAS.

ATTENTION is now so much alive to the exploration of the Antarctic Seas, that every account of discoveries wafted from that quarter is perused with avidity, not only in England, but in other countries. Of the recent French exploits in this way we have given an opinion (*Lit. Gaz.* 1226), which we think too well of our neighbours to suppose can be misunderstood. All we mean to intimate is, that M. d'Urville loses nothing by his way of telling his own story, and the spirit of nationality, an honourable and stirring characteristic of France, does not suffer him to lose ought by their reception at home. At the same time we noticed the American Reports of the voyage of the ship *Vincennes*, of which the official details have since been published by Lieut. Wilkes. This officer sailed from Sydney, New South Wales, on the 24th December last, with an exploring squadron, consisting of the *Vincennes*, the *Peacock*, the *Flying-Fish*, and the *Porpoise*, and his instructions were to "proceed south as far as possible, and cruise within the Antarctic Ocean." The marrow of his Report

deserves to be recorded where we hope, at no distant period, to record the expedition of James Ross, and we have pleasure in contemplating the persevering enterprise of the American commander and his steady crew. We need not particularise the parting of the vessels or the earlier incidents of the voyage, but make extracts of what is most worthy of notice:—

"I steered with the *Porpoise* in company for our first rendezvous, Macquain's Island, and thence to Emerald Island, our second rendezvous, having passed over the supposed locality of the latter in longitude 162° 30' east latitude, 57° 15' south, without seeing land or meeting with the *Peacock* or *Flying-Fish*. On the 10th of January, being in latitude 61° south, we fell in with the first icelands, and continued steering to the southward among the icebergs, which compelled us to change our course frequently in avoiding them. On the 12th we ran into a bay of field ice in long. 164° 53' east, and lat. 64° 11' south, presenting a perfect barrier to our progress farther south; a heavy fog ensuing, during which we parted company with the *Porpoise*, her commander having directions to follow my written instructions in that event."

The vessels had all directions to act independently; and Lieut. Wilkes, having fallen in with the *Peacock*, continues:—

"On the morning of the 19th of January we saw land to the south and east, with many indications of being in its vicinity, such as penguin, seal, and the discoloration of the water; but the impenetrable barrier of ice prevented our nearer approach to it, and the same day we again saw the *Peacock* to the south and west. We were in long. 104° 27' east, and lat. 66° 20' south."

By casting an eye over the map with the latest discoveries laid down, it will be perceived that Lieut. Wilkes had come upon the "*Sabrina Land*," and "Indications of Land" seen in March 1839 by the vessels of Mr. Enderby; and all that follows indicates and confirms the opinion, that a considerable continent stretches from east to west in these high latitudes:—

"On the 22d we fell in with large clusters and bodies of ice, and innumerable ice islands, and until the 25th were in a large bay formed by ice, examining the different points in hopes of effecting an entrance to the south, but were disappointed. We here reached lat. 67° 4', long. 147° 30' east, being the farthest south we penetrated. Appearances of distant land were seen in the eastward and westward; but all points except the one we entered presented an impenetrable barrier. We here filled up our water tanks with ice taken from an iceberg alongside the ship. We made our magnetic observations on the ice. The dipping needles gave 87° 30' for the dip; and our azimuth compass was so sluggish on the ice, that on being agitated, and bearings taken again, it gave nearly three points difference, the variations being 12° 35' east. A few days afterwards, about 100 miles farther to the west, we had no variation, and thence it rapidly increased in westerly variation, from which I am of opinion, that when in the ice bay we could not have been very far from the south magnetic pole. This bay I named Disappointment Bay, as it seemed to put an end to all our hopes of farther progress south."

The passages we have marked in Italics deserve especial observation, as they point to almost the point where (as was stated in the *Lit. Gaz.* No. 1213) Captain Ross expects to find the magnetic pole.

"On the 28th, at noon, after thirteen re-

pulses, reached long. 140° 30' east, and lat. 66° 32' south, where we again discovered land bearing south, having run over forty miles thickly studded with icebergs. We ran towards the land about fifty miles, when we reached a small bay, pointed by high ice cliffs and black volcanic rocks, with about sixty miles of coast in sight, extending to a great distance towards the southward, in high mountainous land."

The health of the crew was so much affected by fatigue and hardships that it was deemed expedient to return to a milder climate, but Lieutenant Wilkes deemed it his duty to make another attempt to reach what he had named "*The Antarctic Continent*." The Report proceeds:—

"We reached it on the 2d of February, about sixty miles to the westward of the point first visited, where we found the coast lined with solid perpendicular ice cliffs, preventing the possibility of landing, and the same mountains trending to the westward. Thence we proceeded to the westward along the ice barrier, which appeared to make from the land, until the 3d, when we again encountered a severe gale from the south-east, with thick weather and snow until the 7th of February, when it cleared up sufficiently to allow us to see our way clear, and we again approached the perpendicular barrier of ice, similar to that which we had previously seen as attached to the land, the same land being in sight at a great distance. We stood along the barrier about seventy miles to the westward, when it suddenly trended to the southward, and our farther progress to the south was arrested by a solid barrier of field ice. After an unsuccessful examination for twenty-four hours in all directions, we continued to the westward along the barrier, as usual, surrounded by ice islands. On the 8th and 10th (being on the 8th in long. 127° 7' east, lat. 65° 3' south) we had similar appearances of distant mountains, but the compact barrier, extending from east to west by south, prevented a nearer approach. On the night of the 9th of February, being the first clear night for some time, we witnessed the aurora australis. We continued on the 10th and 11th westward, with south-east winds and fine weather, close along the barrier, which was more compact, with immense islands of ice enclosed within the field ice. On the 12th we again saw the distant mountains, but were unable to effect a nearer approach, being in long. 112° 16' east, lat. 64° 57' south, and I was again compelled to go on to the westward. The ice barrier, trending more to the southward, induced me to hope that we should again succeed in approaching nearer the supposed line of coast. On the 13th, at noon, we had reached long. 107° 45' east, lat. 65° 11' south, with a tolerably clear sea before us, and the land plainly in sight. I continued pushing through the ice until we were stopped by the fixed barrier about fifteen miles from the shore, and with little or no prospect of effecting a landing. I hauled off for the short height, and the next morning made another attempt at a different point, but was equally unsuccessful, being able to approach only three or four miles nearer, as it appeared perfectly impenetrable. Near us were several icebergs, coloured and stained with earth, on one of which we landed and obtained numerous specimens of sandstone, quartz, conglomerate and sand, some weighing 100 lbs. This, I am well satisfied, gave us more specimens than could have been attained from the land itself; as we should, no doubt, have found it covered with the ice and snow 100 or more

feet in thickness. We obtained a supply of fresh water from a pond in the centre of the same island. Our position was long.  $106^{\circ} 40'$  east, lat.  $65^{\circ} 57'$  south, and upwards of seventy miles of coast in sight, trending the same as that we had previously seen. Although I had now reached the position where our examinations were to terminate by my instructions to the squadron, I concluded to proceed to the westward along the barrier, which continued to be much discoloured by earth; and specimens of rock, &c., were obtained from an ice island. A sea-leopard was seen on the ice, but the boats sent did not succeed in taking him. On the 17th of February, in long.  $97^{\circ} 30'$  east, lat.  $64^{\circ}$  south, land was seen again, at a great distance, towards the south-west. We now found ourselves closely embayed and unable to proceed in a westerly direction; the ice barrier, trending round to the northward and eastward, compelled us to retrace our steps. The result stated in this Report leads me to the following conclusions:—1st. From our discoveries of the land through forty degrees of longitude and the observations made during this interesting cruise, with the similarity of formation and position of the ice during our close examination of it, I consider that there can scarcely be a doubt of the existence of the Antarctic continent extending the whole distance of seventy degrees from east to west. 2d. That different points of the land are at times free from the ice barrier. 3d. That they are frequented by seal, many of which were seen; and offer to our enterprising countrymen engaged in those pursuits a field of large extent for their future operations. 4th. That the large number of whales of different species seen, and the quantity of food for them, would designate this coast as a place of great resort for them. The fin-backed whale seemed to predominate."

If we look at the position of Enderby Land, the land seen by Kemp in December 1833, the appearances from ten to fourteen degrees south of Kerguelen Land, and Sabrina Land, and its adjuncts before alluded to, we will have little hesitation in agreeing to Mr. Wilkes's geographical conclusions.

#### GEOLOGICAL SOCIETY.

MAY 13th and 27th. Dr. Buckland, President, in the chair.—A memoir was read 'On the Classification of the Older or Palæozoic Rocks of the North of Germany and of Belgium, as compared with formations of the same age in the British Isles,' by Professor Sedgwick and Mr. Murchison. In an introduction of considerable length, the authors give an historical review of the progressive steps by which they were led to consider the stratified rocks of Devonshire and Cornwall, beneath the carboniferous system, to be coeval with the old red sandstone, and to substitute for that term the expression "Devonian System." They then state that their leading object in visiting Belgium, the Rhinish provinces, the Hartz, &c. during 1839, was to ascertain whether, in any of those countries, there exists a group of strata with the Devonian fossils in a position intermediate between the carboniferous and Silurian systems; and thus to establish the existence of the Devonian system, not merely by suits of fossils but by direct evidence of natural sections. With these views the authors endeavoured, 1st. to ascertain the natural descending order of the formations on the right bank of the Rhine, between the Westphalian coal-field and the chain of the Taunus; 2d. to ascertain the same order in Belgium and among the ancient rocks on the left bank of the Rhine, north of the

Hundsruok: they also made several traverses through the Hartz; and a long one from the Thüringerwald to the north flank of the Fichtelgebirge, in the hope of bringing into relation with their previous observations the country of Count Munster's labours. Before the authors, however, proceed to describe the detailed sections, they explain, at some length, the method of determining, by vertical and horizontal sections, the order of superposition in districts where the strata are not only much contorted, but are often in a reversed position; and they allude particularly to Professor Dumont's use of horizontal sections in determining the intricate country around Liege.

*Coal-Fields of Westphalia, &c.*—The authors commenced their descending sections on the right bank of the Rhine, with an account of the coal-field situated to the east of Mulheim. In lithological character and fossil contents it is undistinguishable from the coal-fields of England; and it is divided into an upper, or a productive, and a lower, or an unproductive, portion. The latter is partly composed of coarse grits, well exposed on the banks of the Ruhr, between Herdecke and Schwerte, and partly of yellowish or light-coloured sandstones and grits, with seams of coal and impressions of plants; and it is underlaid by dark grey micaceous slates, and thin-bedded, hard sandstones, of great thickness, marked by many obscure impressions of small plants. The lowest division of the series contains much dark pyritous shale (alaunschiefer), and it reposes on the upper calcareous zone (mountain limestone) of Westphalia. Several sections are then described, which confirm this order of superposition: and the authors state that the lower division of the coal-field is, lithologically, almost identical with the great culm-field of Devon; and that there is also an agreement in the abundance of impressions of small plants. It is the *Flotz leerer sandstein* of the German geologists, by whom it had been regarded as the highest member of the greywacke series; but it is placed by Von Dechen, in his recently published "Map of Europe," on the parallel of the millstone grit of England.

*Carboniferous Limestone (Berg-Kalk) of Westphalia, Kiesel-schiefer, Bituminous Limestone, &c.*—The authors next described the limestone which, commencing at Cromfort, near Ratingen, ranges about E.N.E. to Velbert, and is deflected thence to the valley of Regrath, north of Tonnishede, where it is cut off and does not form, as represented in all German maps, a continuous band with a lower limestone, which passes through Matmann to Elberfeldt. Near Cromfort the limestone is thickly bedded, and agrees in composition, as well as in fossils, with the great scar limestone of England. In its range to the east it becomes more cherty, and abounds in casts of crinoidal stems, resembling the screw-stones of Derbyshire. The connexion of the limestone with the coal-measure series is well exposed at Iseburgel, Velbert, &c.; the upper strata passing into dark, flat-bedded, slinty strata, which is overlaid by psammite and shale, alternating with thin courses of slinty slate, and these dip beneath the lower members of the coal-field. Still further to the east, the limestone is replaced by a large group composed of dark slinty slate (kiesel-schiefer), and dark, fetid, thin-bedded limestone,—containing, also, goniatites and posidonia; and it so closely resembles the culm limestone series of Devonshire, that a geological description of one district would almost serve for that of the other. The group passes under the alum-slate, and

rests on dark shales resembling those which form the base of the limestone. It may be traced by its kiesel-schiefer, posidonia schists, and sometimes by its fetid limestones, to the eastern limits of the chain of older rocks near Bleiwasche and Hadtberge.

*Devonian System.*—The mountain limestone of Cromfort rests on dark-coloured shales, but the descending section is obscured by many overlying accumulations. In the long range between Elberfeldt and Menden there are, however, many clear transverse sections, which exhibit more or less perfectly the following descending series:—1. Immediately under the lower limestone shales, reddish shales with calcareous concretions, containing posidonia, &c.; 2. Psammites and coarse sandstones; 3. Shales and psammites of a dark colour, with occasionally thin courses of impure limestone, enclosing goniatites, terebratula aspera, and other shells, specifically different from those of the overlying formations. These groups are considered by the authors as forming a part of an inferior system, and the first and second as a passage between it and the overlying carboniferous system. They are also placed by them on a parallel with the highest beds of the Devonian series, immediately under the culm measures, and with the yellow sandstones of Ireland described by Mr. Griffith.

*Lower Limestone of Westphalia.*—This formation rises from below the third group mentioned above, and its characters and attendant phenomena, in its range from the neighbourhood of Ratingen to the confines of Hessa, were described in detail. As a whole, it so greatly resembles the limestone of South Devon, that through large tracts of Westphalia the two rocks could not be lithologically distinguished. The most abundant fossils are *Stromatopora polymorpha*, *S. concentrica*, *Favosites polymorpha*, *F. spongites*, *F. gothlandica*, *F. ? ramosa*, *Strygocephalus Burtini*, *Terebratula aspera*, and *Buccinum spinosum*. From these facts the authors infer that this lower limestone of Westphalia is a true Devonian limestone, and on a parallel with the great limestone of South Devon. Detailed sections are given in the memoir, especially one from the posidonia schists and black limestones near Schelke, through the Devonian limestones to the lower formations exposed on the banks of the Lenne, towards Altena. In this section the authors state that there is no ambiguity, and that the defective evidence in the sections in Devonshire is here amply supplied. The reversed sections at Paffrath are described in detail; and the complicated metalliferous deposit of Dillenberg, as well as the limestones of the Lahn, are shewn to belong to the Devonian system. In descending the Lahn, from Dietz to Nassau and Bad Emms, the authors had a proof that this calcareous system is underlaid by Silurian rocks. The appearance of the Devonian deposits near the eastern limit of the old formations on the right bank of the Rhine is accounted for by enormous undulations repeating, in three or four great parallel troughs, the deposits which appear in their true place in Westphalia, on the northern limit of the same ancient formations.

*Silurian System.*—From beneath the lower Westphalia limestone rises a series of rocks, which, in the long range between Elberfeldt and Iserlohn, exhibit an unequivocal descending order. The passage downwards is, in some places, effected by flagstones, with bands of shale containing thin calcareous courses; but at other localities the shales are more abundant; and, near Meschede, the group is greatly ex-

panded, containing many quarries of roofing slate. It is classed by the authors with the shales beneath the Eifel limestones and with the Wissenbach slates, which underlie the Devonian limestone series of Dillenberg. A list of fossils is given, and the authors regard the numerous goniatites as connecting the group with the overlying Devonian rocks; and the trilobites and orthocera, some of which are probably Silurian species, as a connecting link with the Silurian system. Below the preceding is a vast group of earthy schistose beds, nearly throughout which are occasionally obscure vegetable impressions; and in the upper part are calcareous beds with innumerable impressions of fossils. In the lower part the limestones disappear, and the group passes into greywacke, or greywacke slate. The country around Siegen is regarded as a dome of elevation composed of the lower part of this series. The fossils found in these schistose beds exhibit many new forms not found in the overlying strata, including several species of pterinea, homalonotus, orthis, and delthyris, characteristic of the Silurian system: but the authors do not attempt to separate this vast system into distinct groups on a parallel with those of the Silurian system of England, in consequence of the absence of marked calcareous bands, and some of the fossils ranging almost from the highest to the lowest beds; but they consider the great mass of the series as the equivalent of the Silurian system, and the lowest strata as probably the upper part of the Cambrian.

[To be concluded in our next.]

#### PARIS LETTER.

Academy of Sciences, August 18, 1840.

SITTING OF August 10th.—M. Dufresnoy addressed a memoir to the Academy on a new mineral found in a vein of manganese, at St. Marcel, in Piedmont, and which he had named *Greenovite*, in honour of Mr. Greenough. This mineral is a compound—one containing both titanium and manganese. It forms small rose-coloured veins, running irregularly through the principal vein of manganese, and is found in crystals, as well as small amorphous crystalline masses. It possesses a triple cleavage; and the two cleavages parallel to the vertical faces, which form an angle of  $110^{\circ} 35'$ , are very clear and shining.

*Diluvium of the North of Europe.*—M. Durocher sent to the Academy an account of his observations on this subject, made during a recent journey. His attention had been turned, not only to the erratic blocks of granite, but also to the striated marks in the surface of rocks *in situ*, occasioned by the violent passage of the blocks over their surface. In the north of Finmark, lat.  $70^{\circ}$ , furrows and striæ were to be observed on the summits of numerous rocks at Grunstein and Phyllades, running from N.N.W. to S.S.E., and which, in some localities, were 2500 feet above the level of the sea. Similar marks were to be observed in Lapland, towards the south. On the immense table-land of Norwegian Lapland the same marks also occurred, but running from north to south; and on the surface of this table-land was a deposit of detritus and blocks, the formation of which might be referred to the diluvial epoch. The geognostic constitution of Finland consisted of two sorts of granite,—a coarse-grained and a fine-grained; and the whole country might be considered as a granitic table-land, the inequalities of the surface of which were in part levelled by a sandy deposit laid horizontally, and presenting traces of stratification. Erratic blocks were also found on it, and all the rocks *in situ* bore

the marks and striæ caused by the passage of the blocks; those of the fine-grained granites being better defined than those of the coarse. Sometimes, for a space of fifteen or twenty leagues, these marks were altogether obliterated by the action of other agents. They were distinctly traceable, however, in Finland, from  $64^{\circ} 30'$  to  $60^{\circ}$  north lat., and from  $20^{\circ}$  to  $30^{\circ}$  longitude east of Paris; their prevalent direction being a little to west of north. In Russia, Poland, and Germany, the erratic blocks were to be met with commonly in groups on hills, where they formed dykes, or ramparts, almost semicircular, with the convexity turned towards the north: sometimes they formed bands, or lines, along a hill running from north to south. In Russia and Lithuania these blocks were not found beyond the Niemen; that is to say, blocks brought from Finland, or from the shores of Lake Onega. Their range seemed to be limited by the chains of hills that separated the sources of the Duna from those of the Dnieper; and, towards the west, those of the Niemen and the Narew from the marshes of Pinak. In Poland there were two sedimentary formations posterior to the tertiary strata; one argillaceous, called *Lehm*, and containing freshwater shells, with the bones of large fossil animals; the other, a later formation, being the regular diluvial deposit without bones. In Poland, the erratic blocks came chiefly from Finland; only a few from Sweden. Their range is limited by a line from Wlodawa, passing a little to the north of Kielce, and ending at Kozielglow, between the 51st and 50th degrees of latitude. Beyond the Polish territory the limit turns to the north-west, following the foot of the mountains, which may be considered as the last ramifications of the Riesengebirge, the Erzgebirge, and the Harzgebirge. To give an idea of the grand scale on which the dispersion of the erratic blocks has taken place, M. Durocher observed that some of the blocks had been estimated to weigh 300,000 lbs., and that some of them had travelled 250 leagues. In Denmark, the diluvial deposit is of great thickness, and is composed of strata of sand and clay containing erratic blocks, and also more than seventy species of shells now living in the Baltic.

M. Fizeau communicated a method of fixing photographic impressions obtained with the daguerrotype, by means of a chlorure of gold. The mixture employed was one gramme of chlorure of gold dissolved in half a litre of pure water (distilled), to be mixed with three grammes of hyposulphite of soda, also dissolved in half a litre of water. The two mixtures to be poured gradually together, and well stirred. The plate with the impression is to have some drops of alcohol poured on its indurated surface, so as to wet it completely, and it is then dipped successively in pure water and the solution of the hyposulphite. The plate is then fixed over a lamp, with the impression upwards, so as to be well heated, and a quantity of the solution of this salt of gold is poured on it, so as completely to cover it. In three or four minutes the impression begins to get much more strong and clear: the liquid should then be poured off, and the plate washed and dried. By this operation some of the silver covering of the plate is dissolved, and gold is precipitated on the silver and on the mercury, but with different results. The silver, which, by its shining, produces the dark parts of the impression, becomes slightly browned by the thin coat of gold that covers it, and hence the shades become strengthened. The mercury, which, in its state of infinitely small white globules, forms the lights of the im-

pression, acquires more solidity and brightness by its amalgamation with the gold, so that the effect of the impression is in both these ways increased. The impression also becomes fixed.—M. Chevreul reported to the Academy that the commission appointed to inquire what quantity of air was necessary for each horse in cavalry stables, had determined that health might be preserved if each horse had twenty-five to thirty cubic metres of air constantly surrounding him.—M. Franchot read a paper, and presented a model of a machine, for attaining a moving power by the rapid heating and cooling of air in a system of closed vessels, thus producing an alternating effect.

At the last sitting of the Academy of Moral and Political Sciences, Professor Bouchitté read a memoir 'On the History of the Proofs of the Existence of the Deity, from the most remote Periods to the time of the Composition of the *'Monologium'* of Anselm of Canterbury.'

Another Bulletin of the Société de l'Histoire de France is just out. It complains of the remissness of persons charged by the Society to edit works in the performance of their tasks. The "*Chronique des Ducs de Normandie*" is, however, terminated and ready for delivery.

The lectures of the Professor of History in the Faculty of Arts at Lyons, given twice a week, have been attended this year by a constant audience of from 1500 to 1600 persons.

M. Vincent Campanari, a distinguished Italian antiquary, died a short time since, aged sixty-eight.

M. Dufresnoy, Engineer on the Mining Establishment, has been elected a member of the Academy of Sciences in the room of M. Brochant de Villiers, deceased.

Fable by M. Jeauffret of Marseilles:—

"Le Cheval.

Un cheval indocile au frein  
Se cabrait sous la main de l'homme;  
Et se disait d'un air mutin:  
A quoi tient le pouvoir de cet être hautain  
Qui nous gourme soir et matin  
Et nous traite en bêtes de somme?  
Aux lois de ce tyran si nous obéissons,  
C'est qu'il lève la tête, et que nous la baïssons.  
Je veux dresser la mienne, et la porter si fière  
Qu'elle fasse trembler ceux qu'aujourd'hui je crains.  
De ses pieds de devant l'homme s'est fait des mains.  
J'en aurai deux bientôt de la même manière;  
Et je tiendrai tête aux humains.  
Si je marche une fois sur mes pieds de derrière.  
Il dit et veut exécuter  
Une tentative hardie.  
Il se cabre, il se dresse... hélas! faut-il conter  
Le résultat de sa folie?  
Ses jarrets fléchissants ne peuvent le porter;  
Au premier pas qu'il fait, il tombe et s'écroule.  
Pour être moins infortunés,  
Sachons vivre sans répugnance  
Dans la sphère où nous sommes nés.  
S'en plaindre n'est permis qu'à des esprits bornés,  
En sortir n'appartient qu'à des gens en démenée."

Sciarrada.

Traggo l'agnelle ai pascoli;  
Al mio primier l'alfido,  
Poscia all'ombra d'un platano m'assido.  
Ne solo io son, ch'è Apolline  
Lieto mi posca accanto;  
Ed il secondo allor  
Fervendo nel mio cor, scioglio un tal canto:

Nacqui pastor, e placida  
Quietò godendo al campo,  
Dalla finzion degli uomini  
Dalla lor frode scampo:  
E sempre con un viso  
Nel tutto per diporto,  
Come solea in Anfriso,  
Febo pastor io porto  
Alla mia sposa, ai pargoli  
Frutti graditi e fior.

Answer to the last:—Cam-aglio.

#### FINE ARTS.

TRAFALGAR SQUARE.

Public Improvements.

AGREEABLY to our last, we return to this ungratifying subject to notice some of the

prominent features as exhibited in the reported proceedings of the Parliamentary Committee. It met and formed itself, very judiciously electing Mr. Gally Knight to be the chairman; as, indeed, the whole House of Commons could not supply a gentleman more competent, from taste and cultivation, study at home and observation in foreign travel, to fulfil the duties of such an office.

The first witness examined was Mr. Railton, the successful competitor for the erection of the Nelson Memorial, and inventor of the Corinthian Column which gained him that award from the Nelson Committee. Whether, having invited the competition of all the sculptors of England to contend for the prize, this was the most wise decision, it is not our present business to inquire; suffice it to say, that Baily, Lough, and other artists of great and acknowledged genius, were distanced in the race; and the best thing that could be chosen from this grand rivalry was a pillar without a single mark of originality to distinguish it from a hundred which are standing in every part of Europe. So much for the poverty of the English school; so far, at least, as it could be stamped by this election.

It appears from the minutes of Mr. Railton's evidence (10th July), that the pillar which gained the suffrages of the Nelson Committee was to have been 203 feet in height; but somebody frightened the Government by intimating that so high a column would be likely to be blown down some stormy winter's night, with a sou'-wester blowing hard: Government very humanely interfered, and it was reduced to 170 feet. Mr. Railton, nevertheless, thought this very unnecessary, as "if it was [were] thirty feet higher than the original (i.e. up to 233 feet), there would be no reason whatever to doubt the stability of it."—*Report*, page 2. We are not aware how high the Tower of Babel got, but imagine it must have ranged between 170 and 233 feet to have been the source of so much confusion, and, in this respect, the primitive precedent for the Nelson Monument and Trafalgar Square.

The reduction, we are told, is made according to the Government Report, the proportions preserved, &c.; so that

	Feet.	Inches.
The statue is 16 feet .....	16	0
The shaft, 98 feet 6 inches .....	98	6
The pedestal, 36 feet 6 inches .....	36	6
And the steps, 7 feet .....	7	0
	158	0

To which adding, as far as we can comprehend the confused questions and answers,\* 12 feet 6 inches, for the pedestal on which the statue is to stand, make up the sum of the 170 feet, with six inches to come and go upon. The pedestal of the column is a square of 17 feet; and the estimate for the whole was 30,000*l.*, now calculated at about 28,000*l.*, not in consequence of diminishing the size, but of employing granite instead of freestone. The work to be completed in two years.

Besides his columnar elevation, Mr. Railton gave in three plans for laying out the grounds about it; but the plan of another was preferred, which, though quite unknown to him and widely differing from his, he assures the Committee would not in the least have affected his design, as he declares, "I consider nothing but a column is suited to the site."—Page 3. And although the column has been brought down farther from the National Gal-

\* The very frequent want of grammatical accuracy is rather derogatory to the precision and elegance of the examinations: not only the answers but the questions break Priscian's head till we can hardly fancy a whole bone left in his cranium.—*Ed. L. G.*

lery towards Charing Cross some 90 feet, and the ground lowered 4 feet 6 inches, still Mr. Railton holds on, like Candid the optimist, that all is for the best. Give him his Pillar, and it will grace any position and improve any object near it. We firmly believe he would stick to this were it proposed to place it where the statue of Queen Anne stands in front of St. Paul's Cathedral!

"63. Mr. Tufnell.] Do you think the alteration in the position renders any other alteration necessary?—Not the slightest.

"64. Sir H. Vivian.] As far as it intercepts the view of the National Gallery, it is in favour of it.—The present position of the column is a great improvement.

"70. In fact, it impedes much less than before?—Where it was before, it was no detriment to the National Gallery; the Gallery is a very long line, and requires to be broken; therefore it brings it more into keeping.

"71. Still, as an impediment, it is much less now that it was before?—Yes; but it has never been an impediment. [A bit of a bull.]

"86. Mr. Tufnell.] You stated you considered that a column was best calculated for this?—I did. I well considered many other designs, and came to the conclusion that a column was best suited to this site.

"87. What reason have you for saying that?—It obstructs the view of the Gallery and all the buildings in the square less than others possibly can do; and by putting it in the centre, you have a better view of the National Gallery from every point than by putting it in a different situation.

"88. You think no other species of monument would so little interrupt the view of the National Gallery?—Exactly so.

"95. Mr. H. T. Hope.] In your answer just now, when you stated you thought a column less impeded the view of the National Gallery than any other monument, did you allude to every possible monument, statutory for instance?—You never could have erected any thing in statutory of sufficient consequence for the magnitude of the Square for so small a sum as 30,000*l.*

"96. Had you another reason, besides that of interfering with the National Gallery, for objecting to sculpture?—You could not erect any thing of consequence suited to the site.

"97. You rather allude to any architectural monument?—To any monument suited to the site.

"98. Mr. Tufnell.] Suppose you had unlimited funds for a group of sculpture, do you think no group would impede the view of the National Gallery less than the pillar?—That is going very far; in the present day we never get any thing of the sort.

"99. Your answer was only with reference to the funds raised, not generally?—Yes; the base would be so large, it would intercept the whole of the church, looking at it as we do from the point of view from which that drawing is taken; the whole of the base of the portico of the church would be completely hid."

There is nothing like leather! With regard to the alteration in the position, the witness is again asked:—

"85. So that you are better satisfied with it?—Yes, as it is at present; it is certainly an improvement to the whole Square; and it is seen better from the Strand and Cockspur Street, and from different places; much better than it was before."

Mr. Railton goes on to say, that the spire of St. Martin's Church being higher than his column (by 22 feet 6 inches), and nearer the National Gallery, without, in his opinion, injuring that immortal building, "he does not see how his column can." And so his examination closes, as such a farrago ought to end, by a wonderfully pithy question and magniloquent reply:—

"100. Mr. H. T. Hope.] What is your point of view as to your perspective plan?—Near Farrance's the pastry-cook's."

\* The last two questions and answers might be intelligible with the drawing to refer to, but as they appear here, it is no easy matter to make out what is meant. Mr. Railton tells the Committee that no sculpture could be got for 30,000*l.* of sufficient consequence (like his column) for the site; but if unlimited funds were granted, he is not sure but a group of sculpture could be executed which would impede the view of the Gallery less than the pillar. The more money, we should have supposed, the greater the magnitude; and, consequently, the very reverse of this perplexed conclusion. If 30,000*l.* would give a base so large as to intercept the view too much (a most nonsensical assumption), surely 30, 60, or 100,000*l.*, would produce a much bigger interception. A friend of ours, we remember, proposed that the Victory, in which Nelson conquered and died, should be brought up and floated in a splendid basin in Trafalgar Square—an asylum manned by naval heroes and veterans like himself. What would Mr. Railton say to this in the way of suitableness and interceptions of sight?

*Bon! bon!* And Mr. Milne of the Woods and Forests was called in, and examined about the proposed laying out of the Square, by Mr. Barry, at the estimate of 11,800*l.*,\* the Nelson Committee having no voice or control in the matter. In this evidence, the following, though not relative to the Nelson Monument, is worthy of public notice:—

"153. Mr. Protheroe.] I observe that the ground taken out from Trafalgar Square is carried into the Green Park?—Yes.

"154. Is it the intention of the Government to make an alteration in that; to lay it out like St. James's?—Nothing is decided on that subject; it is under consideration.

"155. That question is under consideration?—Yes.

"160. Sir H. Vivian.] The 11,000*l.*\* does not go merely to the alteration of Trafalgar Square, but it goes to the improvement of the Green Park, if you consider that as an improvement?—If it is an improvement."

Sir F. Chantrey, Mr. Cockerell, Mr. P. Hardwick, Mr. D. Burton, Mr. E. Blore, Mr. Deering, Sir R. Westmacott, Mr. S. Smirke, Mr. Joseph Gwilt, and Mr. T. L. Donaldson, were called in, and the four following questions were submitted to them, to which they were requested to furnish answers personally or in writing, on a subsequent day. To these we shall come anon; but, meantime, Mr. Barry was examined, and from him we have a very different kind of testimony, at once clear and decided, like a man who is master of his subject in all its parts, relations, and bearings. His description of what is intended to be done with Trafalgar Square must interest every reader:—

"The area is proposed to be level; on the north side, in front of the National Gallery, is proposed a terrace 165 feet long, and 32 feet wide, with a flight of steps at each end to the area below the same width (each step being two feet wide, and five inches high), with ample landings in the circular corners of the square. The terrace is proposed to have at each end two large oblong pedestals for groups of sculpture, and circular pedestals for candelabra are proposed to be placed at the foot of each of the flights of steps, as well as at the angles of the Square towards Cockspur Street and the Strand. The terrace and flanking walls of the steps are proposed to be surmounted by a balustrade. The terrace wall and balustrade will be fourteen feet in height. The embankment or retaining walls to the surrounding streets are proposed to be surmounted by a solid parapet three feet high. The front, or south side of the Square, and the north side of the terrace towards the road in front of the National Gallery, are proposed to be enclosed by ornamental stone posts, so placed as to be a barrier against carriages and horses. The area is proposed to be covered with asphaltum. The terrace to be paved; and the whole of the masonry in the terrace and retaining walls, the steps and landings, the pedestals, balustrades, and lateral parapets, as well as the posts on the south side of the Square, and on the terrace, are proposed to be wholly of Aberdeen granite. The enclosed area from east to west is about 350 feet; from north to south, including the terrace on the north side, which is thirty-two feet wide, is 290 feet. The area between the building from east to west is about 500 feet wide; and from the statue at Charing Cross to the front of the portico of the National Gallery, the length is about 470 feet. From the proposed column to the front of the National Gallery, the length is 300 feet. From the column to Craig's Court, the length is 400 feet. From the column to Whitehall Chapel, the length is 1180 feet. From the column to the angles of Cockspur Street and the Strand, the length is 240 feet. From the column to the north-west angle of Northumberland House, the length is 190 feet; that is, as regards the dimensions of the Square, and the distance. The levels of the Square below the road in front of the Gallery, are as follows:—At the base of the proposed terrace wall, 11 feet; at the proposed column, 11 feet; at Craig's Court, 25 feet; at Whitehall Chapel, about 30 feet."

And now we are let into a little more about the expense of altering Trafalgar Square and improving the Green Park. "if (as Mr. Milne answers Sir Hussey Vivian's leading question, No. 160,) it is an improvement." Mr. Barry replies to Mr. Lock:—

"The amount of my estimate is 11,000*l.*; the groups of sculpture and candelabra surmounting the pedestals should be of bronze. The asphaltum covering of the square, the pavement of the terrace, and the groups of sculpture on the pedestals, form no part of the estimate."

\* Ed. L. G.

† Page 8 of the Report says, that *five* were read to them, but we can find only *four*.

Why, nearly twice another 11,000*l.* must be the sum required to do these things! The corner lions of the pedestal, which were to be only twenty-four feet long (it is not a joke), and the candelabra, would cost more than one 11,000*l.*; and the asphaltic pavement and sculptural groups (if the latter are fine works) must dip deeply into a like sum. So that there are 28,000*l.* for the column, and about, say 20,000*l.* of public money for the accessories; always bearing in mind that the subscription, and above 5000*l.* of another fund, do not yet amount to two-thirds of the columnar estimate alone: so that it is likely Government will have to make up the deficiency, or Trafalgar Square be content with half a shaft and no statue.

We are not sure that we should dislike to witness this result, as, after all, the whole waste of 100,000*l.* on these national absurdities would be no great matter for lamentation; supposing that were they, consequently, to be raised to the ground, a truly worthy use would be made of the space they will disgrace,—especially as they will do so for so long a period. But we come to Mr. Barry's opinion of Mr. Railton's darling column, and beg that it may be compared with that gentleman's ideas, as they appear in our previous quotations from his evidence:—

"190. *Chairman.* Will you favour the Committee with your opinion as to the propriety of placing the column in Trafalgar Square?—The area is, in my opinion, too small and confined for a column of the height and magnitude proposed: the effect of it would be to reduce the apparent size of the Square, and render the surrounding buildings insignificant. The National Gallery, being small in its parts, and low in elevation, will suffer materially in this respect, more especially when viewed from Whitehall and Charing Cross; where the pedestal steps and stylobate, forming the base of the proposed column, will conceal a considerable portion of the portico, which is the most effective part of the building. The irregularity in the form of the area, the variation in the levels of the surrounding streets, and the direction of the several lines of approach, are not calculated to afford a favourable view of the column, except from Charing Cross and Whitehall, where, as I have before stated, it will have an injurious effect upon the National Gallery, whilst the Gallery will form an unfavourable background for the column. From all other points of view, the unsymmetrical position of the column, in respect of the surrounding objects, will be striking and unsatisfactory. The views of the proposed column from the ends of Duncannon Street and Pall Mall East, as well as from the road in front of the Gallery, would be unfavourable, in consequence of the points of sight being from eleven to fourteen feet above the base of the stylobate on which the column rests. For these reasons, I am of opinion that the column will be improperly placed in Trafalgar Square."

The fact is, that the things most in favour of the column are, that it will be a tolerable screen for a wretched building in the best point of view; make the Insurance Office, the pastry-cook's shop, and Macintosh's warehouse, look like huts; convert Morley's Hotel into apparently a country inn; cause St. Martin's Church and steeple to sing small; and frighten the lion a-top of Northumberland House till he shakes his tail and falls into fits! In answer to another question, Mr. Barry gives a fanciful sketch of what he thinks might be done "in the event of the removal of the column," which, as we last week stated, not being likely, we need not discuss; nor trouble ourselves with the inquiry whether it might be advantageously placed, as suggested, in the centre of St. James's Square, with a central street into Pall Mall; or the Crescent at the top of Portland Place; or such a situation as the Circus between Oxford Street and Regent Street; or whether, out of London, perhaps the best and most appropriate site would be in conjunction with Greenwich Hospital.

Looking forward to the chance and possibility of mending the imbecilities being thus increased and perpetuated, a light is thrown

upon the state of feeling on the subject by the following:—

"235. *Chairman.* Are you of opinion that by the introduction of the terrace, which you think desirable, the effect of the National Gallery, as a building, would be improved?—I have no doubt of it.

"236. *Mr. Protheroe.* Your object, I suppose, is by an unbroken line to relieve the effect of that broken mass of the National Gallery?—My object is to give an increased apparent height to the Gallery.

"237. *Sir J. Graham.* Will the erection of so high a column have the effect of making more prominent the defects of the National Gallery in your opinion?—No doubt of it.

"238. Therefore it will, in reality, counteract the effect intended to be produced by your terrace?—To a certain extent.

"239. *Chairman.* Are you of opinion the appearance of the National Gallery might be further improved?—Yes, I am quite of that opinion.

"240. Could you explain to the Committee in what way it might be done?—I should say that a continuation of the order of columns or pilasters through the whole length of the front would be one means of improvement, and by raising the dome and altering the design of it would be another means of improving it.

"241. Are the existing walls strong enough to enable you to do that?—I am not prepared to say that; I have very little doubt they would, for the walls that carry the present mass would probably carry much more.

"242. Could you encircle the cupola with pillars?—Yes.

"243. You think that could be borne?—Yes; it is probable, if the pillars were engaged.

"244. And would you have a bolder cornice?—I should recommend a bolder one, and an increased height of the parapet, so as to conceal the lanterns which now just appear.

"245. You think the walls probably would bear that?—I think in all probability they would.

"246. *Sir J. Graham.* Would the cost of such an alteration be considerable?—I am not prepared to state that.

"248. *Mr. Protheroe.* You have spoken of the injurious effect this large Nelson Column will have on the National Gallery, would it not also produce an effect on the portico of St. Martin's Church?—It would, decidedly.

"249. *Sir S. Canning.* Would the proposed alterations have the effect of completely curing the existing defects of the National Gallery?—I cannot say that they would. The great defect of the National Gallery is its lowness; this would in part be obviated by raising the centre, and giving more elevation to the dome, but it would not make the entire mass appear high enough for effect.

"250. The original defect would remain?—It would in part be remedied, but it would still be there.

"251. *Sir J. Graham.* You cannot form a rough estimate of the cost of executing some such plan as that, and of pulling down the materials and rebuilding it?—No.

"252. Would the difference be considerable?—Yes.

"253. Would it be cheaper?—It would.

"254. The defects, such as they are, of the National Gallery, as it now is, or even if the National Gallery is altered, would be more prominently brought forth by the erection of a column of that altitude in its front?—Yes, they would.

"255. In either case it would operate disadvantageously to the building?—Yes.

"256. *Mr. Greene.* Do you consider it utterly useless to do any thing for the improvement of the National Gallery, if the column is to be placed in front of it?—I do not consider it would in that case be worth while to make any of it."

Think of setting such a man as Barry to patch up a Wilkins! We believe he will find enough ado to manage the strangely unequal area of Trafalgar Square, with its highest elevation at the angle nearest St. Martin's Church, and sloping unequally to the whole length of the Charing Cross frontage. The higher level of the surrounding streets must give this ground a pitlike appearance, and every thing in it be seen to disadvantage.

But now, July 16th, enter Mr. Scott, the Secretary to the Committee for the Nelson Memorial—a gentleman whose active proceedings, as we observed last week, might have saved the Committee the trouble of sitting; since he took care, whatever its judgment might be, to get so much expense incurred as to render it next to impossible to prevent the execution of the whole job. Mr. Scott, being much pressed, stated that the subscription amounted to 12,534*l.*, together with 5545*l.* 19*s.* three per cents, a balance handed over from the old Patriotic Fund. The *non mi ricordo* nature of his evidence may be gathered from the annexed:—

"305. *Mr. Protheroe.* Pray what is the estimate of the expense of the Memorial?—I cannot state accurately at the present moment.

"306. What was the amount of subscriptions when the Government agreed to give the site in Trafalgar Square?—I cannot say.

"307. Can you say whether the amount of money then subscribed was signified to Government?—I am not aware that it was.

"308. Am I to understand that you are not enabled to state what the amount of money was at that time?—No, I am not.

"309. What is the amount of money which you have received from foreign subscriptions?—I cannot say.

"310. Do you expect more subscriptions from abroad than you have received?—Most decidedly. [!!!]

"311. To what amount?—I cannot fix any definite amount."

Mr. S. explained that he looked principally to India for additional aid, and to such an amount that, in his sanguine enthusiasm, he said—

"I think the subscription may be considered at present as only in its infancy; that is my opinion."

When this infant of two years of age grows up we shall have almost the "unlimited funds," at the bare mention of which worthy Mr. Railton gasped for breath.

"325. *Sir R. Inglis.* What is the amount subscribed since the plan has been adopted?—I cannot say.

"326. What is your reason for stating to the Committee that you consider the subscription still in its infancy?—For this reason, when the undertaking first commenced, our subscriptions came in very rapidly; but since the proceedings of the Committee have been of a private nature, by correspondence and communications with the Government and the Woods and Forests, the undertaking has not been so much before the public as it was before, and the subscriptions, comparatively speaking, ceased; but I have every reason to believe, when the public feel satisfied that the undertaking will be carried out, that we can have subscriptions abundantly sufficient to complete the undertaking as designed.

"327. That is matter of opinion?—Yes.

"328. Is that sanctioned by any returns which you can submit to the Committee, shewing the increase of the subscription within the last few months?—No, certainly not; on the contrary, the subscriptions have been stationary, or nearly so; but, as I conceive, for the reasons I have already stated.

"329. *Sir H. Vivian.* What has been received since the column has been approved of?—I have not made any calculation. [Intelligent Secretary!]

When Government granted the site, Mr. Scott says they knew nothing of the amount subscribed, and he seems to fancy that the position of the column was changed, not

"Because it was deemed objectionable for the purpose, but that the Commissioners thought that, in laying out the Square, it would be found more advantageous for the appearance of the Square to advance the intended site of the column."

Some erasures in the Chancellor of the Exchequer's letter, signifying the grant of the site, puzzled the Committee not a little; but the following is the climax, and we shall leave it to speak for itself, with only a few parentheses:—

"380. *Chairman.* What have the contractors undertaken to do?—To complete the column, the capital, I believe, and the statue. We have good hopes that we shall receive from Government sufficient gun-metal to make the bronze.

"381. *Mr. Protheroe.* What would remain incomplete, supposing the subscriptions were not to be increased?—Four bas-reliefs, designed on each side of the pedestal, and the lions.

"382. Were they to be of bronze, or what?—Of granite, I believe.

"383. The bas-reliefs would be bronze?—Yes.

"384. They are not included in the contract?—No.

"385. *Mr. E. J. Stanley.* In point of fact, will not the subscription be sufficient to complete the column and the statue?—Yes.

"386. *Mr. Protheroe.* Omitting the ornamental part at the base?—Yes.

"389. *Mr. Loch.* What is the column itself to be built of?—Granite.

"390. And what is the statue to be of?—Portland stone. [Alas, poor country! Poor Art!]

"391. Is not that a perishable material?—It is a perishable material, but it is to be saturated with boiling oil,

\* Yet a previous question by Sir H. Vivian is reported thus:—

"324. *Sir H. Vivian.* Are you daily receiving additional subscriptions?—Yes; I have had one this morning. [What is the meaning of a daily increasing, yet stationary or nearly stationary subscription?]

\* Although we read this plainly and distinctly, we can hardly believe it possible. A Portland statue to crown a National Memorial to the greatest naval hero of England!!!—*Ed. L. G.*

which renders it as imperishable as granite. [*Risum teneatis.*]

392. *Sir C. Douglas.* When was the contract as to this 15,000, which you have spoken of completed?—It has been entered into some time.

393. But when was it completed?—The contract may be considered to be complete at the time of accepting the tender.

394. When was it in fact completed: state to me what the date was?—I cannot tell you the date, for this reason: the contract would bear date the day of the date of the tender; the contractors are bound to execute the work within a given time, and that is calculated from the date of the tender.

395. Is it six months ago?—No.

396. Is it six weeks ago since the completion of the contract?—The formal acceptance of the tender, I believe, was in May.

397. Was it at the end or the beginning?—I should be disposed to think it was towards the end of May.

402. Have there been any directions given with respect to accelerating the works by the Committee?—*I am anxious to get the works done as fast as possible.*

403. Have the works been accelerated lately?—As soon as they commenced the concrete, I gave them instructions to get on as fast as possible.

404. Was that as soon as you heard of this Committee?—I should say as soon as I got possession of the ground I gave them orders to get on as quick as possible. [A determined fix.]

405. Have there been any communications between you and the Woods and Forests, and the Treasury, with respect to accelerating the work?—No; I have had no communication with the Woods and Forests, or the Treasury: there have been no directions from them to me to get on with the works. What I have done has been done on my own responsibility.

406. *Chairman.* Then the effect of my addressing you a letter on the 5th of July, to propose that the works should be suspended till the Committee had reported was to induce you to order them to accelerate the works?—I did not so understand your letter; I could give no order, in the absence of authority from the Nelson Memorial Committee, to stop the works.

407. But you did give an order since that time to accelerate the works?—*Most certainly I did.*

Having by this grand manœuvre (resorted to on the instant, for they had the site so long before as January 11th) rendered the sitting of the Committee a farce, we may turn with a more laughable inclination to the farcical portions of its labours. On the motion "That the Report, as proposed by Mr. Gally Knight, be read paragraph by paragraph," Sir Robert Inglis tried to stifle the whole affair by proposing as an amendment—

"The site of the Nelson Monument, in Trafalgar Square, having been promised by her Majesty's Government to the Monument Committee, and having been subsequently made over by the Government to the contractors, under the direction of that Committee, and the contractors having accordingly commenced the execution of the work, it is not expedient for this Committee to recommend that any obstacle to the completion of such work be now interposed."

This amendment being negatived by five to four (the noes were Sir Robert Inglis, Sir C. Lemon, Sir H. Vivian, and Mr. Tufnell), the Committee proceeded to read the Report, and several amendments on matters of taste were put to the vote and decided upon, when Sir Robert returned to the charge, and moved to leave out the words "that such a column so situated would have an injurious effect upon the National Gallery, by depressing its apparent altitude, and interrupting that point of view which should be least interfered with." On this Sir C. Lemon quitted the minority of four, but Mr. Protheroe joined it, and so they went on dividing on Sir Robert's amendments to defeat the Report, in the most approved manner of parliamentary tactics.

"On the sixth paragraph, Sir R. Inglis moved to leave out the words, 'That a column of such dimensions will render the surrounding buildings less important, and, so situated, will not group well with any thing in its neighbourhood.'"

On the seventh paragraph, Sir R. Inglis moved to leave out the words, 'That, as approached from Whitehall, as seen at the termination of this grand avenue, which forms one of the principal entrances of the metropolis, the appearance of the National Gallery will be much injured by the column. In this point of view, the column will cut the National Gallery through the centre, and the pedestal of the column alone will nearly conceal both the portico and the cupola.'

On the eighth paragraph, Sir R. Inglis moved to leave out the words, 'That the position is not a favourable position for the column itself.'

On the tenth paragraph, Sir R. Inglis moved to leave out the words, 'Are unable to avoid arriving at the conclusion that it is undesirable that the Nelson Column should be placed in the situation which is at present selected; if the column is not the only thing to be regarded: if it is desirable in a great city to suggest the idea of space, and, having once obtained space, not to block it again; if the general architectural effect of Trafalgar Square, or of the buildings around it, is to be at all considered; or if at any time an equally conspicuous situation should be desired for any other monument, the situation at present selected for the Nelson Column is most unfortunate.'

Sir Robert went on proposing amendments and dividing till the Committee adjourned; and next meeting he does not seem to have attended at the opening; but Mr. Stanley did for the first time, and acted for the Government in covering it from any presumable censure; as, for instance:—

"Motion made (Mr. Protheroe) and question put, 'That it appears, from the evidence, that the Government did not act with due caution and consideration in surrendering a portion of the Crown Lands for the erection of this monument at a time when the subscription to defray the expense of the work was so very far short of the estimate.'—The Committee divided:—

Ayes, 2.

Mr. Protheroe

Sir Charles Douglas.

Noes, 5.

Mr. Tufnell

Mr. Stanley

Sir H. Vivian

Sir Charles Lemon

Mr. Pendarves.

So it passed in the negative."

Some other less essential attempts were made, *pro et con*, with various results; and the divisions and decision altogether shewed that the *fine arts* were as nothing in the scale when compared with asserting the infallibility of the Nelson Committee,\* and the prudence and wisdom of the Woods and Forests and Treasury.

On the 22d July the Committee met for the last time; and there is a Railtonian episode so amusing that we must extract it:—

"426. *Sir H. Vivian.* In the former examination, in answer to Question 34, you there stated that you had given in several plans for the improvement of the ground about the National Gallery?—Yes."

427. Will you state to the Committee what those plans were?—One plan was, a *flight of steps* in front of the Gallery, and another *flight* at each angle of the Square, for foot passengers crossing the Square diagonally; and from those steps there was an inclined plane down to within thirty feet of the Nelson Column. Another plan was, with a *flight of steps* in front of the portico of the Gallery, and as wide as the portico; and another *flight of steps* opposite each archway forming the wings of the Gallery, one leading to the barracks, and the other to Castle Street. The other was, to raise a platform, or terrace, by steps at the lower part of the Square, and extending the whole width of the Square, and to place the column on this terrace a few feet from the top step, the terrace being level to a short distance beyond the column, and then continuing with a gradual ascent to the National Gallery. Those were the three plans.

428. In all those plans it was an inclined plane from the column to the Gallery?—Yes, so as not to have too many steps; the object was to avoid too many steps.

429. There was no terrace-wall between the gallery and the terrace?—There was some five or six feet. The grand object in having the inclined plane was, that the ground-line of the terrace should be seen when approaching from Whitehall; that would not be the case if it is made a perfect level, as it is now proposed by Mr. Barry's plan.

430. The effect of Mr. Barry's plan to a certain point, after you have passed the column in approaching the National Gallery, will be to intersect, transversely, the view of the National Gallery?—It will be objectionable on that account; steps will be decidedly an improvement.

431. *Mr. Protheroe.* Will Mr. Barry's plan have the effect of giving an increased elevation to the National Gallery?—When you are standing in the Square it will decidedly not do that.

432. *Chairman.* On this side King Charles's statue, from the Banqueting-house at Whitehall?—The ground-line would be lost; and I should say it would not have so much that effect as if there were steps.

433. Do you say it would not have that effect at all, looking at it from the Banqueting-house; that is the point we have taken in the consideration of all the plans?—It would not raise the Gallery so much as steps would.

434. That does not answer the question; the question

\* This Committee undoubtedly consisted of many individuals, not only of the highest rank and talents, but of the foremost reputations as lovers of art in the kingdom; though we are not aware of those who took an active part in its proceedings. There were many members, who could know nothing of the matter. Sir J. Graham, Sir H. Vivian, and Sir R. Inglis, were members both of it and the Parliamentary Committee.

is, whether it would or not give more apparent elevation to it than it has now?—It would give an apparent elevation, but not so well as steps.

435. How much of the base of the lower part of the National Gallery would be hid by any part of Mr. Barry's terrace?—The whole of it, with the exception of the cornice, and that for 200 feet in length.

436. How do you mean the whole of the National Gallery?—The whole of the podium, or the stylobate of the Gallery.

437. How many feet up would that be?—The whole height of it would be hid, the whole of the stylobate; the red line shows Mr. Barry's terrace-wall (referring to a Plan), and that is the line that shows the eye of a man at Craig's Court.

438. Would it not have the appearance of the portico, at least of the National Gallery, standing on the top of Mr. Barry's terrace?—Yes; that is not at all desirable; you hide it in the first place.

439. You do not hide the portico?—When you are standing in the Square you cannot see it at all; I expect the Square will be a grand promenade; if not, it will be of little use. If a person walking in the Square can see nothing but that terrace, it will be like a well completely."

Poor Mr. Railton, bothered out of his Steps, sticks the faster to his column and its site, though both have been altered, the former lowered thirty-three feet,\* and the latter advanced ninety.

"486. *Sir H. Vivian.* In the event of any interruption to placing the column where it is now proposed, and to remove it to another place, would that do any injury?—I do not think any person would subscribe to it, or have any thing of that nature.

447. There would be no reflection on the person who proposed the column, if it was said, 'This is a beautiful column, but we do not like the site: we will put it somewhere else?—I do not think any architect would compete afterwards.

438. *Chairman.* Would you refuse to build it, if you were desired to build it a few yards in a different situation?—I should not have any faith. If it was removed from the original spot, I should say another spot would be taken away directly.

439. On the whole, would you refuse it at all?—I think I should.

490. *Sir C. Lemon.* Was the design originally made with reference to that spot, in your opinion?—For that spot; and all the competitors were aware that it was to be erected on that spot, and the designs were made to accord to that spot, and no other. I do not think it would suit any other, without material alteration; and the work being now in a forward state, an expense of above 5000*l.* would be incurred by a removal.

494. *Sir R. Inglis.* Your observations have reference to the removal to Greenwich or Blackheath?—You might as well go down to the Nore; it would suit one as well as the other.

495. *Chairman.* Do you give it as your opinion that Greenwich would be a bad situation?—I have not considered that.

496. You said it might as well go to the Nore?—I meant there would be no faith kept if the situation was altered.

497. *Sir C. Douglas.* Do you mean after one spot has been selected, if, on further examination, it should be found that spot is not a desirable one, and that another spot can be found that is more desirable, that you would immediately say, 'I will not have any thing further to do with this, I will throw it up'; do you mean to say that would be your answer under such circumstances?—I should think that very few architects would have any thing to do with it in that case; that would be my impression; it would not be worth an architect's while to attend to it."

When the Committee wish to see a canvass model of his pedestal set up that they may judge of the effect, he declares,—

"That the contractors now employed by the Committee are under engagements to complete a given extent of work by the first of the ensuing month, preparatory to the ceremony of laying the first stone; and that the

\* And besides Sir R. Smirke and Mr. T. Walker, to whom the question of its stability was referred, reported that, "Such a structure does not certainly present in its form and proportions the obvious characteristics of great stability; its slender shaft, with the deep flutings upon it, and the peculiar form and size of the capital, appear to require for its security a particular degree of strength and solidity in the construction of the work;" and farther, "the alterations which we consider it desirable to make in the design selected for the Nelson Monument, in order to remove all doubts concerning its stability, and its power of resisting the effect of high winds, we beg leave to recommend that the height of the monument be reduced not less than thirty feet, of which reduction not less than twenty feet should be made in the shaft of the column; that the shaft be of solid stone, and (with its pedestal) of granite; that the lower diameter of the shaft be made larger in proportion to its height; that the flutings upon it be made elliptical instead of semicircular, and that the capital be made of bronze. With these alterations, and the work properly executed upon a good foundation, we should feel perfect confidence in the stability of the proposed monument."

erection at this moment of any scaffolding of the description required, possessing sufficient strength to resist the action of the winds in so exposed a situation, would entirely obstruct their proceedings."

And he winds up the whole (see Appendix) by the following most characteristic letter to his stanch ally and supporter, Sir R. Inglis:—

"Loughborough, 23 July, 1846.

"Sir, — I think it my duty to inform you, that the Committee, on giving up the site in Trafalgar Square, will at least be *liable*, on account of contracts, &c. to the following amount, viz:—

Work already completed.....	£3000
*Stone-work ready at the quarry, some already shipped.....	3000
Hoard, &c.....	600
*Mr. Baily, for statue, first instalment, paid ..	500
*Second nearly due .....	250
*Mr. Smith, for model of capital, first instalment .....	100
*Architect's commission, &c. ....	700
Clerk of the works .....	40
*Law and sundry expenses .....	500
Chances of bad foundation in another site, particularly at Greenwich .....	2000
	£10,600

This is exclusive of any just profit which the contractor may claim on the work, had it been allowed to go on.

"This is no exaggerated statement, but what can be fully accounted for."

It will not do to say the column can be placed in another situation; it may have to be completely altered; and as every single stone is made for a particular position, the least alteration will create great expense: at any rate the parties causing the alteration must pay for what is done, and if it happens hereafter that it costs less, the difference is refunded.

The ground in the neighbourhood of the river Thames is generally bad, and I should think I have stated a low sum when I say 2000*l.* for extra work in foundations.

Begging you will excuse such a hasty letter, being on the point of leaving for Ripon, I have, &c.

"Sir Robert Inglis, Bart. M.P. WM. RAILTON.

&c. &c. &c.

"P.S. Supposing it is said the Nelson Committee have not funds to complete the works, it would at present be less costly for the Government to make up the deficiency than pay the compensation required to remove it; and all but one of the architects agree in stating it is the most favourable site for it."

We have been obliged to dissect this pretty business at such length that we cannot find space for even a few remarks upon the opinions of the artists who were called in to advise the Committee; but we propose to finish what we have to say on the subject by referring to them in our next *Gazette*, and adding some general observations on the process of electing the *doers* of national monuments by public competition, and other points connected with these intrigues so injurious to the fine arts.

#### NEW PUBLICATIONS.

*Findens' Female Aristocracy, &c.*

Nos. XII. XIII. and XIV.

NINE more of these charming portraits claim a renewed notice from us: Lady Mahon, Lady Craven, and the lamented Lady Flora Hastings, are given in Part XII. In Part XIII. Lady Ernest Bruce, Lady E. Capel, and Lady A. Buller; and in the Part which has just appeared, Lady Fitzalan, Lady E. Foley, and Lady Honoria Cadogan. We do not like to expose ourselves to the dilemma and fate of the youthful Paris, and therefore abstain from awarding the apple to Beauty. Were we near Mount Ida, instead of Waterloo Bridge, we should, however, have no hesitation in distributing half a bushel of pippins among our lovely countrywomen. They are beyond all the Junos, and Minervas, and Venuses of classic, poetical, and artistical Greece.

*Wellington.* From a Sketch by the late Sir T. Lawrence. Engraved by F. C. Lewis. Hodgson and Graves.

THIS is a magnificent and dignified portrait of the great Duke, whose image cannot be too

often multiplied amongst us. In every form it must be welcome to English eyes and hearts; and in the present case it does justice to him and credit to the fine arts. Lawrence, we believe, finished most of his pictures of his grace from the original of this beautiful engraving.

#### Portraits by Count d'Orsay. Mitchell.

THIS fasciculus presents us with likenesses of the Duke of Beaufort; Marquess of Worcester (a happy resemblance subsisting between the popular sire and the promising son); Earl of Errol, a handsome likeness of a handsome countenance; Lord Maidstone, an intellectual head; the Hon. C. Stuart Wortley, of the likeness of which we are not competent to speak, but it is a spirited drawing; the Hon. Charles N. Forrester, another good portrait; C. Greville, Esq., very like, and a fine gentlemanlike head; and dear old Dowton, which will remind the world of his pleasantest features in his pleasantest days. Count d'Orsay seems to acquire more faculty and power with these very clever sketches, as he extends his practice among his numerous friends,—and we know no one who has or deserves so many.

#### THE DRAMA.

*Her Majesty's Theatre* closed last Saturday. *Haymarket.*—On Saturday was reproduced Mrs. Inchbald's comedy of *To Marry or not to Marry*; the principal characters by Macready, Miss P. Horton, Mrs. Glover, Miss Charles, Wrench, Strickland, Phelps, and Howe. It is so long ago since this play was new, that we fear few of our readers remember it when Kemble was its hero, Mrs. Glover its lively and youthful *Lady Susan Courtley* (not the staid, old maidly *Mrs. Sarah Mortland* of its revival), and Miss Shuttleworth, the *protégée* of its authoress, the *Hester*, with so many allusions to her private position and history. It was not then what is called a very great hit, but still it had a considerable run; which it surely deserves whenever so well cast and enacted as it was at that time, and is now. As an acting piece it is well fitted for the stage, though as a comedy it is not very natural, but rather forced, both in the drawing of the characters and in the incidents which are contrived to give effect to their peculiarities. The first two acts are by far the best, and the fourth has some excellent points. Macready, in *Sir Oswin Mortland*, gave abundant proof that his dramatic powers are not confined to tragedy. It is an example of great skill in the more serious parts, and of ease and variety in the lighter traits. His finding out that he was in love was the consummation of a finely considered and admirably executed personation. Of Miss P. Horton we rejoice to be able to speak in fully as strong terms of praise. The part of *Hester* is a very difficult one, requiring great judgment to avoid too much simplicity on the one hand, and too much consciousness on the other. Most of her scenes depend upon rapid changes of expression,—from earnestness to playfulness, and from pathos to joy. To these Miss Horton did the most ample justice, and her transitions from tears to smiles were full of truth and beauty. The character altogether afforded her an opportunity (of which, looking at her talents, she has had too few,) for displaying those qualities which we have always felt she possessed, and giving her another claim to rank with the three or four best actresses on the stage. Wrench's *Willowear* must have our next plaudit. It is a very clever, off-hand performance; unexaggerated and effective with-

out an apparent effort. Miss Charles looked very pretty all eyes, and played with vivacity; and Mrs. Glover did every thing for the sensible spinster. Of Mr. Phelps, in *Lavenforth*, we cannot speak so highly, though his efforts were marked with some energy; and as it is so seldom we have to say one word in praise of Mr. Strickland (in a very comprehensive line without his superior), we may just note that he is too manual and *pull-hawly* even for an old lord. A little less action, and all will be well. Mr. Howe, as a nigger, is the last on our list: he occasionally forgot the conventional, but did as much as might be requisite. Upon the whole this play merits, and we hope will meet, with popular favour, as it takes its turn in the weekly circle of the Haymarket. A good and well-acted comedy is refreshing in the midst of other species of dramatic composition. On Thursday it was repeated to a full house, with increased effect.

We have taken another evening of Mr. D. Rees, and, upon the whole, our opinion is favourable to his advent. His *Paul Pry* was most decidedly bad, and the humour evaporated in an uplifting of eyebrows; but his *Galahad* is greatly improved and full of fun; and his *Billy Lackaday* so near to the *Liston* standard, that it deservedly won great applause. In short, as he acquires more confidence, he is gaining on the town, and bursts of genuine laughter bear testimony to his success. There is a fine opening in his line of characters, and we think he will fill it effectively. Of his own style we would say that it is a *pasticcio*, or mosaic; but yet, as it answers every purpose, what need we care?

*The Strand* has shut been shut, *pro tempore*, by the interference of some common informers, whose foul attempt has been quashed by the magistrates; and we hope a theatre which offers a provision for so many deserving performers will soon be reopened and meet the public encouragement it deserves.

*Gregory VII.: a Tragedy. With an Essay on Tragic Influence.* By R. H. Horne, author of "Cosmo de' Medici," "The Death of Marlowe," &c. 8vo. pp. 136. London, 1846. Saunders and Otley.

THIS subject having somewhat engaged us in recent Numbers of the *Literary Gazette* (see 1227-28), we turned with interest to Mr. Horne's *Essay on Tragic Influence*, and have found in it much not undeserving of consideration, especially in the present condition of our stage and higher orders of dramatic literature. A new season is about to open, and what are our hopes?—Very blank, indeed! But our author treats the question on more general grounds. He nobly asserts the powers of tragic creations.

"Not for themselves alone, as in real life, do the ideal characters of profound tragic creation act and suffer. They may think no more of us and our affairs than the towering pride of yesterday (which ascended step by step against Nature in all her habitual instincts, to cast itself from a monument, and be dashed to pieces in our commonplace streets); but their mental history burns in the footways of their departure. It is the revelation of passion by genius; the intimacy communicated through ideal art; it is 'the cause, my soul,' which turns ignorance and indifference into shuddering comprehension, and dogmatism or levity into solemn-thoughted grief. It is the knowledge of all their struggles that finds a way into successive hearts, and multiplies in imagination the fiery aspiration, with the grandeur,

\* As if these were all thrown away, and would not suit any place in the world but Trafalgar Square.—*Ed. L.C.*

the exultation, the love, the terror, the satisfaction, or the pity, that attends their doom. We act and suffer with them; their experience is made ours; and from the yearning grave of their gone existence the fatal histories of their lives arise, and warn us of ourselves. For them there is no repose of cold and quiet death; their ashes are ever alive with 'wonted fires,' ready at the electric touch of sympathising imagination to spring afresh into active existence, and pour forth their souls, like Memnon at the rising of the sun, even though it 'set in blood.' Do we sincerely feel that the awful spirit of Clytemnestra is indeed at peace?—that the inspired delirium and prophetic agony of Cassandra can never again burst upon the visionary sense in the darkness of night, or come upon the wind, moaning afar, over lonely twilight fields? Can we believe that Othello's torment or his desolate remorse are at an end?—that Macbeth, no longer maddened with the anguish of equivocal despair, fights upward at the airy fates who quire his fall?—that Ophelia's fair eyelids are no longer burned dry and discoloured with encrusted tears; her distracted flowers all scattered; her sweet, soul-penetrating voice now choked in earth?—that Lear's aged, thorn-torn hands shall be wrung no more; and his white, dishevelled, rain-dripping locks lie silky smooth in vaulted sleep? Is it credible that Hamlet's ever-teeming brain-pan, hot with aching thoughts, has become vacant as poor Yorick's skull; and that he, to whom man and the universe were made but for incessant contemplation, should now be able to feel, to speculate, to resolve, and hesitate no more? These ever full and high-wrought beings are not dead: like others, their consummate peers, they live to do and suffer as of yore, and the work they shall accomplish amidst progressive generations is yet only in the infancy of its operation and influence."

And again, their universal application:—

"The moral effect of works of ideal art is humanising, chiefly because they excite refined emotions without advocating any dogmatic or exclusive moral. They appeal to the heart and the imagination, not to the measurements of the understanding; and this is why their fine essence is very apt to float off and escape at the material touch of analysis, discussion, and criticism. Their true mission is to enlarge the bounds of human sympathy. A drama with a single moral can only be a great work when, at the same time, it develops universal passion; otherwise it is worse than useless. A particular moral, to which every thing else is made subservient, can only produce a hard, limited, or sectarian effect, and has a direct tendency to generate purblind bigotry to some contracted principle; the frequent cruelty involved in the exercise being mistaken for high morality, which refuses to sympathise with, or even tolerate, any exception in kind or variation in degree. It was universally the custom in this country, till within these last few years, to ask, 'What is the moral of the piece?' The answer was always absurd or infantine; frequently turning upon the 'naughty' parts of the story, some quotation from a school catechism of maxims, or a common proverb, but more commonly one of the ten commandments; which later, in a Christian country, we should have thought might have been taken for granted, without so many illustrations. Shakspeare is manifestly a profound and universal moralist; yet there is no particular moral laboured at in any of his dramas."

There is profound truth in these and other of the author's remarks, though we have some-

times to confess that he verges into the High-German metaphysical and mystical style, too much for our ready comprehension. We are obliged to read against time; and no one can tell what a horror it is to us to have to go over a passage again and again in order to understand its meaning, and at last be able to acquire only a vague idea of it. We know not whether to curse the writer's *genius* or our own stupidity; and we lift up our eyes and invoke that literary divinity, yeelp Simplicity, with a fervour that would astonish her less ardent worshippers. But, though thus somewhat perplexed, we think we accord heartily with the following:—

"All genuine tragedies, whatever their deficiencies in execution, must possess the elements of greatness, being transcripts of some of the most intense thoughts and emotions which can visit this our mortal existence. Tragedy is the exercise of the feelings, the antagonism of all hardness of the heart. The extremity of its distresses softens the obduracy of natures, frequently so hard as not to be otherwise reducible to sympathy; and yet more generally, of natures deadened by the unvarying flow of the common current of everyday business, which is but too apt gradually to petrify the passages to the heart, though the heart itself, when reached, may be one of real kindness and humane capacity. Natures are elevated and instructed unconsciously. Taken unawares, and thrown quite off its guard, the will offers no opposition to the impulse and the course of genuine feelings; the sympathies have free play through the imagination, and experience no repugnance from any sense of compulsion, social duties, prejudice, or worldly discretion. We feel with others, and for others, without any interest, except the ties of our common humanity. In public representations, large masses of men experience emotions together, which are more generous, more just, and less selfish, than under any other circumstances of their lives; and emotions, as Lord Bacon has remarked, are the more readily and strongly experienced when multitudes are assembled together."

Without being perplexed, we agree that—

"The genuine drama, and tragedy in especial, is the strongest influence from without (except the Bible) which asserts the unadulterated principles of nature, as opposed to convention. We cannot, of course, assume it to be more pure and elevating than any other of the high classes of poetry and literature; but it is more entire, direct, and palpable in its working out of causes and effects of passionate nature. When appropriately acted, its influence is stronger than an oratory, however sound and eloquent. An artificial age, with all its refinements, real and assumed, must always generate a morality of its own, which, weakening and circumscribing the emotions of the heart, and reducing impulse to the narrowest bounds of action, will never bear the test of being carried back to the strong and healthy foundations of nature without making the truth of things apparent. Every great tragedy sends us back to these foundations, whether we are aware of it or not, and nature is thus vindicated in the secret heart; is redeemed (in proportion to the noble sympathies experienced) from the perversions of luxury, false refinement, and effeminacy of soul; and preserved from the absolute tyranny of the manifold vices, intolerance, and corrosion of heart, which have always hitherto been encouraged by what is termed a high state of civilisation."

Having laid down his principles, we must

say, in an able and lofty manner, Mr. Horne proceeds to exemplify them in the tragedy of *Gregory VII.*, the famous monk Hildebrand, who raised the pretensions of the Romish Church to the highest standard of human and superhuman potency. His contest with the Emperor Henry IV., after deposing and murdering Pope Alexander, being aided for a while by Matilda, countess of Tuscany, against the will and remonstrances of her husband, Godfrey, duke of Bouillon (who is jealous both of Hildebrand and the Emperor), is the main-spring of the action. Other characters—Guido, archbishop of Milan; Centius, a patriotic noble of Rome; Agnes, the dowager empress, and mother of Henry; Peter Damianus, a monk, the friend and youthful companion of Hildebrand, are of this order, and contribute, in various essential ways, to the development and issue of the tragedy. Without entering upon the plot, we proceed to make a few quotations from it, pointing, as we go along, to what we admire, and what we think deteriorates from the execution, not only on Mr. Horne's own data, but on all acknowledged rules of good taste and excellence in composition. At the opening, Hildebrand is well painted, in a very brief space:—

"He is a man  
Who drives his conscience like a slave before him,  
While as a task-master it doth follow others!"

and yet within ten lines of what his ambition shall bring upon him to suffer:—

"When the red-lights of doom shall counten o'er him!"  
a line which may be poetical, but seems to us words inapplicable to any idea. How different and pithy is this:—

"For I can stand alone, therefore have friends."

A boast of Hildebrand's is also fine, though quite poetical enough:—

"His proclamation  
Is as a plague-wind howling through a hall,  
Throng'd with grey statues of the elder gods.  
Its breath can never taint me: let it proclaim!  
There is no vice can dwell in a soul of power:  
It may appear in transitory fits;  
But, like bleak lightning at the pitch of noon,  
It leaves no flaw in heaven. Poisonous dews  
Are presently o'ermaster'd by the sun,  
Which sucks them up, but of their influence  
Partaking nought, absorbs and turns to good."

We would oppose to this another quotation, which, in our eyes, approaches the fustian texture. Guido suggests to Godfrey that something were "a *fortunate means*" to turn the Emperor against Hildebrand, whom they hate, and Godfrey exclaims:—

"Call you it fortunate? Is there no word  
That to the mind shall paint a hideous thought  
Blacker than blackness?—no revolting act  
That, o' the instant it first stings the brain,  
Shall brand the forehead? If that such there be,  
Or word or act, call it a fortunate means  
For sure perdition of high manhood here,  
With flames hereafter. Shame on thee, my lord!  
Thy sacred robes change colour as I gaze,  
And startle apprehension! I had hoped  
Far different consolation and advice:  
But I will fly the hated city walls,  
And trust the day not distant when I'll find  
A means which honour's hand shall proudly own,  
And vengeance feel complete! [Exit.  
Gai. Vengeance on whom?—not on me.  
So angry! I was unguarded—perhaps even wrong.  
Hildebrand moves Matilda to this pass—  
Whether she know it or not, I see 't is done—  
That Godfrey, jealous of the emperor's sighs,  
May take no part with him. I do dissect  
This truth like a burnt ortolan."

We hope the author will pardon us for considering the italicised passages too "rombustious," and the last image too comic for tragic influence. And, noting the strange use of images, we may as well here advert to the misuse of words. *Ex. gr.*: fires

"Threatening precipitate sovereignty."—P. 17.  
"What madness burns" this sense."—P. 48.

"By these fierce truths."—P. 73.  
 "I gasp for too much breath."—P. 75.  
 "A strange breath stung my shoulder."—P. 78.  
 "I am shading off to a sick air."—Ibid.  
 "He raised his 'eel o'er me, and shall draw down  
 Electric answers!"—P. 63.  
 "At every magnitudinal desire."—Ibid.  
 And, to conclude—

"Agn. Gregory no longer shines.  
 Emp. What! this infallible, whom I have felt  
 The adumbration and the realised power  
 Of heaven and earth; chief substance of the forms  
 That walk upon the walls of destiny!"  
 It is now with pleasure we transcribe two  
 short speeches, as examples of Mr. Horne's  
 powers:—

"Golf. (abstractedly, after a pause.) What is our life?—  
 Oh, Innocence! white-bosom'd purity!  
 Sweet essence of the heart, and its best hopes;  
 Whose breath is of the heavens, whose path is peace;  
 Whose presence fills all places with a light;  
 Whose loss makes dark the sun, and poisons time;  
 Can man mistake thee, and can woman feign,—  
 Using thy pure divinity as a mask;  
 Or, from the depths of nature, tearing up  
 A power to hide the anguish and the crime  
 That blot thy vacant throne?"

Mat. Sure, 'tis not envious spleen  
 At the overwhelming glory of the change  
 Wrought by one man, while thou art left behind  
 At bottom of the hill, round which of yore  
 Ye both paced side by side, gazing towards heaven.  
 Dami. Ah, no! I would but seek that state once  
 more.

The pleasant, peaceful, bird-awaken'd days  
 Of learned solitude; the deep-moss'd groves  
 In Clugny, where together we oft read  
 The words of earth's great patriarchs and the lore  
 Of many a clime, were to my satisfied heart  
 More natural far than bickering crowns of power.  
 I, therefore, crave your influence with the Pontiff,  
 For prompt permission to depart."

#### VARIETIES.

**The late John Lander.**—We are gratified to hear that the friends of this amiable man, and admirers of his talent and enterprise, have originated a subscription for a monument to do honour to his memory. A century hence, when his name is connected with the earlier efforts to carry civilisation and Christianity into Africa,—and what will Africa be then, in consequence of following in these efforts?—it will be a pride to his country to point to this tomb, and say his merits were not overlooked by the generation among whom he lived and prematurely died. So general is the feeling in this respect, that Mr. John Murray, and Messrs. Jackson and Kuill in London, Mr. Tweedy, banker in Truro (Lander's native place), and Mr. Egerton Smith and Mr. Thomas Kaye, of Liverpool, have kindly undertaken to receive contributions for carrying the design into effect. We may notice that there was a bust of Lander, by Mr. Francis, in the last Exhibition, and a striking likeness of our lamented friend.

**Law in the Far-West.**—"Gentlemen of the jury," said a lawyer, in defence of his client; "I say that ere magnanimous sun shines in the heavens though you can't see it, kase it is behind a cloud; but you know it, though I can't prove it. So my client has a good case, though he can't prove it. Now if you believe what I tell you about the sun, you are bound by your Bible oath to believe what I tell you about my client's case; and if you don't, why, then, you call me a liar; and that I'll be squataw'd if I'll stand any how: so if you don't want to swear false and have no trouble, you had better give us a verdict!"

**The Jews.**—The Rev. Mr. Samuel, of Bombay, states that he has discovered, and for

\* Close by is the following brief beauty:—  
 "Well—well—nothing in life  
 Seems natural to those sick of it; grief conjures  
 With commonest sounds and things. I am, indeed,  
 In extreme wretchedness, and my knees tremble  
 With fast-declining health. Poor Damianus!  
 He, too, is sinking."

several months lived among, the remnant of the ten tribes of Israel, located on the south-west shores of the Caspian sea, and surrounded by a circle of mountains. He reports them to be living in the exercise of their religious customs, in a primitive manner, distinct from the customs of modern Judaism.—*Correspondent in "The Times" of Monday last.*

**Dante.**—The portrait of Dante, painted by Giotto, has just been discovered at Florence, in the pantry of the prison, which was formerly the chapel of the Podesta. This valuable picture was covered with plaster of Paris, but is in good preservation. The poet is drawn in the flower of age, and has a fine majestic expression of countenance, free from that caricatured expression which so many of the portraits of Dante are remarkable for.—*French Paper: Times, 15th.*—[This is the last portrait mentioned by Italian writers on the Arts; and other portraits have also been un-covered in restoring the frescoes of this chapel.]

**Prince Louis Napoleon's effects** have been under the hammer of Messrs. Christie and Manson on Thursday and Friday. On the former day some rather fine cameos, a few pictures, and a fine bust of Napoleon by Canova, in his consular day, were well sold. On Friday, the sale was chiefly of books (no great or select store), and bed and table linen.

By WALTER PRIDEAUX, Esq.  
 Smith, Elder, and Co. 65 Cornhill.

Publishing, under the Authority of Government, in Parts, on the 1st of each alternate Month,

**THE ZOOLOGY of the VOYAGE of H.M.S. BEAGLE;** under the Command of Captain

IRVING, R.N., during the Years 1832 to 1836.

Edited and Superintended by CHARLES DARWIN, Esq.  
 M.A. Sec. G.S. Naturalist to the Expedition.

Comprising highly finished representations of the most novel and interesting objects in Natural History, collected during the voyage; with descriptive Letterpress.  
 Fourteen Numbers are already Published, varying in Price from 6s. to 10s. each, according to the number of Engravings.  
 Smith, Elder, and Co. 65 Cornhill.

On the 1st of September will be published, No. I. of

# JEM BUNT;

## A TALE OF THE LAND AND THE OCEAN.

By the OLD SAILOR.

WITH NAUTICAL AND HUMOROUS ILLUSTRATIONS.

London: SHERWOOD and CO. Paternoster Row.

8 New Burlington Street, August 22.  
**MR. BENTLEY** will immediately publish  
 the following NEW WORKS:—

### I. The Thames and its Tributaries.

By Charles Mackay, Esq.  
 2 vols. 8vo. bound, with upwards of Forty Illustrations.

### II. The Clandestine Marriage;

A Story of the Present Day.  
 3 vols.

### III. The Fifth Volume of the complete edition of

#### Horace Walpole's Letters.

Embellished with Portraits of Countess of Ailesbury, Lady Diana Beauclerc, Marshal Conway, and Horace Walpole. This edition will be comprised in Six Volumes.

New Works now ready:—

### I. Narrative of the Campaign of the Army of the Indus, in Sind and Kaubool, in 1838, 1839.

By Richard Hartley Kennedy, M.D.  
 Late Chief of the Medical Staff of the Bombay Division of the Army of the Indus.  
 2 vols. post 8vo. with numerous Illustrations.

### II.

#### The Man at Arms;

Or, Henri de Cerons. A Romance.

By G. P. R. James, Esq.  
 Author of "Darnley," "De l'Orme," "Charles Tyrrell," &c.  
 Post 8vo.

### III.

#### A Summer amongst the Bocages and the Vines.

By Miss Louisa Stuart Costello,  
 Author of "Specimens of the Early Poetry of France."  
 2 vols. 8vo. bound, with numerous Illustrations.  
 Richard Bentley, New Burlington Street,  
 Publishing in Ordinary to Her Majesty.

Price 2s. 6d. cloth.

**MURPHY'S SCRIPTURE ATLAS:**  
 the Bible Atlas. A Series of Maps, illustrating the Old and New Testaments, with Historical Descriptions. Drawn and Engraved by WILLIAM MURPHY.  
 Edinburgh: W. Murphy; and Stirling, Kenney, and Co.  
 London: Duncan and Malcolm, 37 Paternoster Row.

13 Great Marlborough Street, Aug. 23.

**MR. COLBURN** has just published  
 the following NEW WORKS:—

### I. Narrative of the War in Afghanistan, in 1838, 1839.

By Capt. Henry Havelock.  
 13th Light Infantry, Aide-de-Camp to Major-General Sir William Cotton, G.C.B. K.C.H. &c. commanding the Bengal Forces.

## REVIEWS OF NEW BOOKS.

*History of Scotland.* By Patrick Fraser Tytler, Esq. Vol. VII. 8vo. pp. 471. Edinburgh, 1840. Tait.

THE penultimate volume of Mr. Tytler's historical labours does equal honour to his indefatigable research and ability, as compared with any that has preceded it; and, as regards the interest of its leading subject, is, we think, perhaps the most attractive of the series. The period of Mary—the unfortunate and unhappy Mary—has more than romance thrown around it. Every tender human feeling is excited by her story; and even those who are the sternest to condemn her conduct cannot help yielding something to the contagion of sympathy with which those who justify, admire, and pity her, have embalmed her memory. Mr. Tytler is among the most faithful of her apologists; and in this portion of his work finds more and more cause to absolve her from many of the stains attempted to be fastened on her name. For ourselves, we confess that we are not deeply inclined to balance every item of suspicion and charge against this hapless princess. There is so much about her to run away with the heart, that we do not care to give the head too severe a task in scanning the allegations by which she has been assailed. Her position exposed her too much to wrong and obloquy to suffer us to think that she was not, in a great degree, the victim of both. In a terrible, and for religion's sake we may add a melancholy, religious crisis, she was the object of hope to one party, and of hate to another. In her political relations she was the object of apprehension and jealousy to the powerful Elizabeth and her crafty and unscrupulous ministers; at home, in her own kingdom, she was the object of dread and abhorrence to a sect of enthusiast Reformers, and equally obnoxious in the way of her turbulent and ambitious nobles, who were ever plotting and engaged in conspiracies against the throne. Her husband Darnley was not her friend; and she was, from her education, almost a foreigner in her native land, differing in refinements, manners, and sentiments, from all around her. Alas! what had she to expect from the mildness and mercy of Christianity, from the consanguinity of the neighbouring crown, from the feudal loyalty of rigid men, from the affection of subjects estranged by so many opposite motives and injurious arts?—Nothing but evil. And of evil poor Mary had a cup full of bitterness. She was light, says one delver into memoirs, and letters, and state papers; she was criminal, asserts another; she was the tool and instrument in Britain of a powerful league which divided Europe and drenched it in blood, is the representation of a third. The last is true. Mary's adhesion to the Catholic party was the source of her greatest misfortunes; and, as we are not about to revive, even for a *Literary Gazette* short column, the interminable controversy involved in the two preceding categories, we shall beg leave to observe that if both were certain, never since the creation had a helpless woman so much to urge in extenuation of her errors.

We now turn to Mr. Tytler's volume, and as we shall have to return to it on other questions of as great historical importance, for elucidating

which we feel much indebted to this part of his work, we shall this week be satisfied with laying before our readers the corrected history of the murder of David Riccio.

"Riccio, who at this moment possessed much influence, and was on good grounds suspected to be a pensioner of Rome, seconded these views with all his power. On the other hand, she did not want advisers on the side of wisdom and mercy. Sir James Melvil, in Scotland, and Sir Nicholas Throckmorton, one of her most powerful friends in England, earnestly implored her to pardon Murray, and adopt a conciliatory course. Mary was not naturally inclined to harsh or cruel measures, and for some time she vacillated between the adoption of temperate and violent counsels. But now the entreaties of her uncle the cardinal, the advice of her ambassador, the prejudices of her education, and the intolerance of the Protestants, and of Elizabeth, by whom she had been so often deceived, all united to influence her decision, and overmaster her better judgment. In an evil hour she signed the League, and determined to hurry on the parliament for the forfeiture of the rebels. This may, I think, be regarded as one of the most fatal errors of her life; and it proved the source of all her future misfortunes. She united herself to a bigoted and unprincipled association, which, under the mask of defending the truth, offered an outrage to the plainest precepts of the Gospel. She imagined herself a supporter of the Catholic Church, when she was giving her sanction to one of the worst corruptions of Romanism; and she was destined to reap the consequences of such a step in all their protracted bitterness. The moment the queen's resolution was known, it blasted the hopes of Murray, and threw him and all Mary's enemies upon desperate courses. If the Estates were allowed to meet, the consequence to them was ruin; if the councillors continued unchanged, and Riccio's advice was followed, it was certain the Estates would meet. What, then, was to be done? The time was fast running on, and the remedy, if there was to be any, must be sudden. Such being the crisis, it was at once determined that the meeting of parliament should be arrested, the government of the queen and her ministers overturned; and that, to effect this, Riccio must be murdered. This last atrocious expedient was no new idea, for the seeds of an unformed conspiracy against the foreign favourite had been sown some time before; and of this Murray's friends now availed themselves, artfully uniting the two plots into one, the object of which was the return of Murray, the dethronement of the queen, and the re-establishment of the Protestant leaders in the power which they had lost. The origin, growth, and subsequent combination, of these two conspiracies have never yet been understood, although they can be distinctly traced. The first plot for the death of Riccio was, strange to say, formed by no less personages than the young king and his father, the Earl of Lennox. It had its rise in the jealousy and ambition of these unprincipled men, and the imprudent conduct of Mary. In the early ardour of her affection, the queen had

promised Darnley the crown matrimonial, by which was meant an equal share with herself in the government; but after a few months she had the misery to discover that her love had been thrown away upon a husband whom it was impossible for her to treat with confidence or respect. He was fickle, proud, and suspicious; ambitions of power, yet incapable of business, and the easy dupe of every crafty or interested companion whom he met. It became necessary for Mary to draw back from her first promise. This led to coldness, to reproaches, soon to an absolute estrangement; even in public he treated her with harshness; he became addicted to low dissipation, forsook her company, and threw himself into the hands of her enemies. They persuaded him that Riccio was the sole author of those measures which had deprived him of his due share in the government. But this was not all. Darnley had the folly to become the dupe of a more absurd delusion. He became jealous of the Italian secretary; he believed that he had supplanted him in the affections of the queen; he went so far as to assert that he had dishonoured his bed, and in a furious state of mind sent his cousin, George Douglas, to implore Lord Ruthven, in whom he had great confidence, to assist him against 'the villain David.' Ruthven was at this moment confined to bed by a dangerous sickness, which might have been supposed to unfit him for such desperate projects. He was, as he himself informs us, 'scarcely able to walk twice the length of his chamber;' yet he consented to engage in the murder, and Darnley was sworn to keep all secret; but Randolph, the English minister, having become acquainted with the plot, revealed it to Leicester in a remarkable letter, which yet remains. He informed him that the king and his father, Lennox, were determined to murder Riccio; that within ten days the deed would be done; that, as to the queen, the crown would be torn from her whose dishonour was discovered; and that still darker designs were meditated against her person, which he did not dare to commit to writing. From his letter, which is very long, I must give this important passage. 'I know now for certain,' said he, 'that this queen repenteth her marriage; that she hateth him (Darnley) and all his kin. I know that he knoweth himself that he hath a partaker in play and game with him; I know that there are practices in hand, contrived between the father and son to come by the crown against her will. I know that if that take effect which is intended, David, with the consent of the king, shall have his throat cut within these ten days. Many things grievous and worse than these are brought to my ears; yea, of things intended against her own person, which, because I think better to keep secret than write to Mr. Secretary, I speak not of them but now to your lordship.' At this time Randolph, who, from the terms in which he described it, appears to have had no objection to the plot, was banished by Mary to Berwick, the queen having now discovered certain proof of his having encouraged and assisted Murray in his rebellion. To supply his place, Ruthven, who perceived that the king's intent to murder the

Italian gave him a good opportunity to labour for the return of his banished friends, called in the Earl of Morton, then chancellor of the kingdom. This powerful and unscrupulous man proved an able assistant. Under his father, the noted George Douglas, he had been early familiarised with intrigue. He hated Riccio, and dreaded the assembling of parliament almost as much as Murray, from a report that he was to be deprived of certain crown lands, which had been improperly obtained, and to lose the seals as chancellor. Morton, too, was the personal friend of Murray; like him he belonged to the party of the Reformed Church; and when Ruthven and Darnley solicited his aid, he at once embraced the proposal for the murder of the secretary, and proceeded to complete the machinery of the conspiracy with greater skill than his fierce but less artful associates. His first endeavour was to strengthen their hands by procuring the co-operation of the party of the Reformed Church; his next, to follow out Ruthven's idea by drawing in Murray, and making the plot the means of his return to power; his last, to secure the countenance and support of Elizabeth and her chief ministers, Cecil and Leicester. In all this he succeeded. The consent and assistance of the leading Protestant barons was soon gained, and to neutralise any opposition on the part of their chief ministers was not found a difficult matter. They were in the deepest alarm at this moment. It was known that Mary had signed the Popish League; it was believed that Riccio corresponded with Rome, and there was no doubt that some measures for the restoration of the Roman Catholic religion were in preparation, and only waited for the parliament to be carried into execution. Having these gloomy prospects before their eyes, Knox and Craig, the ministers of Edinburgh, were made acquainted with the conspiracy; Bellenden, the justice clerk, Makgill, the clerk register, the lairds of Brunston, Calder and Ormiston, and other leading men of that party were, at the same time, admitted into the secret. It was contended by Morton, that one only way remained to extirpate the Romish faith, and replace religion upon a secure basis; this was to break off the parliament by the murder of Riccio, to imprison the queen, intrust Darnley with the nominal sovereignty, and restore the Earl of Murray to be the head of the government. Desperate as were these designs, the Reformed party in Scotland did not hesitate to adopt them. Their horror of Idolatry, the name they bestowed on the Roman Catholic religion, misled their judgment and hardened their feelings, and they regarded the plot as the act of men raised up by God for the destruction of an accursed superstition. The general fast, which always secured the presence of a formidable and numerous band of partisans, was near approaching; and as the murder had been fixed for the week in March in which the parliament had been summoned, it was contrived that this religious solemnity should be held in the capital at the same time. This secured Morton and enabled him to work with greater boldness. Having so far organised the conspiracy, it remained to communicate it to Murray, and for this purpose the king's father, the Earl of Lennox, repaired to England. It required no great persuasion to induce Murray, now in banishment, and over whose head forfeiture and ruin were impending, to embrace a plot which promised to avert all danger, and restore him to the station he had lost. It was accordingly arranged by him, with Grange, Ochiltree, the father-in-law of

Knox, and the other banished lords, that as soon as the day for the murder was fixed, they should be informed of it, and then order matters so that their return to Edinburgh should take place instantly after it was committed. But this was not all. According to a common but revolting practice of this age, which combined the utmost feudal ferocity with a singular love of legal formalities, it was resolved, that 'covenants' or contracts for the commission of the murder, and the benefits to be derived from it, should be entered into, and signed by, the young king himself and the rest of the conspirators. Two 'bands,' or 'covenants,' were accordingly drawn up; the first ran in the king's name alone, although many were parties to it. It stated that the queen's 'gentle and good nature' was abused by some wicked and ungodly persons, specially an Italian stranger called David; it declared his resolution, with the assistance of certain of his nobility and others, to seize these enemies; and if any difficulty or resistance occurred, 'to cut them off immediately, and slay them wherever it happened;' and solemnly promised on the word of a prince, to maintain and defend his assistants and associates in the enterprise, though carried into execution in presence of the queen's majesty, and within the precincts of the palace. By whom this agreement was signed, besides the king, Morton, and Ruthven, does not appear; but it is certain that its contents were communicated, amongst others, to Murray, Argyle, Rothes, Maitland, Grange, and the Lords Boyd and Lindsay. Of these persons, some were in England, and could not personally assist in the assassination; and, to them, among others, Morton and Ruthven no doubt alluded, when they afterwards declared, that the most honest and the most worthy were easily induced to approve of the intended murder, and to support their prince in its execution. The second 'covenant' has been also preserved. It was supplementary to the first, its purpose being to bind the king on the one hand, and the conspirators on the other, to the performance of those conditions which were considered for their mutual advantage. The parties to it were the King, the Earls of Murray, Argyle, Glencairn, and Rothes, the Lords Boyd and Ochiltree, and their 'complices.' They promised to support Darnley in all his just quarrels, to be friends to his friends, and enemies to his enemies; to give him the crown matrimonial, to maintain the Protestant religion, to put down its enemies, and uphold every reform founded on the word of God. For his part, the king engaged to pardon Murray and the banished lords, to stay all proceedings for their forfeiture, and to restore them to their lands and dignities. Such was now the forward state of the conspiracy for the murder of Riccio, the restoration of Murray, and the revolution in the government; and it appears to have assumed this form only a few days previous to Randolph's dismissal from the Scottish court. One only step remained; to communicate the plot to the Queen of England and her ministers, and to obtain their approval and support. Randolph was now at Berwick with the Earl of Bedford, the lieutenant of the north, and from this place these persons wrote on the 6th of March to Elizabeth, informing her of 'a matter of no small consequence being intended in Scotland,' referring to a more particular statement which they had transmitted to Cecil, adding that Murray would thus be brought home; that Tuesday was the last day, and that they looked daily to hear of its execution. The other letter from Bedford and Ran-

dolph to Cecil, written on the same day, was far more explicit. It enjoined the strictest secrecy: they had promised, they said, upon their honour, that none except the Queen, Leicester, and Cecil himself, should be informed of 'the great attempt,' now on the eve of being put into execution; and they went on thus to describe it:—

"The matter is this. Somewhat we are sure you have heard of divers discords and jars\* between this queen and her husband, partly for that she hath refused him the crown matrimonial, partly for that he hath assured knowledge of such usage of herself as altogether is intolerable to be borne, which, if it were not overwell known, we would both be very loath to think that it could be true. To take away this occasion of slander, he is himself determined to be at the apprehension and execution of him, whom he is able manifestly to charge with the crime, and to have done him the most dishonour that can be to any man, much more being as he is. We need not more plainly to describe the person. You have heard of the man whom we mean of. To come by the other thing which he desireth, which is the crown matrimonial, what is devised and concluded upon by him and the noblemen, you shall see by the copies of the conditions between them and him, of which Mr. Randolph assureth me to have seen the principals, and taken the copies written with his own hand. The time of execution and performance of these matters is before the parliament, as near as it is. To this determination of theirs, there are privy in Scotland these:—Argyle, Morton, Boyd, Ruthven, and Liddington. In England these:—Murray, Rothes, Grange, myself, and the writer hereof. If persuasions to cause the queen to yield to these matters do no good, they purpose to proceed we know not in what sort. If she be able to make any power at home, she shall be withstood, and herself kept from all other counsel than her own nobility. If she seek any foreign support, the queen's majesty, our sovereign shall be sought, and sued unto to accept his and their defence, with offers reasonable to her majesty's contentment. These are the things which we thought and think to be of no small importance, and knowing them certainly intended, and concluded upon, thought it our duties to utter the same to you Mr. Secretary, to make declaration thereof as shall seem best to your wisdom. And of this matter thought to write conjunctly, though we came severally by knowledge, agreeing both, in one, in the substance of that which is determined. At Berwick, 6th March, 1565.

'F. BEDFORD. TH. RANDOLPHE.'

I have given this long extract as the letter is of much importance, and has never before been known. It proves that Elizabeth received the most precise intimation of the intended murder of Riccio, that she was made fully acquainted with the determination to secure the person of the Scottish queen, and create a revolution in the government. Murray's share in the conspiracy, and his consent to the assassination of the foreign secretary, are established by the same letter beyond a doubt; and we see the declared object of the plot was to put an end to his banishment, to replace him in the power which he had lost, and by one decided and triumphant blow to destroy the schemes which were in agitation for the re-establishment of the Roman Catholic religion in Scotland. It is of great moment to attend to the conduct of Elizabeth at this

\* "Jars."

crisis. She knew all that was about to occur: the life of Riccio, the liberty—perhaps, too, the life—of Mary was in her hands; Murray was at her court; the conspirators were at her devotion; they had given the fullest information to Randolph, that he might consult the queen: she might have imprisoned Murray, discomfited the plans of the conspirators, saved the life of the miserable victim who was marked for slaughter, and preserved Mary, to whom she professed a warm attachment, from captivity. All this might have been done, perhaps it is not too much to say, that even in these dark times it would have been done by a monarch acutely alive to the common feelings of humanity. But Elizabeth adopted a very different course: she not only allowed Murray to leave her realm, she dismissed him with marks of the highest confidence and distinction; and this baron, when ready to set out for Scotland, to take part in those dark transactions which soon after followed, sent his secretary, Wood, to acquaint Cecil with the most secret intentions of the conspirators. Whilst these terrible designs were in preparation against her, some hints of approaching danger were conveyed to the Scottish queen; but she imprudently disregarded them. Riccio, too, received a mysterious caution from Damiot, an astrologer, whom he used to consult, and who bade him beware of the bastard, evidently alluding to George Douglas, the natural son of the Earl of Angus, and one of the chief conspirators; but he imagined that he pointed at Murray, then in banishment, and derided his apprehensions. Meantime every thing was in readiness; a large concourse of the friends of the Reformed Church assembled at Edinburgh, for the week of fasting and humiliation; directions for prayers and sermons had been previously drawn up by Knox and the ministers, and the subjects chosen were such as seemed calculated to prepare the public mind for resistance, violence, and bloodshed. They were selected from the Old Testament alone, and included, amongst other examples, the slaying of Oreb and Zeb, the cutting off the Benjamites, the fast of Esther, the hanging of Haman, inculcating the duty of inflicting swift and summary vengeance on all who persecuted the people of God. On the 3d of March the fast commenced in the capital, and on the 4th parliament assembled. It was opened by the queen in person; and the lords of the articles having been chosen, the statute of treason and forfeiture against Murray and the banished lords was prepared. This was on a Thursday; and on Tuesday, in the following week, the act was to be passed; but it was fearfully arrested in its progress. On Saturday evening, about seven o'clock, when it was dark, the Earls of Morton and Lindsay, with a hundred and fifty men bearing torches and weapons, occupied the court of the palace of Holyrood, seized the gates without resistance, and closed them against all but their own friends. At his moment Mary was at supper in a small closet or cabinet, which entered from her bedchamber. She was attended by the Countess of Argyle, the Commendator of Holyrood, Beaton, master of the household, Arthur Erskine, captain of the guard, and her secretary, Riccio. The bedchamber, communicated by a secret arnpike-stair with the king's apartment below, to which the conspirators had been admitted; and Darnley, ascending this stair, threw up the arras which concealed its opening in the wall, entered the little apartment where Mary sat, and casting his arm fondly round her waist, seated himself beside her at table. A

minute had scarcely passed when Ruthven, clad in complete armour, abruptly broke in. This man had just risen from a sick bed, his features were sunk and pale from disease, his voice hollow, and his whole appearance haggard and terrible. Mary, who was now seven months gone with child, started up in terror, commanding him to be gone; but ere the words were uttered, torches gleamed in the outer room, a confused noise of voices and weapons was heard, and the next moment George Douglas, Car of Faudonside, and other conspirators, rushed into the closet. Ruthven now drew his dagger, and calling out that their business was with Riccio, made an effort to seize him, whilst this miserable victim springing behind the queen, clung by her gown, and in his broken language called out, 'Giustizia! Giustizia! sauve ma vie, madame; sauve ma vie!' All was now uproar and confusion; and though Mary earnestly implored them to have mercy, they were deaf to her entreaties; the table and lights were thrown down, Riccio was stabbed by Douglas over the queen's shoulder, Car of Fardonside, one of the most ferocious of the conspirators, held a pistol to her breast, and whilst she shrieked with terror, their bleeding victim was torn from her knees, and dragged amidst shouts and execrations through the queen's bedroom, to the entrance of the presence chamber. Here Morton and his men rushed upon him, and buried their daggers in his body. So eager and reckless were they in their ferocity, that in the struggle to get at him, they wounded one another, nor did they think the work complete till the body was mangled by fifty-six wounds, and left in a pool of blood, with the king's dagger sticking in it, to shew, as was afterwards alleged, that he had sanctioned the murder. Nothing can more strongly shew the ferocious manners of the times than an incident which now occurred. Ruthven, faint from sickness, and reeking from the scene of blood, staggered into the queen's cabinet, where Mary still stood distracted, and in terror of her life. Here he threw himself upon a seat, called for a cup of wine, and being reproached for the cruelty of his conduct, not only vindicated himself and his associates, but plunged a new dagger into the heart of the unhappy queen, by declaring that her husband had advised the whole. She was then ignorant of the completion of the murder, but suddenly one of her ladies rushed into the room, and cried out that their victim was slain. 'And is it so?' said Mary; 'then farewell tears, we must now think of revenge.' Having finished the first act of this tragedy, the conspirators proceeded to follow out their preconcerted measures. The queen was kept a prisoner in her apartment, and strictly guarded. The king, assuming the sole power, addressed his royal letters, dissolving the parliament, and commanding the Estates to leave the capital within three hours on pain of treason; orders were despatched to the magistrates, enjoining them with their city force to keep a vigilant watch, and suffer none but Protestants to leave their houses. And to Morton, the chancellor, with his armed retainers, was intrusted the guarding the gates of the palace, with strict injunction that none should escape from it. This, however, amid the tumult of a midnight murder, was not so easy a task. Huntley and Bothwell contrived to elude the guards. Sir James Balfour and James Melvil were equally fortunate; and as this last gentleman passed beneath the queen's window, she threw up the arras and implored him to warn the citizens, to

save her from the traitors who had her in their power. Soon after the common bell was heard ringing, so speedily had the message been carried; and the chief magistrate, with a body of armed townsmen, rushed confusedly into the palace court, demanding the instant deliverance of their sovereign. But Mary in vain implored to speak with them; she was dragged back from the window by the ruffians, who threatened to cut her in pieces if she attempted to shew herself; and, in her stead, the pusillanimous Darnley was thrust forward. He addressed the citizens, assured them that both he and the queen were in safety, and commanding them on their allegiance to go home was instantly obeyed."

*The Man at Arms; or, Henri de Corons. A Romance.* By G. P. R. James, Esq., author of "Darnley," "De l'Orme," "Charles Tyrrell," &c. 12mo. pp. 640. London, 1840. Bentley.

MR. JAMES has so completely imbued his mind not only with the history of France, but with all its minor details, including the costumes, manners, customs, and state of feeling of the people, that when he takes up the story of any period in that country, his characters look, speak, and act with an identity which, if not real, has all the effect of reality upon his readers. The present publication is an eminent example of this. It describes an epoch in the religious wars between the Roman Catholics and Protestants, and closes with the fatal massacre of St. Bartholomew.

In order to bring the circumstances of this contest vividly before us, he has made his hero Henri de Corons, a youth of noble family, embrace the profession of a Man at Arms, whose sword is his only means of carving his way to fame and fortune. His adventures and those of his followers—the descriptions of ambuscades, sieges, and battles—the various turns of war—the condition of the country and its merchants, both Christian and Jewish, are all told in the author's best style, and afford a very accurate and lively picture of the land torn by civil discord, and the age of strife, and force, and violence, when the strong oppressed and the weak suffered.

Not to interfere with the circumstances of this tale, which should be left as a thread through the labyrinth of incidents to interest our fair friends from first to last, we shall only select a few examples from the volume, which may indicate its nature without exposing its secrets. The opening is reflective and touching:—

"It is difficult to discover what are the exact sources from which spring the thrilling feelings of joy and satisfaction with which we look back to the days of our early youth and to the scenes in which our infancy was passed. It matters not, or at least very little, what are the pleasures which we have enjoyed in after-years, what are the delights that surround us, what are the blessings which Heaven has cast upon our lot. Whenever the mind, either as a voluntary act, or from accidental associations, recalls, by the aid of memory, the period of childhood and the things which surrounded it, there comes over us a gladdening sensation of pure and simple joys which we never taste again at any time of life. It must be, at least in part, that the delights of those days were framed in innocence and ignorance of evil; and that He who declared that of such as little children consisted the kingdom of Heaven, has allotted to the babes of this world, in the brightness of their innocence, joys similar to those of the world

beyond—joys that never cloy and that leave no regret. What though some mortal tears will mix with those delights?—what though the flesh must suffer and the evil one will tempt? yet the allotted pleasures have a zest which not even novelty alone could give, and an imperishable purity in their nature which makes their remembrance sweeter than the fruition of other joys, and speaks their origin from heaven. I love to dwell upon such memories, and to find likenesses for them in the course, the aspect, and the productions of the earth itself. I see the same sweetness and the same simplicity pervading the youth of all nature, and find in the dim violet, the youngest child of Spring, an image of those early joys—pure, soft, and calm, and full of an odour that acts upon the sense more than that of any other flower. Thus it is, I suppose, and for these causes, that in looking back upon the days of my youth—though those days were not as happy and as bright as they are to many people—I feel a secret satisfaction, which I knew not at the time. Yet those hours indeed, as one who gives a diamond to a child, bestowed upon me a gift the value of which I knew not till many a year had passed away.”

Here are also some finely simple reflections from the many scattered over these pages:—

“I have since learned to know, that in the human heart there is often a great difference between remorse and repentance; and that when we have done a fellow-creature wrong, when we have pained, injured, aggrieved—ay, even when we only entertain the purpose of doing so—we hate that being on account of the very acts for which we should hate ourselves. \* \* \* At this point may be said to end the period of my early life, which—like an old picture painted at first in vivid colours soon loses the brightness of its hues, becomes mellowed but less distinct to the eye, then grows grey and dim, and then is almost obscured altogether—has now greatly faded away from memory, though the impressions were then as bright and vivid, as perhaps, any that I have received since. \* \* \* ‘How far is it to that town?’ demanded Louise, after gazing for some time. ‘Nearly five miles, dear one,’ I replied. ‘How near it looks!’ she said: ‘I shouldn’t have thought that it were two.’ ‘It looks so, dear Louise,’ I replied, ‘from the clearness of the wintry air; and so it is, Louise,’ I said, ‘with future, as with distant things. To the calm, cold, icy eye of experience and reason, the remote and distant times, the five or six years hence, look as near as if we could touch them; the space between dwindles down to nothing, and the rest of life seems but as a moment: while, in the warm and sunny days of youth, the airy mist of passion, of fancy, and of expectation, throws every future thing far, far away, and the five or six years that may lie between us and happiness seem a long age of wearisome expectation.’ She looked up in my face and smiled, saying, ‘I suppose it is so, Henri.’”

Robert Stuart, a Scottish soldier of fortune, is a capital portrait; and so is Moric Endem, a follower of De Cerous. The former, in equipping Henri at Bordeaux, previous to his joining the army, gives rise to the following:—

“Two horses may be had for you cheap enough, if you can ride well; for there is a Maquignon, called Pierrot, has got a troop of wild devils from the Limousin, for which he can find no sale here amongst the merchants, and citizens, and soft-boned gentry of Bordeaux.” I smiled, replying, ‘We will ride them, if they can be ridden.’ ‘I advise you,’ he continued, ‘to do this rather than to fur-

nish yourself at the army; both because you will find it cheaper, and because it always looks better, and gives a higher opinion of a man when he joins his leader fully prepared. Besides, you have a chance of some little adventure on the road, which may take off the freshness of your arms, and give you some little reputation. Such things are as common in these days as they were in the times of the knights-errant. Now, what I propose for you to do, when you have joined the army, is, not for you to put yourself in this troop or that, as a simple man-at-arms; for that is the way to get yourself killed speedily, without any body hearing any thing of you; but to look about the camp for any stray vagabonds that may be about—I mean of those whose whole fortune consists in a steel cap, a breastplate, and a horse; and the whole sum of whose virtues lies in courage. You will find two or three young fellows, too, at every corner, who, like yourself, are seeking service, fresh in arms and willing to stick to any leader who will but gallop them into the cannon’s mouth. They are generally younger than you are, for you have been somewhat late in taking to the trade. That, however, will only make it the more likely they should follow you, which is the great thing; for to be the leader of one of these bands is the sure means of getting on, whereas to be a follower in one of them is the readiest way of getting hanged. You have then nothing to do, you know, but to take up absolutely the trade of adventurer, attack the enemy every where, harass him on every occasion, cut off his parties, attack every chateau where you think there is a soldier,—in short, run your head against every stone wall that you meet with. You may chance to knock some of them down; and if you do, you will gain a reputation which will soon put you at the head of a better band than that with which you set out. Good old soldiers will be glad to come to you then, and you may work yourself up to be a general by steadiness and perseverance.’ ‘There are two things, however,’ I said, ‘which you have forgotten to mention: first, where am I to get the money to pay these recruits? for after I have bought horses and arms for myself and Andriot, there will not be much left to pay any one.’ ‘Oh, they will pay themselves—they will pay themselves,’ he said. ‘You may have, indeed, in the first instance, to give one or two of these vagabonds, who have seen service, a crown a-week, just to make the beginning of a band; all the others you will take merely upon trial; and, of course, you must put the Catholics under contributions. If they will have war, let them have war, and pay for it. It is an undoubted fact that, since the last peace, they have put to death, in one town or another, full ten thousand Protestants; and therefore we have a right to make them pay for such sorts of amusement. Then you will put the prisoners to ransom, you know; and every one that is taken by your men pays you a share too. You will, therefore, have plenty to keep the band up as soon as it is formed.”

A scene after a skirmish, in which our hero had rescued some merchants from the Catholics, will supply us with another characteristic extract:—

“In the meanwhile, Andriot and Moric Endem were aiding the merchant’s wife and the women servants to lay out the provisions upon the banks of the stream; and with all the facility of an old soldier, Moric had cast down his steel cap, and was busily arranging the whole, with many a dry jest, and merry look, and careless laughter, which made the

women and the children soon forget the terror that had seized them, and prevented them even from perceiving the extraordinary ugliness of their gallant defender. A huge cold capon, which he instantly christened ‘Monseigneur,’ was placed in the midst of the little circle; manifold eggs were arranged neatly around; various stores of salted provisions, tongues, lard, and sausages, were spread out by his hands with more taste than one might have expected; and at length came two huge bottles of wine, which he called the king and queen, with various other things, for each of which he had a name. As we all took our places around, however, it was discovered suddenly that the eggs, which were to form no inconsiderable part of the meal, had not been cooked. ‘We could soon cook them,’ cried Andriot, ‘for there’s wood enough in the neighbourhood; but where are we to find wherewithal to cook them in?’ ‘You get the wood—you get the wood,’ ‘scapegrace,’ cried Moric; ‘run up the hill, and get the wood. You shew how long you have been a soldier. Don’t you know that every man-at-arms carries a kettle on his head and a fryingpan on his stomach? Get ye gone, and come back speedily, and leave the cooking to me. Now we will put him in a fright for his polished morion,’ continued Moric, after the youth was gone, at the same time collecting some dry stricks and grass that lay about, and striking a light. ‘Susanne, my pretty one,’ he continued, to one of the little girls, ‘I see some branches lying there; go and fetch them, while I blow the fire up.’ And using his mouth for a pair of bellows, he had contrived to kindle a strong flame by the time that Andriot and the girl had returned. ‘Now, Andriot,’ he went on, ‘take off you morion, there’s a good youth; fill it with water out of the stream, and you shall see that we will boil the eggs in a minute.’ ‘Hadn’t better take yours, Master Moric?’ said the young man, looking somewhat ruefully at him. Moric burst into a shout of laughter, in which all the rest of the party joined. ‘Come come,’ cried Moric, ‘since thou art stingy o thy morion, Andriot, we will roast the eggs though it is a difficult task, and not to be undertaken by any but an old woman or an old soldier.’

‘There’s an art in roasting of eggs—there’s an art in roasting of eggs; And he who would run before he can walk, must first learn to use his legs.’

Thus sung Moric Endem in a tolerably good voice, as he laid the eggs in order amongst the hot wood-ashes; and there was something contagious in the gay, careless merriment which my new follower displayed, that I never before had a meal pass more cheerfully than did ours that day by the banks of the little stream. Moric’s eggs proved to be excellent, and of the wine, which was excellent also, he was permitted, in recompense, to have his full share. It had no perceptible effect upon him, however; more cheerful it could not make him, and his head was a great deal too well seasoned to the juice of the grape for his faculties to be disturbed by it. Before we rose to go on our way I produced the purse which I had received from the merchant, and bestowed ten crowns from it upon the old soldier, with the like sum upon Andriot. The eyes of both glistened not a little at the treasure they had so rapidly acquired, and Moric, starting up, drew me on one side, saying, ‘That puts me in mind of something. Now, monseigneur, I have got some plunder, you know, to divide, which came out of that fellow’s saddle. We have

said nothing yet about the way we intend to divide it; but I tell you what I saw tried in the last war, and which is the best plan; namely, this, that every thing which is brought in is given up to the captain. Every week it is divided amongst the whole band, the number of lots being just one more than the band, including the captain. He has two lots, and every other man one. That makes each man do his best for the whole, and see that others do the best too; and the captain, who has a great many things to pay, and to do for us all, has something to do it with, and a little more. Ransoms, however, and compositions, and such things, are, of course, regulated differently, according to the laws of arms, and each man keeps his own. Also, of any plunder taken in a general battle, you know, a part goes to the leader whose cornet we fight under; but only be sure in making terms with the general, that you get his authority for dealing with your own men according to your own way, and bind yourself as little as you can to the laws and regulations of other people.' 'Somewhat freebooting advice, Master Moric,' I replied; 'though not bad in some respects. But, nevertheless, you must remember that I have honour and glory to gain, and to make a name for my band too, as well as to acquire money and plunder.' 'The one's the way to do the other,' replied Moric. 'Your way to get honour and renown for yourself and your band is to fight like a lion and make your men fight; and depend upon it, every one fights ten times as well when he thinks he is to get something for it, as when he thinks that every thing he takes is to be shared with the whole army.' There was some reason in what the man said, and I then proceeded to consult him in regard to obtaining some new recruits as speedily as possible."

With Henri's first military trial under the eyes of the great Protestant chief we shall now conclude:—

"I was awake by daylight on the following morning, and was up, and had made a soldier's brief toilet, as well as armed myself completely, before five o'clock. Luckily it happened that I was so, for in a few minutes afterwards I was visited by a gay-looking youth, who introduced himself as the Captain Genissac, and who told me that in an hour we were to mount the breach together. He looked at me somewhat superciliously from head to foot; and, though I felt that I could have broken him through the middle over my knee, as a boy breaks a stick, his cool scrutiny annoyed and discomposed me. We talked over what was to be done for some time; and, urging me to hasten my movements, he went to take his station at the head of the storming party. I hurried after at all speed, followed by my little band; and, getting out of the hamlet, and passing through the middle of the tents toward the battery which had effected the breach, a fine, a gay, and an interesting sight was presented, which remains fixed upon my memory, as much from the beauty of the scene as from being the first military effort of any consequence in which I took a part. The whole army was drawn out in the open space between the camp and the city; and about five or six hundred yards in advance of the line was the small battery, which had effected a very insufficient breach in the wall. It was still firing, as it had been since the break of day; and a light wind blew the wreaths of smoke down into the hollow which ran towards the Charente, enveloping the base of the hill on which Angoulême stands; while out of the white, uncertain mist thus

created started forth clear the town, with all its manifold towers and spires. The sun was shining brightly as he rose upon the glittering line of our cavalry and infantry, variously armed, and with many a cornet and a pennon amongst them; while the rich and peaceful-looking slopes and rises—the clear blue sky—the bright sunshine—and the soft murmur of the autumnal air, contrasted strangely and strikingly with the camp behind us,—the long line of iron-clad soldiery in the front, the occasional thunder of our own artillery, and the flashes that burst from time to time from the walls of Angoulême. Some way in advance of the general line appeared a small body of infantry, with Genissac at their head; and behind him, a little before the other forces, an entire infantry regiment, supported by a strong force of cavalry. Between that body and the little *peloton* of Genissac were a group of officers and gentlemen, with one or two led horses, apparently waiting for their riders. As I passed by, my eye rested for a moment upon the well-known D'Andelot; while another officer, considerably older in appearance, but with a fine open countenance, whom I took to be the far-famed Admiral de Coligny, sat beside him, on a strong horse, receiving from time to time communications from different persons who rode up. D'Andelot's visor was up, and, as I passed, he noticed me with an inclination of the head, and then, turning to the admiral, pointed me out to him. Coligny immediately beckoned me towards him; and, ordering my men to march on and take the order from Monsieur de Genissac, I advanced to the side of the admiral's horse. 'I knew your father well, Monsieur de Cérans,' said Coligny, 'and my beholding his son here this day gives me the pleasant expectation of soon seeing him behave as his father would have done on a similar occasion. I grieve that we have not the presence of your cousin, Monsieur de Blancford; but his faith has been supposed to be wavering for some time. I must not detain you, however, for here comes the prince, and the word will be given in a moment.' I bowed, and then advanced immediately to the side of Genissac, who, I found, had drawn up my men with his own very fairly and very skilfully. In order to take advantage of some hollows in the ground, we were to advance six abreast, three of my men and three of his, with the two leaders at the head. As the whole of the party were composed of about a hundred men, he had filled up the space behind, where my scanty band ended, by his own troops; and, placing himself close to me, he said, 'Now, Monsieur de Cérans, you and I will keep near together, as I may have something to say to you when we are near the breach. I wish they would send us the word to advance, for this long expectation dulls the men's spirits.' At that moment, however, an officer gave the word to march, while the battery opened a sharp fire upon the breach. In the first instance we had to descend some way, which we did with considerable rapidity, but not so fast as far to outstrip the regiment behind, who, as soon as they were within shot, opened a smart fire of small arms against the enemy. From the bottom of the valley we had now, however, to ascend to the park; and the moment we began to do so, one of the hottest fires of musketry I ever saw was poured upon us from the breach and the neighbouring walls. One of Genissac's men went down; and one of mine staggered from a slight wound in the shoulder, but regained his footing and kept on with the rest. I was somewhat surprised that we did not advance

more rapidly, and said to my companion, 'Let us hasten forward!—let us hasten forward! The men will soon be out of the fire.' Genissac gave no order, and at the same time a shot, passing between him and me, carried away a part of my casque, and went through the head of one of the men behind. 'Don't be too hot, —don't be too hot!' he said the minute after, when we had got so near that I could see the features of the men in the breach. 'I am only ordered to make a reconnaissance; but to retreat immediately, if the breach is not practicable.' 'But I was ordered to storm,' I replied; 'and the breach, though small, is deep, and seems to me quite practicable.' 'Have with you,—have with you then!' he said, 'if you are so eager.' But the words we had uttered had been heard by those behind us; and, though we had been still advancing, the men began to waver. It was a critical moment; and, waving my sword over my head, I cried aloud, 'To the breach!—to the breach!' My own men took it up, shouting, 'To the breach!—to the breach!' His people followed; and, rushing forward with jealous rivalry of each other, though, as we came nearer, the shots of the enemy told terribly amongst us, we climbed the height, and rushed up furiously to the foot of the wall. There was an immense deal of broken rubbish, earth, and stones to be passed, which had been cast down by the fire of our battery, and a tremendous discharge of musketry welcomed us at the top; but still we rushed on, while the regiment, which had advanced to support us, now caught the spirit of the assault, and doubling its pace, crossed the valley and charged up the hill. On we pressed, as hard as we could go, with the stones and earth slipping away and rolling under our feet; all staggering, some falling, and only thankful that the dense smoke of the enemy's fire rolled into the breach, and prevented them from taking any very certain aim. When first we arrived at the foot of the wall, the breach was crowded by arquebusiers; but they began to fall back as we climbed over the piles of rubbish; and, when we were near the top, only five or six men remained, of whom one rushed down several steps to meet me, aiming a pistol at me as he came, and firing within three paces. Striking my cuirass on the left side obliquely, the shot glanced off, and entered my arm a little above the elbow; but it was a mere flesh wound, and only inconvenient. A blow of my heavy horse-sword, however, dashed my adversary's casque down upon his head, broke the fastenings, and brought him on his knee; another blow, before he could ward it off, struck the helmet from his head, and at the same time inflicted a deep wound upon his forehead; and, as he called out that he would surrender,—indeed, he had no choice,—I passed him back to the hands of Moric Endem, who followed me close, without seeing any thing further than that he was a young man of good mien. Genissac was now a step or two before me; but, rushing up, I was by his side in a moment, and in another instant we stood together at the top of the hill. The interior of what was called the park,—a large open space, forming a sort of Place d'Armes,—was now open before us; and, to my surprise, I beheld, drawn up on either side, and ready to charge us the moment we descended, a large body of men-at-arms, with their lances levelled, and supported by a considerable force of pikemen and arquebusiers on foot. Our men were rushing up, however, one by one, as fast as they could climb, to our support; Moric Endem, having passed on his prisoner,

was close behind us; a slight-looking youth, armed only with a close-covering casque and cuirass, was upon my right, struggling up with difficulty over a steep part of the ruin; and giving him my hand, unfortunately for himself, I drew him up in a moment: Genissac was a little farther off on the same side, with four or five of his followers; and, seeing the infantry regiment coming up, I thought it not at all improbable that we might be able to force an entrance, notwithstanding the strength of the enemy in the park. All this was soon thought, and done in a moment; but at the very same instant the regiment behind halted, a small party of horsemen galloped up towards us from our own army at full speed, and the arquebusers from the park opened a sudden and tremendous fire upon the breach. Three men amongst us were brought down at once; Genissac, standing upon a high point of the broken wall, received a shot in his head and fell back, rolling over and over down the heap of rubbish, writhing in the agonies of death; one of his men fell forward severely wounded, and a shot took the poor youth I had just helped up, and, entering his right side, laid him prostrate across one of my feet. Still my own followers were coming rapidly up; several of Genissac's people were making their way towards the top; and though it was impossible to face the force in the park, now that the other regiment had halted, it was quite possible to effect a lodgment on the breach. Turning, therefore, to those who were following, and to the group of officers who had now advanced nearly to the foot of the wall, and were shouting up loudly to me, though I could not hear a word they said, from the noise of the small arms, I called to them to roll me up gabions and barrels, for that we could certainly effect a lodgment. My words were passed down by those who were following; but D'Anelot, whom I now saw at the head of the officers, shook his clenched fist at me, and shouted to me, as I found, to come down and retreat. The words were passed up to me, and with much regret, I own, I prepared to obey. 'We must retreat,' I said, 'Moris. We are commanded to retreat!' But at that moment I heard a voice which I thought I had heard somewhere before, proceeding from the casque of the young man who had fallen beside me, and who exclaimed, 'Oh, do not leave me here!' It would have been cruel to do so, even had it been more difficult and dangerous to rescue him than it was; and, therefore, taking him up in my arms, I carried him down to the spot where D'Anelot stood, and to which several horses had been brought, by this time, for the purpose of removing the wounded. 'You seem determined to get yourself killed, Monsieur de Cerons,' said D'Anelot. 'We only intended a reconnaissance, and poor Genissac has suffered for his folly in changing it into an assault.' 'My orders were to storm, sir,' I said; 'and I have done no more than I was directed to do.' 'We were wrong! we were wrong, Monsieur de Cerons!' said that great commander. 'We wanted to try you; but Genissac had full orders how to act, and he should have obeyed them. Now take a horse, put yourself at the head of his men as well as your own, get them into order, and make the best of your retreat. You are very well sheltered here, but you will find the fire somewhat hot in the valley. Don't mind using your legs there, for you have shewn sufficiently that it is not bullets you are afraid of.' I only paused to tell Moric to place the lad I was carrying on a horse, and take him carefully to

the camp; and then obeyed the orders of D'Anelot. The matter was a mere affair of discipline; the men followed my commands with alacrity; and choosing the direction which seemed most sheltered from the fire of the garrison, I led them on without loss, and with but little haste and confusion, till, passing the battery which had effected the breach, I took up the same position with them which we had occupied in the morning before the assault began. I acted altogether as I had learned from the memoirs of various distinguished knights and officers that it was right and proper to do on such occasions; and the moment I had reached the same spot from which we had started, I made the men wheel round again, and face the city, as if for a new assault. They were all picked soldiers, and they performed the manœuvre with promptitude and precision; but in the troubled state into which the whole art of warfare had fallen in that day, this little evolution, which never would have been neglected in former times, except in case of a complete defeat, excited the surprise of every body; and a loud shout of applause burst from the regiments around."

These quotations will speak more forcibly for *Henri de Cerons* than any more praise of ours; and we leave them, without comment, to the taste of our readers.

*Touche on the Harp of Nature; in the same Key as Burns's Grand Anthem.* By Henry Ellison, of Christchurch, Oxford; author of "Man and Nature in their Poetical Relations." 12mo. pp. 56. London, 1839. Painter.

THIS is an ambitious title, and strangely out of keeping with the key which the immortal Burns pitched in such lines as the following, written in defiance of all acknowledged rules for composing poetry:—

"Respect us,—shall we then respect our own—  
Salute less?" &c.

"Fulfillment of thy wish, yea, in its high—  
Est sense could bring, as the Godlike, which thy," &c.

"The perfume from a flower! and his new—  
Born brother wakes, delightedly, to hear."

"Believe it such; believe that it can true—  
Ly see thy thoughts: then will thy heart be by."

Here again is another specimen of the same description:—

"No mean conspiracy, to rob of his  
Just laurels the deserving head—an high—  
Er source this feeling claims."

Numerous are the outrages of the same kind with which this little volume abounds. Now this is too bad, for the author is a poet of no ordinary ability; and he must have read sufficiently to have known that no good writer plays such "unnatural tricks" with words as he has here done. Who would think that the man who wrote such slovenly lines as these could breathe so much of the spirit of Wordsworth (though still ill constructed) as is evinced in the following extracts?—Yet so it is.

"London after Midnight.

Silence broods o'er the mighty Babylon,  
And Darkness, his twin brother, with him keeps  
His solemn watch; the wearied city sleeps,  
And Solitude, strange contrast! muses on  
The fate of man, there, whence the crowd anon  
Will scare her with life's tumult! the great deeps  
Of human thought are stillness, yet there creeps,  
As 'twere, a far-off hum, scarce heard, then gone,  
On the still air: it is the beating of  
The mighty heart, which, shortly, from its sleep,  
Shall start refreshed. O Thou, who rail'st above,  
Be with it in its dreams, and let it keep  
Awake the spirit of pure peace and love,  
Which thou breath'st through it now, so still and deep!"

"Thoughts on Roadside Seats, and their Moral.  
I love to feel the firm earth 'neath my feet,  
The solid ground of life's reality!  
I like to live too by the daily eye  
And heart, and e'en the meanest thing I meet,  
With kindly recognition still to greet;  
'Tis not so if my heart but feels thereby  
Its best—then has it its sublimity!  
I love not dreams, save such as, on this seat,  
With quicken'd pulse of heart, and waking sight,  
I now indulge—such as God himself might  
Dream, could he ever dream!—which steadily  
By God's broad day beam looking into! yea!  
Such as ne'er hover 'round the brows of Sleep!  
Well may Heaven's blessed light, transfiguring, steep  
This rude, yet sublime symbol, by the way  
Of human love! which stirs the heart more deep  
Than pompous eulogy, or poet's lay!  
Blessings be on his head who placed it here!  
Who, of poor human nature's destiny,  
Still mindful, sought to sweeten, though but by  
A moment's rest, its hard path towards the bier!  
It bears no name, inscription—yet in clear  
And sublime characters its meaning high  
Is graven—'Sacred to Humanity!'  
And from what altar would God sooner hear  
A prayer addressed to Him? Then kneel, O man!  
And pray for godlike modesty like this  
To work the godlike likewise under His,  
And not thy, name! And this the poorest can!  
To serve man, man's best glory, none need miss!  
And he who can't do so, none has, nor—is!"

"The beating of the mighty heart," in the first extract, ought to have been marked as a quotation from Wordsworth on the same subject. But no matter, for in spite of all drawbacks these trifles are pitched in the right key. There are such passages in the book as we have not read for many a day. What excuse a man of such talent can offer for the contempt he has shewn to rhythm, and the beheading of words in the manner he has done, we know not. That he is a poet in feeling of no common degree the above extracts prove.

#### KENNEDY'S ARMY OF THE INDUS.

[Sequel of Notice.]

HAVING touched upon matters somewhat in advance, we have now to revert towards earlier steps, and may observe, that Dr. K. speaks highly of the importance of Kurachy to the future navigation of the Indus:—

"Dépôts of stores and well-equipped detachments at Kurachy, and Sukkur, and Dera Ishmael Khan, will not only place the navigation of the whole river in perfect security, but form an invincible barrier to an invading army from the west: not that the Indus is to be relied on as 'a wet ditch, full of water,' like the moat of Ghizni; but as a canal for the easy and cheap conveyance of heavy ordnance and ammunition, and other military stores, to the scene of action, where an invading army would find a well-equipped artillery, which no expenditure could enable them, under any circumstances, to meet upon any thing like terms of equality. Too great a value cannot possibly be placed on the possession of the harbour of Kurachy, whether as a military and naval station, or in a political and commercial view; and every thing that our government can do should be done without delay, to improve and strengthen it. It is the key of Sind and the Indus, and of the approaches, either military or commercial, to Central Asia. A lighthouse on the headland of Manoorra, and a pier on piles at the landing-place, are the first desiderata. The second and third will be the improvement of the Garra Creek, and a canal to reunite it to the Indus, to make Kurachy what it was in the days of Alexander, on the western outlet of the Indus. We may now, at least, hope that the noble canal of this immense river is open for twelve hundred miles, to the rich regions of the Punjab and Kanbool, and that the port of Bombay may become the emporium of an important traffic, conveyed along its waters, not inferior event."

ually to what Calcutta now receives from the Ganges. The opening of the navigation of the Ganges formed the greatness of Calcutta, and combined, with the superior advantages of Bombay, to destroy Surat, which then ceased to be the emporium of European trade with the kingdom of the Mogul. The opening of the Indus can only affect the inland trade westward; and even there it admits of most plausible argument that, whilst the regions of Central Asia, by exporting their raw products of wool, and dyeing drugs, and gums, will be enabled to import a thousand-fold beyond the experience of past ages, the vast influx of wealth will increase, and not diminish, the present trade in furs and other Russian produce exchanged for the shawls of Cashmere."

As an accessory to these hopeful anticipations, the author says:—

"The fort and town of Diu are still retained by the Portuguese, and should, with Goa, Demau, and the settlements on the African coast, be purchased at almost any price, to be paid by our government. To the Portuguese they were an expensive burden, until our Malwa opium monopoly, with the usual effect of over-high customs, offered a sufficiently high premium to the smuggler to convey his illicit trade from Malwa, through Marwar, to Sind. The value of the opium embarked at Kurachy for Demau has exceeded sixteen lakhs of rupees per annum. A reduction of the duty has reduced the illicit trade, but it is still important. Our new relation with Sind must reduce Demau and Goa to their former insignificance; and it would be no mean policy to secure the possessions, which among other evils accustom the natives to the sight of a foreign European flag, and tend to direct their thoughts to a foreign European power. The Asiatic character in general, and the Hindoo in particular, is compounded of intrigue and treachery, — not because they are Asiatics and Hindoos, but because they are so educated; and they are only to be depended on so far as they see their own interests, and feel the power of their masters. Our future repose indispensably requires that no foreign flag should wave in India. But it is as nests of the wretched slave-trade, for which alone the Portuguese settlements of the Mozambique exist, that they ought to be disposed—by fair means, if possible; if not, by foul: we can never prevent the importation of African slaves at Diu, Demau, and Goa, from Africa, except by an expenditure beyond what the purchase of these unproductive colonies would amount to."

In connexion with this part of the subject, the following remarks are interesting:—

"The absence of sea-birds forms a singular trait in the character of the Indian seas; scarcely a single living thing appeared in the sky above, or the sea below, betwixt Bombay and the Indus. The gigantic albatross and the sea-pigeons roam to many hundred miles from the coast of Africa; here, within four miles of the muddy banks, only a very few sea-birds hovered round us. By the help of glasses, we could discover flocks of flamingoes on the distant beach, but they never travelled seaward. The fleets of fishing-boats only on one occasion brought us fish fit for food: this was not the fault of the fishery, as was afterwards ascertained in the days of peace at Kurachy, but the unsettled state of the country, and the ignorance of the poor fishermen of our punctuality in payment; a proceeding, by the stronger party toward the weaker, so apparently unnatural to a Sindian, that it was the most difficult to their compre-

hension of all our peculiarities. They described the shoals of cod to be migratory; that on some occasions a single boat would take a hundred in a night, and that at other periods not a dozen in a week. The cod-sounds, described as the lungs or air-vessels of the fish, are cut out, and the fish itself thrown away, not being eatable: these sounds are dried, and sold at the rate of three for a rupee, for exportation to China. When dried, they are like lumps of glue; and form, with the gummy birds' nests, and shark-fins, &c. the glutinous luxury of the Chinese gourmands, who seem ignorant of the simple fact that all gluten of animal matter may be boiled down to any particular consistence required, and that the strength of the jelly that results depends upon the quantity and the boiling. In reference to this market, the salop misri of Ghizni, a bulbous root not unlike a small turnip, and dried in the sun for exportation, will be a valuable article, forming a finer and richer jelly than arrow-root or sago."

Every narrative of this campaign which has yet appeared (and we have one of the Bengal operations still before us for review) speaks the same language of the transcendent services performed by one of the ablest of our countrymen in the East. Of Sir Alexander Burnes, Dr. Kennedy states, on his arrival at Kandahar:—

"My excellent friend, Sir Alexander Burnes, received me with the kindest welcome, and with all that unaffected goodness, simplicity of manner, and warmth of heart, which mark his character. My residence in India has denied me personal knowledge of the great ones of the earth. They have not been the worse for it; nor, thank Heaven! have I. But I have seen and conversed with Mountstuart Elphinstone, and with Reginald Heber, two sublime, and, as far as the world can read them, faultless characters, most singularly resembling each other, and apparently made different only by circumstances of early position and initiative steps in life. I have seen and conversed with Sir John Malcolm and Sir James Mackintosh. The most *outré* egotism in the former, and a more refined but scarcely less concealed self-estimate in the latter, could not reduce them to the level of common men. I have seen in my time a stupendous amount of India big-wiggery, in all shapes and in every possible variety: and the less we say of it the better. But of the great minds which I have been allowed to study, and which I can be allowed to name, one distinguishing characteristic was their simplicity and naked truth; and in this essentiality of greatness Sir Alexander is most especially modelled after them. At his early age he has done more, and been more under the world's eye, — and borne the inspection well too, — than either Elphinstone or Malcolm had done at his time of life; and, in the absence of all that is artificial, that indicates self-seeking or self-love, he surpasses the latter, and equals the former; and, should his life be spared, the highest pinnacles of Indian greatness await him, as they fell to the lot of those to whom I liken him. These observations are not the overflowing of attached friendship; they would have been suppressed, and my friend's great services left to speak for themselves, had justice been done him in the past year: but that justice remains yet to be done; and until it is so, whilst the palm of merit is awarded to others as inferior to him as pygmies to giants, it is the historian's duty to tear pretension to tatters. But this is enough."

The following account of an Eastern ceremony is seasoned with some satirical remarks:—

"On the 27th of May was performed the

very singular ceremony of as many officers of the army as chose being introduced at court to present Nuzzurana; that is, to pay feudal homage. 'The Mayor of Garrat,' and the Kings of the Antipodes and of the Cannibal Islands, have redeeming wit, though coarse, to palliate the folly; but here the whole affair was done in sober sadness, and intended for the sublime, though it went the step beyond, and trenched on the ridiculous! Let it be remembered that Shah Soojah and his family for twenty years past have lived dependants on Britain at Loodiana, and that he is restored only by the British treasury and the British bayonet; that, when restored to all that it is intended to give him, his royal revenue as the king of Afghanistan, at the most favourable estimate, will be short of 300,000*l.* sterling for the whole royal financial resources of the Douranee empire. Knowledge may be power, but revenue is power too; and whatever Shah Soojah may be whilst befriended by his indulgent ally the British government, the most extravagant fancy could not by any stretch of imagination magnify so insignificant a potentate into a pageant for admiration. The ceremonial was simple enough. Officers wishing to go were supplied with gold mohurs—a coin value 1*l.* 10*s.* —at the rate of twenty each for general officers and brigadiers, five each for field-officers, and two for captains and subalterns. The majority attended partly through curiosity, and partly through a sense of duty, as their presence seemed to be wished. The Shah was seated in a neglected court-yard, 'where once the garden smiled,' surrounded by ruinous buildings; but very few of his Affghans were present, and those chiefly his domestic servants. The officers passed in array before him, dropping their Nuzzuranas of sixty shillings each for captains and subalterns, and 7*l.* 10*s.* for field-officers, in slow succession; the old king, with a very demure look and a most marvellously well-dyed black beard, looking on with an abundance of satisfaction, and remarking, when the ceremony had concluded, that he felt himself in all the realities of waking bliss a king indeed. 'Umeeen sultaun! e'en us!' was his observation. Whoever advised this ceremony might be a friend to Shah Soojah, but must, in my opinion, have ill understood the native character, and have entirely overlooked that it was not calculated to do honour to his own countrymen. This is a point on which, I think, I am competent to deliver an opinion: my whole life has been spent in close intercourse with natives of every class and character, and a great portion of it in a native court far superior in wealth and importance, as respects ancient rights and hereditary claims, to that of Shah Soojah; and not only did I never see or hear of such an exhibition, but, let whatever may be the practice at Delhi, I am persuaded that it would be 'more honoured in the breach than the observance' at a new court of our own creation, and that no native of Western India could have imagined the possibility of its occurrence at Kandahar. On our arrival at Kandahar the climate had still the sweetness of spring, and the nights were cold; but as May advanced the days became sultry, and by the middle of June even the nights were close and hot. The weather, even at three thousand five hundred feet elevation in 31° north, was too severe for tents: the average range of thermometer was maximum 104°, minimum 64°; the former being twenty degrees higher, and the latter ten degrees lower, than a good house would have exhibited. In Sir A. Burnes's room, about 84° and 74° appeared to be the mean of the month.

The fruits were afterwards so surpassed by those of the orchards of Kaubool, that they were forgotten; but, when they first appeared, the apricots and plums of Kandahar were considered beyond praise: and the snow, which on our arrival, the bazar supplied at a very moderate price, but which was soon consumed, was, whilst it lasted, the unbounded delight of all to whom it was a luxury from its novelty."

Before leaving Kandahar, we must notice its most striking antiquity. In the city,

"The only curiosity that remained was a stone vase of black whinstone, of the shape of an ordinary china cup, four feet in diameter, thirty inches deep, and six inches thick, covered with Arabic inscriptions of quotations from the Koran. The carver had hewed for some other object than for fame, as his name was not engraved on his work; at least, I did not see it. This singular piece of antiquity was left neglected under a tree, near a faqueer's hut; and if Mr. Mac Naughten would bestow his influence to get it conveyed to the British Museum, a trifle of the public money might be employed in a way that would gratify public curiosity, would present a pleasing trophy of the campaign in the British metropolis, and a very interesting specimen of ancient Asiatic art from Kandahar."

We conclude with a specimen of the uncertainty which attended most of our agreements with native authorities:—

"The Lohany chief—a personal friend of Sir Alexander Burnes—had been induced to furnish a caravan of four thousand camels, and to travel with a strong party of his tribe, supposed near seven hundred, and escort them from Shikapore to Kandahar. A guard was offered him from Sukkur; but he replied, he thanked God he could guard himself, and only asked and received a few muskets and a little ammunition. His arrival was now most anxiously looked for; it had been expected on the 14th of June, but it did not take place until the 23d. 'He had been delayed,' he said, 'by attacks of Beloochies; but through God's assistance had severed thirty-eight of their heads from their shoulders, and had brought all safe, the enemies' heads inclusive—two camel-loads!' Some said that Scirva Khan, the Lohany chief, had been tampered with by Dost Mahomed; if so, the gallantry he displayed in repulsing the Chief of Khelaut's people when attempting to plunder the stores in his charge, must have been a temporary effervescence, and not the constitutional character of a naturally brave man; for there was nothing to have prevented his directing his course by the Toba mountains to Ghizni, communicating his position and his plan to the Ghilji chiefs to cover his march through their terrific defiles, and so delivering all our stores to the enemy. Nothing but his own integrity, or far-sightedness as to his own interest, could have secured us that convoy; and it is not reasonable to impugn with treachery a humble but very useful ally, who performed a most difficult and dangerous task with perfect fidelity, because he was pleased to say that he could not go farther through circumstances beyond his control, and could not do more than he had contracted to perform. He acknowledged that his people had been tampered with by Dost Mahomed; declared himself dissatisfied with our remuneration for his past services, and our offers for the future; said he could not trust his own people, and would not put himself in the way of being betrayed by them, and compromised with the British government. Those who knew more of the matter than I could attached no blame to the Lohany chief; but

those whose duty it was to have been in communication with him, should have ascertained beforehand the important fact, whether he could or would proceed onward with the army."

#### MISCELLANEOUS.

*The Principles of Population, and their Connection with Human Happiness.* By Archibald Alison, F.R.S.E. &c., author of "The History of Europe during the French Revolution." 2 vols. 8vo. 1840. Edinburgh: Blackwoods. London: Cadell.

THE mass of information in this work, collected during years of pains-taking and research, recommends it very strongly to the public. In its pages the benevolence of the author is no less conspicuous than his reasoning powers; and instead of being led to believe that the Creator of our world has made it insufficient for the increase and sustenance of those he has planted upon it, we are taught that Divine wisdom has amply provided for all creatures and every contingency that may arise. The whole may be viewed as a supplement to Mr. Alison's great work, "The History of Europe during the French Revolution." The grand support of population, Agriculture, has its interests warmly enforced; and the various checks and restraints which gradually arise out of social and other circumstances to limit all wants to possible supplies are dwelt upon with philosophical comprehension.

The subject branches into far too many most important considerations to allow of our taking up even one of them to illustrate a production of this magnitude. The chapters on the management of the poor, and on charity, public and private (the latter of which Mr. Alison feelingly advocates, notwithstanding all the cold arguments against it)—on colonisation—on church establishments and the voluntary system,—on education, are eminently deserving of the deepest reflection. The dangers of exciting the minds of men beyond the sphere in which they must move are clearly pointed out, and it is shewn that in nothing is the present transition state of society more conducive to depravity than in extending human desires beyond their means of gratification. But we must not attempt to particularise, and thus give so utterly a meagre and imperfect idea of a whole, which affects the dearest interests of mankind in every way which can prompt rational beings to bestow their earnest thoughts on the matters adduced by this very able author.

*Annals of Humble Life.* 1840. Maitland.

A SERIES of tales too trifling to interest the grown-up reader, and with some passages which would prevent its being placed in the hands of young people.

*The Election.* By the Author of "Hyacinth O'Gara." &c. Dublin, Tims; London, Simpkin and Marshall.

AN Irish story, not remarkable for any thing.

*Arnold's Italian Analyst.* Pp. 116. (London, Rivingtons.) *Alfred's Italian and French Conversations.* Pp. 148. (London, Jeffs.)—Two very nice and useful books for students in Italian.

*An Appeal in Behalf of Church Government,* by a Member of the Church. Pp. 147. (London, Houlston and Stoneman.)—An elaborate review of the debate in the House of Lords on this important subject, in which its chief features are touched upon with moderation and ability.

*The Hand-book up the Rhine.* Pp. 104. (London, Churton.)—Very small, very convenient, and very useful, for a summer trip up the Rhine and back again.

*Elements of Algebra, for the Use of St. Paul's School, Southsea, and Adapted to the General Objects of Education,* by W. Foster, M.A. Pp. 78. (London, Simpkin and Marshall; Portsea, Woodward.)—Of this little treatise we can truly say, that it offers a clear and simple guide, within a small compass, to all the essential parts of algebra taught in schools. A slight difference in the

mode of arranging equations is the only variance we observe from established practice. It is, altogether, a very deserving instructor.

*Selections from Robert Hall, A.M.:* with a Brief Sketch of his Life and Notes, by C. Badham, B.A. 12mo. pp. 400. (London: Ball, Arnold, and Co. Ipswich: Burton.)—The reputation of Robert Hall stands so high, and his writings have so richly deserved it, that it required nothing to make an acceptable selection from his works but discrimination and judgment, both of which Mr. Badham has exercised in the miscellaneous volume before us.

*Murphy's Bible Atlas.* Pp. 56. (Edinburgh: Murphy, Stirling; Kenney and Co. London: Duncan and Malcolm.)—A little book with maps illustrative of the Old and New Testament, and accompanied by historical descriptions well adapted for readers of the Scriptures who desire to gather such information as they pass along.

*A Peep at Grammar.* Pp. 36. (London, Darton and Clark.)—A sixpenny peep for children, without any defined object, but correct in what it states.

*Exposure of Misrepresentations contained in the Preface to the Correspondence of W. Wilberforce,* by H. C. Robinson, Esq., editor of Mr. Clarkson's "Strictures." Pp. 90. (London, Moxon.)—This is another step in the controversy about the respective merits of Messrs. Wilberforce and Clarkson; and Mr. Robinson, as the advocate of the latter, fiercely attacks the sons of the former for, as he alleges, exalting their father at the expense of his friends and contemporaries.

*Poems,* by W. Henry Leatham. Pp. 358. (London, Longman and Co.)—The earliest effort of a young aspirant to the muses; and containing some agreeable compositions in the ballad style. A love of nature and a love of virtue are two good poetical constituents; and these Mr. Leatham possesses, whilst his faults are those of youth and inexperience. The poem entitled "Sandal in the Olden Time," has some sweet and pretty passages.

*Miss Julia Corner's Historical Library.* Part VIII. (London, Dean and Munday.)—In this Part our pleasant instructress of youth arrives at Ireland, and brings down its history familiarly to the time of Henry IV. The narrative is written with great facility, and is both agreeable and intelligent.

*The Student's Manual of Mercantile Knowledge, &c. &c.,* by J. Antrobus. 8vo. pp. 138. (London, Longman and Co.)—As far as we can judge, comprehending most of the subjects of interest to persons engaged in trade and commerce.

*Table-Wit, and After-Dinner Anecdote,* by the Editor of "Laconica." &c. Pp. 132. (London, Tilt and Bogue.)—An amusing selection of some five or six hundred bon mots, puns, witticisms, and acute remarks, chiefly from modern writers. A sort of new "Joe Miller."

*The Florist's Journal.* Nos. I. II. III. IV. V. 8vo. (London, Hayward and Moore.)—The natural love of flowers is likely to grow with an increase of the banquet on which it feeds; and when we look at the vast improvements and novelties which our gardens boast within the last twenty years, we need not wonder at the variety of publications which follow in the floral train. This *Journal* gives accounts of "fashionable" flowers (for we may use the term to indicate novelties which are the rage of the season); has a gay-coloured frontispiece of them for every number, just as a court-beauty is prefixed to a magazine; visits the interesting nursery-grounds about London; and gives us calendars and other matters connected with its subject, so as to be altogether a very laudable miscellany at the low price at which it is sold.

*Christian Morals: Englishman's Library,* Vol. X., by the Rev. W. Sewell, M.A. Pp. 410. (London, Burns.)—The Professor of Moral Philosophy at Oxford has, in this volume, gone with much circumspection into an examination of Ethics, and thence contends that they involve the Science of Education. He also enters into several abstruse questions connected with the subject, such as baptism, free will, the covenant with God, &c. &c. The book is evidently for students of divinity, and may point out to them the way to deeper research upon these great topics.

*The Pulpit,* Vol. XXXVII. (London, Sherwood and Co.; Edinburgh, Oliphant.)—Another excellent volume of this work, whose continuance is a sufficient mark of its success.

#### ARTS AND SCIENCES.

##### THE BRITISH ASSOCIATION.

THE local preparations for the meeting at Glasgow, the tenth of this Association, which has given so strong and friendly a stimulus to science, have, we learn with pleasure, been perfected with all the skillful arrangement that belongs to a mercantile city, and all the liberality of a wealthy one. Latterly the Secretary, Mr. John Phillips, has added his experience to the labours of the Glasgow officers, who have been most zealous and indefatigable in the previous discharge of the duties they had undertaken. The first meeting of the General Committee is appointed for Wednesday, the 16th September. On the evening of the 17th the President elect, the Marquess of Breadalbane,

will take the chair; and communications, or statements of their general nature and probable extent, are invited to be addressed to the Assistant-secretary at Glasgow previous to the first of the month.

The Hall of Hutchinson's Hospital is assigned for the information which members may require on arriving at Glasgow. From all we hear the meeting is likely to be a brilliant and interesting one. It may not be able to originate another Antarctic Expedition; but there can be no doubt that from every such public manifestation of a love for science and a desire to promote it, much of good and value must ensue.

#### NEW AGRARIAN SYSTEM.

WE regret our want of power, without diagrams and engravings, which our *Gazette* could not contain, to afford any adequate idea of the important system which Mr. Pinkus has developed under the above title. It applies to the entire agriculture and cultivation of the earth which we inhabit, and from which all mankind derive their sustenance.

At the Colosseum, in the Regent's Park, we attended and witnessed the working of a model of certain machinery, by means of which this extraordinary revolution is proposed to be brought about. It consists of a stationary steam-engine, which communicates by pipes laid a few inches under ground, and branching in all the necessary directions, with the machine for performing every kind of husbandry and agricultural labour,—ploughing, harrowing, sowing, reaping, draining, levelling, cutting down wood, &c. &c.

Mr. Pinkus states his decided opinion that locomotive power, similar to that employed on railroads, can never be effectively used for agricultural purpose; and goes on to say that he has invented and adopted "the only feasible means of using steam power in the cultivation of the soil, the easy practicability of which no one conversant with practical science can hesitate to assent to; they admit of the use of stationary steam power, or water power; no other methods of application can be so efficient or economical. By these improved methods, detailed in the enrolled specifications of the several patents, distant fields, comprising many square miles, near to or surrounding a station, are combined with it through the medium of pipes laid under ground, leading from the station and passing into the fields, in such proportion as that in every square mile there shall be a half-mile in length of mains or pipes; through these the power of the stationary engine is transmitted into the fields by an auxiliary vacuum power, which the mechanical combinations of this invention admit of being taken up in any parts of such fields to put in motion a locomotive engine of light weight by vacuum power, which engine has neither boiler nor furnace. To this engine various agricultural implements are from time to time appended, that perform all the operations herein enumerated. Thus one of the most effective philosophical principles in nature is made available, through the agency of fixed engines, to the purposes of agriculture."

The engine alluded to is propelled by a hollow, flexible tube, working round a roller parallel to the axle, and which, by a slight check, may be reversed at pleasure, so as to operate backwards and forwards, and in any direction. The ploughshares, harrows, hoes, scythes, or whatever is wanted, are readily fixed to this movement, and do the business of many horses and many persons.

Mr. P. goes on to observe:—

"The power of stationary engines being unlimited, the efficiency of the locomotive impelling machine can be varied from time to time, to suit the exigencies of field labour. Stationary engines, whether for steam or water, yield power in the cheapest form. An ordinary stationary engine will last more than twenty-five years. If—for steam admits of the use of fuel of the cheapest kind—its force can be augmented to any desirable extent, and it can be accumulated for the moment it may be required. No other means of applying it affords this advantage. It is, in fact, a well-understood principle in physics, that whatever moving force be expended in producing the rarefaction of air in—say, in an extended main hermetically sealed—must necessarily be followed by a corresponding force at a given distance from the prime mover or generator of force when taken up from the main, and made to act on pistons moving air-tight in cylinders, and exposed to the free action of incumbent atmospheric pressure. The whole power of the stationary engine is transmitted and taken up in a given time without any loss in the transmission. The only mechanical parts of the locomotive here used are those which, in similar machines, sustain but little wear and tear, or mechanical disarrangements. By it spade labour may be applied so rapidly and cheaply as to dispense with the use of the ploughshare altogether, thus deriving the well-known benefit of spade labour in thoroughly pulverising and tilling the soil. For opening trenches in the stiffest soils its power is efficient; in bog or marshy lands it is equally so; and for making tiles to effect drainage, or for mixing and spreading soils, it is the moving power. Not only in Great Britain and Ireland may the value of landed property be greatly enhanced by the application of this invention, but, in those colonies where the value of an estate is estimated not so much by the number of acres as by the amount of labour which is brought to bear on lands, it will increase their value in a fourfold proportion; and a not less important object may, by its introduction, be attained in those colonies where slave labour is mainly depended upon. So effectually will it compete with such labour, and so reduce its value, that, it is hoped, it will be found to be one of the most effectual means of any yet suggested, of conducting to the annihilation of that iniquitous system—slave traffic."

For the present we must content ourselves with this announcement; for it would lead us to a very prolonged discussion to touch on the mighty changes which the adoption of such a mode of raising produce must cause. The land of Britain, estimated at 3,000,000,000 acres, of which 40,000,000, capable of feeding 20,000,000 of people, are as yet uncultivated, offers an immensity for experiment. A million of horses might be dispensed with; the cost of which would be a saving of 30,000,000*l.* per annum. In the meantime this steam power, which has done so much for our manufactories (though applied to a total value of only 350,000,000*l.*), has never been made to serve the infinitely more important uses of agriculture. What may come of it as yet we cannot foresee; but if the plan can be carried into effect on a large scale, it must be prodigious—incalculable!

#### ZOOLOGICAL SOCIETY.

SOME extraordinary novelties were exhibited at the scientific meeting of this Society on Tuesday evening by Mr. Gould, the well-known ornithologist, who has just returned from Australia; whither he proceeded, about

two years since, for the purpose of collecting the requisite information for his forthcoming work on the birds of that interesting country. Mr. Gould's indefatigable perseverance, his warm attachment to the study of natural history, and his undoubted scientific attainments, well qualified him for his arduous and adventurous undertaking. His success has far exceeded his expectations, and he has brought with him the finest collection of quadrupeds, birds, their nests, eggs, &c., that has ever been imported into this country. Mr. Gould has also made a very fine series of drawings, and obtained a vast fund of information connected with the objects of his research. The subjects exhibited by him on Tuesday evening were a new and very singular species of lizard: two extraordinary bower-shaped playing-grounds, or "runs," as they are called, of the satin-bird; *Philonorhynchus holosericeus*, Temm.; and *Chlamydera maculata*, Gould. These are the most singular examples of the architectural powers of birds that have ever been observed. Mr. Gould then exhibited and gave an interesting account of no fewer than six new species of that curious tribe of quadrupeds the kangaroos, all of which possess well-defined and distinct characters. A very powerful species was named by him *Macropus robustus*; another, remarkable for having a nail at the tip of the tail considerably resembling that on the human finger, *M. unguifer*; a third, with elegant harness-like markings, commencing at the nape of the neck and proceeding over the shoulders, *M. lateralis*; a fourth, remarkable for the smallness of its feet, and for its fur closely resembling that of the English hare, *M. pilopus*; a fifth, with a lunar-shaped mark over the shoulders, *M. lunatus*; and the sixth, being procured in the neighbourhood of Nepean Bay, *M. Nepeanensis*.—Mr. Cuming, corresponding member of the Zoological Society, who has lately returned from the Philippine Islands, afterwards exhibited an interesting series of new shells belonging to the family *Helicidae*; accompanied by the reading of two papers, in which their characters were given, by W. J. Broderip and G. B. Sowerby, Esqrs.—The meeting then adjourned to the 8th of September.

#### GEOLOGICAL SOCIETY.

[Concluded from our last.]

MAY 13th and 27th. Dr. Buckland, President, in the chair.—*Older Formations on the Left Bank of the Rhine, the Harz, and Upper Franconia.* The authors commence this division of the memoir with an account of the physical structure of the region, extending from the coal-field of Belgium to the south-eastern flank of the Ardennes; next, they describe the country between the same coal-field and the lime stone of the Eifel; then they discuss at some length the methods used by M. Dumont to determine the superposition of the natural groups, and after proving that the geological sequence had been correctly assigned by him, they show that the Belgian coal-field is on the same geological horizon as the coal-fields of England, and the upper limestone of M. Dumont to be true mountain limestone: but they object to the classification by that observer of the three lower divisions of the terrain anthracifere with the Ludlow rock, the Wenlock limestone, and Caradoc sandstone: and place them in the Devonian system. With respect to the lowest of these divisions the authors show that its descending series is better developed, and more fossiliferous in the Eifel than near Liege; and they infer, that though several species of its organic remains

are in common with those of the overlying Devonian system, yet that as a group they are distinct. 1st. Because the carboniferous species disappear; secondly, because the *Strygocephalus Burtini*, and other shells characteristic of the lower limestone, are wanting; and, thirdly, because Silurian fossils, as the *Homonotus Knightii*, *Calymene Blumenbachii*, &c., begin to abound. The authors farther remark, that the Silurian fossils given in the Eifel lists are mostly obtained from these lower beds. There is no defined boundary between this group and the slate country of the Ardennes; the strata composing which are subdivided into an upper, middle, and lower group. From the first the authors obtained fossils wholly referable to Silurian types, but from the second and third they did not obtain any; and as all the groups are linked together, they place the uppermost in the Silurian system, and the two lower in the Cambrian. Some observations are then made on the structure of the slates of the Ardennes; and among the crystalline beds of the lowest group are pointed out some examples of slates, derived from a cleavage transverse to the beds, and intersected by a true second cleavage plane, a rare phenomenon among the slates of England, but noticed by the authors in some rocks on the south coast of Devonshire and the north coast of Cornwall.

*Formations between the Eifel and the Hunsrück, Left Bank of the Rhine, &c.*—In several distinct traverses from the Eifel to the Moselle, the authors met with the same descending series, in some places highly fossiliferous; including several species of *Pterinea*, *Dalmanites*, and *Orthis*, also casts of a large Silurian *Homonotus*, and occasionally obscure impressions of plants. The sequence determined more by the symmetrical position of the great mineral masses than by direct superposition, as seen on vertical sections, gradually passes into rocks of a more decidedly slaty structure, and almost without fossils. Passing to the right bank of the Moselle, they again had, in traversing through the chain of the Hunsrück, an ascending series, and thence they concluded that the whole chain is only a portion of the great system under the Eifel limestone, in an altered form. The Silurian fossils discovered among the crystalline quartzites and schists of the chain confirmed this view. Hence also the chain of the Taunus, a physical prolongation of the Hunsrück, must be referred to a similar place in the general series,—a conclusion at which the authors also arrived from an examination of the sections on the right bank of the Rhine. The authors then offer some remarks on the trappean and volcanic rocks on both banks of the Rhine, and they infer that the quartzites, chlorite slates, &c. of the Hunsrück and the Taunus, are only altered Silurian rocks. On a review of the foregoing facts they conclude, 1st. That from the carboniferous deposits of Westphalia and Belgium to the lowest fossiliferous deposits of the Rhenish provinces, there is a great and uninterrupted series of formations, which are in general accordance with the British series, though the subordinate groups do not admit of direct comparison; secondly, that the natural successive groups of strata, and the natural successive groups of fossils, are in general accordance, but that the boundaries of the physical and fossil groups are ill-defined, and pass into one another; thirdly, that as there are no great mineralogical interruptions, or want of conformity among the deposits, so there seems to be no want of conformity among the

groups of the great palaeozoic series of animal forms; fourthly, that the Devonian system is a natural system defined in the Rhenish provinces, both by its fossils and its place, in a true descending section; and as the old red sandstone of Herefordshire passes on the one hand into the carboniferous limestone, and, on the other, into the upper Silurian rocks without interruption, so it follows that the Devonian system, as above defined, is contemporaneous with, and the representative of, the old red sandstone.

*Chain of the Hartz, Fichtelgebirge, &c.*—

The authors commence this portion of the memoir with remarks on the physical structure of the region, and the difficulties in determining the true order of superposition. The general strike of the chain, the mineral structure, and the fossils, are stated to be the same as in the preceding districts. They then describe the igneous rocks, which are said to be of four kinds,—firstly, traps in beds, or protruded masses nearly on the line of strike; secondly, granite, sending veins into the older slates and trappean rocks; thirdly, quartziferous porphyry in masses, or dykes, agreeing with the elvans of Cornwall; fourthly, trap rocks, associated with rothe-tode-liegende and coal measures. Silurian fossils are found in several parts of the Hartz; but the authors saw no rocks which they could compare with the central slates of the Ardennes, or the oldest slates of the Rhine. A section from Heiligenstein to the neighbourhood of Clausthal gave the following ascending series:—1. Devonian limestone with well characterised fossils; 2. Psammites and shales with psidonia; 3. Coarse sandstone and grits surmounted by psammities and shales, highly charged with plants, and mineralogically resembling the Devonian culm beds. Another section, commencing at Ebingerode, on the south side of the Brocken, gave—1. Limestone and Devonian fossils; 2. Ferriferous deposits; 3. Black shale, containing kiesel-schiefer, and, if the authors were not misinformed, psidonia schists. From these facts they infer, that the older rocks of the Hartz are chiefly Silurian and Devonian, with traces of the lower carboniferous. They also state that if the great contortions and strike of the Rhenish provinces were produced contemporaneously with those of the Hartz, then the great derangement of the Hartz must have taken place after the deposit of the Belgian and Westphalian coal-fields; but before the accumulation of the red conglomerates, sandstones, coal-beds, and trappean masses at its eastern flank. Hence the authors infer that none of these red conglomerates are of the date of the old red sandstone, and that the coal-beds belong to the highest part of the carboniferous series, where it passes into the new red sandstone. Lastly, they describe a hasty traverse from the Thüringerwald through the forest of Upper Franconia, and thence to the north flank of the Fichtelgebirge. On the northern limits of the section are rocks with a true slaty cleavage, which might be compared with the upper slates of the Ardennes; farther south, the analogy was confirmed by bands of limestone with stems of encrinites; still farther south occur impressions of plants; and the whole system appears to be finally overlaid by a series of limestones and schists, some of which are very rich in fossils. The lowest of these zones of limestone rests on calcareous slates, containing a coriaria of the upper Ludlow rock. In this zone the species of clymenia are most abundant; goniatites and orthocera are numerous in a higher zone; and

the series is overlaid by a limestone containing many true carboniferous shells. From these facts the authors are convinced that the fossiliferous region near Hoff belongs to the Devonian system, with the exception of the highest beds, which are carboniferous. Such are the results arrived at by the authors; and they seem to be in general accordance with one another, and to bear out the classification proposed for the older British formations.

PARIS LETTER.

Academy of Sciences, August 25, 1840.

SITTING of August 17.—MM. Soyex and Inger, the eminent bronze founders, sent to the Academy a statuette, and a bust of the heroic size, entirely covered with copper by Professor Jacobi's galvanic method, slightly modified; as well as a small branch of the box-tree beautifully encrusted in a similar manner.—M. Verumore sent a communication of a farm at Tamerville, near Valognes in the Manche, having been burnt on the 3d August by the fall of a meteor, or shooting star. Six witnesses affirmed the fact of having seen the meteoric body going in the direction of the house, and of the conflagration breaking out immediately after; but there were no means of proving that it actually hit the building.—M. Arago laid before the Academy some valuable manuscript maps of the territory of Venezuela, made by order of the republic, by Colonel Codazzi. The Lake Maracaybo had been thus accurately determined in all its bearings, &c., for the first time; and all the territory was correctly delineated. Much admiration was excited by this fine work: it is to be lithographed and published at Paris.

*Geology of the Mountains between the Saône and the Loire.*—M. Elie de Beaumont read to

the Academy a very voluminous report on several memoirs by Captain Rozet, who had been surveying and examining this district for three years. The granites and porphyries were observed to form distinct masses of hills, with central points from which the rest of the mass took their ramifications,—these ramifications becoming lower in elevation according as they extended, and forming a col, or pass, whenever the granite and the porphyry met. In some of these masses a kind of bearing from north-west to south-east was observable. Each of these masses was considered by M. Rozet to be the effect of upheaving: the granite between La Claye and Autun rises to 760 metres above the level of the sea, and is at 230 metres in its lowest elevations. Similar observations were made in all the other districts. It was found that several schistose formations were much broken and distributed by the porphyries, and were traversed in several localities by porphyry veins. The granites and porphyries themselves, as well as the other later formations, were also found to be traversed by quartz veins; and in particular at St. Christophe, on the new road to Charolles, it was found that quartz veins pierced the granite, and a stratum of calcareous rock full of gryphites lying upon it: in some spots the quartz appeared to have soldered the granite and the calcareous rock together. M. Rozet divided the periods of upheaving of these mountains into six: viz. 1. That of the leptinites and the gneiss; 2. Of the granites, some of which are posterior to the schistose rocks, since they penetrate them as veins; 3. Of the porphyries related to the carbonic series; 4. Of the enrytes which penetrate the carbonic series; 5. Of new commotions which have produced extensive dislocations among the iridescent shales and the lias:

the lias is penetrated by quartz veins, accompanied by sulphate of barytes, fluor spar, and galena; 6. The basaltic eruptions posterior to all the formations. M. Rozet thinks that the whole of this central plateau has received a general inclination, turning round an imaginary hinge in the direction of the valley of the Saône.

**Atomic Weight of Carbon.**—A letter was read from M. Dumas, stating that, from very accurate experiments recently made for determining the weight of the proportional atom of carbon (the process of combustion in pure oxygen gas had been adopted, and the carbonic acid thus formed had been collected with very minute precaution), he had been led to doubt whether it should be 76.5, as commonly given: he thought it should be only 75. He had made fourteen experiments, and had employed oil of naphtha, camphor, benzoic acid, and graphite. If this were true, he observed, it would make a most important *erratum* in all chemical books, and would also tend to confirm an hypothesis long since emitted by Prout, that the atomic weight of a body is always a multiple of the weight of its hydrogen.

Several minor papers on infusoria, on the silurus, &c., were read.

**Academy of Inscriptions and Belles Lettres.**—At the last sitting, M. Gobert's prize (9000 francs per annum till a new award of prizes is made) was given to M. Ampère, for his "Literary History of France before the Twelfth Century." A second prize of the same foundation (1000 francs) was adjudged to M. Montell, for "Histoire des Français des divers Etats." The three gold medals for works on national antiquities were also distributed: one to M. Jollois, for his "Antiquities discovered at Paris;" another to M. Jubinal, for his "Ancient French Tapestry;" and the third to Messrs. Albert Lenoir and La Saussaye, jointly, for their works "On the Medieval Antiquities of Paris."

**Academy of Moral and Political Sciences.**—Sitting of August 23d. M. Eusébe de Salle read a memoir on certain points of the ancient history of Egypt, and on the filiation of the human race. M. Blanqui presented a report on a work by Gen. Letang, upon the means of insuring French domination in Algeria. He was for promoting civil colonisation, and for founding hospitals and other benevolent institutions for the natives.

The Minister of Public Works has directed that all head engineers of the Ponts et Chaussées shall be furnished with barometrical apparatus, for observing the heights of mountains within their respective districts.

M. Bodichon, of Algiers, has sent to the public library at Nantes a curious Arabic MS., found in one of the mosques at Constantina, when the town was taken. It comprises the first part of what is called "The smaller Collection of the Traditions of the Dispenser of Rewards and Punishments," composed by Djelaleddin Abou 'l fadhl Abderrahmān el Souïthy, about the end of the fifteenth century; and contains the principal traditions, religious, judicial, and moral maxims, &c. of the Mussulmans, arranged in a dictionary. The MS. in question comprises the first seventeen letters of the Arabic alphabet.

M. de Golbéry's translation of Niebuhr's "Rome" is now finished. A most interesting biographical and literary notice of Niebuhr is in the last, or eighth, volume; besides some able dissertations of the translator in the seventh volume on the *Comitia de Roma*, and the "De Republica" of Cicero.

The musical library of the late Professor Thibaut, of Heidelberg, is, we understand, about to be purchased by the government of Baden. It contains 1500 volumes on the theory of music; the *chefs d'œuvre* of the greatest composers of the eighteenth and nineteenth centuries; a large collection of compositions of the fifteenth, sixteenth, and seventeenth centuries; and a vast series of national songs and airs, to most of which Professor Thibaut has added accompaniments for the pianoforte.

**Exhibition of the Works of the Students of the French Academy at Rome, in the Ecole des Beaux Arts.**—We have just been rathbling through the halls and galleries of this beautiful palace. The works sent home this year are neither numerous nor very striking in excellence. An "Adam and Eve," by Pils, a young student in his first year, is one of the best: the colouring is good, and the drawing natural. He is a decided *Ingrist*, following M. Ingris in his *umbre tints* with great closeness. A "Prometheus Vincitur," by Jourdy, is another picture of the Ingris school, which contains much anatomical science, but is by no means a pleasing production. The sculpture is not worth mentioning; but the architectural drawings, though very few in number, are of exquisite beauty; particularly M. Boulanger's "Restoration of the Temples," &c. at Agrigentum; and M. Ochart's "Details of the Græcoastasis."

Fable by M. Jeauffret of Marseilles:—

"L'Assemblée des Vents.

De tous les points de l'horizon,  
Les vents s'étaient rendus dans la même valée.  
Ils y tenaient une assemblée  
Que présidait le fougux Aquilon;  
Là tous ces fiers enfans d'Eole,  
Tous ces tyrans des airs, à la bruyante voix,  
Prenaient tour-à-tour la parole,  
Et se racontaient leurs exploits.  
L'un se vantait d'avoir, dans les forêts prochaines,  
Abattu des sapins, déraciné des chênes.  
L'autre en de poudreux tourbillons  
Avait enveloppé jardins, vergers, moissons.  
Le furieux Auster, déchaîné sur les ondes,  
Et sourd aux cris des matelots,  
Venait d'abîmer cent vaisseaux  
Chargés de trésors et de gazons.  
Borée, Auster, Eurus avaient déjà parlé;  
Quand Zéphire interpellé  
Rompt en ces mots le silence:  
Vous savez la différence  
Que le sort mit entre nous.  
Nulre est un plaisir pour vous:  
Moi, je suis plein d'innocence,  
Vifs, emportés et méchans,  
Vous troublez la terre et l'onde;  
Moi, fidèle à mes penchans,  
Par mon haleine féconde,  
Je fertilise les champs.  
Amoureux de la verdure,  
Je suis le cours des ruisseaux,  
Mariant mon doux murmure  
Au murmure de leurs eaux.  
J'aime les danses légères,  
Que, dans la belle saison,  
Forment sur un vert gazon  
Les bergers et les bergères.  
Dans leurs cheveux me jouant,  
J'en fais voltiger les tresses.  
L'innocence au front riant  
Jamais ne fuit mes caresses.  
Chacun me fait bon accueil,  
Et partout chacun répète  
Que mon absence est un deuil  
Et mon retour une fête.

Zéphire ainsi parlait d'un ton plein de candeur,  
Ses frères, cependant, sont assaillés de rage,  
Indignés qu'il ait pu leur tenir ce langage.  
Borée, Auster, Eurus lui soufflent au visage,  
Et d'une voix à le glacer de peur:  
Va, fuis, lui disent-ils, tu nous fais déshonneur.  
L'autre s'envola de bon cœur.  
Et leur dit en partant: sur la terre alarmée,  
Allez, dispersez-vous, artisans de malheur!...  
Moi, je retourne aux lieux dont mon âme est charmée.  
Je vais, en exhalant une haleine embaumée,  
Dans les prés, dans les bois pleins d'ombre et de fraîcheur,  
Faire ma ronde accoutumée  
Et voltiger de fleur en fleur,  
Je vous laisse l'éclat, le bruit, la renommée;  
Je garde pour moi le bonheur."

*Sciarada.*  
Col mio primo si fan le calzette;  
Mungio l'altro tagliandolo a fette;  
E l'inter, prole già d'un regnante,  
Erra intorno alle siepi e alle piante.  
Answer to the last:—Canestro.

## FINE ARTS.

### THE WELLINGTON STATUE.

WE recently noticed the noble colossal head of his Grace, modelled by Mr. Wyatt, for the equestrian statue to be placed on the palace-gate entrance at Hyde Park Corner. The artist has now cast it in imperishable bronze; and we rejoice to say with at least equal effect. Our readers are aware that considerable uncertainty exists in works of this kind; and, as in enamel-painting, the subject may come from the fire either a perfect production or a failure. In the present instance the gun of Waterloo has proved its fidelity to the victor of that immortal field, by filling the mould with as superb a metal as ever ran from a furnace. It is almost like the grain of pure gold, and of adamantine hardness. We trust the entire group may be equally fortunate; and it is honourable to the government to have favoured the sculptor with this piece of ordinance for his interesting experiment, with the success of which we are sure they will be cordially gratified. As an anecdote connected with it, we may notice, as a curious coincidence, that the gun bore the initials of the duke's brother, Lord Maryborough, who was master-general at the period it was cast. We trust that there are plenty more to complete the work; and that those in authority will act with the same liberality and patriotism in assigning them to so fit a destination. Under Wellington they carried the glories of his country to their highest pinnacle; to Wellington, as an everlasting memorial of that country's love, let them be devoted.

### TRAFALGAR SQUARE.

#### Public Improvements.

THERE is nothing like a good example. The notice of this subject by the *Literary Gazette* has, we are glad to see, awakened the attention of our brethren of the press to it, and "The Times," "John Bull," "Naval and Military Gazette," and other journals of much public influence, have joined their voice to ours in the (we fear too late) hope of yet arresting the progress of a work which must entail lasting deformity upon the capital of England, and no slight degree of disgrace upon all who have contributed to its infliction. The *Corinthian* Tem pillar, like the hero of some years back at the Adelphi Theatre, is rearing his flash head above the vulgar level around, and the poor *Dusty Bob* National Gallery will, by the contrast, be made to appear lower than ever.

Before proceeding to the remainder of the task we proposed to ourselves in discussing this sad affair, it may be as well to mark the preliminary expense of making the Square as fit as ingenuity can make it for the reception of this tall aspiring monster, with its Portland stone Nelson, steeped in train-oil or bear's grease,\* at top. The subscription for the Memorial, independently of the Patriotic Fund balance, reached somewhere about 13,000*l.*; and the following is the estimate (besides the exceptions of other necessary works specified in

\* We do not mean to say that a statue so prepared will not offer great resistance to the effects of weather, for we believe it has, so far, been successfully tried in Dublin. But the measure of the material is a fit crowning for the absurdity of the pillar, as if Great Britain could not afford brass even from the guns captured by the hero of the Nile and Trafalgar!

our last) of the cost of preparing the site for Mr. Railton's operations:—

June 1st, 1840.

(Signed) C. BARRY.

In our animadversions upon the whole of the proceedings which have led to this jumble of incongruities, we laid considerable stress upon that which is, perhaps, the chief root of all the miserable abortions in sculpture and architecture which abound in London, where there is scarcely a public monument or building that can bear the test of examination; we allude to the incompetency of the parties who are chosen to be umpires or judges on these occasions. Of the elementary principles of art they are, most of them, utterly ignorant, and yet they are called to vote who shall execute designs of the highest pretensions and character as lasting memorials of national gratitude and admiration. And this comes of the silly outcry for general competition, as a basis to prevent the favouritism or partiality which would select a particular artist. In every case of the kind we have seen that the very same spirit of favouritism and partiality, which it was thus desired to shut out, prevailed in these committees of taste; and what with canvassing and interest-making, the majorities have been induced to commit the offence against which they were elected to guard. The more numerous these bodies, the more likely to be led by the nose; for the odium shared by many companions is more readily faced than where it must be borne individually, or by a select few. To the melancholy truth and baneful effects of this fact, the cathedral churches in their sculptured tombs, and every street in London where public erections are found, bear glaring testimony.

But when we have read the Artists' answers to the four questions propounded by the Parliamentary Committee, we confess that we feel inclined to spare those out of the pale who decide on such matters, seeing how strange and contradictory a difference of opinion is manifested by the instructed and practised whom they call upon to assist them in their deliberations.—The purblind leading the blind.

Some of these artists, surely, cannot merit to be placed in the elevated station they occupy in the eye of the world. Let us glance at their

various, and, in some points, notoriously absurd and contradicting dicta:—

*“Question I.—What effect, in your opinion, will a column, of which the pedestal, including the steps, is 43 feet high, and the height altogether 170, have upon the National Gallery?”*

*Answer by Edward Blore, Esq.—*An object of the magnitude of the column in question, that is, including the plinth, 170 feet high, and occupying so prominent a position, whether considered as an ornamental object or not, will form, by far, the principal feature in any point of view in which it may be considered; and the National Gallery, and the surrounding buildings, will only have the effect of backgrounds or accessories to this principal feature.”

This roundabout reply is well contrasted by the brief and decisive

*“Answer by Decimus Burton, Esq.—*The column will apparently diminish the size of the Gallery.”

The “Answer by Sir Francis Chantrey” is characteristic, but we cannot say direct or conclusive. He goes into odd views:—

“Although I have attentively examined Mr. Railton's very beautiful perspective drawing, and Mr. Barry's plans, yet, in the absence of a geometrical drawing, or a model, shewing the relative height of the column, with the adjacent buildings, they do not convey so clear a conception to my mind as enables me to give a decided opinion; perhaps to the more practised understanding of an architect they may be sufficiently intelligible: I cannot, however, believe that a column, or other ornamental object, placed where this is intended to be, can injure the present appearance of the National Gallery, except so far as it may interrupt the view, and perhaps tend to lower its apparent altitude.”

The next is very much to our mind in laying down the groundwork, but lamentably disappoints us by its conclusions:—

*“Answer by T. L. Donaldson, Esq.—*It will render the inadequacy of the National Gallery for the important position which it occupies still more apparent: the want of altitude in the National Gallery, the littleness of all the features, the number of parts into which the elevation is divided, are so many circumstances which give an insignificance to the building. If any other ornamental erections are to be placed in Trafalgar Square, and restricted to being in consist of a vast space occupied by insignificant objects. The only way to restore to it that importance which it deserves, and which it has lost through the National Gallery, is to place within it a lofty towering edifice, to which all the buildings around will be subordinate, and form the background. I conceive, therefore, the size of the proposed column to be no objection.”

We now come to an opinion of a most artist-like and comprehensive character:—

*“Answer by Joseph Gault, Esq.—*A column, whose pedestal is to rise to the height of forty-three feet, of proportionate width, will, in every view from the south, have the effect of destroying whatever unity of design the National Gallery possesses, by cutting it into two parts, equal or unequal, as the place of the spectator may be varied. This, of course, can only take place in the view from the south. As respects its grouping with the Gallery and other buildings about it, as seen from the eastern and western sides, I do not think it possible that it can in any position be seen advantageously in connection with them. This opinion is founded on a survey of the spot itself, with the proposed pedestal and steps set out by the eye; but as the matter is reducible to strict mathematical reasoning on a plan and section of the ground and levels of the neighbourhood, it may be tested by such means to positive proof, by drawing lines, touching the boundaries of the pedestal from every point of view, and continuing them to intersect the façade of the National Gallery, by which will be seen the portions of it intercepted. The portico, the best part of the building in question, will thus be found to suffer much more than the subordinate parts.”

The following, as far as they go, are also quite correct:—

*“Answer by Philip Hardwick, Esq.—*I am of opinion that a column of which the pedestal, including the steps, is 43 feet high, and the height altogether 170 feet, placed, as it is proposed to be, in front of the National Gallery, and in a line with the centre of the portico, must in certain points of view, on approaching it from the south, conceal so much of it, that its effect cannot be favourable on that building.”

*Answer by Sidney Smirke, Esq.—*I think that the column and its pedestal will have the effect of detracting, in some degree, from the importance of the National Gallery as an architectural object.

*Answer by Sir R. Westmacott.—*I am of opinion that a column, of which the pedestal, including the steps, is 43 feet high and 17 feet wide, and the height altogether 170 feet, will be injurious to the effect of the National Gallery.”

Thus we find, with the exception of Sir

F. Chantrey's modified expression and Mr. Donaldson's dictum, all the artists agree that the column would be injurious to the Gallery and site. And now,—

*“Question II.—What effect, in your opinion, will the said column have as an ornamental object, in combination with the surrounding buildings?”*

*Answer by Edward Blore, Esq.—*The effect of the column considered as a whole, in combination with the surrounding buildings, will vary very much according to the different points of view in which they are seen, offering with every change of position some new combination of greater or less merit. [Words—words—words.]

*Answer by Decimus Burton, Esq.—*To render those buildings less important. [Clear and true.]

*Answer by Sir Francis Chantrey.—*This question involves all the difficulties contained in the first. As an ornamental object, the beauty and just proportions of a Corinthian column, as forming part of a building, are matters settled 2000 years ago; what its effect may be standing alone must depend much on the base, and the object which crowns the summit. An injudicious association of modern things with ancient may put the column out of the pale of classic beauty. Of the statue which is to be made I can give no opinion; but if it be only to measure seventeen feet, its bird-like size will not be much in the way; and, if formed of Portland stone, will not be long in the way.\* The Trajan, the Antonine, and the Napoleon columns are the only monumental objects of this class that I have ever looked upon with entire satisfaction; I read the history of the man on the shaft of the column, and the mind is thus reconciled to see the statue so elevated. I may be told we have not money enough for a work of this character; that naval exploits furnish bad materials for sculpture, or that the arts of this country are too low a state to accomplish so noble a work; then I say abandon the impossibility at once, and try something more in keeping with our means and our genius. [A good lecture, and just of the character we would expect from the lecturer.]

*Answer by T. L. Donaldson, Esq.—*An advantageous effect: as the judicious design prepared by Mr. Barry for laying out the area will make, to a great degree, the distortions and inequalities in the levels, and the irregularities in the plan, and render them inapparent to the general mass of people. St. Martin's Church is already of such a scale, and so peculiar and distinct in character, that it cannot suffer from the column. The masses to the east and west, although imposing in style, are not sufficiently monumental to deserve any sacrifice being made to them; and the National Gallery is so insignificant as to require some other object to redeem the opportunity which has been lost. [Sticks to the column.]

*Answer by Joseph Gault, Esq.—*I do not think the proposed column will combine so as to group well with any of the surrounding buildings, and least of all, if there be any difference, with the National Gallery. In this the intention seems to have been to preserve a strictly Greek style, in contradistinction to one of Roman or of Italian character; whereof the small inclination of the pediment seems to be such an indication, that a vertical feature (such as the column would be) rising through it I think likely to produce even a ludicrous effect. Viewed with the group of buildings on the east side of Trafalgar Square (St. Martin's Church excepted), I do not think any bad effect would be produced. Architectural importance to weigh in the matter; but with those on the west side, and also of St. Martin's portico on the east, and to the south-east with a building of great architectural merit and consistency, I mean Northumberland House, I see no lines about the column nor its appendages which make it desirable to choose such a site for it as that in question. [An admirably reasoned answer.]

*Answer by Philip Hardwick, Esq.—*Architectural objects, well designed and of good proportion, almost invariably combine well with surrounding buildings; and I think it probable that such will be the effect of the proposed column. [Rather conjectural and evasive.]

*Answer by Sidney Smirke, Esq.—*It will have the same effect upon all the adjacent buildings; but, when viewed as a whole, in combination with the surrounding architecture, including the intended terrace, &c., I should expect that a very fine architectural scene will be produced, however much each building composing the group may suffer in individual importance. [We do not well understand how a fine scene can be produced by rendering surrounding objects trifling.]

*Answer by Sir R. Westmacott.—*As an ornamental object, in combination with the surrounding buildings, I cannot hesitate in saying that I think the effect of the column itself and those buildings, from the absence of harmony of proportion with each other, will in itself be bad; and, considered in reference to those buildings, by reducing their scale, and more especially of St. Martin's Church, have an injurious effect on those edifices. [A complete answer to Mr. Smirke.]

*Question III.—What effect will the column have on the National Gallery, as you approach it from Whitehall?*

*Answer by Edward Blore, Esq.—*As regards the National Gallery, the combination you approach it from Whitehall will be one of the least favourable, inasmuch as the column, in this point of view, will cut the portico and dome of the National Gallery almost through the centre; still, however, it must be borne in mind, that the Na-

\* Mr. J. W. Croker holds an opposite opinion; and he has no mean authority on questions of taste and art.

tional Gallery, from the superior height and the prominent position of the column, will, in this point of view (pictorially considered), have only the effect of a background—an effect which will be more obvious from the great distance interposed between the two objects, and the aerial tint which the more remote one will acquire by this distance; so that the disadvantage of combination will be very much mitigated by the relative distance of the objects, and the atmospheric modification resulting therefrom. [Very fine; but when simple questions have their answers wrapped up in so much mysterious jargon, we are glad to turn to the next interrogatory and reply.]

*Answer by Decimus Burton, Esq.*—Its pedestal will obscure a portion.

*Answer by Sir Francis Chantrey.*—I expect that when the column and the National Gallery are seen together in their whole extent at the same moment, which will be the case when viewed between Whitehall and Charing Cross, that the Gallery, as I have said before, may suffer somewhat in its apparent height; but I do not regard this as of much importance, when I consider that Mr. Barry's plan of sinking the base line ten or twelve feet must improve the elevation of the National Gallery considerably.

*Answer by T. L. Donaldson, Esq.*—The Gallery will then form a subordinate background to the column; the portico, which is the least exceptional feature in the building, will be intercepted; the cupola over the centre is too paltry in scale and character to render the interposition of the column, when seen from Whitehall, of any consequence.

*Answer by Joseph Gwilt, Esq.*—This is answered in reply to Question I., and it would be easy to shew, by carrying out the test there proposed, that whatever importance the National Gallery possesses will be destroyed by placing the column on the spot selected.

*Answer by Philip Hardwick, Esq.*—The answer to this question may be considered as included in that to the first, as it is in the approach to the National Gallery from the south, or Whitehall, that the effect of the column would be unfavourable to that building.—[Getting better.]

*Answer by Sidney Smirke, Esq.*—From the more distant parts of Whitehall the column will be the most conspicuous object, and will, of course, interfere with the present view of the National Gallery; and when the spectator advances, say to the door of Messrs. Drummond's bank, I apprehend that the pedestal of the column will pretty nearly exclude from view both the portico and dome of that building. I would suggest the erection of a slight boarded scaffold, representing three sides of the pedestal and base; the Committee and the public would then see, without the exercise of any imagination, the actual effect that would be produced by that, the more bulky part of the monument.—[Begins to doubt more and more.]

*Answer by Sir R. Westmacott.*—It would have the effect, at the distance of Whitehall, of concealing a great portion of the portico; and on a nearer approach to Charing Cross, the pedestal of the column being seen at an angle, and increased several feet in width, would obstruct the view of two-thirds of the portico, and a considerable portion of the west wing of the National Gallery.

*Question IV.*—How far do you consider that position a favourable position for the column itself?

*Answer by Edward Blore, Esq.*—I have no hesitation in stating that, in my opinion, the position is peculiarly favourable for a lofty object, such as a column or obelisk, provided it be in good proportion, and designed with good taste; and that, taking into consideration all the circumstances of the ground and the surrounding buildings, that no substitute could be found for such a form to produce an equally good effect.

*Answer by Decimus Burton, Esq.*—For the column itself, a very favourable position.

*Answer by Sir Francis Chantrey.*—I consider this position to be the most favourable that can be found or imagined for any national work of art; its aspect is nearly south, and sufficiently open on all sides to give the object placed on that identical spot all the advantage from light and shade that can be desired; to this may be added the advantage of a happy combination of unobtrusive buildings around; but to conceive a national monument worthy of this magnificent site is no easy task.

*Answer by T. L. Donaldson, Esq.*—One of the finest in the world. The best possible position for a lofty monument is when the spectator comes upon it unexpectedly, and when it can only be seen from a short distance: Trafalgar Square unites, in an eminent degree, both these requisites. To those approaching from the Strand and Pall Mall, it will come upon them by surprise, and the column will present itself in all its grandeur. To those approaching from Westminster, it will appear majestically on a rising ground, with the contrast of the low National Gallery behind it, to increase its apparent size; both which circumstances will give it dignity. The eye can embrace without inconvenience an area of sixty degrees; but it is no objection to the dignity of an object that it compels an effort on the part of the beholder, in order to embrace all its parts; and the very circumstance of those approaching Trafalgar Square from the east or west being obliged to raise their heads, and use some exertion in order to see the full height of the column, will create an impression of dignity upon the mind; and the first emotion which a monument produces upon the spectator is all-important. When a lofty object is first seen from far and kept in view up to the moment that the beholder gets close up to it, the impression is not so overpowering, however small may be the other objects which may surround it, as when it bursts suddenly upon the view close upon him. The gradual approach to it from a distance

begets impatience and weariness; the impressions of grandeur only progressively develop themselves, and are therefore comparatively weaker. The ancients well understood this: their temples were never seen isolated and from far; they were always surrounded by colonnades and enclosure walls. The column of Trajan was on one side of a square court of small dimensions, probably not more than 100 feet square.

*Answer by Joseph Gwilt, Esq.*—I do not think the position favourable for any columnar monument; because when such a form is selected, it is, in my opinion, desirable that the whole, or at least the greatest part of the outline, if it be good, should be distinguishable or marked against a background, whose colour and quality are different from the material whereof it (the column) is composed. I would instance, in illustration of my meaning, the effect of the background of trees and sky, in walking down Regent Street from Piccadilly, on the Duke of York's Column; and, in Paris, that of the column in the Place Vendôme, in walking from the Boulevard down the Rue de la Paix towards the Tuileries Gardens, the foliage of those trees and sky above give peculiar value to the outline and its effect. The effect of the majestic and beautiful Column of London, perhaps the finest in Europe, would, I believe, be vastly improved, if it could be seen in a long street, or centre of a square, whereof it only intercepted the portion of a vista, and became thus susceptible of having its form thoroughly developed, instead of being backed on three sides by mean buildings, which confuse its forms, and tend to render them mixed and indistinct, except under broad lights.

*Answer by Philip Hardwick, Esq.*—There are so many circumstances in favour of the position selected, that I am of opinion it is altogether an eligible site for the column.

*Answer by Sidney Smirke, Esq.*—I think that the situation in question is a most favourable one for the monument; if no site for it be adopted but one where it would not affect the apparent magnitude of adjacent buildings, it must be removed to the middle of Hyde Park or Regent's Park, where it would be entirely thrown away. I would not, out of regard for the surrounding buildings, be afraid of the height of this monument; to give it all the effect of which it is capable should be, I think, the paramount object; and, with that view, instead of dropping it down to a ground line sunk below the level of the terrace, I would lift it up on to a terrace levelled out from the portico of the Gallery; and, may I venture to add, I would have selected a design for this monument that could be prudently built without the serious curtailment of its dimensions which has been found necessary.

*Answer by Sir R. Westmacott.*—As a site for the column itself, or indeed for any monument (without reference to objects now erected), the position referred to is most favourable.

Thus we see Mr. Blore thinks the position, with all the buildings round, peculiarly favourable for a lofty object, and consequently for the column; Mr. Burton for the column *per se*, without regard to surrounding objects; Sir F. Chantrey, that it is the finest situation possible for any grand national monument, and the better for having insignificant buildings round it; Mr. Donaldson upholds it by some metaphysical argument, which seems to imply that what is surprising must be great; Mr. Gwilt maintains his judicious opinion, that a lofty pillar cannot be seen to advantage on such a spot; Mr. Hardwick, that it will do well enough; Mr. Smirke, that it would be better placed higher up, and more elevated; and Sir R. Westmacott, that it is most favourable. But besides the clashing ideas through which we have waded, Mr. Cockerell and Mr. Deering were also called upon for their opinions on the subject, which they delivered in writing in the form of letters, as follow:—

"In answer to the first and second questions," says Mr. Cockerell, "I beg leave to offer as my opinion, that such a column, on a pedestal 43 feet high, the whole being 170 feet high, will have no ill effect on the National Gallery and the surrounding buildings, on the score of its scale and dimensions, viewed from the north, west, and east sides of the Square, because I believe that the juxtaposition of colossal and ordinary proportions has been practised in all times and in all styles of architecture with success, especially by the ancients, who observed this principle more strictly than the moderns. Witness the column of Trajan, in an area 93 feet by 93 feet; that of Antonine, in a square not much larger; the ivory and gold colossal statues of Jupiter and of Minerva, which occupied the entire nave of their temples. Again, the Tower of St. Mark, at Venice, 42 feet wide at the base, and 316 feet high, in a square 563 by 232; the column of London, and that of the Duke of York; none of which can be said to deteriorate from the architecture in connexion with which they are seen. [What is the architecture of Monument Yard?] The placing such colossal objects in extensive areas, as in the front of St. Peter's at Rome, Place Louis XV. at Paris, at St. Petersburg, and other places, is wholly a modern practice, and a departure

from the principle of effect on which they were originally founded by the ancients. My conclusion therefore is, not that the proposed column is too large for the site, but that the site is too large for the full effect of the proposed column. With reference to the third question of your honourable Committee, I beg leave to suggest that the principle in question appears to apply to colossal objects seen rather from a near point of view than from a distant one; because, in the first case, their position with respect to the objects beyond is altered with every step of the spectator, and the contrast and combination of their ever-varying forms with those in the background may be advantageous to both; but, in the latter case, where the gross disproportion is viewed almost geometrically, is unrelieved by detail or change of form, and fixed, during an approach from some distance in a straight line, the interposition of such an object actually exceeding the height of the entire building, and growing larger in the advance towards it, must divide and disunite the whole composition of the background, and obstruct the view of the central feature by its bulk, to its great disadvantage. I believe it will be found the constant practice of the best architects to consider the central object in front of a great building, as a scale for the appreciation of its magnitude, and to make it always subordinate to the uninterrupted view of its principal feature. Thus the statue of Queen Anne, before St. Paul's, presents an admirable centre and scale to the whole front, without in any degree obstructing its view. The statue of King Charles plays the same part, with reference to the National Gallery, from Whitehall Place, and the contrast is greatly to its advantage in approaching from Parliament Street. The proposed column would supersede that well-proportioned centre, and present a succession of centres, contrary to the usual architectural practice, which places successive objects at the sides, but never in the centre of an avenue, especially when such centres would obstruct the view of a fine object in the background. In answering the fourth question of your honourable Committee, I am constrained, for the above reasons, to offer my humble opinion that the proposed position for the column is not favourable to it with reference to the whole Square, nor to the National Gallery as seen from Whitehall."

Mr. C. proceeds to suggest two columns, one on each side, instead of the one in the centre; and adds:—

"By such an arrangement the whole area would be left open for all those monuments which in process of time will, we hope, increase upon us, reproducing that altar, or forum, in which the gratitude of the country may be expressed in all the variety of design suited to the situation."

Mr. Deering writes:—

"I think the proposed Nelson Monument presents that precise character of altitude most to be desired at the particular site intended, where a great and wide street of entrance necessarily branches off right and left into a principal artery of the metropolis, and where the idea of termination is the impression most essential to be avoided; for we must recollect that the object is not to arrive at Trafalgar Square or the National Gallery, it is to convey to the mind of the stranger the true and peculiar character of our capital—its endless continuation. [How this pillar is to convey this notion is, we confess, as much above our comprehension as the pillar itself will be above the home of King Charles I.] If this view be correct, the whole object would be a plain, unbroken mass, which, like the County Fire Office to its disadvantage (by the eye at once), conveys the idea of obstruction, and limits consideration to its own pretensions alone, as the sole object of the whole arrangement. The broken line of architecture in the National Gallery obliges the eye to travel along its length; but the proposed form completely gets over the difficulty, presenting a magnificent object in the vista of approach, while it leaves the idea of space beyond, and suggests the idea of divergence, without obstruction, where that idea is most essential. I cannot suppose the effect would be unfavourable upon the National Gallery; for although that building could be no longer seen in its whole extent from any point more distant than the column, I doubt whether its broken character of outline and laboured details, as well as smallness of parts, do not require that it should be seen, as a whole, beyond the distance whence those features could be visible at the same time, and so form, as it were, a part of the design; but, on the whole, I think it equally certain that, in its magnitude, this monument, in reducing to comparative insignificance, not only the Gallery, but St. Martin's Church (its pedestal being nearly as large as the portico, and the whole nearly as high as the spire of that building), will not also be a monument equally unfavourable to the memory of those who spilt the National Gallery inside and outside for the assumed sake of a building, of which the unimportance will be thus placed in its true light. But, notwithstanding, we must not forget that the great end should be to adorn the metropolis, and not to persuade the unwilling of the architectural beauty of Trafalgar Square, or any particular building around its circuit."

The end of all seems to be that, with all our experience, we, the English nation, have not yet discovered the right method to procure masterpieces of art to embellish our capital, or to do honour to virtue and patriotism. With regard to Mr. Raiton's pillar, the difference of

opinion is merely matter of taste. We may hold it to have been a most ridiculous farce to invite all the artists of Britain to furnish designs, and then to fix on a work so hackneyed and poor, that it could not with propriety be called a design at all; but others, for whose opinions we have respect, may entertain the opposite conviction. Being preferred, however, and with reference to a predestined site, the Government is solicited to grant that ground; and then comes in mere official formalities and no corrective judgment. The Lords of the Treasury say, Very well; this distinguished committee of Lords, Commons, and the Lord knows who else, have begged this boon: we are in the liberal mood, and gratefully yield it. The Woods and Forests have nothing to do but take care that the crown lands are used as directed; and Lord Duncannon does not trouble his head whether it is a kirk or a mill. And so the thing goes through all the necessary forms, apparently with the approval of three important bodies, whereas the whole job has been carried by a canvassed vote or two in the first instance; and the rest, with all the foolery and trickery we have pointed out, follows of course.

It is thus we shall have the Nelson Column where no erection of the kind can be, without producing ludicrous combinations, and stamping our age as despicable for art. The same, as far as we understand, is likely to happen in the city, where the new Temple of Mammon, yclept the Royal Exchange (unless it be timeously stopped by government as a party to the concern), bids fair to rival any absurdity that has ever yet been committed — though London may proudly boast of more than any three cities in the world, and with fewer exceptions of even tolerable works.

#### ORIGINAL POETRY.

*American Poetry.*—It is always a pleasure to us to notice the successful cultivation in the same tongue with our own, which the worship of the "tuneful Nine" receives in America. It refreshes us from steam and smuggled tobacco to fall upon a production like the following, which we copy from the forthcoming volume of the *Literary Amaranth*, an Annual which does credit to the taste and spirit of Baltimore:—

#### NEPTUNE.

*Περσίδας γαλήνης κυνηγῶν.*

God of the fearful trident! On thy brow  
Sits awful majesty as on a throne;  
That makes the Ocean's myriad monsters bow  
In low obeisance, thy dread power to own;  
And brings the gentler dwellers of the brine,  
Whose light and graceful figures far outshine  
Earth's fairest forms, to sport and gambol round,  
By mingled love, and fear, and pleasing wonder bound.  
Lord of the boundless waves, sea-potent dread!  
From pole to pole, through every varying zone,  
Thy mighty liquid empire is outspread—  
Immeasurable, matchless, and alone.  
The sea obeys thee, and at thy command  
Is calm or troublous; and the trembling land,  
Smit by the mace of thy dread sovereignty,  
Earth-shaking Neptune, owns its fealty to thee.  
When cloud, and tempest, and the dark-brow'd storm,  
Sweep o'er the sea — when mountain billows curl'd  
With deep-plough'd wrinkles do its face bedim,  
And Ocean's voice is heard around the world, —  
Amid the roar of elemental war  
Is seen, convolved in wave and foam, thy car,  
With axle thundering up the watery steep  
Of precipices heaved from the excited deep.  
Upon the far-reounding whirlpool's verge  
Its fearful course thy circling chariot wheels,  
And sports amid the eddies, while the surge  
Now streams aloft, now the abyss reveals  
Deep yawning to engulf its fated prey;  
And the toss'd bark, envelop'd 'mid the spray,  
With all her howling mariners, goes down  
Where wrecks and bones proclaim thy terrible renown.  
These are thy awful works — the cruel sport  
Of thy tremendous majesty, when wrath

Of power omnipotent assumes the port,  
And wreck and ruin strew thy direful path.  
But thou canst lay, great ruler of the sea!  
Thy sterner attributes aside, and be  
Of brow smooth as the mirror of the deep  
When wind and tide are hush'd, and waves all tranquil.

When not a wave appears at eventide,  
Save from the pawing of thy couriers' feet,  
With queenly Amphitrite by thy side,  
On the still waters glides thy chariot fleet;  
While bifurc shapes are summon'd by the shell  
Of Triton, winding through each crystal dell,  
And brawny hands bear up the almodine,  
And pearl, and emerald stone, as gifts to Ocean's queen.  
Remote from storms, where adamantine walls  
Fling their far-flashing radiance on the wave,  
Thou hold'st thy court in Ocean's glittering halls,  
Where gold and shells bestrew the snowy pave;  
There, smitten by the moonbeam's silver light,  
The waters are both musical and right;  
And to their tune, round the sea's throne advance  
Nalads and Tritons, their light footsteps in the dance.  
Baltimore, June 20, 1840. N. C. BROOKS.

#### THE DRAMA.

*Covent Garden* has beat the drum for its troops to be reviewed, and speaks of opening the campaign on Monday week.

*Haymarket.*—On Tuesday, *The Country Girl* was played to re-introduce Mrs. Fitzwilliam on her return from America, as *Peggy*. Coming across the Atlantic, we suppose we must consider it as the "New Country" girl; but at any rate it was not a hit. The comedy has been doubly distilled, *vice versa*; that is to say, its spirit of licentiousness has been evaporated, carrying off with it the spirit of wit, and the residuum left is fit for no mortal taste. There is nothing to recommend the revival. In some of her favourite vaudeville parts our clever actress has shewn that she has lost nothing of her powers and versatility by being steamed across the world. Her *Widow Wiggins*, in Buckstone's *Monopolologue*, on Thursday, was most admirable for versatility, and extremely entertaining.

*English Opera House.*—The formidable *Guido Fawkes*, after having, merely in MS., terrified the Lord Chamberlain out of his chair, and given the Young Licensor of dramas such a twist as will make him remember (the fifth of November and) the office he holds to the last day of his life, was produced at the English Opera House on Tuesday, Wednesday, Thursday, &c., without any ill effects whatever. This extraordinary fact must either have proceeded from the people in authority having discovered and countermined the author's plot; or from the author's never entertaining any dangerous plot at all; which we cannot tell. Only that on Wednesday evening, when we went to see the piece, we were much confused by hearing guns fired and seeing strange lights about London, which we afterwards learned were nothing about Guy and gunpowder treason, but about Prince Albert, who had just attained the age of twenty-one. Our momentary ignorance of the occasion, however, produced an excitement which gave consequence to the acting. *Guido* appeared to us in the person of Mr. Maynard, a hero of no small calibre; *Catesby*, a double-dyed villain; *Dr. Dee*, a conjuror of uncommon potency; *Elizabeth Orton*, an individual whose body anybody would rejoice to raise from the dead; and the people of the Seven Stars Inn, very comical fellows. The audience seemed to be of the same opinion, for they applauded mightily. The tableaux are indeed striking and well executed; and though the action occupies only a small portion of Mr. Ainsworth's yet unfinished historical novel, it seems to be enough to raise that interest in the spectators which hair-breadth adventures and supernatural doings are almost sure to create. The final explosion ensures the aim of every

dramatist—to go off with *éclat*, and if this cannot be accomplished by a barrel of gunpowder, we should like to see the writer who could invent aught more effective.

*The Strand*, not quite stranded by the reformers, has re-opened with its grotesque and merry efforts. The season is dull, and persons who are dull with the season may help themselves to a little life and laughing, by taking an evening hour or two here.

#### MODEL OF HOBART TOWN, ETC.

An exhibition of this model, just opened in the Suffolk Street Gallery, offers a new subject of interest among the sights of London. It is more than 1000 square feet in extent, and on the scale of 20 feet to an inch; so that every object is not only distinctly indicated, but represented. The streets at right angles, the public buildings, the country around; the rivers, with wharfs; high grounds, with windmills; and mountains covered with snow, are all laid down with the most accurate minuteness; so that the spectator acquires at a glance a perfect idea of the place and its environs. Mr. G. Peck, who has executed this really extraordinary work, is, we believe, a native of Hull but spent several years in Australia, and must have given most of that time to the execution of this task. We have read many a volume of the colony, and, what is more, we have reviewed them; but we can safely say, that we never obtained so satisfactory an idea of it as by an hour's visit to this Exhibition. Were we thinking of emigration, we should examine it very carefully. After all, it does not look so tempting as the Company advertisements, prospectuses, &c. &c., make out. The fields are greenish, no doubt, and the water clear; but there is no richness of hedgerow, exuberance of vegetation, grandeur of forest scenery. The trees are not pleasing, and they look scattering and unsocial. In short, we in dear old England must see that it is another land.

In addition to the model, there are two moving panoramic views of Sydney and of the environs of Hobart Town; and these are well worth notice, as tending to complete the idea which the whole combined together afford of this very important and rapidly rising new world.

#### VARIETIES.

*Destructive Artillery.*—"The Times" newspaper has this week a long notice of a new and most destructive arm of war, which has been several years under the notice of the administration. The writer seems to fear that it may be lost to this country. We were invited to witness experiments by it more than a year ago, and are assured that it blew a vessel all to pieces moored at a distance in the Thames. We trust it will meet the attention it merits. Steam, be it remembered, was ridiculed and laughed at when first described as a power likely to be of wonderful efficacy.

*Atmospheric Railway.*—A great dispute has arisen as to the priority and right of invention to this means of railway transit. Of various parties who have been trying to bring it to useful working order, Mr. Vallance and Mr. Pinkus contend that they accomplished that end before Mr. Clegg and his co-patenters.

*Edinburgh Monument to Sir W. Scott.*—The foundation-stone for this tribute to the memory of their most distinguished compatriot was laid, with great ceremony, on Saturday last, in Princes Street Garden, between the new and old town, opposite St. David's Street.

The statue is by Mr. Steall, and is to be executed for 2000l.; the architectural portion is estimated at 12,200l., of which there is yet a deficiency of between 2000l. and 3000l., which will, no doubt, be immediately raised for so desirable an object.

**Concerts at the Colosseum.**—During the week, from two to four o'clock, a series of very pleasing concerts have been given here. The weather also inviting to the Regent's Park, we cannot advise those who remain in London to any place where they can pass a more agreeable hour.

### LITERARY NOVELTIES.

In the Press.

The Invalid's Guide to Madeira, with a Description of Teneriffe, Lisbon, Cintra, and Mafra. By W. W. Cooper, Esq. M.R.C.S.

### KNIGHT'S MISCELLANIES.

On the 1st of September will be published, price 5s. the First Volume of the

**PASTON LETTERS.** Original Letters written during the Reigns of Henry VI., Edward IV., and Richard III., by various Persons of Rank or Consequence; containing many curious Anecdotes relative to that turbulent and bloody, but otherwise interesting, story, and elucidating not only public matters of state, but likewise the private manners of the age. A new edition, with additional Notes and Corrections, in 2 vols.

The First Volume of Knight's Miscellanies comprises **ENGLISH CAUSES CELEBRES**; or, Reports of Remarkable Trials. Edited and illustrated by G. L. Craik. Vol. I. price 4s.

The Second Volume of **DAVIS'S WORK ON THE CHINESE.** A new edition, with Additions and several Engravings, price 5s.

\* \* \* Mr. Davis resided twenty years at Canton, where he at length rose to be chief of the factory. He accompanied Lord Amherst's embassy to Peking, and he ranks as one of the few Europeans who have ever really mastered the language and literature of China. We have a right, therefore, to consider the statements which he has now submitted to the public, as containing as full and correct a view of this singular people, of their government, laws, and institutions, and, in short, of the whole frame of their society, as the many difficulties with which the subject is beset will admit.—*Quarterly Review*.

London: Charles Knight and Co. 33 Ludgate Street.

2. A Scriptural Vindication of Church Establishments, with a Review of the Principal Objections of Non-conformists. 7s. 6d.

Demy 8vo. price 7s. 6d. cloth,  
**A PRACTICAL TREATISE on the HUMAN TEETH,** Shewing the Cause of their Destruction and the Means of their Preservation.  
By WILLIAM ROBERTSON.  
3d edition, with Plates.  
Critical Analysis.

"We have given to Mr. Robertson's treatise a most careful examination in its relations, facts, and consequences, and can unhesitatingly admit the truth of his theory, as corroborated both by external and internal evidence. We congratulate ourselves and the public, not so much upon the discovery of the true cause of caries of the teeth, but that this discovery indicates a sure plan, not only of cure, but of the prevention of caries, which no other theory has yet accomplished."—*The Analyst*, October 1839.  
"We consider the author has fairly established the correctness of his theory, and the fallacy of those founded upon inflammatory action." The descriptive portion of the work, with its illustrations, are executed in the very best style."—*Morning Post*, January 3, 1840.

"The simple and clear manner in which the facts contained in Mr. Robertson's book are set forth, their important application, and the facility with which the proofs brought forward in support of the theory may be comprehended by even unprofessional readers, must render the present publication not only an important improvement in modern dental surgery, but also a valuable and useful contribution to the public at large."—*Medical-Chirurgical Review*, April 1840.

"We rejoice that this excellent practical work has received that attention from the public which it eminently deserves. The publication is extremely valuable, full of information popularly conveyed, and contains a more general and scientific outline of the nature and structure of the teeth, together with the minute practical details for their management in health and disease, than we believe will be found in any other work devoted to the subject."—*Atlas*, July 27, 1839.

"His observations seem to be the result of much experience in the practice of dental surgery; and we have no hesitation in recommending it to the notice of those who devote their attention to the practice of this art."—*The Edinburgh Medical and Surgical Journal*, January 1, 1840.

"A second edition of a work of this kind speaks well for its merits; and, in the present instance, seems well deserved."—*The Literary Gazette*, November 9, 1839.

London: Hayward and Moore.

In 12mo. price 3s. cloth, and lettered,  
**GOSPEL EXTRACTS for YOUNG CHILDREN.**

"It is hoped that the following extracts, being printed in a clear type, and consisting of portions of convenient length without division of verses, will prove acceptable to many Parents, who agree with the editor in thinking that the Scripture Narrative is best conveyed, even to young children, in Scripture language."—*Preface*.  
Rivingtons, St. Paul's Churchyard, and Waterloo Place.

Price 9s. boards, the Second Volume of  
**A COURSE of PLAIN SERMONS on the CHURCH and HER GIFTS.** With a Preface, and occasional Notes.

By the Rev. FRANCIS FULFORD, M.A.  
Rector of Trowbridge, Wilts; Chaplain to Her Royal Highness the Duchess of Gloucester; and late Fellow of Exeter College, Oxford.  
Rivingtons, St. Paul's Churchyard, and Waterloo Place.  
Lately published, the First Volume, price 9s.

Printed by HANNAH PAGE MOYSE, of Brook Green, Hammer-smith, and GEORGE HARVEY, of Number 2 Pullin's Place, Ilington, both in the County of Middlesex, Printers, at their Printing Office, Number 28 Castle Street, Leicester Square, in the said County; and published by WILLIAM AKER, of St. James's, Strand, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Place, Strand, in the said County, on Saturday, August 29th, 1840.

## REVIEWS OF NEW BOOKS.

*A Collection of National English Airs, consisting of Ancient Song, Ballad, and Dance Tunes, interspersed with Remarks and Anecdotes, and preceded by an Essay on English Minstrelsy.* The Airs Harmonised, for the Pianoforte, by W. Crotch, Mus. Doc., G. A. Macfarren, and J. A. Wade. Edited by W. Chapell, F.S.A. 2 vols. 4to. London, 1840. Chapell; Simpkin, Marshall, and Co.

We lately had occasion to turn to the ancient music of Scotland, as brought prominently forward by the publication of the Skene MS. (*Literary Gazette*, No. 1150); and to review with merited encomiums the resuscitation of evidence so important to the history of the concord of sweet sounds as a national and popular science. We have also had, for several weeks, on our table an Irish work which claims our attention to the minstrelsy of that land of the harp; but, in the meantime, we owe no less a debt to Mr. Chapell for his patriotic effort to rescue the music of Old England from the obloquy under which it has been laid by the assertions, that this country never had a national school, but delighted in a medley from all nations, just as its inhabitants were composed of Celts, Picts, British, Gauls, Saxons, Danes, Normans, Irish, and Scotch, &c. &c. &c.

"The object (says Mr. Chapell) of the present work is to give practical refutation to the popular fallacy that England has no national music,—a fallacy arising solely from indolence in collecting; for we trust that the present work will shew that there is no deficiency in material, whatever there may have been in the prospect of encouragement to such collections. It is hoped that such songs as 'Chevy Chase,' 'King John and the Abbot of Canterbury,' 'Robin Hood and the Bishop,' 'From Oberon in Fairy-land,' and the numerous fine old ballads in which England so peculiarly abounds, will be received with additional interest when accompanied by their original tunes, and probably excite a feeling of surprise, that while, within the last century, so many collections of Irish, Scotch, and Welsh airs have appeared, in the same period scarcely one collection of English should have been made. It has been too much the fashion with us to pay little attention to our own tunes; and the last importation has been generally the best received: so that want of encouragement has been justly complained of by our native musicians in all ages, and not less so at the very time when we might have challenged competition with any other nation in Europe. Even the materials of the present work are, in some degree, drawn from foreign sources; and in particular from two collections of English airs, the one printed at Haerlem† in 1626, and the other at Amsterdam‡ in 1634; in which are

to be found several melodies, acquiring additional interest from being mentioned by Shakspeare, by Izaak Walton, &c., and might have been sought for in vain at home. The existence, however, of two such collections a century before any published collection of Irish or Scotch is a proof that, though lightly esteemed by ourselves, English airs must then have been held in considerable estimation abroad; and as public attention has been gradually turning to the old English ballad, since Dr. Percy first led the way, as madrigals have been recently revived, and heard with pleasure, and even the national country-dance has been again introduced at court,—it is hoped that the present moment may prove auspicious for a publication of this description; more especially since the indifference with which the pursuit has been generally regarded has caused a difficulty in procuring the necessary works of reference, which would only become greater by farther delay. It is often difficult to affix periods, or to authenticate tunes, which rest wholly upon the uncertain evidence of tradition; but the antiquity of the airs in this collection has a firmer basis, being generally accompanied by dates and evidences of publication at least a century old; and old as these authorities are, they, in their time, only chronicled elder things. Thus the 'Beggars' Opera' (1728), and the numerous ballad operas which its success engendered, were all made up of 'snatches of old tunes.' 'The English Dancing Master,' with its multiplied editions from 1650 to 1721; 'D'Urfey's Pills to purge Melancholy;' and 'Antidote against Melancholy,' from 1666 to 1720; 'The Musical Miscellany,' six volumes, 1729; Walsh's 'British Musical Miscellany,' in six volumes; Queen Elizabeth's, Elizabeth Rogers', and other virginal books; the MSS. of Henry the Eighth's time, the Harleian, and others in the British Museum,\* with the already mentioned collections published at Haerlem and Amsterdam in 1626 and 1634, have each contributed their quota. It now only remains to observe, that diligent research has been made to obtain, compare, and select, the best copies of the melodies; and occasionally different settings of the same air are placed in juxtaposition; so that to meet a diversity of taste, opportunities are afforded of selecting from various sources of equally acknowledged authenticity."

In further explaining the nature of his plan, Mr. Chapell adds:—

"Some airs are inserted as national favourites, though not strictly national music, in

\* "It is to be hoped that the attention of the Trustees may be soon drawn to the state of the invaluable library of music in the British Museum; for whilst the publisher is taxed a copy of every work, it is but just that it should be open to inspection. At present, with the exception of a few works on theory, which, being almost entirely letterpress, are included with the books, the music is perfectly inaccessible,—not being catalogued or classed in any manner. No persons can be more attentive or obliging than the attendants in the reading-room, but in this they are unable to render any assistance. It is not generally known that the manuscripts of the great Henry Purcell and many others are also in the Museum; but they are in the same state as the music, and are not to be seen."

† "If that which truly constitutes national music be an affinity between it and the ruling passions or even pastimes of a people, the English have an undoubted claim to distinction; for while other countries have in

the sense generally used, as the composers are known: such as 'The Roast Beef of Old England,' 'Black-eyed Susan,' 'Rule Britannia,' &c.; which are always accompanied by the names of the composers. One verse of the words of most of the songs is given between the lines of music, but it has not been thought necessary to divide each syllable to its proper note, because the metre is occasionally so irregular, that if right in one verse it would be wrong in another. A glance at 'Robin Hood and the Bishop,' tune 1.x.x.1., will sufficiently demonstrate the necessity of this precaution. Sometimes, the words are entirely omitted,\* many of the old songs being too coarse for republication; and in other instances a good melody is either coupled with words not worth printing, or the originals have not been found. As by far the greater part of the old airs are found without basses, and a good melody 'is not for an age, but for all time,' so occasional deviations have been made from the rigid school of harmony which some would wish to see always accompanying antiquity: the melodies, however, have been held inviolate. Dr. Crotch, Mr. Macfarren, and Mr. Wade, who have arranged the basses to the airs (and whose initials are attached to their respective portions), have severally followed their own judgment and taste; and it is to be hoped that their occasional diversity of style may rather please than disappoint the patrons of the work. Horace remarks, 'Difficile est proprie communia dicere,' and it will probably be equally difficult to harmonise to every person's taste."

This introduction so fully and distinctly describes the volumes before us, that we have little to do except to turn over their pages and mark the manner in which the design of their author has been carried out; for it is not within our competency to copy any of the music as specimens of the whole. But we may say that we have been greatly charmed by them, their peculiar characters, their beauty, the air of antiquity that breathes from them and affords all the interest of affecting associations. 'Who can listen to the touching simplicity of "Chevy Chase" without picturing to the imagination those by whom it was originally sung,—the rush-strewed floor, the rude instrument accompanying the voice of ladye fair or wandering minstrel, the stern men melted into the quality of mercy by its tones, and the rough society by which the whole was surrounded? Then come the bacchanalian round with loud genial chorus; the sea-song of ancient times, in which the English sailor's perils and valour were first vaunted in strains of national pride; the love-verse, with its classic sympathies (how far from natural, and yet how poetical and pleasing); the political chansou; the inspiring war-blast, and the hardly less inspiring notes dedicated to hunting and the sports of the field; the familiar picture of man-

their songs been either martial or melancholy, or both, there is in the old English ballad a certain firmness and solidity of expression which admirably harmonise with the independent spirit and freedom of the national character."

It was at first intended to publish the tunes entirely without words, but they were found frequently to lose so much by the omission, that the editor thought it advisable to retain them."

\* "By Henry Lawes (so highly eulogised by Milton), by Matthew Locke, author of the music in 'Macbeth,' and numberless others. Lawes set to music the initial words of a Catalogue of Books, and passing them off as a song newly imported, ridiculed the success with which it was received by the public."

† "Neder-Landsche Gedenck-clank door Adrianum Valerium." The words are all Dutch, but the tunes are acknowledged by the title, 'Engelsche Stemmen.'"

‡ "Friesche Lust-hof, door Jan Jansz. Starter." In this collection the words are also Dutch, but the tunes have their names in English."

ners, and satirical squibs of the times; and, in short, all the multifarious forms which the genius of Music assumes in giving a new and lasting passport to words of every kind; at once rendering them universally acceptable, and preserving them in a medium to be handed down to future generations. The airs mentioned by, or illustrating, Shakspeare alone, which are revived in Mr. Chapell's admirable collection, convey proof enough of this variety, and of the existence of a national music at a very early period. They are thus enumerated with reference to the pages where they occur in the first volume:—

"No. 1, Gravedigger's Song, in 'Hamlet.'—No. 2, King Lear and his Three Daughters, and 'When Arthur first in court began.'—No. 11, Green Sleeves.—Nos. 38, 39, How should I your True Love know?—No. 40, Good Morrow, it is St. Valentine's Day.—Nos. 41 and 41 bis, And will he not come again?—No. 233, For bonny sweet Robin is all my joy?—No. 61, Under the Greenwood Tree.—No. 84, Light o' Love.—No. 132, When that I was a little tiny boy.—No. 164, It was a lover and his lass.—Nos. 169 and 170, Peg-a-Ramsey.—No. 206, Three merry men we be.—No. 62, Fortune my foe, and Titus Andronicus' Complaint.—No. 178, Heart's ease.—No. 180, Come live with me and be my love.—No. 196, The hunt is up.—No. 203, Trip and go.—No. 231, The Carman's Whistle.—No. 237, Jog on, jog on, the footpath way.—And No. 241, O mistress mine."

These, however, constitute but a very small portion of this interesting production, which contains some hundreds of ancient tunes, ancient words, not very modern adaptations of the former, and curious alterations in the latter, and both airs and poetry founded on them down to our own day. It may be supposed what a treasure we have in the entire miscellany!

The "Essay on English Minstrelsy" is a very able paper, and displays much reading and diligent research. It compresses into the most agreeable and instructive form all that is requisite to be learned on the subject, and abounds with characteristic traits and anecdotes connected with the airs, which are altogether collected by the industry of Mr. Chapell. We must endeavour to quote an example or two. In the remarks on "Old Sir Simon the King" (a favourite tune with the cavaliers in 1641), we are informed:—

"Upon the margin of a copy of Sir J. Hawkins's 'Dictionary of Music,' formerly belonging to Dr. Burney, and now in the British Museum, is the following note, in the doctor's handwriting:—'This is the tune to an old song, which see in 'Pills to Purge Melancholy,' vol. iii. p. 144. It is conjectured that the subject of it was Simon Wadloe, who kept the Devil Tavern,\* at the time when Ben Jonson's Club, called the Apollo Club, met there. In the verses over the Apollo Room was this couplet:—

'Hang up all the poor hep-drinkers,  
Cries old Sim the King of Skinkers.'†

And we are further told that the word "hep" was "a term of derision, applied to those who drank a weak infusion of the hep (hip) berry, or sloe. Hence the exclamation of 'Hip, hip, hurra!' corrupted from 'Hip, hip, away!'"

Our next reference is to

"My Lodging it is on the Cold Ground.—This song is taken from Sir William Davenant's comedy of 'The Rivals,' acted by his

\* "At Temple Bar."

† "A skinker is one that serves drink.—Johnson's Dictionary."

highness the Duke of York's servants,' in 1668, and printed by William Cademan, at the Pope's Head, in the lower walk of the new Exchange, in the same year. Downes, in his 'Roscius Anglicanus; or, an Historical View of the Stage,' relates that King Charles II. was so pleased on hearing Mrs. Davis sing this song in the character of Celania, the shepherdess mad for love, that he took her off the stage, and had a daughter by her, who was named Mary Tudor, and was married to Francis, Lord Ratcliffe, afterwards Earl of Derwentwater. Mrs. Davis (better known as Moll Davis) was one of the female actresses who boarded with Sir William Davenant, and was the first who played that part. The air, as it is usually played, is very different from any of the old printed copies, which are interspersed with a number of paltry symphonies and imitations, detracting very much from the beauty of the melody. See No. 46 bis, which is taken from an old edition printed on a half sheet, and is presented in *statu quo*. The following is a reprint of the song from the first edition of the play.\*

"My Lodging it is on the Cold Ground.

My lodging it is on the cold ground,  
And very hard is my fare;  
But that which troubles me most is  
The unkindness of my dear.  
Yet still I cry, O turn, love,  
And prethee, love, turn to me,  
For thou art the man that I long for,  
And, alack what remedy!  
I'll crown thee with a garland of straw then,  
And I'll marry thee with a rush ring,  
My frozen hopes shall thaw then,  
And merrily we will sing;  
O turn to me, my dear love,  
And prethee, love, turn to me,  
For thou art the man that alone canst  
Procure my liberty.  
But if thou wilt harden thy heart still,  
And be deaf to my piteous moan,  
Then I must endure the smart still,  
And tumble in straw all alone;  
Yet still I cry, O turn, love,  
And prethee, love, turn to me,  
For thou art the man that alone art  
The cause of my misery."

There are a few other curious quotations, which we give without comment, as they sufficiently explain themselves, and exemplify Mr. Chapell's singularly attractive work:—

"No. CLXV. *Turkeylony*.—From William Ballet's 'Lute Book' (see note to p. 115). It is mentioned as a dance tune by Nashe, in his 'Have with you to Saffron Walden,'—"or doo as Dick Harvey did, that having preached and beat downe three pulpits in inveighing against dauncing, one Sunday evening, when his wench or friskin was footing it aloft on the greene, with foote out and foote in, and as busie as might be at 'Rogerero,'† 'Basillno,' 'Turkelony,' 'All the flowers of the broom,' 'Pepper is black,' 'Green Sleeves,' 'Peggie Ramsey,' he came sneaking behind a tree, and lookt on; and though hee was loth to be seene to countenance the sport, having laid God's word against it so dreadfully; yet to shewe his good will to it in heart, hee sent her eighteen pence in hugger mugger, to pay the fiddlers."

\* "As this song has been published by Moore in his admirable collection of 'Irish Melodies,' the editor wishes to state it as the opinion of Mr. Bunting, who has devoted his life to the collection of Irish music,—of Mr. Wade, who has also made it a particular study,—of Mr. Edward Taylor, the Gresham lecturer,—of Dr. Crotch, Mr. Ayrton, and many other eminent musical antiquaries, that from internal evidence of the tune itself, it is not Irish, but English; nor, indeed, has he hitherto met with any difference of opinion amongst musicians upon the subject. About the time that it was printed in Moore's 'Irish Melodies,' it was also published (in Dublin) in Clifton's 'British Melodies.'"

† "Rogerero," "All the flowers of the broom," "Green Sleeves," and "Peg-a-Ramsey," are in William Ballet's 'Lute Book.' "Pepper's black" is in the seventh edition of 'The Dancing Master.'

It is also mentioned with 'Rogerero,' 'Trenchmore,' &c. in Stephen Gosson's 'Schoole of Abuse,' 1579; and the figure of the dance is in a manuscript in the Bodleian Library (MSS. Rawl. Poet. 108), written about the year 1507. The same manuscript contains also 'The Old Allmayne,' 'The Queen's Allmayne,' and 'The Nine Muses.'

"No. CLXVI. *Tom Tinker's my True Love*.—This song, which was introduced in 'The Beggars' Opera,' to the words 'Which way shall I turn me?' is to be found in D'Urfey's 'Pills to Purge Melancholy,' 1719, vol. vi. p. 265. It is mentioned in a black-letter tract, called 'The World's Folly,' 'A pot of strong ale, which was often at his nose, kept his face in so good a colour, and his brains in so kinde a heate, as forgetting part of his forepassed pride, in the good humour of grieving patience, made him, with a hemming sigh, ilfavouordly singe the ballad of 'Whilom I was,' to the tune of 'Tom Tinker.' The song begins thus:—

'Tom Tinker's my true love, and I am his deary;  
And I will go with him his budget to beare,  
For of all the young men he has the best way;  
All the day he will fiddle, at night he will play,—  
This way, that way, which way you will,  
I'm sure I say nothing that you can take ill,' &c.

In 'The Dancing Master' of 1650, and in other early editions of the same work, another, and perhaps older, tune is to be found under the same name.

"No. CLXVII. *Joan's Ale is New; or, the Jovial Tinker*.—From D'Urfey's 'Pills to Purge Melancholy,' vol. v. p. 61, edition of 1719. Ben Jonson, in his 'Tale of a Tub,' introduces 'Old Father Rosin, chief minstrel of Highgate, and his two boys,' who play the tunes called for by the company, which are 'Tom Tiler,' 'The Jolly Joiner,' and 'The Jovial Tinker.' 'Joan's Ale is New' (the burden of the song) is enumerated in a curious list of some hundred 'small books, ballads, and histories, printed for and sold by William Thackery, at the Angel in Duck Lane,' about the year 1680. The following quotation concerning the musical acquirements of tinkers is from p. 94 of a 'Declaration of Egregious Impostures' (1604), written by Samuel Harsnet, who died Archbishop of York. "Lustie Jolly Jenkin, by his name should seeme to be foreman of the motley morrice: he had under him, saith himselfe, forty assistants; or rather (if I mistake not), he had beene by some old exercist allowed for the master setter of Catches, or Roundes used to be sung by Tinkers, as they sit by the fire, with a pot of good ale between their legges: 'Hey, jolly Jenken, I see a knave drinking,' &c." Quare, how many tinkers in the present day can be found to sing catches?"

We must here break off, but will continue our illustrations from these volumes, so full of curious matter and of interest to every class of readers. As the high annual time of scientific record approaches, we look to them to give an agreeable variety to our columns, and will place them under our head of Music.

*Memoir of John James Macgregor, author of a "History of the French Revolution and the War," &c. With copious Extracts from his Writings.* By his Son, John James Macgregor, M.D. Dublin, 1840. Curry and Co. The biography of Mr. Macgregor, like that of many literary men, possesses no feature of extraordinary interest. He was a native of Limerick, of which city his father was appointed store-keeper to the garrison, as a reward for his services in the 42d regiment, called, about the

period at which the elder Mr. Macgregor volunteered to join it, "The Black Watch."

The subject of the present memoir was the youngest of seventeen children, and was born in 1775.

"Amongst the many amusing anecdotes which Mr. Macgregor was fond of relating of his father, we shall give the following, as a specimen of the mode by which disagreeable events can, by a little judgment, combined with a playful degree of humour, be converted into a subject of mirth with children. Whenever it was thought necessary for one of them to take medicine, the old man himself poured out the nauseous draught into a cup, and presented it to the little patient; should there be any demurring, he immediately assumed a martial and stern air, at the same time exclaiming, in a tone of command—'What, sir! do you refuse to drink the king's health?' If he was not instantly obeyed, he then sang the following couplet, which was always decisive:—

'He that will this cup deny,  
Into his face the dregs shall fly.'

The cup was then emptied at once, and the child smiled with astonishment and pleasure at the ease with which he had gotten through an operation, the bare thought of which was so dreaded a moment before."

Young Macgregor was educated at a school in his native town, conducted by Mr. Carroll, who is said to have "possessed a kind heart and great shrewdness in the management of his young subjects, whom he disciplined with an ingenuity and effect which were highly creditable to the inventive genius of the worthy man. Whenever a boy was guilty of any misdemeanour, or had neglected the preparation of his allotted task, a leathern strap was put around his waist, which was attached to a strong iron hook fastened in the wall; so that the unhappy delinquent was suspended several feet above the ground, to the no small delight and amusement of the laughing group, who were directed by the master to play a game of ball, so as to afford him an opportunity of exercising his skill by avoiding, in the best manner he might, the threatened stroke. So much was this species of punishment dreaded, that it produced a more decided effect than the use of the rod or cat-o'-nine tails. There were many boys educated at this seminary who have since earned laurels for themselves in the different professions which they entered: amongst those are the names of Lefroy, Ouseley, &c."

Young Macgregor was intended by his father for the study of physic, but "he suddenly altered his intentions, and apprenticed his son to Hargrove and Co. printers and booksellers, in the city of Limerick, in whose office he contracted a friendship for the late Mr. John Bull of Waterford, who afterwards became the printer and publisher of his six first volumes of the 'History of the French Revolution.' The events which occurred at this period of his life have often been a theme of conversation with his family in after-years. His fellow-apprentices were, without an exception almost, young men of dissipated habits, whose temples of worship were the tavern and the theatre, and whose deity was Pleasure. After for a long time withstanding their entreaties to visit a private theatre, upon whose boards many of them performed as amateurs, his curiosity at length vanquished his scruples and he went one night to see the 'Soldier's Daughter.' The scenic delusions, however, were not sufficiently fascinating to obliterate from his mind a sense of sinful indulgence, nor was the voice of conscience to be silenced by the din of theatrical folly; for

before the piece was concluded he left the place, stole to his closet, and there, in the silence of the night, poured out in penitence and prayer the affliction of his soul, and fervently sought pardon from God for what he deemed so gross a violation of his commandments. This proved the first and last occasion he ever entered a theatre. \* \* \* At a very early age [23] (says Mr. Macgregor's biographer) he obtained the situation of editor to a paper in Waterford, called the 'Munster Telegraph,' an undertaking which at the stormy period of ninety-eight [1798] required no small share of talent and moral courage to engage in."

Mr. Macgregor supported the loyal side of the question, and took an active part among the Wesleyan Methodists at this critical time, and soon after entered into trade as a bookseller. Bankruptcy followed; and then he opened a school, which the state of his health obliged him to give up in the course of two years. Mr. Macgregor "was nearly forty years old when he first entertained the serious idea of devoting his energies to the arduous pursuit of letters, and of commencing an enterprise hazardous and uncertain in its results, and deeply involving the dearest interests he held in life."

In 1814, he commenced writing his "History of the French Revolution," upon the suggestion of the late Major Hill of Waterford.

"He says: 'A friend or two to whom I shewed my manuscript, approved of my first attempt, and thus encouraged I went on to publish my prospectus; upon which Sir John Newport and other literary men in Waterford kindly opened their libraries for my use, and in a few months afterwards five hundred names were entered upon my subscription-list.' Thus he found himself engaged in an undertaking, the magnitude of which, perhaps, does not strike the minds of many, except such as are acquainted with the difficulties which are opposed to the publication of an extensive work in such a country as Ireland, especially in a provincial town, and at a time when there existed less speculation in literature than at the present day. We may obtain some information upon the subject from Mr. Macgregor's own remarks. 'I proceeded with my manuscript for two years, not knowing by what means it would see the light. No Irish bookseller would at that time undertake it; and having as yet no character as an author, I saw little chance of doing any good with it in London. I therefore perceived I had no other mode of acting than to bring it out in numbers and endeavour to push it myself. After these numbers had been published, the work appeared likely to be so popular that a friend lent me a sum of money on its security. This enabled me to go on with spirit till I completed my first volume and a great part of my second; and in the autumn of 1816 I set out on a tour through the south of Ireland, and in four months procured nearly four hundred additional subscribers."

Soon after, Mr. Macgregor was introduced to Sir James Macgregor, who not only subscribed for his namesake's work, but forwarded to the Duke of Wellington an application to permit Mr. Macgregor's "History of the French Revolution" to be dedicated to his grace, and who declined acceding to the request for the reasons stated in the following letter, which may be regarded as a literary curiosity:—

"Paris, March 29th, 1817.

'Dear Sir,—I am very sorry I cannot consent to the dedication to me of the work of Mr. Macgregor, of Waterford. I have uniformly refused such applications, because I conceive that when I give a formal permission that a

work should be dedicated to me, I give an approbation at least of its contents. This I cannot do without first reading the work. If any person chooses to dedicate a work to me without a permission I have no objection, but I neither can nor will give a permission.—I have, &c.

'WELLINGTON.'

"Mr. Macgregor, under those circumstances, very properly declined dedicating the work to his grace; but the latter became one of his subscribers, and shortly afterwards some of the highest names in the army and navy were added to his list. Many copies of the "History" were also sent out to India, to the officers who were stationed there with their regiments."

In 1819, Mr. Macgregor published his fifth volume of the "History of the French Revolution," and visited London with the view of extending its sale. At this time "he attended a conference of the Church Methodists, where the establishment of a magazine was suggested; and this body expressed their unanimous wish that he should be appointed their editor, and should make arrangements for settling altogether in Dublin."

Mr. Macgregor returned from London to Waterford by the way of Dublin, and here he collected materials for a picture of the Irish metropolis, which was speedily published, and for which he received 120*l*.

In 1820, Mr. Macgregor published his sixth volume of the "History of the French Revolution," but its pecuniary support from subscribers was seriously injured by the failure of several provincial banks. "By this," says Mr. Macgregor, "many of my subscribers were ruined, and a general damp cast upon all business, in which I largely participated."

Mr. Macgregor removed with his family, in 1821, to Dublin, where he was engaged to conduct a weekly paper called the "Family Gazette," at a salary of 150*l*. per annum. This publication, however, terminated at the end of the first year; and Mr. Macgregor "commenced the management and editorship of the 'Church Methodist Magazine,' a quarterly publication, which was brought out with a view of presenting to the members of the society a cheap means of storing their minds with useful and religious information."

Of its editor his biographer observes, that, "For one who had very little physical strength, it is a matter of surprise that he possessed moral courage sufficient to engage in so arduous a work as the 'History of the French Revolution,' which occupied altogether nearly twenty years before it was completed; during which period he underwent a process of mental labour that was quite depressing, and which often reduced him to the last degree of lowness of spirits: but such was the elasticity of his mind, that a comparatively trifling circumstance sufficed to cheer him to persevere in his task. He seemed to be influenced by that unaccountable stimulus which men of genius often feel within them, to attempt things which individuals of more cautious temperament would never dream of."

In 1819, Lord Talbot, then Lord-lieutenant of Ireland, was pleased to grant Mr. Macgregor permission to dedicate to his excellency the "History of the French Revolution." We have thus minutely traced the progress of an important work which ought to have received popular support on its own merits, with the view of shewing how much importance its author placed upon a dedication, and what the literary views of the Duke of Wellington are upon this, as it appears to us, unimportant matter,

"From the great expense of the work, and other causes which we have before mentioned, there was a considerable delay in the publication, and Mr. Macgregor was forced to change his original plan of bringing it out in eight volumes octavo, with a certain number of engravings, to that of extending the letterpress, and suppressing some of the plates which were attended with much delay in the execution. In order to keep his engagement with his subscribers, he was forced to enter into an agreement with his friend, Mr. Christopher Benham, who was to receive two-thirds of the profits for printing, and bear the other expenses of the publication of the remainder of the book. By this unpropitious circumstance his expectation of any emolument, at least from the succeeding volumes of the first edition, was greatly diminished: so that his labours, for some years, were attended with little recompense of a pecuniary nature; yet it rejoiced him to have the prospect of witnessing the termination of a work which had for many years occupied his thought most intensely, and had been a source of deep uneasiness at all seasons. The best years of his life were spent in its production, and now that he might naturally look forward to reaping some harvest after all his toil, he was miserably disappointed. The hopes he fondly entertained of being able to lay by some moderate provision for his family, against the time when it should please Providence to remove him from amongst them, were sadly blighted; and thus he found himself approaching the evening and decline of life in the same situation as when he began to write the first pages of his laborious task. His strength was fast declining, and when he looked around and saw the gloomy prospects which awaited him on every side, he sunk into the greatest despondency of mind, which rendered even the society of his friends irksome to him. Still he did not altogether despair; his trust in the never-failing mercy of a gracious God did not entirely forsake him; and when weighed down by a load of foreboding evil, he was wont to enter his chamber and pour out his spirit in secret to the Eternal One: by such means he ever obtained the relief he sought, and rose up from his knees invigorated and refreshed. At this period he was appointed to a situation on the 'Christian Examiner; or, Church of Ireland Magazine;' and continued his connexion with it for five years.\* His mind was constantly employed in literary avocations; he corrected and revised all his own writings, which employment occupied a great portion of his time.† There can be little doubt that such close application, with the pernicious habits of sitting up till one or two o'clock, served to shorten his span of existence, and hasten him towards the tomb. Yet it is doubtful whether he could have avoided this practice, placed under the peculiar circumstances he was; for such was the anxious nature of his mind, that he could not rest if any thing were left unfinished before he retired for the night: in this spirit he often exclaimed, 'None but an author knows an author's cares.'"

The following remarks upon the value of historical writing appear to us to be extremely judicious:—

"It would be well if every man who has taken upon himself the responsibility of record-

ing on the eventful page of history the actions of kings and emperors, for the instruction of posterity, had paid the same attention to the improvements of the reader's moral taste, as he (Mr. Macgregor) has done. Perhaps one of the most difficult parts of the historian's labour consists in the judicious sifting of a variety of testimony, and winnowing with a cautious hand the chaff of prejudice and falsehood from the precious golden grain of truth. We conceive, however, the chief responsibility to be that of the proper application of events which appear to the sceptic the mere offspring of chance, but to the humble believer in Providence a means wisely ordered to the working out of a special end. It is the historian's office, if actuated by just principles, to paint facts in their true colours,—to trace them to their proper sources,—to lay bare the real motives of statesmen,—to point out what emanates from true notions of justice, and what from a hollow expediency,—and endeavour to instil into the minds of those who peruse his pages an honest sense of loyalty, and a detestation of those principles which lead to anarchy and confusion. This appears to be the real philosophy of history, and any system which deviates from this standard is spurious, and detrimental in its effect upon society."

We have only to add, that Mr. Macgregor's strength appears to have failed from over-exertion, and that he died, in the same frame of mind in which he had lived, on the 24th of August, 1834, in his 59th year.

"Although his literary career did not properly begin till he was nearly forty years of age, yet from that period till his death he wrote the 'History of the French Revolution,' in twelve octavo volumes; the 'History of the County and City of Limerick,' in two octavo volumes, in conjunction with the Rev. P. Fitzgerald; 'True Stories from the History of Ireland,' in three duodecimo volumes; the 'Family Gazette,' in one quarto volume." [In this enumeration of Mr. Macgregor's works, the author of his biography has strangely forgotten the "Picture of Dublin," mentioned by him at page 91, as a volume which "met with a rapid sale, and became very popular." And also Mr. Macgregor's account of the wreck of the Seahorse transport, from which extracts full of the most painful interest are given at pages 63–69.] And to these may be added, Mr. Macgregor's "editorial labours for two magazines, one of which he conducted for fourteen years; together with those works he prepared for the press for the Education Society for five years. It should be rather a matter of surprise, that with all the difficulties he had to compete, considering the great sensitiveness of his disposition, and the daily occurrences which arose to depress his mind and paralyse his exertions, that he did so much, endured so long, and persevered till he completed all his engagements."

*Oliver Cromwell; an Historical Romance.*

Edited by Horace Smith, Esq. author of "Brambletye House." 3 vols. 12mo. London, 1840. Colburn.

THE author of this work is of unquestionable ability, and if we differ upon some points with both author and editor, it is not on that score. We differ with the author because, although he has not used his privilege as romancist to invest his hero with more mental greatness than history sanctions, he has most assuredly availed himself of that character to portray the unfortunate Charles and his queen in the darkest tints he could either collect or imagine. And

with the editor, because in a well-written preface he states, as "a proof of the author's good judgment," that "the fictitious characters introduced are few in number, and generally kept subordinate to the historical personages." His reasons for this opinion are:—

"For the times were so stirring, the public events so startling—not to say romantic, the great drama of reality so absorbing in its interest, that the brightest creations of fancy must have 'paled their ineffectual fire' before the dazzling, though sometimes baleful and ominous, splendours of actual life."

But since history has handed us down the characters and deeds of the real personages, it is to the fictitious we are apt to look for the greatest development of the novelist's powers. From the fictitious, then, we select our extracts, remarking, that the hand which wrote the touching and beautiful passages in the first and second volumes needed not the aid of the many battles, skirmishes, and the somewhat lengthy prayings, with which the third is nearly filled. These are doubtless given to connect more closely the work before us with the real drama of the stirring times in which its scenes are laid; but, with all our love for history, we are fain to confess that the fiction here is so good we should have liked a little more of it. The following scene is vividly coloured:—

"Sir Henry Ardenne stood in the centre at the oaken table, on which a standish was displayed of massive silver, with implements for writing, and a long scroll of parchment, carefully engrossed and decked with several broad seals, to which, as it would seem, he was preparing to affix his signature. His figure, still erect and stately, was clad in a rich military suit of buff, splendidly laced with gold, booted and spurred, and girt with the long rapier of the day; his snow-white locks hung down on either cheek, uncovered, for an attendant held, in readiness for instant use, his high-crowned beaver with its drooping feather, and his sad-coloured riding-cloak. His noble features were knit firmly, with an evident expression of resolve, although a tear-drop might be seen to twinkle in his dark eye as he looked down upon his niece grovelling in the dust before him, prostrate, and clinging to his knees, with her side-hair in its dishevelled volumes, half covering her lovely form—with her hands clasped, her eyes uplifted to his face, her lips apart, but motionless, in agony of tearless supplication. A hoary-headed servant watched, at a short distance, the development of the sad scene, with every wrinkled feature telling of his affectionate concern; while a stout, stolid-looking yeoman, summoned, it might be, to attest a signature, lounged at his elbow, staring in rude indifference on the display of passions with which his boorish nature vainly sought to sympathise. A small man, meanly clad in a black buckram doublet, with an inkhorn and a penknife in lieu of weapons at his girdle, of an expression impudently sly and knavish, was the last person of the group within the manor; but without, plainly to be discovered from the casements, there was assembled a fair company of horsemen, gaily equipped in the bright fluttering garb affected by the cavaliers, with the old banner of the house of Ardenne unfurled and streaming to the wintry wind, and a groom leading to and fro the favourite charger of the head of that high name. 'No! no,' cried Sibyl, in tones that quivered with excitement till they were barely audible, resisting the slight force which the old man put forth to raise her.—'No! no! I will not rise. Here,

\* He also for some time contributed to the London "Record" newspaper, upon Irish affairs.

† His extreme accuracy as a corrector of the press will not soon be forgotten by those in that department who had daily opportunities of witnessing his indefatigable labours. It was a common practice for him to read the manuscript and proof-sheet alternately himself.

here at your feet will I remain, till I prevail in my entreaty! Oh, you were wont to be wise, generous, and just! Temperate in your youth, as I have heard them tell, and calm: be then yourself, my noble uncle—he then once more yourself—nor sully, by this deed of unconsidered rashness, a whole long life of wisdom and of honour.—‘It may not be,’ he answered quietly, though not without an effort, as he compelled her to arise. ‘It may not be; the time allotted to our race hath now run out! The house of Ardenne is extinct with the old miserable man who stands before you: the lands that have been subject to my name for centuries shall never know it more! The Lord gave—the Lord hath taken away—blessed be the name of the Lord! But would—oh, would to heaven, that his corpse had mouldered on some foreign battle-field—that his bones had been entombed deep in the caverns of the sea—that he had died by any death, how terrible soever—that he had dragged out any life, however wretched and intolerable! Better, far better had it been, so to have mourned for him, than to have seen him thus—a blot—a single blot—on an unblemished name! A traitor to his king—a foeman to his country—a curse to him from whom he drew his being! No! plead to me no more—for never, never shall a traitor—a fanatic and hypocritical traitor, inherit ought from me, save the high name he hath disgraced. I have—and I bless heaven that I have it—through his own act of treason, the right to sunder this entail, and sundered shall it be ere sunset! He hath no corner of my heart—no jot of mine affections—himself, he hath cut out his path, and—rue it as he may—by that path must he travel now unto the end—dishonoured—outcast—disinherited—accursed—’ ‘Oh, no! no, no!’ she shrieked in frantic tones, drowning his utterance of a word so terrible, when coming from a parent’s lips—‘curse him not!—curse him not! or never shall you taste of peace again. Father, curse not your son—your first-born, and your only!—Sinner, curse not your fellow!—Christian, curse not a soul, whose hopes are thy hopes also!—Curse not, but pray!—Pray, not for your erring child, but for your rash and sinful self! Pray, uncle, pray for penitence and pardon!’ Affected somewhat by her words, but yet more by the fearful energy of her demeanour than by the tenour of her speech, Sir Henry paused; but not to doubt, much less to bend from his revengeful policy. ‘In so far, at the least, fair niece—in so far, at the least,’ he said, with a smile evidently forced and painful, ‘you have the right of it. ‘Tis neither Christianlike to curse, nor manly. But to this gear, good Master Sexby!’ he continued, turning to the lawyer, who had gazed with hardened coldness on the affecting scene. This deed, you tell me, is complete and firm in all the technicalities? ‘As strong as law can render it, Sir Henry,’ returned the mean attorney; ‘else know I nothing of mine own profession. Since Master Ardenne being last of the entail, and now declared a traitor by proclamation of his majesty at Oxford, could scarce inherit, even without this deed of settlement on Mistress Sibyl and her heirs—’ ‘Never!’ she answered in a calm low voice, the more peculiar from its contrast to the fiery vehemence she had before displayed; ‘never would I receive the smallest share—the least particular of that which is another’s. That other Edgar Ardenne, too!—though I should perish of starvation—never! And heirs—what tell ye me of heirs? Think ye that I—I the affianced bride of such a man

—would deign to cast myself away on his inferior? No, no! your testament is nothing worth. Heirless will I die, or die the wife of Ardenne! What, then, avail your crafts and subtleties of law? I spurn their false and sly toils before me, as the free hawk would rive asunder with his unfettered wing the trammels of the spider’s web!’ ‘Peace! for your fame’s sake; peace, degenerate girl!’ the old man sternly answered: ‘would you disclose to these your miserable weakness?’ ‘To these? To every dweller of the universal earth would I avow the strength—the constancy—the immortality of my legitimate and hallowed love! Affianced in my youth—by thee affianced—to one whom both my reason and my heart prefer, why should I shrink to own it? Weakness! I tell you, uncle, that I am no whit less strong—nay, ten times stronger than yourself—in faith, in loyalty, in conscience, in resolve! If I may not approve his actions—and, of a truth, I do not—I may not but revere his motives! and if those actions must half sever the strong links that join us, and render me, for very conscience sake, a widowed maiden,—his motives, pure, and sincere, and fervent as an angel’s faith, shall, at the least, forbid me to misjudge, much more to wrong him. Weakness! I tell you I adore him,—adore him even more for this his constancy to what he deems the better cause, when every fibre of his heart is tugging him to the other,—when loss of name, and fame, and fortune must be the guerdon of his unflinching and severe devotion to a mistaken creed! Yet deeply, singly as I love him, never will I wed Edgar Ardenne while he unsheaths a rebel blade, or prompts a rebel council. I tell you I adore him, yet will I die a maiden unless—’ and she paused for a space in her most eloquent appeal, as if to mark what influence it might have had upon the mind of her stern relative,—‘unless by this your madness you drive me to do that my conscience shrinks from. Suffer your broad lands to descend to him who justly heirs them, and rest assured that sooner will I die than marry with a rebel! Leave them to me—as, in the madness of your passion, you propose—leave them to me, and instantly will I make restitution to the rightful owner; if by no other means, at least by sacrifice of mine own conscience—mine own person!’ ‘Go to! you will not, Sibyl!’ exclaimed the old man vehemently. ‘I know you better than you know yourself; you would not do so, were things a thousand times more precious than these miserable lands dependent on your action!’ ‘And wherefore not?’ she cried. ‘Have I not, at the dictates of my conscience, cast from me the affections of the warmest and the highest heart that ever beat for woman? Have I not sacrificed unto my sense of loyalty—a sense, perchance, fantastic or mistaken—my every hope of happiness on earth? And wherefore shall I not obey the voice of the same counsellor, and to a sacrifice less grievous? Think you the love of justice is a less eloquent or weaker advocate than the mere love of kings? But since you may not be convinced by argument, nor won by any pleading, hear me then swear, and hear me Thou’—she added, solemnly turning upward her bright eyes, flashing with strong excitement, and dilated far beyond their wonted size—‘that sittest on the wings of cherubim,—Thou that hast no regard for kings, nor any trust in princes, receive my vow!’ She paused an instant as if to recollect her energies, and, as she paused, a deep voice broke the silence. ‘Swear not, my gentle cousin,’ said the slow harmonious voice, ‘and, above all, swear not for me!’

The genuine spirit of the following is refreshing:—

“‘Fly, Sibyl!—fly, my fairy!’ cried the impatient veteran. ‘Do on your riding-gear right speedily—Ariel is champing on his bits even now, to summon you! Edgar and I meanwhile will look to our guests in the great hall. Dally not, girl, I pray you—the sun is shrouded even now, and the scent will lie most bravely—I would not, to be Prince of Wales, lose such a morning! What ho! my jovial roisters,’ he continued, in a louder tone, striding into the huge vaulted hall through one door, as his fair niece vanished at the other. ‘What ho!’ addressing the laughing group who waited his arrival. ‘Here have ye an old friend, whom some of ye perchance have not as yet forgotten.’ And with a prouder air, and more exulting smile, he introduced his gallant son, unseen for many a year, to his admiring friends. A short half-hour flitted pleasantly away in heartfelt greetings, and gay converse, of light moment, but lively, joyous, and sincere. Then every high-plumed hat was doffed, and every voice was lowered, as Sibyl Ardenne, with her attendant maidens, meetly equipped for the field, entered the hall. ‘To horse! to horse!’ was now the word; and the ladies were assisted to their velvet selles by favoured cavaliers, and the gallants vaulted to their saddles, and threw their chargers on their haunches by dint of curb and spur, and drew their forms to the most graceful attitude, as with courtly merriment and sylvan music they swept away through shadowy avenues and over shaven lawns, to the wilder coppices and more secluded glades of chase and forest. \* \* \*

“The hunt was at its height! The noble stag—which had been harboured on the previous night in a deep swampy thicket, situate at the extreme western verge of the chase, and adjoining a wild tract of semi-cultivated moorland—disdaining to seek refuge in the recesses of the devious woodland, had broken covert gallantly, as the first crash of deep-mouthed music burst from his stanch pursuers, and clearing by a gigantic effort the rough parkings had taken to the open country, crossing hill and dale in a line scarce less direct than the crow’s flight, and at a pace that, ere an hour had passed, reduced the number of those who followed the now mute and panting hounds from a score or two of fearless horsemen to scarcely half-a-dozen of the boldest and best-mounted riders. The ladies of the party had long since been thrown out, scarcely indeed having cantered a half-mile along the nearest road, after the hounds had left the confines of the park; but still the foremost of the field, with all the hair-brained courage of a boy, and all the deep sagacious foresight of a veteran sportsman, rode old Sir Henry Ardenne; his manly features flushed with the excitement of his healthful exercise, and his grey hair floating on the current of air created by his own swift motion, as cap in hand he cheered the laggards of the pack with a voice that had lost nothing of its full-toned roundness. At length, in a sequestered dell clothed on each hand with a dense growth of underwood feathering its rocky and precipitous declivities, down which a sandy road wound in short toilsome curves, and watered by a bright and brawling rivulet, hard pressed and weary the brave quarry turned to bay. The deep note of the leading hound changed to a shrill and savage treble as he viewed his prey, and at the same instant the loud death-halloo rang from the exulting lips of the old baronet, as he caught and comprehended the import of that sharp yell.

Another minute brought him to the brink of a wide pool, embayed between rough cliffs of sandstone, and overlooked by a gnarled and leafless oak, on the highest branch of which a solitary raven sat unmoved by the fierce elamour, and expecting with a sullen croak its share of the after-carnage. In the farther corner of this basin, clear as the virgin crystal in its ordinary state, but turbid now and lashed to foam by the conflict of the animals, the stag had turned on his pursuers—nor had he turned in vain; for one, a brindled bloodhound, the boldest of the pack, unseamed from shoulder-blade to brisket by a thrust of the terrible brow-antler, lay underneath his stamping hoofs a lifeless carcass; while others bayed at a distance, reluctant, as it seemed, again to rush upon an enemy who had already left such painful evidences of his strength and valour on their gored and trampled limbs. Nor, though his velvet coat was clogged and blackened with the dust and sweat, and though the big tears—tokens of anguish in its expression well high human—rolled down his hairy cheeks, did the noble animal exhibit aught of craven terror at the approach of his inveterate pursuers; but, as the veteran advanced upon him, with the glittering wood-knife bared and ready, leaving the dogs as if beneath his notice, he dashed with a bold spring against his human persecutor, eye, hoof, and horn, in perfect concert of quick movement. The slightest tremor in the huntsman's nerves, the most trifling slip or stumble, might have well proved fatal; but, although seventy winters had shed their snows upon his head, his muscles had been indurated so by constant exercise in his beloved field-sports, that many a younger arm had failed in rivalling their powerful, though anelastic, firmness. When the despairing deer made his last effort, eluding by a rapid turn his formidable front, Sir Henry struck a full blow as he passed, completely severing the tendons of the hinder leg. Hamstrung and crippled, the gallant brute plunged headlong forward, and received in the next instant the keen point in his gullet. One short gurgling bleat, and two or three convulsive struggles of the agile limbs, the full eye glazed, and, in a moment, all the fiery energy, the bounding life that had so lately animated that beautiful form, was utterly extinct for ever. Then came the thundering shouts and the long cadences of the French-horns, their joyous notes multiplied by the ringing echoes, and sent back from every heath-clad knoll or craggy eminence, the merry narrative of harmless accidents, the self-congratulations of the select and lucky few, who from the start to the death had kept the hounds in view,—the queries for the absent,—the praises of some favourite horse or daring rider,—the stinging railery,—the honest, unfeigned laughter!

With this we conclude, promising our readers much amusement in the perusal of this pleasant and interesting work.

*Narrative of the War in Affghanistan, in 1838, 1839.* By Capt. Henry Havelock. 2 vols. post 8vo. London, 1840. Colburn.

OUR friends and countrymen in the Indian armies are, as a body, very intelligent; and one of the consequences is, that many of them are apt to run into print when any events occur to call forth their hardly latent talents. Thus we have already had to pass in review two distinct works on the war by which Shah Soojah has been restored to Cabool, besides several preliminary publications connected with the subject as it approached the arbitrament of arms; and we

have now to bestow our pen upon Captain Havelock's account of the operations of the Bengal division in this successful war. In this, however, we necessarily find that we have a good deal of the same ground to go over; which, added to the somewhat inherent proximity of Indian orders, despatches, and other documents and descriptions, inclines us rather to abridge than expand our notice of the present work. Captain Havelock's general views are more military and political than those of his predecessors; and at the end of every chapter he throws a retrospect over the preceding matters and marches which he has related, that fully and clearly explains the judgment he has formed upon their conception and execution. A preliminary introduction on the policy of the contest, Lord W. Bentinck's pacific government, &c. &c. contributes to the same end, and may be perused with advantage by the English at home. The writer is strongly anti-Russian throughout; but we shall neither meddle with his national opinions, nor, as far as we can avoid it, with his more particularly regimental, brigade, or division, ramifications of military acts and dispositions. We leave these to the War Office and Commander-in-chief. We stop not, therefore, for the Bengal preparations or declarations, but march (and much is done by rapidity in this way) at once to the river Gharra, meet Runjeet Singh for the last time (he died the day we entered Candahar), and thence proceed across various territories till we reach the Indus at Goth Amil, where we observe the rocky isle of Bukkur and its fort, the key to Upper Sind. Here we negotiate with Meer Roostum, and some of his brother ameer—because we cannot safely leave this "key" behind us, and must have it either temporarily given up to us by treaty, or take it by force. The place, with all these difficult arrangements to make, was not so bad for a halt.

"Here a spectacle awaited the troops, which the young and enthusiastic might deem fully to repay them for all the fatigues of their precedent marches. A noble river of little less than one thousand yards in breadth, is the Indus at Goth Amil; but here, where its stream is impeded by the rocky island of Bukkur, it expands into a wide bay to embrace and pass the obstacle, the resistance of which to its waters seems only to add fury to their natural impetuosity. On either bank are here seen two large groves of date-trees, clothing for a certain distance the hills of limestone rock, which stretch out like two huge arms, the one towards Cutch Gundava, the other into the territories of Meer Roostum. These wood-crowned heights, though not lofty, present a striking contrast to the level plain around them, green only with corn and tamarisk-bushes. The town of Roree is wholly built of sunburnt bricks; but raised on limestone crags in the bend of the little gulf, it lays claim to a wild kind of beauty: whilst on the same bank a magnificent pile of rocks of the same formation, surmounted by the painted and glittering spires of a zyarat gah, and insulated, when the river is swollen, arrests the admiration of the spectator. Thence his gaze is at length withdrawn to the fort of Bukkur, and the view into the expanded reach of the Indus below it. The sandy islet on which the stronghold is built would be washed over by the river, but that from this low basis suddenly arises a singular superstructure of hard limestone, in which little masses of agate flint are thickly and deeply bedded. The isle is, in length, eight hundred yards; and, in breadth, varies from one hundred and fifty to one hundred. The whole area is covered by

the *enceinte* and buildings of the fortress, which reach down to the water's edge. This intervening land divides the river into two channels, the northern of which does not exceed ninety yards, whilst the southern branch spreads with a whirling course towards the town of Roree to the width of four hundred and fifty. The smaller arm had already been securely bridged by nineteen boats lashed together, and the engineers were labouring incessantly in connecting seventy-five more to restrain and subdue the waters of the main stream. Bukkur consists of a brick wall of about thirty feet in height, battlemented, and divided into curtains, and semicircular towers and bastions. A lower wall, *rounee* or *fausse braye*, prevents a considerable part of the base of this circumference from being seen; but the brick structure is every where mouldering into decay, and was at this time armed with only three guns, which were mounted *en barbette*. The balconied residence of the killadar was seen over the principal gate, and high Sindian caps appearing above the parapet, assured us that Bukkur was still held in the name of the ameer. We knew, however, that his garrison was not very formidable; as it had, three days before, been increased from twelve men to two hundred only. The landscape on the Indus, as viewed from our camp, was completed on the right by the heights of Snkkur; a ruinous, but once extensive town on the right bank, in which tottering mosque, minaret, and eedgah, yet glittering with purple and gilding, tell of the faded magnificence of Mahomedan rule. But between the main island and the Roree bank have been thrown up by the stream two other islets. One of these, which is at the eastern extremity of Fort Bukkur, and bears the name of Khaju Khizzur, is covered with tombs. A relic is enshrined within the largest of them, which, if genuine, ought surely to be venerable in the eyes of the people of Islam, being no other than the beard which fringed the sacred chin of Mahomed himself. Sir Willoughby Cotton afterwards presented a handsome muzzur to the mootwullee, or superintendent of this monument, in which act of munificence Sir Henry Fane had set him the example. On our arrival at Roree, we found Sir Alexander Burnes still busily employed in negotiating with Meer Roostum's ministers, who were encamped about three miles off their master. He was surrounded by a considerable force, and accompanied by his brother ameer. Our envoy had left Sir Willoughby Cotton's camp in the middle of January, and preceded it to Bukkur, in order to quiet the apprehensions which the Khaypore ameer professed to feel on the subject of our establishing a bridge over the Indus. This fortress he had temporarily given up to us by treaty; but as this convention had not yet been ratified by the governor-general, he wished that we should defer acting upon it in any way until it should return with his lordship's signature attached to it. As it was important, however, that no delay should take place in establishing the bridge, and at the same time desirable to avoid any ebullition of barbarian impatience at Roree, Sir Alexander deemed it to be best to administer the sedative of his personal assurances until the despatches might arrive from Lord Auckland at Lahore. We found that he had been successful in keeping things quiet till the army came up. Sir Willoughby Cotton's camp was pitched on a plateau of sand, near the margin of the river, directly opposite to Khaju Khizzur. Here his flag was displayed, and immediately below waved on the waters of the Indus that of Sir

Henry Fane, whose flotilla of eight large boats, led by his own handsome budgerow, the Avenel, was moored to the bank. It was from the mound above that the most pleasing view could be obtained of Bukkur, Roree, and Sukkur, the Indus, and the adjacent groves; and hardly in the world could a spectacle more magnificent be found than the zyarat gah, and the fort and islands, and the watery vista beyond, when the sun sunk into the waves of the extensive reach of the great river. On the day after our arrival, Sir Henry gave audience in Sir Willeoughby Cotton's tent, his own not having yet been landed, to two relatives of the ruling ameer and his prime minister. Arrangements were made at this conference for the more important visit which Meer Roostum himself had been persuaded to consent to pay to his excellency. Hopes were held out to the Sindians that intelligence would arrive from Lord Auckland's camp before this conference could take place, and that the tenour of the next news would be the complete re-establishment of the best understanding between the British and this branch of the Talpoor family. Sir A. Burnes acted as interpreter, and conducted the negotiation and ceremonial, and displayed admirable tact in the happy manner and choice of phrases, by which he contrived to inspire with confidence in his own government, and to set at their ease in the presence of foreigners and superiors at this interview, individuals at once so timid and suspicious, haughty and repulsive, as these connexions and servants of the ruler of Khyrpore. Unfeigned anxiety was felt in both camps respecting the arrival of the ratified convention.\*

Sinde lies terrified into passive submission,\* and the fortress given up to us: we occupied it, and marched on for our ultimate destination.

Passes, and mountains, and desert tracts, the assaults of predatory hordes hovering round, and the uncertainty of the disposition of various native tribes and rulers, are sufficient to occupy us on our route to Ghuznee (which, as you know, we take by storm); but we give you a taste of the country near Kwettah as we go along:—

"Kwettah itself stands at the northern extremity of the Dushet. The more fertile valley of Shawl, to which it belongs, is seen stretching out to the westward, having the Tukattoo line of mountain for its northern boundary, whilst a far lower chain of hills defines it to the westward. They wear away gradually towards the south. Amongst their eminences is seen, with the naked eye, from Kwettah, the little kotul, or pass, which leads to the valley and town of Koochlak, and forms the direct route to Candahar. Macartney, whose accuracy we have generally had cause to admire, has erred in placing Koochlak to the eastward instead of the westward of Tukattoo; and Tassin has delineated Tukattoo, itself as a detached, insulated mount, whereas it is the crowning eminence of an extensive range. The former topographer, never having extended his personal researches into Beloochistan, must have trusted entirely to native reports, from which

\* It was reasonable to anticipate from the ameer of Sind the bitterest hostility, since the object of the British in coming amongst them was to compel them to submit to conditions most hateful to them: viz. besides the payment of money—a demand to all most unpalatable—the admission of a foreign force within their territorial boundaries, and the establishment of military posts in their country by the British. The three principal ameer could bring into the field certainly not fewer than seven, three, and two thousand Sindians; in all twelve thousand soldiers, besides a contingent of mercenary Belooches, amounting to at least as many more—hardy, resolute, and rapacious men, whom they would be enabled to raise and embody at the shortest notice in the neighbouring territories of our ally, Mirhab Khan of Kalat.

he has certainly extracted a surprising amount of information. Tassin may be supposed to have had little to guide him here in his late useful compilation, but the map of Macartney, and such incidental notices of the country as he might have gleaned from the journal of Lieutenant Connolly. The brigades of Arnold and Sale were disposed in something like a military position on the slope at the head of the valley of Shawl, the cavalry on the right, the infantry on the left. The right of the line formed by these troops stretched out towards the chain and peaks of Tukattoo, of which, however, it fell short by some miles; whilst the left rested on ground much intersected by water-courses and low walls, by which alone it was separated from the ramparts of Kwettah. The fortifications of the place were, therefore, in fact, the *appui* of this flank. The valley in front of the force is not very well cultivated, although numerous and extensive kahreeses supply it with very sufficient means of irrigation. It produces, however, only some trifling crops of wheat and barley. The camel-thorn, indeed, springs up in considerable abundance on as much of the ground as is left waste, and this in the course of another month will become nutritious. The camp overlooks the whole vale, and in advance of our line of encampment was a mound, the value of which would have been acknowledged if it had become necessary to establish an extended chain of distant outposts in the direction of Koochlak. The front and left of the position might, therefore, be deemed pretty secure, but besides that its right needed support, it was compromised and menaced in reverse by the two Kotuls, which have been described as existing in the lower range to the northward of Kwettah. The valley of Shawl and its vicinage claim to be reckoned a favoured and promising region, whether we consider its own superior elevation, the grand and striking outline of the mountains around it, its numerous and pellucid streams, the evident fertility of its soil, or the apparent salubrity of its climate. We, who have lately seen the quicksilver at 94° at noon, in Cutch Gundava, are now braced by the healthful cold of the morning, the thermometer standing at 34° a little before sunshine, and not rising beyond 64° during any part of the day in our tents. We have on this spot, too, some of the productions of Europe, to the sight of which many of us have been for a succession of years entire strangers. The poplars and fruit-trees have been already noticed, as have the tulips and irises of the dushet, which are also to be found close to Kwettah. In addition to these, our botanists have discovered a wild anemone in the plains, and the butter-cup and dandelion in the mountains. One of our sportsmen has shot a woodcock in the copse near Major Cureton's camp of observation; larks are to be seen in flocks around the town, and saluted us with their morning carols as we marched down from the put, and white linnets flutter about amongst the low bushes of the valley of Shawl. Assafetida also grows on the dushet, whilst the vale to the northward produces, besides wheat and barley, rice and the small vetch called moong (*mungo phaseolus*); but no chunna or gram. The harvest of last year had here, as nearly throughout Hindoostan, been scanty; and it seems now to be ascertained beyond dispute, that of the little grain grown in the Belooche provinces adjacent to the capital, a large proportion had been forcibly collected, and stored up by Mirhab Khan. Despatches from Sir Alexander Burnes, at Moostoon, have already acquainted us that he had found

in that place no food either for man or beast."

We now proceed by Candahar, and, as we have intimated, capture Ghuznee; but a few incidental particulars of that brilliant affair may please you to be told, though we must reserve them for another week.

#### TYTLER'S HISTORY OF SCOTLAND.

[Second notice.]

THE last portion of Mr. Tytler's volume consists of a statement so important in a historical point of view, that we, for the present, pass over other interesting parts for the sake of quoting it entire. It relates to the secret plot contrived by Elizabeth and her advisers to have Mary delivered over and put to death in Scotland, after Elizabeth had politically found it inconvenient, and publicly refused to sanction her trial and execution in England:—

"Fears for her own life, and terror for the result of those dark plots which she had already repeatedly detected and severely punished, perpetually haunted her imagination, and shook even her strong and masculine mind. Of these conspiracies Mary was the centre; she was engaged in a perpetual correspondence with the court of Rome; with France, whose name could not now be uttered without calling up images of horror; with Spain, where Philip and the Duke of Alva—men hated by the Protestants—had recently lent her the most effectual assistance; and, what was more alarming to Elizabeth than all, the recent trial of Norfolk, and the confessions of the Bishop of Rose, now a prisoner in the Tower, had convinced her that, as long as the Scottish queen remained in England, the minds of her Roman Catholic subjects would be kept in perpetual agitation; that no permanent tranquillity could be reasonably expected; and that, judging by the recent excesses in France, her own life might not be secure. It is impossible to blame such feelings or such conclusions. They were natural and inevitable; but, making every allowance for the fears of her council and her people, and the attachment of her great minister Burghley, we are scarcely prepared for the calmness with which the death of the Scottish queen was recommended by the House of Commons, and strongly urged by Cecil. Elizabeth, however, would not listen to their arguments, and at last peremptorily put an end to their consultations.\* She had already publicly declared that there had been no sufficient evidence exhibited against Mary by those who accused her of the death of her husband; and to bring her to trial in England, or to cause her to be publicly put to death without trial, would, she felt, be equally unjust and odious. She accordingly contented herself, after the death of Norfolk, with sending Lord de la Ware, Sir R. Sadler, and Bromley, her solicitor-general, to interrogate the Scottish queen regarding her political connexion with that unfortunate man, and to remonstrate against any continuation of her intrigues. On this occasion, Mary, although plunged in grief for the recent execution of the duke, was roused by the harshness of the messengers to a spirited vindication of her rights as a free princess. Some of the allegations she admitted, some she palliated, others she peremptorily denied; and the interview led, and was probably intended to lead, to no definite result. But if Elizabeth abandoned all thoughts of bringing her royal prisoner to a public trial,

\* "The English bishops, in answer to a question of Burghley's, had given it as their opinion that Elizabeth might lawfully put Mary to death, and justified their sentence by reasons of Scripture taken from the Old Testament.—See Caligula, c. ii. fol. 584; and D'Ewes' Journal, p. 507; also Lingard, vol. viii, pp. 106-108."

and putting her to death in England, it was only to embrace a more dark and secret expedient, and what she judged a surer mode of getting rid of her hated and dangerous prisoner. The plot was an extraordinary one, and its details, upon which I now enter, are new to this part of our history. Previous to the massacre of Saint Bartholomew, and after the failure of the negotiations for peace in Scotland, which were conducted by the French ambassador De Croc and Sir William Drury, Elizabeth had resolved to send a new envoy to that country, with the object of watching over the English interests. When the dreadful news arrived from France, Burghley and Leicester pressed upon the English queen the necessity of instant attention to her safety on the side of Scotland, and Mr. Henry Killigrew was selected to proceed thither. He was instructed to negotiate both with Mar, the regent, and the opposite faction led by Lethington and Grange; to exhort both sides to observe the late abstinence; to give them the details of the late horrible massacre, expressing the queen's conviction that it was premeditated, and to implore them to be on their guard. Such was his public mission; but shortly before he set out, Killigrew was informed that a far greater matter was to be intrusted to his management; that it was to be conducted with the utmost secrecy, and was known to none but Elizabeth, Leicester, and Burghley. In an interview with the queen herself, to which none were admitted but these two lords, he received his instructions, which remain drawn up by Cecil in his own hand. It was explained to him that it had at last become absolutely necessary to execute the Scottish queen, and that unless the realm were delivered of her, the life of Elizabeth was no longer safe. This might, indeed, be done in England, but, for some good respects, it was thought better that she should be sent to Scotland, and delivered to the regent and his party, 'to proceed with her by way of justice.\*' To accomplish this must depend, it was said, upon his skillful management. He must frame matters so that the offer must come from them, not from the English queen. This would probably not be difficult, for they had already many times before, under the former regents, made proposals of this nature. If such an offer were again made, he was now empowered to agree to it, but it must be upon the most solemn assurance that she should be put to death without fail, and that neither England nor Scotland should be endangered by her hereafter; for otherwise, it was added, to have her and to keep her would be of all other ways the most dangerous. If, however, he could contrive it so that the regent or Morton should secretly apply to some of the lords of the English council to have her given up, now was the best time; only, it was repeated, it must be upon absolute surety that she should receive what she deserved, and that no further peril could ever possibly occur, either by her escape or by setting her up again. To make certain of this, hostages must be required by him and those of the highest rank; that is to say, children or near kinsfolk of the regent and the Earl of Morton. Last of all, he was solemnly re-

mindful that the queen's name must not appear in the transaction; and Elizabeth herself, in dismissing him, bade him remember that none but Leicester, Burghley, and himself, were privy to the great and delicate charge which was now laid upon him, adding a caution, that if it 'came forth,' or was ever known, he must answer for it. To this Killigrew replied, 'that he would keep the secret as he would his life,' and immediately set out on his journey. On entering Scotland, his first visit was to Tantallon, Morton's castle, where that nobleman was confined by sickness; but the ambassador received from him the strongest assurances of devotedness to the young king his sovereign, and to Elizabeth, whose interests he believed to be the same. Knox had returned again to Edinburgh, and the recent news of the massacre in France was producing the strongest excitement. On repairing to Stirling, to meet the regent, he passed through the capital, and encountered there his old friend Sir James Melvil, from whom he understood something of the state of the Castilians, as the queen's party were now called; and in his subsequent interview with Mar, he found him expressing himself decidedly against any intimate alliance with France, and determined, so long as he had any hope of effectual assistance from England, never to connect himself with a foreign power. So far all was favourable, but it was evident to Killigrew that, without additional forces, which he well knew Elizabeth would be unwilling to send, the regent could never make himself master of the castle. These, and similar particulars connected with his public mission, he communicated, as he had been previously instructed, to the secretary of state; but his proceedings in the other great and secret matter touching Mary, were contained in letters addressed to Cecil and Leicester jointly, and he appears to have lost no time in entering upon it. He informed them in a despatch on the 19th of September, that he had already 'dealt with a fit instrument, and expected that the regent and the Earl of Morton would soon break their minds unto him secretly.' The instrument thus selected to manage the secret and speedy execution of the unhappy Mary was Mr. Nicholas Elphinstoun, a dependant of the late Regent Murray, and who from an expression of Killigrew appears to have been on a former occasion employed in a similar negotiation. Matters, however, were not expedited with that rapidity which Burghley deemed necessary; and this minister, although assured by his agent that he could not for his life make more speed than he had done, determined to urge him forward. For this purpose he addressed to him a letter jointly from himself and Leicester. In reading it as it still exists in the original draft in Cecil's hand, with its erasures and corrections, it is striking to remark the contrast between its cold and measured style and the cruel purpose which it advocates. It was written from Windsor, and ran thus:— 'After our hearty commendations we two have received your several letters directed to us, whereof the last came this last night, being of the 24th of September, and as we like well the comfort you give us of the towardness in the special matter committed to you, so we do greatly long to receive from you a further motion with some earnestness, and that both moved to you and prosecuted by them of valour, as we may look for assurance to have it take effect; for when all other ways come in consideration, none appeareth more ready to be allowed here by the best, than that which you have in hand. Wherefore we earnestly re-

quire you to employ all your labours, to procure that it may be both earnestly and speedily followed there, and yet also secretly as the cause requireth; and when we think of the matter, as daily, yea hourly, we have cause to do, we see not but the same reasons that may move us to desire that it take effect, ought also to move them, and in some part the more, considering both their private sureties, their common estate, and the continuance of the religion, all which three points are in more danger from [for] them to uphold than for us. The causes thereof we doubt not, but you can enlarge to them if you see that they do not sufficiently foresee them. We suspend all our actions only upon this, and, therefore, you can do no greater service than to use speed.—Your loving friends,  
W. BURGHLEY.'

'From Windsor, the 29th of Sept. 1572.'

"In the interval between this letter and Killigrew's last despatch, the English envoy had not been idle. He had assured himself of Morton's cordial co-operation in the scheme for having Mary secretly executed, and according to the instructions received from his own court, he had availed himself of the deep and general horror, occasioned by the late murders in France, to excite animosity against the Papists, and to convince all ranks, that without the most determined measures of defence their lives and their religion would fall a sacrifice to the fury of their enemies. He also had seen and consulted with Knox, who, although so feeble that he could scarce stand alone, was as entire in intellect and resolute in action as ever. The picture given of this extraordinary man by Killigrew, in a letter addressed to Cecil and Leicester, written on the sixth of October, in reply to theirs of the 29th of September, is very striking.—'I trust,' said he, 'to satisfy Morton; and as for John Knox, that thing you may see by my despatch to Mr. Secretary, is done, and doing daily; the people in general, well bent to England, abhorring the fact in France, and fearing their tyranny. John Knox (he continued) is now so feeble as scarce can he stand alone, or speak to be heard of any audience, yet doth he every Sunday cause himself to be carried to a place where a certain number do hear him, and preacheth with the same vehemency and zeal that ever he did. He doth reverence your lordship much, and willed me once again to send you word that he thanked God he had obtained, at his hands, that the Gospel of Jesus Christ is truly and simply preached through Scotland, which doth so comfort him as now he desireth to be out of this miserable life. He further said, that it was not of your lordships that he was not a great bishop in England, but the effect grown in Scotland, he being an instrument, doth much more satisfy him. He desired me to make his last commendations most humbly unto your lordship, and, withal that, he prayed God to increase his strong spirit in you, saying, that there was never more need.' It was, no doubt, by Knox's advice that proclamation was made on the 3d of October, for a convention of the 'professors of the true religion' to consult upon the dangers resulting from the conspiracies of the Papists. To the sheet on which it was printed there were added certain heads or articles, said to be extracts from the secret contract between the pope, the emperor, and the kings of Spain and Portugal, for the extirpation of the Protestant faith, and Killigrew believed that all these preliminaries would prepare the mind of the people for any extremities that might be used against their unhappy sovereign. Meanwhile his tool,

\* Dr. Robertson notices the paper in Murdin, and severely condemns this proposal of Elizabeth. This eminent writer interprets it as if the queen had desired the Scottish regent to bring Mary to a public trial, and, if condemnation followed, to execute her. It seems to me clear, however, that the words 'proceed with her by way of justice,' when taken with the context, can bear but one meaning,—the same meaning in which Leicester employs the phrase in his letter in the Appendix, that of executing her summarily and without delay.—See Dr. Lingard, vol. viii. p. 118.
